two Office Systems Specialists at not to exceed $15,036 per annum each in lieu of an Office Systems Specialist at not to exceed $17,542 per annum; a Senior Training Specialist at not to exceed $22,912 per annum in lieu of a Training Specialist at not to exceed $22,912 per annum; three Training Specialists at not to exceed $18,258 per annum each in lieu of three Office Systems Specialists at not to exceed $17,542 per annum each; four Training Specialists at not to exceed $16,647 per annum each in lieu of an Office Systems Specialist at not to exceed $17,542 per annum and two Printing Operators at not to exceed $16,826 per annum each; a Production Manager at not to exceed $25,060 per annum in lieu of not to exceed $23,986 per annum; a Hardware Manager at not to exceed $25,060 per annum in lieu of an Operations Supervisor at not to exceed $23,986 per annum; two Computer Resource and Performance Analysts at not to exceed $22,912 per annum each in lieu of two Data Standards Specialists at not to exceed $22,912 per annum each; a Documentation Specialist at not to exceed $22,017 per annum in lieu of a Computer Performance Analyst at not to exceed $22,017 per annum; six Job Controllers at not to exceed $16,826 per annum each in lieu of six Lead Operators at not to exceed $16,468 per annum each; six Lead Operators at not to exceed $16,110 per annum each in lieu of not to exceed $16,468 per annum each; a Data Conversion Operator at not to exceed $11,277 per annum in lieu of a Computer Terminal Installer at not to exceed $10,382 per annum; a Secretary at not to exceed $21,122 per annum in lieu of a Technical Writer at not to exceed $21,122 per annum; a Secretary at not to exceed $14,857 per annum in lieu of a Secretary Typist at not to exceed $13,962 per annum; a Secretary at not to exceed $14,141 per annum in lieu of a Junior Operator at not to exceed $14,678 per annum; three Secretaries at not to exceed $13,962 per annum each in lieu of a Secretary Receptionist at not to exceed $13,962 per annum, a Secretary Typist at not to exceed $13,962 per annum and a Secretary at not to exceed $12,888 per annum; a Secretary/Receptionist at not to exceed $13,604 per annum in lieu of a Quality Controller at not to exceed $16,826 per annum; a Secretary Typist at not to exceed $13,067 per annum in lieu of a Quality Controller at not to exceed $16,826 per annum; a Receptionist at not to exceed $12,172 per annum in lieu of an Operations Clerk at not to exceed $13,246 per annum; an Office Systems Supervisor at not to exceed $26,492 per annum; a Text Processing Specialist at not to exceed $14,678 per annum; two Senior Systems Programmers at not to exceed $31,146 per annum each; a Data Resources Manager at not to exceed $25,060 per annum; a Secretary at not to exceed $14,320 per annum;

two Senior Network Technicians at not to exceed $26,492 per annum each; a Technical User Liaison at not to exceed $16,468 per annum; a Special Projects Officer at not to exceed $32,220 per annum; a Receptionist at not to exceed $13,246 per annum; two Captains, Police Force at not to exceed $25,776 per annum each; two Sergeants, Police Force at not to exceed $17,900 per annum each; three Detectives, Police Force at not to exceed $16,826 per annum each; two Plainclothes Officers, Police Force at not to exceed $15,752 per annum each; a Clerk at not to exceed $13,962 per annum in lieu of not to exceed $12,888 per annum; a Clerk at not to exceed $12,888 per annum in lieu of not to exceed $11,814 per annum; an Auditor at not to exceed $12,888 per annum in lieu of not to exceed $11,814 per annum; a Purchasing Clerk at not to exceed $15,036 per annum in lieu of not to exceed $13,962 per annum; a Clerk at not to exceed $12,530 per annum in lieu of not to exceed $11,456 per annum; a Supervisor of Door Attendants at not to exceed $19,153 per annum in lieu of a Messenger Acting as Assistant Doorkeeper at not to exceed $15,036 per annum; an Assistant Supervisor of Door Attendants at not to exceed $17,184 per annum in lieu of a Messenger Acting as Assistant Doorkeeper at not to exceed $15,036 per annum; a Director, Service Department at not to exceed $41,170 per annum in lieu of a Superintendent, Service Department at not to exceed $41,170 per annum; an Assistant Director, Service Department at not to exceed $28,640 per annum in lieu of an Assistant Superintendent, Service Department at not to exceed $25,776 per annum; a Technical Clerk at not to exceed $13,962 per annum in lieu of a Photostat Operator at not to exceed $13,962 per annum; a Secretary to the Director, Service Department at not to exceed $16,468 per annum in lieu of a Secretary to Superintendent, Service Department at not to exceed $16,468 per annum; ten Inserting Machine Operators at not to exceed $12,888 per annum each, in lieu of not to exceed $11,814 per annum each; three Senior Press Operators at not to exceed $17,542 per annum each, in lieu of three Printing Press Operators at not to exceed $16,468 per annum each; eleven Printing Press Operators at not to exceed $16,468 per annum each, in lieu of eleven Offset Press Operators at not to exceed $15,394 per annum each; a Senior Pressman/Repairman at not to exceed $17,900 per annum in lieu of not to exceed $17,363 per annum; an Assistant Night Supervisor, Duplicating Section at not to exceed $18,709 per annum in lieu of not to exceed $17,363 per annum; eleven Addressograph Operators at not to exceed $13,425 per annum each, in lieu of not to exceed $12,530 per annum each; a Secretary at not to exceed $13,425 per annum in lieu of not to exceed $12,530 per annum;

a Secretary-Receptionist at not to exceed $14,857 per annum in lieu of not to exceed $13,962 per annum; a Supervisor, Supply Section at not to exceed $16,289 per annum in lieu of not to exceed $15,394 per annum; a Technical Clerk at not to exceed $13,425 per annum in lieu of not to exceed $12,530 per annum; six Automatic Typewriter Repairmen at not to exceed $17,542 per annum each, in lieu of not to exceed $16,468 per annum each; three Repairmen at not to exceed $16,110 per annum each, in lieu of not to exceed $15,036 per annum each; a Film and Video Cameraman at not to exceed $25,597 per annum in lieu of not to exceed $23,270 per annum; a Laboratory Supervisor at not to exceed $25,597 per annum in lieu of not to exceed $23,270 per annum; an Audio Engineer at not to exceed $21,122 per annum in lieu of not to exceed $19,332 per annum; an Audio Engineer at not to exceed $16,468 per annum in lieu of not to exceed $15,036 per annum; a Skilled Laborer at not to exceed $12,888 per annum in lieu of not to exceed $11,814 per annum; a Skilled Laborer at not to exceed $12,530 per annum in lieu of not to exceed $11,456 per annum; a Laborer at not to exceed $12,888 per annum in lieu of not to exceed $11,814 per annum; two Senior Door Attendants at not to exceed $15,036 per annum each, in lieu of two Messengers Acting as Assistant Doorkeeper at not to exceed $15,036 per annum each; twenty-five Door Attendants at not to exceed $12,530 per annum each, in lieu of twenty-five Messengers at not to exceed $12,530 per annum each; six Door Attendants at not to exceed $11,814 per annum each, in lieu of six Messengers at not to exceed $11,814 per annum each; a Door Attendant at not to exceed $10,740 per annum in lieu of a Messenger at not to exceed $10,740 per annum; a Door Attendant at not to exceed $10,382 per annum in lieu of a Messenger at not to exceed $10,382 per annum;

a Chief Door Attendant for the Minority at not to exceed $13,962 per annum in lieu of a Chief Messenger for the Minority at not to exceed $13,962 per annum; three Door Attendants for the Minority at not to exceed $12,530 per annum each, in lieu of three Messengers for the Minority at not to exceed $12,530 per annum each; a Secretary/Receptionist at not to exceed $15,394 per annum in lieu of a Receptionist at not to exceed $13,067 per annum: *provided further*, That, effective April 1, 1978, the Sergeant at Arms and Doorkeeper may appoint and fix the compensation of an Executive Assistant at not to exceed $42,065 per annum in lieu of a Special Assistant at not to exceed $30,788 per annum.

For an additional amount for "Office of Sergeant at Arms and Doorkeeper", fiscal year 1978, $1,219,000.

OFFICES OF THE SECRETARIES FOR THE MAJORITY AND MINORITY

For offices of the Secretary for the Majority and the Secretary for the Minority, $411,000.

For an additional amount for "Offices of the Secretaries for the Majority and Minority", fiscal year 1978, $20,700.

AGENCY CONTRIBUTIONS AND LONGEVITY COMPENSATION

For agency contributions for employee benefits and longevity compensation, as authorized by law, $7,785,000.

For an additional amount for "agency contributions and longevity compensation", fiscal year 1978, $785,000.

OFFICE OF THE LEGISLATIVE COUNSEL OF THE SENATE

For salaries and expenses of the Office of the Legislative Counsel of the Senate, $815,000.

For an additional amount for "Office of the Legislative Counsel of the Senate", fiscal year 1978, $33,300.

CONTINGENT EXPENSES OF THE SENATE

SENATE POLICY COMMITTEES

For salaries and expenses of the Majority Policy Committee and the Minority Policy Committee, $694,000 for each such committee; in all, $1,388,000.

For an additional amount for "Senate Policy Committees", fiscal year 1978, $93,500.

AUTOMOBILES AND MAINTENANCE

For purchase, lease, exchange, maintenance, and operation of vehicles, one for the Vice President, one for the President pro tempore, one for the Majority Leader, one for the Minority Leader, one for the Majority Whip, one for the Minority Whip, for carrying the mails, and for official use of the offices of the Secretary and the Sergeant at Arms and Doorkeeper, $58,000.

INQUIRIES AND INVESTIGATIONS

For expenses of inquiries and investigations ordered by the Senate, or conducted pursuant to section 134(a) of Public Law 601, Seventy-ninth Congress, as amended, including $740,881 for the Committee on Appropriations, to be available also for the purposes mentioned in Senate Resolution Numbered 193, agreed to October 14, 1943, and Senate Resolution Numbered 140, agreed to May 14, 1975, $30,625,000.

For an additional amount for "Inquiries and Investigations", fiscal year 1978, $1,553,800.

FOLDING DOCUMENTS

For the employment of personnel for folding speeches and pamphlets at a gross rate of not exceeding $4.57 per hour per person, $103,000.

For an additional amount for "Folding Documents", fiscal year 1978, $7,600.

MISCELLANEOUS ITEMS

For miscellaneous items, $29,443,000.

For an additional amount for "Miscellaneous Items", fiscal year 1978, $4,015,500.

POSTAGE STAMPS

For postage stamps for the offices of the Secretaries for the Majority and Minority, $420; Chaplain, $200; and for air mail and special delivery postage for the office of the Secretary, $3,925; office of the Sergeant at Arms and Doorkeeper, $240; and the President of the Senate, as authorized by law, $1,215; in all, $6,000.

STATIONERY (REVOLVING FUND)

For stationery for the President of the Senate, $4,500, and for committees and officers of the Senate, $34,500; in all $39,000.

ADMINISTRATIVE PROVISIONS

SEC. 101. Any funds appropriated under the heading "Senate" in any appropriation Act for the fiscal year ending September 30, 1978, and any funds made available for obligation through September 30, 1978, by section 109 of the Supplemental Appropriations Act, 1977, shall remain available for obligation through September 30, 1979, for the same purposes for which appropriated or made available.

SEC. 102. Effective October 1, 1978, the number of employees in the Office of the Legislative Counsel of the Senate who may be designated as, and receive the compensation of, a Senior Counsel is increased to five.

SEC. 103. Effective on the first day of the first month following the date of the enactment of this Act, the Secretary of the Senate may appoint and fix the compensation of two Senior Assistants, Document Room at not to exceed $14,678 per annum each in lieu of two Assistants in Document Room at not to exceed $14,678 per annum each; a Senior Assistant, Document Room at not to exceed $14,678 per annum in lieu of an Assistant at not to exceed $13,246 per annum, a Senior Assistant, Document Room at not to exceed $14,678 per annum in lieu of an Assistant at not to exceed $12,530 per annum; two Senior Assistants, Document Room at not to exceed $14,678 per annum each in lieu of two Assistants at not to exceed $12,172 per annuam each; an Assistant, Document Room at not to exceed $12,530 per annum in lieu of a Reference Assistant at not to exceed $14,678 per annum; three Assistants, Document Room at not to exceed $12,530 per annum each in lieu of three Assistants in Document Room at not to exceed $14,678 per annum each; a Chief Messenger, Library at not to exceed $13,962 per annum in lieu of a Chief Messenger in Library at not to exceed $13,246 per annum; a Messenger, Library at not to exceed $13,246 per annum in lieu of a Messenger at not to exceed $13,962 per annum; and three Counter Clerks, Stationary Room at not to exceed $14,678 per annum each in lieu of three Clerks at not to exceed $14,678 per annum each: *Provided*, That an employee serving as an Assistant in Document Room at not to exceed $14,678 per annum on the last day of the month in which this Act is enacted and who continues to serve as an Assistant, Document Room, after such last day may be paid compensation at not to exceed $14,678 per annum so long as such employee continuously serves in such position.

SEC. 104. (a) Effective April 1, 1978, the clerk-hire allowance of each Senator from the State of Georgia is increased to that allowed Senators from States having a population of five million but less than seven million, the population of said State having exceeded five million inhabitants.

(b) Effective April 1, 1978, the table contained in section 105(d)(1) of the Legislative Branch Appropriation Act, 1968, as amended and modified (2 U.S.C. 61–1(d)(1)), is amended by striking out

"$644,937 if such population is 7,000,000 but less than 9,000,000;

and inserting in lieu thereof

"$644,937 if such population is 7,000,000 but less than 8,000,000;

"664,627 if such population is 8,000,000 but less than 9,000,000;".

SEC. 105. (a) For the period beginning on October 1, 1978, and ending on December 31, 1980, there is established within the Office of the Secretary of the Senate an office to be known as the "Office of Classified National Security Information" (hereafter in this section referred to as the "Office"). The Office shall be under the policy direction of the Majority Leader, the Minority Leader, and the chairman of the committee on Rules and Administration of the Senate, and shall be under the administrative direction and supervision of the Secretary of the Senate. The Office shall have the responsibility for safeguarding such restricted data and such other classified information as any committee of the Senate may from time to time assign to it.

(b) The Office shall have authority—

(1) upon application of any committee of the Senate, to perform the administrative functions necessary to classify and declassify information relating to the national security considerations of nuclear technology in accordance with guidelines developed for restricted data by the responsible executive agencies;

(2) to provide appropriate facilities for hearings of committees of the Senate at which restricted data or other classified information is to be presented or discussed; and

(3) to establish and operate a central repository in the United States Capitol for the safeguarding of restricted data and other classified information for which such Office is responsible.

(c) All records, documents, and data in the custody of the Office of Classified National Security Information established by section 2 of Senate Resolution Numbered 252, Ninety-fifth Congress, are transferred to the Office established by subsection (a).

(d) As an exercise of the rulemaking power of the Senate, section 2 of Senate Resolution Numbered 252, Ninety-fifth Congress, is repealed effective October 1, 1978.

SEC. 106. Section 117 of the Second Supplemental Appropriations Act, 1976 (2 U.S.C. 61f–1a), is amended by striking out "$10,000" and inserting in lieu thereof "$25,000".

SEC. 107. During the fiscal year ending September 30, 1979, amounts required to be deposited in the Treasury of the United States to the credit of the Civil Service Retirement and Disability Fund under section 8344 of title 5, United States Code, with respect to any officer or employee of the Senate (including an employee in the office of a Senator) shall be paid from the contingent fund of the Senate. Effective October 1, 1979, amounts required to be so deposited with respect to any individual who is an officer or employee of the Senate (including an employee in the office of a Senator) on September 30, 1979, shall be paid from the contingent fund of the Senate so long as the individual serves continuously as an officer or employee of the Senate.

SEC. 108. (a) Section 506 of the Supplemental Appropriations Act, 1973 (2 U.S.C. 58), is amended by redesignating subsections (h) through (j) as subsections (i) through (k), respectively, and by inserting after subsection (g) the following new subsection:

"(h)(1) For purposes of subsections (a) and (e), an individual who is selected by a Senator to serve on a panel or other body to make recommendations for nominees to one or more Federal judgeships or to one or more service academies shall be considered to be an employee in the office of that Senator with respect to travel and official expenses incurred in performing duties as a member of such panel or other body, and shall be reimbursed (A) for actual transportation expenses and per diem expenses (but not exceeding actual travel expenses) incurred while traveling in performing such duties within the Senator's home State or between that State and Washington, District of Columbia, and each of the service academies (B) for official expenses incurred in performing such duties. For purposes of this subsection and subsection (a), 'official expenses' means expenses of the type for which reimbursement may be made under subsection (a)(9) when such expenses are incurred by or on behalf of a Senator, and, for accounting purposes, such expenses shall be treated as expenses for which reimbursement may be made under subsection (a)(5).

"(2) The amount of official expenses incurred by individuals selected by a Senator for which reimbursement may be made under this subsection shall not exceed $500 each calendar year, and the total amount of expenses incurred by such individuals for which reimbursement may be made under this subsection shall not exceed $3,000 each calendar year.".

(b) The amendment made by subsection (a) shall take effect on January 1, 1978.

SEC. 109. (a) Effective with the fiscal year beginning October 1, 1978, and each fiscal year thereafter, the appropriations for "OFFICE OF THE SECRETARY" and "OFFICE OF SERGEANT AT ARMS AND DOORKEEPER" under the heading "SALARIES, OFFICERS AND EMPLOYEES" shall be available for the payment of additional annual compensation (hereinafter referred to as "merit compensation") to employees rated as outstanding and exceptional by the Secretary of the Senate and Sergeant at Arms and Doorkeeper, respectively.

(b) Subject to the provisions of subsections (c) and (d), each fiscal year, the Secretary of the Senate may authorize merit compensation for not to exceed 8 employees of his Office and the Sergeant at Arms and Doorkeeper may authorize merit compensation for not to exceed 18 employees of his Office. Each such authorization shall continue in effect until it is terminated or changed by the Secretary of the Senate or the Sergeant at Arms and Doorkeeper, as the case may be.

(c) No employee shall be eligible to receive merit compensation unless such employee has occupied the same position for at least two years and is being compensated at the maximum annual salary for the position so occupied, except that, in the discretion of the Secretary of the Senate or the Sergeant at Arms and Doorkeeper, as the case may be, an employee who is receiving merit compensation and is transferred to another position in which he is compensated at the maximum annual salary shall be eligible to receive merit compensation while occupying such other position.

(d)(1) The amount of merit compensation which may be paid to an employee (as authorized by the Secretary of the Senate or the Sergeant at Arms and Doorkeeper, as the case may be) shall not exceed an amount equal to ten percent of the maximum annual rate of compensation of the position occupied by such employee rounded to the next highest multiple contained in section 1(a) of the applicable Order of the President pro tempore of the Senate issued under authority of section 4 of the Federal Pay Comparability Act of 1970.

(2) The amount of merit compensation which may be paid to an employee, when added to his regular annual compensation and his longevity compensation, shall not exceed the maximum annual compensation which may be paid to Senate employees generally as prescribed by law or orders of the President pro tempore issued under authority of section 4 of the Federal Pay Comparability Act of 1970.

(e) Within thirty days following the end of each fiscal year, the Secretary of the Senate and the Sergeant at Arms and Doorkeeper shall file reports with the Senate Committee on Appropriations detailing the use and implementation of the authority contained in this section. Such reports shall include the means of all employees receiving merit compensation under authority of this section at the end of the fiscal year, the positions occupied by them, and the date when each such employee first began to receive merit compensation.

SEC. 110. (a) Subsection (a) and (b) of section 106 of the Legislative Branch Appropriations Act, 1963 (2 U.S.C. 60j), are amended to read as follows:

"SEC. 106 (a) This section shall apply to—

"(1) each employee of the Senate whose compensation is paid from the appropriation for Salaries, Officers and Employees under the following headings:

"(A) Office of the Secretary, including individuals employed under authority of section 244 of the Legislative Reorganization Act of 1946 (2 U.S.C. 74b);

"(B) Office of the Sergeant at Arms and Doorkeeper, except employees designated as 'special employees'; and

"(C) Offices of the Secretaries for the Majority and the Minority;

"(2) each employee of the Senate authorized by Senate resolution to be appointed by the Secretary of the Senate or the Sergeant at Arms and Doorkeeper, except employees designated as 'special employees'; and

"(3) each employee of the Capitol Guide Service established under section 441 of the Legislative Reorganization Act of 1970.

"(b)(1) Except as provided in paragraph (2), an employee to whom this section applies shall be paid, during any period of continuous creditable service, additional annual compensation (hereinafter referred to as 'longevity compensation') at the rate of two times the multiple contained in section 1(a) of the applicable Order of the President pro tempore of the Senate issued under authority of section 4 of the Federal Pay Comparability Act of 1970 for (A) each year of creditable service performed for the first five years and (B) each two years of creditable service performed during the twenty-year period following the first five years.

"(2) The amount of longevity compensation which may be paid to an employee, when added to his regular annual compensation, shall not exceed the maximum annual compensation which may be paid to Senate employees generally as prescribed by law or orders of the President pro tempore issued under authority of section 4 of the Federal Pay Comparability Act of 1970.

"(3) For purposes of this section—

"(A) creditable service includes (i) service performed as an employee described in subsection (a), (ii) service performed as a member of the Capitol Police or as an employee of the United States Capitol Telephone Exchange while compensation therefor is disbursed by the Clerk of the House of Representatives, and (iii) service which is creditable for purposes of this section as in effect on the last day of the month in which the Legislative Branch Appropriation Act, 1979, is enacted;

"(B) in computing length of continuous creditable service, only creditable service performed subsequent to August 31, 1957, shall be taken into account, except that, in the case of service as an employee employed under authority of section 244 of the Legislative Reorganization Act of 1946, only creditable service performed subsequent to January 2, 1971, shall be taken into account; and

"(C) continuity of creditable service shall not be deemed to be broken by separations from service of not more than thirty days, by the performance of service as an employee (other than an employee subject to the provisions of this section) whose compensation is disbursed by the Secretary of the Senate or the Clerk of the House of Representatives, or by the performance of active military service in the armed forces of the United States, but periods of such separations and service shall not be creditable service.

"(4) Longevity compensation shall be payable on and after the first day of the first month following completion of each period of creditable service upon which such compensation is based.".

(b) The amendment made by subsection (a) shall take effect on the first day of the first month which begins after the date of the enactment of this Act. The gross compensation of employees entitled to longevity compensation on such first day under section 106 of the Legislative Branch Appropriation Act, 1963, shall be adjusted in accordance with the provisions of such section as amended by subsection (a). No increase in compensation by reason of such amendment shall take effect for any pay period beginning before such first day, and no monetary benefit by reason for such amendment shall accrue for any period before such first day.

MOTION OFFERED BY MR. BENJAMIN

Mr. BENJAMIN. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. BENJAMIN moves that the House recede from its disagrement to the amendment of the Senate numbered 1 through 39 inclusive and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 45: Page 47, line 20, insert:

SENATE OFFICE BUILDINGS

For maintenance, miscellaneous items and supplies, including furniture, furnishings, and equipment, and for labor and material incident thereto, and repairs thereof; for purchase of waterproof wearing apparel, and for personal and other services; for the care and operation of the Senate Office Buildings; including the subway and subway transportation systems connecting the Senate Office Buildings with the Capitol; uniforms or allowances therefor as authorized by law (5 U.S.C. 5901–5902), prevention and eradication of insect and other pests without regard to section 3709 of the Revised Statutes as amended; to be expended under the control and supervision of the Architect of the Capitol in all $10,328,600, of which $210,000 shall remain available until expended.

MOTION OFFERED BY MR. BENJAMIN

Mr. BENJAMIN. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. BENJAMIN moves that the House recede from its disagreement to the amendment of the Senate numbered 45 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 46: Page 48, line 9, insert:

SENATE GARAGE

MOTION OFFERED BY MR. BENJAMIN

Mr. BENJAMIN. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. BENJAMIN moves that the House recede from its disagreement to the amendment of the Senate numbered 46 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 47: Page 51, line 3, insert: "Hereafter, notwithstanding any other provision of law, appropriations for the automatic distribution to Senators and Representatives (including Delegates to Congress and the Resident Commissioner from Puerto Rico) of the bound and biweekly Congressional Records shall not be available with respect to any Senator or Representative unless such Senator or Representative specifically, in writing, requests that he or she receive copies of such Records.".

MOTION OFFERED BY MR. BENJAMIN

Mr. BENJAMIN. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. BENJAMIN moves that the House recede from its disagreement to the amendment of the Senate numbered 47 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the last amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 52: Page 65, line 13, insert:

SEC. 310. (a) The provisions of subsections (a) and (b) of section 106 of the Legislative Branch Appropriation Act, 1963 (as amended by section 110 of this Act), shall apply to telephone operators (including the chief operator and assistant chief operators) on the United States Capitol telephone exchange and members of the Capitol Police whose compensation is disbursed by the Clerk of the House of Representatives in the same manner and to the same extent as such provisions apply to individuals whose compensation is disbursed by the Secretary of the Senate. For purposes of so applying such subsections, creditable service shall include service performed as an employee of the United States Capitol telephone exchange or a member of the Capitol Police whether compensation therefor is disbursed by the Clerk of the House of Representatives or the Secretary of the Senate.

MOTION OFFERED BY MR. BENJAMIN

Mr. BENJAMIN. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. BENJAMIN moves that the House recede from its disagreement to the amendment of the Senate numbered 52 and concur therein.

The motion was agreed to.

A motion to reconsider the votes by which action was taken on the conference report and on the several motions was laid on the table.

GENERAL LEAVE

Mr. BENJAMIN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days within which to revise and extend their remarks on the conference report just agreed to, and that I be permitted to include a table summarizing the House action, as well as to insert other extraneous material.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Indiana?

There was no objection.

CONFERENCE REPORT ON H.R. 12927, MILITARY CONSTRUCTION APPROPRIATIONS

Mr. McKAY. Mr. Speaker, I call up the conference report on the bill (H.R. 12927) making appropriations for military construction for the Department of Defense for the fiscal year ending September 30, 1979, and for other purposes, and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Utah?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see Proceedings of the House of August 15, 1978.)

Mr. McKAY (during the reading). Mr. Speaker, I ask unanimous consent to dispense with further reading of the statement.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Utah?

There was no objection.

GENERAL LEAVE

Mr. McKAY. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days within which to revise and extend their remarks and to include extraneous matter on the conference report and on the Senate amendments.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Utah?

There was no objection.

The SPEAKER pro tempore. The gentleman from Utah (Mr. McKAY) will be recognized for 30 minutes, and the gentleman from New York (Mr. McEWEN) will be recognized for 30 minutes.

The Chair recognizes the gentleman from Utah (Mr. McKAY).

Mr. McKAY. Mr. Speaker, I yield myself such time as I may consume.

We are presenting today the conference report on H.R. 12927, providing for military construction for fiscal year 1979. The conference agreement provides $3,880,863,000, which is $372 million below the President's request and only $36 million above the House version of the bill. The amount recomended is a 9-percent reduction.

Although there have been a series of changes made by the conferees, which are all listed in the conference report and the statement of the managers, we were able to bring the conference agreement back substantially below the President's requested level in accordance with the sentiment of the House when it passed the bill earlier this year.

In spite of the fact that the amount recommended for appropriation is considerably below the requested level, we have provided in this bill for the most critical and important construction projects to maintain the operational readiness of our Armed Forces. In this context, I would like to highlight some of the major proposals included in the conference agreement:

For NATO, we are recommending appropriations that sustain the House position that a greater share of the burden of funding NATO should be borne by NATO allies and that the U.S. contribution to NATO should be in the context of the mutually funded infrastructure program rather than through unilateral U.S. funding of facilities.

For the Reserve Components, the committee agreed to fund increases above the President's request up to the authorized level. The committee has felt that, with a very large backlog of construction requirements, there is a need to proceed now with reserve component construction. The projects included above the requested level are for facilities that are designed and ready to go to construction in fiscal year 1979.

For the Navy, the conference agreement provides for all major projects added by the Congress to upgrade the naval shipyards. These are essential to the continuing ability of the Navy to maintain the fleet in a high state of operational readiness.

For pollution abatement and energy conservation, the conferees agreed to continue the initiatives begun last year by the Congress to assure that military installations are not contributing to air or water pollution and are, in every way, energy efficient. The conference agreement emphasizes the need for defense installations to improve their safety programs as the Federal Government has required the private sector to do.

Military medical programs have been endorsed by the conference agreement and provide for two new major hospitals, additions to two others, and the construction of 14 dental clinics.

In summary, therefore, this conference agreement, while it shows a substantial reduction below the President's request, provides for the most important military construction projects proposed this year and recognizes congressional initiatives and priorities. It is in conformance with the authorization agreement.

There are three members, Mr. McEWEN, Mr. FLYNT, and Mr. CEDERBERG, excepting to the report language on the Panama Canal in the statement of the managers.

Mr. Speaker, I should like to include at this point in the RECORD a comparative tabulation of the conference action:

COMPARATIVE STATEMENT OF NEW BUDGET AUTHORITY

[Fiscal years]

	New budget authority					Conference compared with—			
	Enacted, 1978	Estimates, 1979	House, 1979	Senate, 1979	Conference, 1979	1978 enacted	1979 estimate	House bill	Senate bill
Planning and design	219,812,000	198,450,000	186,450,000			−219,812,000	−198,450,000	−186,450,000

Mr. McEWEN. Mr. Speaker, the chairman of our subcommittee has ably summarized what is in this conference report and what has been agreed to with the Senate. The minority concurs with everything the gentleman from Utah has said. I will take no further time of the House.

Mr. LAGOMARSINO. Mr. Speaker, will the gentleman yield?

Mr. McEWEN. I yield to the the gentleman from California.

Mr. LAGOMARSINO. I thank the gentleman for yielding.

I would like to ask the chairman of the subcommittee a question, if I might. During the discussion of the bill when it passed the House I engaged in a colloquy with the chairman about the Vandenberg Air Force Base space shuttle program.

Mr. McKAY. Yes.

Mr. LAGOMARSINO. I would like to ask the gentleman what funds are included in the conference report with respect to that item.

Mr. McKAY. The conference committee agreed to insert sufficient appropriations to accommodate the total request with the exception of the runway which is not needed in fiscal year 1979, and there will be at least a 6-month gap when the runway will sit unused and with no equipment in place. It was the feeling of the conference committee that we need not fund the runway this year. It is the feeling of the conference committee however that the request for the essential shuttle facilities at that base are needed in connection with the shuttle mission, and it is just a matter of timing rather than the need for the items.

Mr. LAGOMARSINO. I thank the gentleman.

Mr. McEWEN. Mr. Speaker, may I inquire of the gentleman from Utah (Mr. McKAY) whether or not in his remarks he made any reference to exceptions to the language regarding the Panama Canal?

Mr. McKAY. In my remarks, which will be revised and extended, I made reference to the exceptions to the language that three Members had relative to the conference report itself.

Mr. McEWEN. I thank the chairman.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield?

Mr. McKAY. I yield to the gentleman from Maryland.

Mr. BAUMAN. Mr. Speaker, I certainly am not going to oppose the conference report, but it is my understanding when the bill passed here there was a restriction stated in the report on the spending of military funds in the Panama Canal Zone. I notice in the conference statement at least three Members have excepted to the language of the conference report regarding our funds. Reading on page 3, it appears to me that the conference committee may have given the military a blank check, so to speak, along with the President of the United States, to spend money before it is actually appropriated for specific purposes and for carrying out the canal treaties. It seems to me that is a circumvention of the appropriation process the House ought not to permit.

Mr. McKAY. Let me respond to the gentleman's inquiry.

I believe that the House has upheld the committee's intent when it was considered by the House originally. We could, when we came to the floor, have made no mention of the fact that the President, under his emergency construction authority and using funds already appropriated for that purpose, could have proceeded as he chose. When we came to the floor of the House, we said we did not think that was right and we thought the House should be apprised of anything of this type. Therefore we wrote language specifically designating that the administration, if there was any construction to be done, emergency or otherwise, should come back to the House with those requests to have the committee reaction, and so forth.

We changed that language slightly in conference to bring agreement back between the House and the Senate. Otherwise, we would have wound up with two different instructions from the House and the Senate. What we have done is to say that the administration has to come back to us. Otherwise, they would have been able to act by themselves with congressional review.

The language on page 3 of the conference report says:

Panama Canal: The conferees agree that funding for military construction in the Panama Canal Zone should be the subject of review by the House and the Senate, but that limited prior approval reprogramming of emergency construction required for the realignment of military installations consistent with the responsibility of the United States to defend the canal and provide for the security of U.S. personnel may be necessary before a budget amendment or supplemental could be acted on by the Congress. In such event, the requirement and emergency nature of such construction must be certified by the President of the United States before submission to the Committees on Appropriations of the House and Senate.

So what we have done is instruct them that they must come back here in order to get approval so that we as a committee could recommend approval or disapproval. Otherwise, it is our feeling that they could do it without us, and we thought we ought to have some hold on them.

Mr. BAUMAN. The House committee report contained a specific statement of the position of the House, which said that no money was to be spent for the purpose of implementing the Panama Canal Treaties unless the armed services came before the Committee on Appropriations, and justified the expenditure. Do I understand that by the conference agreement they still must do that?

Mr. McKAY. Yes, the gentleman understands the law. The Supreme Court decision on the Tellico Dam says that language in a report is not law and therefore is not commanding. It is our understanding and it is our full intent that any reprograming shall come for an approval to this committee. That is our full intent, and I think that is what this language says.

Mr. BAUMAN. I would say to the gentleman further that it does not appear to me that there exists any emergency situation in the Army, Air Force, or various other installations in the Panama Canal Zone to starting the implementation of the treaties, is not an emergency in my view that should require circumventing the appropriation process.

Mr. McKAY. That is the reason why we have instructed them on any of those things to come back to the committee before they attempt to do any such thing and justify to us that these items are an emergency; otherwise, it is the intent of the committee very clearly to turn them down.

Mr. BAUMAN. I hope the intent of the gentleman is carried out and that the military agencies realize the restrictions of the House and the intent of the House that no funds be spent for treaty implementation unless we approve them.

Mr. McKAY. As the gentleman knows, the makeup of this committee is not pro-canal giveaway, so to speak, so I think that anything that comes back to this committee is going to get absolutely thorough scrutiny before it is approved.

Mr. BAUMAN. I would say to the gentleman that his committee is one of the more magnificent subcommittees of the Committee on Appropriations.

Mr. HANSEN. Mr. Speaker, will the gentleman yield?

Mr. McKAY. I yield to the gentleman from Idaho.

Mr. HANSEN. I have asked the gentleman to yield so as to further question the gentleman on this matter.

As I understand it, in the military procurement authorization bill there is a restriction against any of the funds being used to implement the treaties without specific authorization by the Congress. Is that correct?

Mr. McKAY. I think the language of the Defense authorization act was much broader and much more liberal in its interpretations than our report language is. Of course, ours is strictly just report language of instruction. But the language of the Committee on Armed Services is much broader in its application, and they could proceed with implementation, if I read it correctly, in the authorization bill that passed the House and Senate. I will read it to you if you would like, it is in section 813, and it says:

> The Senate conferees offered an amendment which would restrict expenditure of funds authorized to be appropriated in this Act for the realignment of any military installation in the Canal Zone to such use as is consistent with the responsibility of and the necessity for the United States to defend the Panama Canal or with legislation which may be enacted to implement the Panama Canal Treaties of 1978. The House conferees concurred.

That, of course, was passed in the prior authorization bill.

Mr. HANSEN. If the gentleman will yield further, the gentleman feels what is here in the conference report is in that spirit?

Mr. McKAY. Our instruction is much more restrictive.

Mr. HANSEN. I appreciate it is more restrained.

One other question, there is no attempt here to, in a sense, legislate in an appropriation, and it is just a further clarification, is that correct?

Mr. McKAY. What it is is the committee sending instructions to the administration as to what we feel they should do before any funds are to be used in the Canal Zone—that they should come with justification to this committee.

Mr. HANSEN. One other point. I feel that it is important for the gentleman to understand and for this body to understand that the General Accounting Office, which was apprised of the fact that there has been apparently some juggling of funds to preimplement the Panama Canal treaties, has inspectors on the spot in Panama at this time to look into this particular matter and also has attorneys looking into what is going on at the Pentagon.

I think it is appropriate that the House knows that this is happening, and certainly I hope that this legislation is in keeping with the situation which has caused this investigation. As soon as the results are known, we will make them public.

I appreciate the gentleman's willingness to answer questions in this regard.

Mr. McKAY. Mr. Speaker, I thank the gentleman.

Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. ROUSSELOT. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 355, nays 24, not voting 53, as follows:

Mrs. Lloyd of Tennessee with Mr. McDonald.
Mr. Mikva with Mr. Holland.
Mr. Stokes with Mr. Hagedorn.
Mr. Clay with Mr. Schulze.
Mr. Ireland with Mrs. Smith of Nebraska.
Mr. Miller of California with Mr. Barnard.
Mr. Fascell with Mr. Eckhardt.
Mr. Fountain with Mr. Fraser.
Mr. Pattison of New York with Mr. Nix.
Mr. Sikes with Mr. Evans of Colorado.
Mr. Shipley with Mr. Harrington.
Mr. Risenhoover with Mr. Leggett.
Mr. Tsongas with Mr. Milford.
Mr. Charles H. Wilson of California, with Mr. Steiger.
Mr. Jenkins with Mr. Teague.
Mr. Flynt with Mr. Sisk.
Mr. Dicks with Mr. Fowler.
Mr. Huckaby with Mr. Pritchard.
Mr. Stangeland with Mr. Young of Alaska.

Mr. ARMSTRONG changed his vote from "nay" to "yea."

Mr. COLLINS of Texas changed his vote from "yea" to "nay."

So the conference report was agreed to.

The result of the vote was announced as above recorded.

AMENDMENTS IN DISAGREEMENT

The SPEAKER pro tempore. The Clerk will report the first amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 3: Page 2, line 20, strike out "1983" and insert "1983: *Provided*, That of this amount, not to exceed $67,400,000 shall be available for study, planning, design, architect and engineer services, as authorized by law, unless the Secretary of Defense determines that additional obligations are necessary for such purposes and notifies the Committees on Appropriations for both Houses of Congress of his determination and the reasons therefor".

MOTION OFFERED BY MR. M'KAY

Mr. McKAY. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. McKAY moves that the House recede from its disagreement to the amendment of the Senate numbered 3 and concur therein with an amendment, as follows:

In lieu of the matter proposed by said amendment, insert: "1983: *Provided*, That of this amount, not to exceed $64,400,000 shall be available for study, planning, design, architect and engineer services, as authorized by law, unless the Secretary of Defense determines that additional obligations are necessary for such purposes and notifies the Committees on Appropriations for both Houses of Congress of his determination and the reasons therefor".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 5: Page 3, line 5, strike out "1983" and insert "1983: *Provided*, That of this amount, not to exceed $49,300,000 shall be available for study, planning, design, architect and engineer services, as authorized by law, unless the Secretary of Defense determines that additional obligations are necessary for such purposes and notifies the Committees on Appropriations of both Houses of Congress of his determination and the reasons therefor".

MOTION OFFERED BY MR. M'KAY

Mr. McKAY. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. McKAY moves that the House recede from its disagreement to the amendment of the Senate numbered 5 and concur therein with an amendment, as follows:

In lieu of the matter proposed by said amendment, insert: "1983: *Provided*, That of this amount, not to exceed $46,300,000 shall be available for study, planning, design, architect and engineer services, as authorized by law, unless the Secretary of Defense determines that additional obligations are necessary for such purposes and notifies the Committees on Appropriations of both Houses of Congress of his determination and the reasons therefor".

The motion was agreed to.

The SPEAKER, pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 7: Page 3, line 13, strike out "1983" and insert "1983: *Provided*, That of this amount, not to exceed $55,000,000 shall be available for study, planning, design, architect and engineer services, as authorized by law, unless the Secretary of Defense determines that additional obligations are necessary for such purposes and notifies the Committees on Appropriations of both Houses of Congress of his determination and the reasons therefor".

MOTION OFFERED BY MR. M'KAY

Mr. McKAY. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. McKAY moves that the House recede from its disagreement to the amendment of the Senate numbered 7 and concur therein with an amendment, as follows: In lieu of the matter proposed by said amendment, insert: "1983: *Provided*, That of this amount, not to exceed $52,000,000 shall be available for study, planning, design, architect and engineer services, as authorized by law, unless the Secretary of Defense determines that additional obligations are necessary for such purposes and notifies the Committees on Appropriations of both Houses of Congress of his determination and the reasons therefor".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 8: Page 4, line 23, strike out "$183,280,000" and insert "$173,780,000".

MOTION OFFERED BY MR. M'KAY

Mr. McKAY. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. McKAY moves that the House recede from its disagreement to the amendment of the Senate numbered 8 and concur therein with an amendment, as follows: In lieu of the sum proposed in said amendment, insert "$194,880,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No 9: Page 5, line 6, strike out "designate" and insert "designate: *Provided further*, That of the amount appropriated, not to exceed $11,400,000 shall be available for study, planning, design, architect and engineer services, as authorized by law, unless the Secretary of Defense determines that additional obligations are necessary for such purposes and notifies the Committees on Appropriations of both Houses of Congress of his determination and the reasons therefor".

MOTION OFFERED BY MR. M'KAY

Mr. McKAY. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. McKAY moves that the House recede from its disagreement to the amendment of the Senate numbered 9 and concur therein with an amendment, as follows: In lieu of the matter proposed by said amendment, insert: "designate: *Provided further*, That of the amount appropriated, not to exceed $9,400,000 shall be available for study, planning, design, architect and engineer services, as authorized by law, unless the Secretary of Defense determines that additional obligations are necessary for such purposes and notifies the Committees on Appropriations of both Houses of Congress of his determination and the reasons therefor".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 15: Page 5, line 24, strike out "$1,688,615,000" and insert "$1,701,605,000".

MOTION OFFERED BY MR. M'KAY

Mr. McKAY. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. McKAY moves that the House recede from its disagreement to the amendment of the Senate numbered 15 and concur therein with an amendment, as follows: In lieu of the sum proposed in said amendment, insert "$1,679,865,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 17: Page 6, line 6, strike out "$34,696,000" and insert "$43,451,000".

MOTION OFFERED BY MR. M'KAY

Mr. McKAY. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. McKAY moves that the House recede from its disagreement to the amendment of the Senate numbered 17 and concur therein with an amendment, as follows: In lieu of the sum proposed in said amendment, insert "$33,446,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 20: Page 6, line 13, strike out "$1,404,400,000" and insert "$1,414,400,000".

MOTION OFFERED BY MR. M'KAY

Mr. McKAY. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. McKAY moves that the House recede from its disagreement to the amendment of the Senate numbered 20 and concur therein

with an amendment, as follows: In lieu of the sum proposed in said amendment, insert "$1,399,400,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the last amendment in disagreement.

Senate amendment No. 21: Page 6, line 16, strike out "1983" and insert "1983: *Provided further*, That of the amounts appropriated for operation and maintenance, not less than $635,000,000 shall be available only for the maintenance of real property facilities".

MOTION OFFERED BY MR. M'KAY

Mr. McKAY. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. McKAY moves that the House recede from its disagreement to the amendment of the Senate numbered 21 and concur therein.

The motion was agreed to.

A motion to reconsider the votes by which action was taken on the conference report and on the several motions was laid on the table.

AUTHORIZING CLERK TO MAKE TECHNICAL CORRECTIONS IN ENGROSSMENT OF H.R. 12927

Mr. McKAY. Mr. Speaker, I ask unanimous consent that the Clerk be permitted to make technical corrections in the engrossment of the bill, H.R. 12927, on which the conference report was just agreed to.

The SPEAKER pro tempore (Mr. ROSTENKOWSKI). Is there objection to the request of the gentleman from Utah?

There was no objection.

PERMISSION FOR COMMITTEE ON WAYS AND MEANS TO HAVE UNTIL MIDNIGHT, FRIDAY, SEPTEMBER 1, 1978, TO FILE A REPORT ON H.R. 13817, AMENDING THE SOCIAL SECURITY ACT

Mr. VANIK. I ask unanimous consent that the Committee on Ways and means may have until midnight, Friday, September 1, 1978, to file a report on the bill, H.R. 13817, to amend the Social Security Act with respect to health programs authorized under it and for other purposes.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

PERMISSION FOR COMMITTEE ON WAYS AND MEANS TO HAVE UNTIL MIDNIGHT FRIDAY, SEPTEMBER 1, 1978, TO FILE A REPORT ON H.R. 11545

Mr. VANIK. Mr. Speaker, I ask unanimous consent that the Committee on Ways and Means may have until midnight, Friday, September 1, 1978, to file a report on the bill, H.R. 11545, to modify the method of determining quantitative limitations on the importation of certain articles of meat and meat products, to apply quantitative limitations on the importation of certain additional articles of meat, meat products, and livestock, and for other purposes, along with any separate or minority views.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

PERMISSION FOR COMMITTEE ON WAYS AND MEANS TO HAVE UNTIL MIDNIGHT, FRIDAY, SEPTEMBER 1, 1978, TO FILE A REPORT ON H.R. 13097, AMENDING CERTAIN PROVISIONS OF TITLE XVIII OF THE SOCIAL SECURITY ACT

Mr. VANIK. Mr. Speaker, I ask unanimous consent that the Committee on Ways and Means may have until midnight, Friday, September 1, 1978, to file a report on the bill H.R. 13097, to amend certain provisions of title XVIII of the Social Security Act as they relate to the medicare program established by part A of such title.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

PERMISSION FOR COMMITTEE ON WAYS AND MEANS TO HAVE UNTIL MIDNIGHT, FRIDAY, SEPTEMBER 1, 1978, TO FILE A REPORT ON H.R. 13814, AMENDING SECTION 8 OF PUBLIC LAW 93–233

Mr. VANIK. Mr. Speaker, I ask unanimous consent that the Committee on Ways and Means may have until midnight, Friday, September 1, 1978, to file a report on the bill H.R. 13814, to amend section 8 of Public Law 93–233 to permit California to continue cash payments to SSI recipients in lieu of food stamps.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, will the gentleman explain what this is?

Mr. VANIK. Mr. Speaker, if the gentleman will yield, I would ask the gentleman to yield to the gentleman from California (Mr. CORMAN), the chairman of the subcommittee, to respond to his question.

Mr. ROUSSELOT. I yield to my distinguished colleague, the gentleman from California (Mr. CORMAN).

Mr. CORMAN. Mr. Speaker, this bill will permit California to continue on a cash-out status for food stamps for their SSI recipients. The recipients will receive $10 in Federal funds in lieu of the $10 in Federal food stamps that they would otherwise be entitled to. We will save, with this bill, from $40 million to $75 million a year in administrative costs. One-half of that will be saved by the Federal Government and one-half of that will be saved by the State government.

Mr. ROUSSELOT. Mr. Speaker, further reserving the right to object, how much will we save on this bill?

Mr. CORMAN. If the gentleman will yield, somewhere between $40 million and $75 million.

Mr. ROUSSELOT. Mr. Speaker, I thank the gentleman for his explanation, and I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

PERMISSION FOR COMMITTEE ON GOVERNMENT OPERATIONS TO HAVE UNTIL MIDNIGHT FRIDAY, AUGUST 25, 1978, TO FILE SIX LEGISLATIVE REPORTS AND TWO OVERSIGHT REPORTS

Mr. BROOKS. Mr. Speaker, I ask unanimous consent that the Committee on Government Operations have until midnight Friday, August 25, to file six legislative reports and two oversight reports.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

PERSONAL EXPLANATION

Mr. DON H. CLAUSEN. Mr. Speaker, I was unavoidably detained at a meeting with staff of the Interior Committee on issues related to the Alaska oil. Because of this I arrived at the floor of the House just after the time had ended for a vote on the conference report for the legislative branch appropriations bill for 1979, H.R. 12935.

Had I been present I would have voted against the conference report as I did when it was on the House floor in June. While the bill contains some good provisions such as the freeze on salaries for Members of Congress, it is still far too expensive and contains numerous unnecessary and/or wasteful expenditures.

The legislative branch should be in the forefront of our efforts to balance the budget—not falling behind. I hope we can get our spending habits under control.

FURTHER MESSAGE FROM THE SENATE

A further message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed with an amendment in which the concurrence of the House is requested, a concurrent resolution of the House of the following title:

H. Con. Res. 696. Concurrent resolution providing for an adjournment of the House from August 17 to September 6, 1978.

CONFERENCE REPORT ON H.R. 13468, MAKING APPROPRIATIONS FOR THE GOVERNMENT OF THE DISTRICT OF COLUMBIA

Mr. NATCHER. Mr. Speaker, pursuant to the order of yesterday of the House of Representatives, I call up the conference report on the bill (H.R. 13468) making appropriations for the government of the District of Columbia and other activities chargeable in whole or in part against the revenues of said District for the fiscal year ending September 30, 1979, and for other purposes, and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of August 16, 1978.)

Mr. NATCHER. Mr. Speaker, I ask unanimous consent that further reading of the statement be dispsensed with.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

The SPEAKER pro tempore. The gentleman from Kentucky (Mr. NATCHER) will be recognized for 30 minutes, and the gentleman from California (Mr. BURGENER) will be recognized for 30 minutes.

The Chair recognizes the gentleman from Kentucky (Mr. NATCHER).

Mr. NATCHER. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the conference report now before us will provide the District of Columbia with total resources of $1,767,886,400 for the fiscal year 1979. Of this amount, $679,374,900 or 39 percent will be financed from Federal funds. The Federal payment for fiscal year 1979 as provided for in this conference report totals $235 million. This, Mr. Speaker, is the lowest Federal payment since 1975, and is $82 million below the budget request, $29 million below the bill as passed the House, and $3 million below the Senate proposal. The reduction below the House amount results mainly from additional revenues the city expects to collect from its new parking enforcement and traffic adjudication program which was not authorized at the time the House considered the bill. The conference agreement also provides $9,900,000 for the Federal share of the RFK Stadium bonds which become due on December 1, 1979. The city's share of $9,900,000 was included in the fiscal year 1978 bill.

As far as total Federal funds are concerned, Mr. Speaker, the bill provides $255,200,000, which is $140,916,000 below the request and $19,100,000 below the House bill.

Mr. Speaker, the conference agreement provides a total of $1,362,317,700 in District of Columbia funds including $1,285,102,700 in operating expenses and $77,215,000 for capital outlay. This is $66,124,300 below the amount requested in the budget, $14,132,600 above the House allowance and $2,463,800 below the amount included in the Senate version of the bill. In addition, Mr. Speaker, the conference agreement includes $21,341,500 in supplemental appropriations for fiscal year 1978. This is $6,064,600 less than the budget request and $588,600 below the amount provided by the Senate. The House did not consider the 1978 requests as they were submitted subsequent to House action on the bill.

The conference agreement includes new positions and additional funding to strengthen the city's efforts in child abuse prevention and enforcement, as well as the resources necessary to implement the new parking enforcement and traffic adjudication program. The conferees have denied the creation of five new agencies requested by the city and instead, have transferred the activities to the departments which are currently performing the functions. A total of $625,000 has been approved for the Advisory Neighborhood Commissions, an increase of $125,000 above the amount available for the current fiscal year.

Mr. Speaker, I will, at the appropriate time, request permission to insert at this point in the RECORD a tabulation summarizing the conference action.

The table referred to follows:

DISTRICT OF COLUMBIA APPROPRIATION BILL, 1979 (H.R. 13468)—CONFERENCE SUMMARY

Mr. Speaker, this is a good conference report and I urge its adoption.

Mr. BURGENER. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, it is a real privilege to serve under the inspiring and dedicated leadership of the gentleman from Kentucky (Mr. NATCHER).

Mr. Speaker, let me say that this particular conference report may not be greeted with wild enthusiasm by perhaps the elected officials of the District of Columbia, but it indeed should be greeted with great enthusiasm by the citizens and the taxpayers of the District of Columbia, because, as our chairman noted, this is the lowest Federal payment in about 12 years. This, in turn, can lower the burden on local citizens.

What does that really mean? If we continually escalate the Federal payment we continue to encourage the local government to add employees, and they have more employees per 10,000 population by far than any other place in the Nation, and that tends to build demand on the local taxpayers for more and more taxes.

So, Mr. Speaker, I think this particular budget is a real service not only to the taxpayers of the entire country but, more particularly, to the taxpayers and residents of the District of Columbia.

One of the basic reasons we can continue to provide a good level of service in the District of Columbia and still have a lower Federal payment is because we have a declining population both generally and in the schools. We have 4,000 fewer students per year in the schools. But, in addition to that, there is a business boom occurring in the District of Columbia, which we are all pleased about. Therefore the local taxes are much higher; local income taxes. sales taxes, licenses and fees of all kinds have been increased. That is what makes it possible for us to have a lower Federal payment and still provide the vital and necessary services.

Mr. Speaker, unless there are some questions, I urge my colleagues to fully support this, what I consider to be, a very austere but fully responsible conference report, since it covers all the essential services needed in the District of Columbia.

Mr. ASHBROOK. Mr. Speaker, will the gentleman yield?

Mr. NATCHER. I am pleased to yield to the gentleman from Ohio (Mr. ASHBROOK).

Mr. ASHBROOK. Mr. Speaker, I thank my good friend, the chairman, for yielding. The thing that catches my eye, and it is kind of a small item but rather interesting, is that on page 49 of the Senate report on the District of Columbia appropriation bill for 1979 it says, under the heading of dog pound:

> The Committee is concerned at the reports regarding rude and unresponsive behavior directed toward the public by the city employees who work at the Dog Pound. The Committee expects the employees at the Dog Pound and in fact all city employees to act responsibly and with courtesy in carrying out their duties to serve the public.

I would say over the years I do not think I can ever recall a reference to the dog pound in a bill.

I say in all seriousness that it must be pretty bad. I know we have a lot of dogs here in Congress, and most of them get voted on; but I did not know the problem in the District of Columbia was quite that acute.

Would my good friend and colleague comment on that?

Mr. NATCHER. Mr. Speaker, in answer to the distinguished gentleman from Ohio (Mr. ASHBROOK), I would like to say that the amount requested in the budget was $275,000 for renovations and an addition to the existing dog pound. After hearing the witnesses, our committee believed the amount was too much for what they were going to do so the request was denied. They have facilities now.

The language which the gentleman has just read is from the report prepared by the other body. The gentleman will be interested to know that the $275,000 requested was deleted.

Mr. ASHBROOK. Mr. Speaker, I thank my good friend, the gentleman from Kentucky (Mr. NATCHER). Those six lines did rather attract my attention. I am glad to get that information.

Mr. BURGENER. Mr. Speaker, if the chairman will yield, I would like to make one further comment. The manner in which the employees of the dog pound treat the dog owners really should be a matter of home rule, to be taken care of by the locally elected Council and Mayor and their constituents. It really is not that much of our business.

● Mr. STEERS. Mr. Speaker, I feel compelled to address a few brief remarks to my colleagues on the cuts which are proposed in this report in the Federal payment for the District of Columbia. The District of Columbia had requested, with the full support of the administration, a Federal payment of $317 million. This body chopped that justified request to $264 million. The other body lowered our figure to $238 million. Now, the conference committee brings a report to us which has further lowered the payment to $235 million, the lowest amount, according to an article in this morning's Washington Post, since 1967, measured as a percentage of the city's approved budget.

The Federal payment to the District of Columbia is not just some Federal dole to the city. It is not some kind of gift from a benevolent government to a territory. The Federal payment has existed from the time the District of Columbia was created not because the Federal Government loves to give away money, but because the District of Columbia deserves such a payment as a matter of right. Less than 40 percent of the property in the District is taxable, not because the District has done anything wrong, but because the Federal Government is present. No other city in the Nation faces such a problem.

The Federal payment is designed, in theory, to provide the city with revenues to make up for those revenues lost due to the Federal Government. It is not some gift to be taken away at our whim. It should never be used as a punitive measure. And yet, here we are considering a bill which proposes a payment lower than it has been in years.

And what is the so-called rationale for this dismally low payment? Because, we are told, the city is doing such a good job of collecting local revenues that they may make more money from local taxes this year than previously anticipated. In other words, the better job the city government does in collecting taxes, the more we "reward" it by drastically slashing the Federal payment.

What kind of incentive are we providing the local government to do a good job? Absolutely none.

What relationship does revenue collected from local residents have to revenue lost due to tax-free Federal property, diplomatic property, and other tax-free property? No relationship whatsoever.

Mr. Speaker, I pledge my every effort to help work out and get approval for a meaningful and permanent formula for the Federal payment for the future. I have introduced legislation to form a commission to determine, in as nonpolitical an atmosphere as possible, what that formula ought to be. My colleague from California, Mr. DELLUMS, has introduced legislation to actually set a formula at a given percentage of local revenues. Both approaches, and others, should be carefully reviewed and resolved so that this kind of shabby treatment of the District's legitimate needs is not repeated.●

Mr. NATCHER. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. RUDD. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 339, nays 31, not voting 62, as follows:

[Roll No. 719]

The Clerk announced the following pairs:

Mrs. Boggs with Mr. Armstrong.
Mr. Rodino with Mr. Frey.
Mr. Risenhoover with Mr. Sarasin.
Mr. Thompson with Mr. Young of Alaska.
Mr. Le Fante with Mr. Winn.
Mr. Preyer with Mrs. Smith of Nebraska.
Mr. Dent with Mr. Hagedorn.
Mr. Delaney with Mr. Cederberg.
Mr. Cornwell with Mr. Fraser.
Mr. Miller of California with Mr. Pritchard.
Mr. Fascell with Mr. Quie.
Mr. Flippo with Mr. Milford.
Mrs. Burke of California with Mr. Kasten.
Mr. Mikva with Mr. Holland.
Mr. Shipley with Mr. Diggs.
Mr. Sikes with Mr. Fowler.
Mr. Stokes with Mr. Charles H. Wilson of California.
Mr. Clay with Mr. Steiger.
Mr. Vento with Mr. Stangeland.
Mr. Traxler with Mr. Sisk.
Mr. Tsongas with Mr. Harrington.
Mr. Waxman with Mr. Dicks.
Mr. Yates with Mr. Evans of Colorado.
Mr. Rose with Mr. McDade.
Mr. Flowers with Mr. McDonald.
Mr. Nolan with Mr. Nix.
Mr. Teague with Mr. Jenkins.
Mr. Flynt with Mr. Huckaby.
Mr. Barnard with Mr. Fountain.
Mrs. Lloyd of Tennessee with Mr. Schulze.

Mr. ASHBROOK and Mr. RUDD changed their vote from "yea" to "nay."

So the conference report was agreed to.

The result of the vote was announced as above recorded.

AMENDMENTS IN DISAGREEMENT

The SPEAKER pro tempore. The Clerk will report the first amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 1: Page 2, line 25, strike out: "$264,000,000" and insert "$238,000,000,".

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 1 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$235,000,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 2: Page 3, line 8, insert: *"Provided,* That there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, $9,900,000, without fiscal year limitation, for the purposes of the sinking fund established by section 6(a) of the District of Columbia Stadium Act of 1957, as amended.".

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 2 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 4: Page 5, line 1, insert: "For an additional amount for "General operating expenses", fiscal year 1978, $2,719,400, including payments made pursuant to the Water and Sewer Repair and Compensation Act of 1976, D.C. Law 1-98, effective March 29, 1977.".

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 4 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 5: Page 5, line 11, strike out: "$266,473,800" and insert "$265,961,200,".

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 5 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$265,190,200".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 11: Page 7, line 11, insert: "For an additional amount for "Recreation", fiscal year 1978, $58,000.".

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 11 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 6: Page 6, line 4, insert "For an additional amount for "Public safety", fiscal year 1978, $889,700.".

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 6 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 13: Page 8, line 9, insert: "For an additional amount for "Human resources", fiscal year 1978, $8,086,000.".

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 13 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 18: Page 8, line 22, insert:

"For an additional amount for 'Transportation', fiscal year 1978, $1,082,200: *Provided further*, That authorization is hereby provided to the government of the District of Columbia to fund the additional cost of snow and ice removal out of funds heretofore appropriated to such government for fiscal year 1978 for Washington Metropolitan Area Transit Authority but not to exceed $1,254,700.".

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 18 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 19: Page 9; line 5, strike out "$72,962,500", and insert "$72,119,800".

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 19 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$72,069,800".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 20: Page 9, line 14, insert: "For an additional amount for "Environmental services", fiscal year 1978, $1,550,400.".

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 20 and concur therein with an amendment, as follows: In lieu of the sum named in said amendment, insert "$1,030,400".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 21: Page 21, insert: "For an additional amount for "Personal services", fiscal year 1978, $7,000,000".

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 21 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 25: Page 10, line 18, insert: "For an additional amount for "Repayment of loans and interest", for fiscal year 1978, $475,800.".

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 25 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 29: Page 18, line 8, insert:

SEC. 220. (a) No funds appropriated by this Act shall be available to pay any part of the salary of any employee of the government of the District of Columbia, or any department, agency, office, or other entity thereof, if any part of such employee's salary is paid from funds appropriated pursuant to the authority of the Comprehensive Employment and Training Act of 1973 (or successor statute), and the annual salary of such employee is in excess of that paid for the position of GS-9, step 1, under the General Schedule, under section 5332 of title 5, United States Code.

(b) Subsection (a) of this section shall take effect upon the expiration of the ninety-day period following the date of the enactment of this Act.

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 29 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 30: Page 18, line 21, insert:

SEC. 221. (a) No funds appropriated by this Act shall be available to pay any part of the salary of an employee of the government of the District of Columbia, or any department, agency, office, or other entity thereof, if any part of such employee's salary is paid from funds appropriated pursuant to the authority of the Comprehensive Employment and Training Act of 1973 (or successor statute), and has been so paid for an aggregate period of at least twenty-four calendar months.

(b) Subsection (a) of this section shall take effect upon the expiration of the ninety-day period following the date of the enactment of this Act.

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 30 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 31: Page 19, line 8, insert:

SEC. 222. (a) No funds appropriated by this Act shall be available to pay any part of the salary of any employee of the Council of the District of Columbia, or committee or subcommittee thereof, or any employee of any elected official of the government of the District of Columbia, if any part of the salary of any such employee is paid from funds appropriated pursuant to the authority of the Comprehensive Employment and Training Act of 1973 (or successor statute).

(b) Subsection (a) of this section shall take effect upon the expiration of the ninety-day period following the date of the enactment of this Act.

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 31 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement

The Clerk read as follows:

Senate amendment No. 32: Page 19, line 19, insert:

SEC. 223. No funds appropriated by this Act shall be available to pay any part of the salary of any individual hereafter employed by any department, agency, office, or other entity of the government of the District of Columbia, having ten or more employees, if, at the time of such employment, any part of the salary of more than ten per centum of the employees of such department, agency, office, or entity is paid partly from funds appropriated pursuant to the authority of the Comprehensive Employment and Training Act of 1973 (or successor statute), and partly from funds of the District of Columbia.

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 32 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the last amendment in disagreement

The Clerk read as follows:

Senate amendment No. 33: Page 20, line 5, insert:

SEC. 224. Notwithstanding any other provision of this Act, the provisions of sections 220, 221, 222, and 223 of this Act shall be deemed repealed upon the date of the enactment of the Act entitled "An Act to amend the Comprehensive Employment and Training Act of 1973, to provide improved employment and training services, to extend the authorization, and for other purposes.".

MOTION OFFERED BY MR. NATCHER

Mr. NATCHER. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. NATCHER moves that the House recede from its disagreement to the amendment of the Senate numbered 33 and concur therein with an amendment, as follows: In lieu of the matter proposed by said amendment, insert:

SEC. 224. Notwithstanding any other provision of this Act, the provisions of sections 220, 221, 222, and 223 of this Act shall be deemed repealed upon the date of the enactment of the Act entitled "An Act to amend the Comprehensive Employment and Training Act of 1973, to provide improved employment and training services, to extend the authorization, and for other purposes", or similar legislation.

The motion was agreed to.

A motion to reconsider the votes by which action was taken on the conference report and on the several motions was laid on the table.

GENERAL LEAVE

Mr. NATCHER. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the conference report on H.R. 13468, just agreed to, and that I be permitted to include a tabulation summarizing the action taken.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

PERMISSION FOR COMMITTEE ON SCIENCE AND TECHNOLOGY TO FILE CONFERENCE REPORT ON H.R. 11401, NASA AUTHORIZATION FOR FISCAL YEAR 1979

Mr. BROWN of California. Mr. Speaker, I ask unanimous consent that the Committee on Science and Technology may have until midnight tonight to file a conference report on H.R. 11401, the NASA authorization bill for fiscal year 1979.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

CONFERENCE REPORT ON S. 9, OUTER CONTINENTAL SHELF LANDS ACT AMENDMENTS OF 1978

Mr. MURPHY of New York. Mr. Speaker, I call up the conference report on the Senate bill (S. 9) to establish a policy for the management of oil and natural gas in the Outer Continental Shelf; to protect the marine and coastal environment; to amend the Outer Continental Shelf Lands Act; and for other purposes and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the Senate bill.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of August 10, 1978.)

Mr. MURPHY of New York (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the statement be dispensed with.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

The SPEAKER pro tempore. The gentleman from New York (Mr. MURPHY) will be recognized for 30 minutes, and the gentleman from New York (Mr. FISH) will be recognized for 30 minutes.

The Chair recognizes the gentleman from New York (Mr. MURPHY).

Mr. MURPHY of New York. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, today, I bring before you for consideration the conference report on S. 9 (H. Rept. 95–1474), a bill to amend the outmoded Outer Continental Shelf Lands Act of 1953 to establish a new statutory regime for the management of the oil and gas resources of the Outer Continental Shelf.

This report is almost identical to the bill passed by this House—this part February—by a vote of more than 3 to 1 (291 to 91). It is supported and was signed by 12 of the 14 House conferees and all but one of the Senate conferees. It is supported strongly by almost all coastal States, citizen groups and environmentalists. It is strongly supported and needed by smaller energy companies. It is considered by the Carter administration as one of the key energy/environmental bills of the 95th Congress.

This is not a new issue, but this conference report is much improved over that considered by the 94th Congress. And it is extremely important for the Nation that we expedite its approval.

Over 2 years ago, I came before the House to urge passage of H.R. 6218. After 10 hours of debate and consideration of some 80 amendments, that bill was passed by the House overwhelmingly by a margin of 247–140.

The bill then went to conference with the Senate-passed companion bill, S. 521, and a compromise bill was brought back to the House for consideration. Unfortunately, due to a number of factors including: A massive national lobbying campaign by big oil and other elements; the opposition of the Ford administration, which included the threat of a veto; a scheduling logjam on the House floor; and a threat of a Senate filibuster, the conference report was narrowly defeated.

Only this past February, I brought before the House for consideration a new version of the OCS bill, H.R. 1614. After hours of debate, and the consideration of over 70 amendments, that bill was again overpoweringly passed by the House by an even larger margin of 291 to 91. A vote to recommit the bill was resoundingly rejected. And I am happy to say that the House bill was supported by most of the minority members of the Ad Hoc OCS Committee, who continue to support and have signed the conference

report—so the conference report you have before you is largely a bipartisan effort.

From May to July of this year, the conferees conducted an extended conference of 11 sessions with countless amendments in order to hammer out a bill that would be acceptable to the House. I can truly say that we have successfully accomplished that and preserved almost all of the House version of the OCS bill including the critical provisions. Because of this effort, S. 9 is now acceptable to many of the previous opponents of this measure.

I do not believe that it is necessary at this point to report the story in detail.

I would, however, like to point out that we have, in the last 4 years, carefully examined the proposed OCS amendments and have made many changes which I feel have improved the bill significantly. As revised, the conference report will expedite OCS development by: Eliminating bureaucratic conflicts; reducing the possibility of frivolous lawsuits; minimizing present opposition to offshore development on the part of States and other interests; and insuring proper financial relief to coastal States, fishermen, and those affected by oil spills. The conference report will also insure a more open OCS policymaking process by involving States, and through the States local governments, and citizens. The conference report will insure safe OCS development by providing for increased environmental and worker-safety controls. In addition, it will enhance competition by providing for new bidding systems which will facilitate the entry of smaller energy companies.

Let me briefly discuss some of the important provisions of the conference report.

ALTERNATE BIDDING SYSTEMS

The Senate bill provided that during the next 5 years, bonus bids cannot be utilized in less than 50 percent of the leases offered in previously undeveloped areas. The House amendment provided that new bidding systems are to be utilized in no less than 20 percent and no more than 50 percent of the leases offered in lease sales held for all areas during the next 5 years. The conference report follows the House amendment with an almost negligible amendment.

Bidding systems other than bonus bidding, including royalty, net profit, work commitment, and nonenumerated systems, are to be utilized in at least 20 percent and not more than 60 percent of the tracts leased in all OCS areas during the next 5 years. So with respect to new bidding systems the conference report is virtually the same as the House provision, which was introduced by the minority on the House floor.

For all practical purposes, there is only one method in the present statute for awarding leases to Federal Outer Continental Shelf lands: bidding on the basis of up front cash bonuses. However, we are now in a period in which investment capital is tight, and we are asking that oil companies find and produce oil in areas they have never developed before. With money tight and the risks high, cash bonus bidding may no longer be the best system for the years ahead. We must spur competition among the oil companies in the bidding process. In doing so, we must strike a balance between a fair profit to the oil companies, which must risk their investment capital, and a fair return to the Federal Government as the owner of the leased lands. The conference report would provide alternative leasing arrangements, and would require the Department of the Interior to use them during the next 5 years so that we may work out the best arrangements for the future.

FEDERAL EXPLORATORY DRILLING

Under the House version the Federal Government itself was not authorized to engage in drilling activities. However, the Secretary of the Interior was specifically directed to offer permits for on-structure exploratory drilling.

The Senate version not only allowed Federal exploration per se, it mandated exploratory drilling if the Secretary determined that drilling was necessary to acquire more accurate information. The Conference report eliminates both the House provision for on-structure drilling and the Senate mandate for Federal exploration, regarding the general authority for Federal exploration, both Houses receded and the conference report maintains the language of the original 1953 act. The conferees' action does not represent any intention to limit, modify, or expand whatever authority the Federal Government has under existing law to grant permits to applicants to conduct drilling operations. However, it does mean that the issue will undoubtedly be decided in court. Government exploration is no longer an issue in this bill. Present law—whatever I, and others believe it allows, or not allows—is maintained.

PARTICIPATION OF STATE AND LOCAL GOVERNMENTS IN THE OCS-DECISIONMAKING PROCESS

Under the existing OCS law, the Secretary of the Interior administers the Federal leasing program and controls the Federal regulatory machinery supervising the development of offshore oil. He does so with almost no outside input. On occasion he may consider the view of outsiders, but he acts under regulations that he himself devises. He is under no statutory compulsion to consider the views of State governments, local communities, or members of the public who may have a real interest. The conference report would open Interior's decisionmaking process so that relevant outsiders—and in particular, State governments and through States, local government—may present their views and must be heard. They would not have a veto—only an opportunity to present their views and assurances that those views will be considered. If we are to have intelligent decisions, they must be highly informed ones. Only an open decisionmaking process can insure this result.

FEDERAL ASSISTANCE TO AFFECTED STATES

The development of the oil and gas resources of the Outer Continental Shelf will have an extensive impact—on our coastal environment. Offshore oil and gas must be brought to shore, processed, stored, and transported. New offshore facilities will have to be built and operated. As new workers crowd into the communities near these facilities, they will need housing, schools, medical facilities, and a variety of municipal services. If the coastal States are to deal with the onshore environmental impacts and the secondary economic impacts of development, they must have Federal assistance. To provide this assistance, the conference report amends the Coastal Zone Management Act of 1972, to provide for increased grants to affected States.

The Senate bill amended the Coastal Zone Management Act, increasing authorization for the OCS formula grants section of the coastal energy impact program from $50 million to $75 million for each of the 8 fiscal years.

The House bill provided that of all Federal OCS rentals, royalties, revenues, or other sums, 20 percent—with a ceiling of $200 million—was to go into the coastal energy impact fund.

The conference report increases authorization for the OCS formula grants section of the coastal energy impact program from $75 million to $130 million beginning in fiscal year 1979 and for the following 9 fiscal years. Of the funds appropriated under this provision, a ceiling of 37½ percent and a floor of 2 percent is established to go to individual affected States. The funds would be allocated under a formula based on the following criteria: 50 percent to be based on a coastal State's adjacency to OCS acreage newly leased; 25 percent based on a coastal State's adjacency to OCS oil and gas produced; and 25 percent based on OCS oil and gas first landed in such coastal State.

Federal assistance to ameliorate the adverse coastal impacts of OCS activities is now made more than adequate.

PROTECTION OF THE ENVIRONMENT

The conference report contains other features designed to protect the environment. It would require the Department of the Interior, working through the Commerce Department, to gather information about the present environment of affected areas and to monitor the environment on a continuing basis. It would require the Department of the Interior to conduct an environmental review after exploration and before production, and to prepare a formal environmental impact statement for every undeveloped major lease area. It would establish liability for oilspills and provides for an offshore oilspill pollution fund to insure that damages from OCS activities are speedily compensated. The fund is to be established at a level of not less than $100 million and not more than $200 million. The fund is supported by an up to 3-cents-per-barrel charge paid by the lessees and permittees. It would provide for funds for damages to fishermen from OCS activities.

LIST OF OTHER PROVISIONS

Besides the above-mentioned provisions, the 1978 OCS Act—obviously a comprehensive bill—

Establishes a national policy for the management of oil and gas leasing on the Outer Continental Shelf;

Provides authority to insure expedi-

tious activity (diligence) and to cancel leases for serious environmental threats;

Requires the Secretary of the Interior to prepare a 5-year leasing program for the orderly development of oil and gas resources on the Outer Continental Shelf, insuring that oil and gas development will be expedited to meet national needs in a balanced and environmentally sound manner;

Requires exploration and development plans to be formulated by the lessees and approved by the Secretary of Interior to insure orderly development of the Nation's oil and gas resources;

Provides for the consolidation of citizens' suits so that cases may be resolved expeditiously and fairly while resulting in minimal delay of development plans;

Provides for an information program in order to assess the Nation's OCS oil and gas resources so that the Government will receive a true value for those resources;

Establishes crewing and manning regulations for vessels and rigs engaged in OCS activities, authorizing procedures so that OCS rigs and vessels be manned and crewed by Americans with certain exceptions;

Allows the secretary to grant rights-of-way through submerged lands of the OCS for pipelines;

Provides that lessees shall produce oil and gas, according to regulations, to assure the maximum rate of production with regard to sound engineering and economic principles;

Requires that 20 percent of OCS production be set aside for small and independent refiners;

Provides for reviews of the competitive aspects of OCS leasing;

Provides for joint Federal/State leasing of areas underlying both the OCS and lands subject to State jurisdiction;

Requires a detailed annual report on OCS leasing;

Provides for the confidentiality of all privileged or proprietary information;

Charges the Secretary of Interior and the Coast Guard with the regulations and enforcement of OCS safety, including requiring on-site inspections and the use of the best available and safest technologies on all new drilling operations, and, wherever practicable, on existing operations;

Providies for the establishment of a policy for the transmission of OCS oil and gas produced by local distribution companies or their affiliates to the service areas of such companies. In short, I feel that S. 9 is a fair and equitable bill, which is an important component of this country's national energy program.

I must re-emphasize that S. 9 has the strong support of the Carter administration which has urged this Congress to move expeditiously and enact this needed legislation

This wholehearted support was reiterated by President Carter in the state of the Union message which stated

Legislation to improve the management of the Outer Continental Shelf for oil and gas development is a major item of unfinished business pending before Congress. Prompt passage is necessary so that we can have the benefit of the new law as we move to open more offshore areas to development and production.

As stated by the President in forwarding his national energy program last year and reiterated in his state of the Union message S. 9 is an important part of this country's national energy program

In addition to the administration the bill has the widespread support of State and local government representatives, gas distributors, many small energy companies union, environmentalists, fishermen, and other citizen groups.

The importance of OCS resources to the United States and the need for this legislation cannot be overstated. The prospects are that the U.S. Continental Shelf can be the largest domestic source of oil and gas between now and the 1990's.

When the select committee began its work over 3½ years ago, the Nation was importing approximately 35 percent of its crude oil. That percentage has risen quickly and steadily. Our imports of foreign crude oil now exceed periodically 50 percent of our domestic consumption.

We are now running a deficit in our balance of payments—and payments for foreign oil are a very large item on the debit side of the ledger—perhaps exceeding $45 billion a year. Furthermore, these dollars end up in the hands of countries whose interests do not always coincide with our own.

These figures underscore our vulnerability to another embargo by the producing nations that make up OPEC. If in fact another embargo occurs, the adverse economic impacts this country stands to suffer will be far more severe than those we suffered as the result of the 1973 embargo. I do not need to remind my colleagues of that difficult period of petroleum shortages and curtailments.

Another effect of the rising level of foreign oil imports is the continuing drain of American dollars to the oil rich OPEC countries. This, as you know, has led to the weakening of the U.S. dollar relative to other currencies in the international monetary market.

Another crucial point relates to our defense posture and the implications of excessive dependence of foreign sources of oil—for it is oil that runs the wheels of any national defense program. The oil lifeline from the Mediterranean and Persian Gulf to the United States could be easily cut by a foreign superpower with large naval strength.

The oil and gas resources that lie beneath our Outer Continental Shelf are enormous, and I know that every Member agrees with me that it is vital that we develop these resources as rapidly as modern technology will safely permit. There is, of course, a statute now in existence for the management of these lands, the Outer Continental Shelf Lands Act of 1953. But, it is now almost 25 years since that statute was enacted, and it is woefully archaic and inadequate.

Recent events have detailed the need for this bill: offshore oil spills, here, off France, and in the North Sea; reports of shut-in wells; delaying and unsuccessful lawsuits; and noncompetitive lease sales have all led to increased public demands for reforms to the antiquated 1953 law.

H.R. 1614 is a long, detailed and well-considered bill. It is the result of 3½ years of extensive hearings, in which the select committee heard more than 375 witnesses and compiled a hearing record totaling more than 10,000 pages, and months of markup, in which the committee considered hundreds of amendments. It is the product of countless hours of consideration and numerous amendments on the House floor and in the conference committee. It is a conference report which, if approved, can make a profound contribution to the Nation's energy crisis and do so in a manner that takes into account the needs of our States and the protection of our marine and coastal environment. The implications for the Nation's economic security are clear.

I strongly urge the House to approve the conference report for this much needed legislation.

Mr. JOHN L. BURTON. Mr. Speaker, will the gentleman yield?

Mr. MURPHY of New York. I yield to the gentleman from California.

Mr. JOHN L. BURTON. Mr. Speaker, I thank the chairman, the gentleman from New York (Mr. MURPHY) for yielding to me.

Mr. Speaker, I would like to commend the chairman and all of the members of the committee for keeping in the amendment I proposed on the floor of the House to prohibit the exploration and drilling within a certain radius of the Point Reyes National Seashore.

I agree with the limiting amendments that were put in by the committee.

I would like to specifically pay my compliments not only to the chairman and the members of the committee in general, but to our colleague, the gentleman from California, Mr. GEORGE MILLER, who worked so hard on this bill and represented my interests as best he could in the conference committee.

Mr. MURPHY of New York. Mr. Speaker, I reserve the balance of my time.

Mr. FISH. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the conference report on S. 9 that we are considering today is the culmination of over 3 years of work by both Houses of Congress.

In April of 1975, the House created the Ad Hoc Select Committee on the Outer Continental Shelf to amend the 1953 Outer Continental Shelf Lands Act of 1953 to provide for accelerated, orderly, and environmentally safe development and production of our energy resources on the OCS.

The House felt that the Outer Continental Shelf contained vast reserves of oil and gas, and that these resources would greatly increase domestic supplies thereby cutting back on our dependence of foreign oil.

In 1975, imports of foreign oil comprised approximately 30 percent of our national consumption of oil. Since that

time, our consumption of imported oil has increased 66 percent to where imports now represent over 50 percent of our total consumption. It is obvious that legislative action should be taken at the earliest possible date.

However, the reason it has taken as long as it has is that legislation in the past has contained many provisions that the House obviously felt would not accomplish the goals we were after, and could, in fact, be detrimental to the development of OCS energy resources by creating untold delays, providing untold new Government regulations and redtape, add to the cost of development and production, as well as opening the door for the Federal Government to go into the oil business.

The OCS conference report contained many of these objectionable provisions. It was for these reasons that I urged and the House voted, to recommit the OCS bill to conference in 1976, where it ultimately died.

In the 95th Congress we began anew hearings on H.R. 1614, the 1977 amendment to the OCSLA. On January 26 we began consideration of this legislation and the bill reported by the committee again contained the objectionable provisions that caused recommittal in 1975.

On February 2, of this year, the House passed a greatly amended version of H.R. 1614 and almost all of the objectionable provisions contained in the committee bill were deleted or substantially changed.

Mandated Federal exploration and the right to conduct core and test drilling were completely eliminated; dual leasing eliminated; authority for the use of new and experimental bidding systems in up to 100 percent of the leases in frontier area was substantially changed by requiring their use in only 20 to 50 percent of all areas offered for lease; authority granting OSHA joint jurisdiction to promulgate safety and health regulations on the OCS was changed by giving the Coast Guard clear authority for safety regs while not prohibiting OSHA from issuing regulations under 4(b)(1) of the OSHA Act; the ability to export massive quantities of OCS oil and gas was abated; the controversial restrictions on employment provision was altered to comply with provisions of H.R. 1; and equitable funding for impacted States was accomplished. The conference substantially upheld these positions of the House.

However, the House will recall, we were not successful last February in altering or defeating amendments that caused unnecessary delays or added inflationary costs to OCS oil and gas such as: First, provided for separate reviews by the Attorney General and by the FTC of leasing programs and preparation and when completed, each lease sale, and in other areas; and Second, excessively stringent and unneeded air quality standards. The Conference Committee modified both these features. The Attorney General need only consent now with the FTC. Air quality standards now only apply to air quality of a State, not the OCS.

Mr. Speaker, the conference report on S. 9 substantially resembles the House-passed bill, and in some respects is an improvement. It retains most of the amendments the minority was successful in getting adopted on the floor, and improves most of the provisions we found objectionable.

After attempting for 3 years to establish a program that will provide for safe, accelerated production of OCS oil and gas, our last fossil energy frontier, I am now faced with casting a final vote on a bill that contains most of the provisions I have fought for. S. 9, while not perfect, is the result of a conference that accomplished what it set out to do—come up with an acceptable compromise from two pieces of legislation that contained divergent solutions to the same problems, and for this reason I urge my colleagues to join me in voting for passage of the conference report on S. 9.

Mr. Speaker, I yield such time as he may consume to the gentleman from New Jersey (Mr. FORSYTHE), a member of the committee of conference.

Mr. FORSYTHE. Mr. Speaker, this legislation represents an idea whose time has come and gone. This bill is a classical example of the ability of Congress to do too much, too late.

Early in 1975, I was one of the first Members of this body to call for extensive overhaul of the laws and regulations governing development of oil and gas on the Outer Continental Shelf. Before the House Select Committee on the OCS was established, I introduced a package of three bills designed to streamline and update leasing and development procedures on the OCS, to provide more involvement of the States in the process, and to strengthen environmental protection on the OCS.

With that personal direction already clearly established, I became a Member of the Select Committee, only to see the committee create during the 94th Congress and again in this Congress a monster piece of legislation which complicates rather than streamlines the leasing and development procedures on the OCS while providing little, if any, true additional protection for the environment.

Since the inception of the OCS Committee, on the other hand, the Department of the Interior has made substantial positive changes in the regulations governing the OCS. In fact, the esteemed chairman of the select committee, my colleague from New York, stated publicly earlier today that since the beginning of hearings by the committee much of what is contained in this bill has already been incorporated in revised regulations.

I would go further, Mr. Speaker, and state that close to two-thirds of the provisions of this bill have already been incorporated in present regulation.

True, that fact might be cited as evidence that the bureaucracy will not move except under the threat of legislation. Whether that is true or not, the fact is that the 1953 act obviously provides the authority for the changes made. And those changes amply reflect the flexibility of the 1953 act and highlight the danger of locking in the granite of statute, provisions which must change to reflect the changing nature of technology and economics.

Mr. Speaker, I refuse to vote for this bill on the basis that it is not necessarily a good bill, but the best possible at the time. I am going to vote against it because I fail to see the reason for any bill at this time. I do not think we should lock up in unnecessary, inflexible statute, matters that best can be handled by flexible regulations.

Mr. Speaker, at this point we have a system governing oil and gas development on the Outer Continental Shelf that has largely accomplished through recent administrative changes the goals which I set out to achieve over 3½ years ago. We have streamlined regulations and have more flexible bidding systems. We have significantly enhanced protection of the environment. True, this progress was accomplished outside of these halls. Congress can take no direct credit, other than in having the foresight to pass a law in 1953 that still functions extremely well in 1978. I, for one, am not willing to tamper with that law now, simply to be able to claim victory after my years of work in this area.

I do feel, however, Mr. Speaker, that the entire United States has gained a victory through the better regulations now governing the OCS, and I hope that progress continues as the industry and the country change. I intend to vote against this conference report in order to provide the continued flexibility needed to cope with these changes.

Mr. FISH. Mr. Speaker, I yield such time as he may consume to the gentleman from Louisiana (Mr. TREEN), a member of the committee of conference.

Mr. TREEN. Mr. Speaker, I want to compliment the chairman of this committee and the ranking minority member and all of those who worked on this bill.

I think I was probably one of the principal thorns in the side of my colleagues, but they tolerated me well, and I appreciate that.

Mr. Speaker, I do want to mention why it was that I did not sign the conference report, and I think I also speak for my colleague, the gentleman from Louisiana (Mr. BREAUX), who is not on the floor at present, who also did not sign the conference report. We felt that with respect to the coastal energy impact program, the single-State limit of 37.5 percent should not have been applied for the year 1979. We thought that it was the intent of the conference that this single-State limit would not apply until we got into appropriations against the larger authorization of $130 million per year, which this bill provides. Therefore, for that reason, we did not sign the conference report.

However, Mr. Speaker, I intend to vote for the bill and urge my colleagues to do so. One of the benefits of the bill is that the coastal energy impact program has been improved from an authorization of $50 million a year to $130 million a year for all of the coastal States. The House

bill provided for $200 million per year in a trust fund, but we had to compromise with the Senate, which had a figure of $75 million a year. We made some substantive improvements in the law.

Mr. Speaker, I want to commend our colleague from New Jersey (Mr. HUGHES), who was a principal architect of the House version of the coastal energy impact program amendments, for his work on this bill.

There is another thing in the bill which gives us reason to support it, and that is the fishermen's compensation fund, which was worked on diligently by the gentleman from Massachusetts (Mr. STUDDS). I collaborated with him on that. This sets up for the first time a means for fishermen who get their nets and their equipment damaged because of OCS activities, and who cannot identify the person or company responsible, to recover for the loss of that equipment.

Mr. Speaker, I will address myself to two issues that the conference compromised, which I believe should have been resolved in favor of the House bill. I refer to the question of Federal exploration, which led the House in the 94th Congress to recommit this bill to conference, and that of financial assistance for coastal States adjacent to OCS activity.

In discussing the Federal exploration question, let me make clear that I find the conference resolution of the issue superior to the Senate bill provisions and those reported to the House by the Ad Hoc Select Committee. The Senate bill mandated that the Secretary of the Interior expend our limited Federal funds on oil and gas exploration. This would have been a very expensive endeavor for which Federal agencies are ill equipped, and one that would have had to be very extensive to prove the extent of our OCS oil and gas resources. The reported version of H.R. 1614 had provided that the "Secretary or any other Federal department or agency * * * may conduct geological and geophysical explorations, including core and test drilling, in the Outer Continental Shelf." The conference report does not explicitly authorize the Secretary to conduct exploration himself. More importantly, it does not contain authority for core and test drilling, impliedly limiting the Secretary to seismic and other geophysical exploration techniques not involving drilling in a geological structure believed to contain oil and gas deposits.

The conference agreed to retain the language of section 11 of the 1953 Outer Continental Shelf Lands Act. In so doing, we explicitly state that it was not our intention to express any opinion as to whether exploration by the Secretary of the Interior or those with whom he contracts was authorized by the 1953 act.

I personally opposed the decision of the conference not to resolve the supposed ambiguities of present section 11. I believe the House overwhelmingly indicated on two occasions its desire to explicitly preclude the expenditure of tax dollars for risky oil and gas exporation. On January 31 the House approved by voice vote my amendment to the amendment of Congressman STUDDS striking from the 1953 act language the phrase "Any agency of the United States and * * *" There was no opposition to my amendment at all. And the House proceeded to adopt Congressman STUDDS' amendment (striking the words "including core and test drilling") as amended by my amendment by the overwhelming vote of 328 to 77.

The desire of the House to preclude Federal exploration could not have been more clear. But it should also be noted that Congressman STUDDS viewed his amendment without mine, which the conference has now adopted, as precluding Federal exploration. Let me quote from his remarks at that time:

> The original language in the statute appears on page 257 of the committee report, and it reads exactly as the paragraph contained in the bill, except that it does not have the words "including core and test drilling". Therefore, Mr. Chairman, in sum the only real effect of my amendment is to remove those controversial words "including core and test drilling" from this bill . . . My amendment removes the only remaining language in the bill which has been construed by some as authorizing Federal Exploratory drilling. If and when this amendment is adopted, there cannot be, in the course of debate on this bill, any further discussion whatsoever with respect to the desirability of the Federal Government's undertaking exploratory drilling, because with the adoption of the Treen amendment (Note: Congressman Studds refers to the Treen amendment on dual leasing which was previously adopted, and not to the amendment I later offered to the Studds amendment to Section 11) and mine, all sections and all language in the bill referring to this subject will have been stricken.

Later in that debate Chairman MURPHY promised "the House conferees are committed to keeping the House position * * * and I will make every endeavor to do the same, hopefully, in the forthcoming conference."

I was disappointed with the endeavors of the majority of the House conferees to support the language on exploration supported by 328 Members of the House. I would have expected more diligence considering the vote of the House in December of 1976 to recommit the conference report with instructions to delete all reference to Federal exploration. I do hope that the Secretary of the Interior will pay particularly close attention to the statements of Congressman STUDDS which I have quoted in interpreting the decision of the 95th Congress on section 11.

The provisions of title V, amending the Coastal Zone Management Act, are a step in the right direction. But they represent a step far too small and pitiful to meet the legitimate need of our coastal States which are adjacent to the oil and gas production we authorize in this legislation.

The conference declined to make the coastal energy impact program permanent but did extend it from fiscal year 1984 to fiscal year 1988. The conference declined to establish a trust fund as the House had done, but did increase the authorization from the present $50 million level to $130 million per year. The value of this increased authorization is, of course, dependent on the level of appropriations. To date appropriations have averaged less than 40 percent of the present authorization level.

A major improvement in the coastal energy impact program in S. 9 was not subject to conference. Until now a State could only employ its formula grant funds for public facilities or public services (other than those needed to mitigate the loss of environmental or recreational resources) after having exhausted its eligibility for coastal energy impact loans. Those loans have been offered at an interest rate higher than most municipalities and States can borrow in the market. This made no sense inasmuch as the State would have the same amount of funds regardless of eligibility for loans.

These small improvements fall far short of the needs of coastal States, which must provide the public facilities to serve OCS employees and business without having the right to tax activity on the OCS. They are miserably shy of the 50 percent of revenues from mineral leasing that interior States receive, year in and year out, without appropriations or renewal of authorizations being required. The defeat of House provisions establishing a permanent CEIP program, funded from OCS revenues placed in a trust fund, and providing for immediate disbursement of formula grants to States to permit States to earn interest on those funds, can be attributed to the strong opposition of the administration to those worthwhile provisions.

The trust fund, to consist of $200 million annually, was approved by the House on a bipartisan 279 to 120 vote. A majority of House conferees had supported the Hughes amendment. But in conference, after rejecting a 7-year $120 million authorization, only two House Democrats opposed accepting a 10-year $130 million authorization in lieu of a permanent $200 million program with a trust fund to encourage appropriations. A June 1 letter from Assistant Secretary of Commerce Harmon must have strongly influenced the other seven Democrats.

The administration opposition is hard to understand in light of the President's strong promises in New Orleans 2 days before the election, and assertions by Secretaries Andrus and Kreps that the President intended to fulfill those promises through improvements to coastal zone management rather than direct revenue sharing.

Most who heard the President speak in New Orleans understood his remarks to have the meaning later attributed in the media by his State campaign manager, his press secretary and issues advisor. To quote the New Orleans Times-Picayune of October 31 quoting candidate Carter:

> "I think it's time we had a fair allocation of Federal funds to give to local and State governments so you can still have a good quality of life and still supply oil and natural gas to the country."
>
> Although Carter's statement was vaguely worded, press secretary Jody Powell said the Democratic nominee was proposing splitting revenues from offshore drilling between the Federal government and local government—a program which could mean millions for Louisiana in the future.

Afterwards, U.S. Senator J. Bennett Johnston—Carter's State campaign chairman—said the Democratic Presidential nominee's remarks amounted to a direct call for offshore revenue sharing.

At McAllen, Texas, Stuart Eizenstat—Carter's issues advisor—said the Democratic nominee intended to propose an offshore revenue sharing program similar to one pushed by Johnston and other State officials.

Under present law, most Federal offshore revenue sharing is designed to deal with onshore environmental effects of offshore drilling.

"He (Carter) would like to broaden that to have a more generalized sharing of fund," Eizenstat said. "It's more or less an offshore revenue sharing proposal for revenue that comes from Outer Continental Shelf leasing," he added.

The President may partially redeem those promises by seeking appropriations for the CEIP program in future years close to the level of the new authorizations. The combined effect of the ceiling on the CEIP grants which any one State may receive adopted in this bill (37½ percent) and the low appropriation requested by the President and approved by both House and Senate of $27.75 million will result in Louisiana receiving less in CEIP assistance in fiscal year 1979 than we did in fiscal year 1978. This result is unconscionable, and I do not believe it was one intended by the conferees. I believe the conference clearly had in mind applying the 37½-percent ceiling to future years in which Congress considered the higher level of appropriations authorized in this bill. I do not believe the conference intended it to apply to fiscal year 1979 since both Houses have already acted on fiscal year 1979 CEIP appropriations, arriving at a figure which is not subject to conference. I regret that Chairman MURPHY insisted on the bill being drafted as it was.

I think it is even more unfortunate that the report does not reflect the clear understanding of the conference on "proportional reduction." The new amendments to the coastal energy impact authorization entitle States to payment of more than 100 percent of the funds appropriated in order to guarantee "affected States," ineligible under the formula, 2 percent of the appropriation. This makes necessary the reduction of the share going to States eligible under the formula. The conference clearly agreed that this reduction was to be shared by States in proportion to their shares of the grant funds. Instead the staff drafted bill language which would exempt from reduction the first 2 percent of each State's allotment—thus putting a much greater burden on States with a share greater than 5 percent of the appropriation. This is patently unfair and contrary to what has been agreed to by the conferees. The chairman insisted, however, so that I could not in good conscience sign the report and attest that it represented the agreement of the conference.

Finally let me mention the provision of this bill amending section 307 of the Coastal Zone Management Act. The potential for delays in this legislation has been one of the prime concerns of a number of us in Congress. A serious source of delay, however, was contained in the present Coastal Zone Management Act which forbids the Secretary of the Interior to approve any exploration plan or development and production plan for 6 months from submission, unless the adjacent coastal State concurs that the plan is consistent with its State coastal zone management program.

The ad hoc select committee adopted my amendment, which was unchanged by the full House, shortening this nonaction period from 6 months to 3 months. This was consistent with the provisions of H.R. 1614 giving States 90 days to comment to these same plans. The Senate bill gave only 60 days for comments and the conference agreed to that time period, which is now used in the Secretary's regulations. Senator JACKSON had introduced legislation shortening the period for CZM concurrence to 60 days as well.

However, my amendment was rejected in conference in favor of a substitute by Chairman MURPHY which authorizes the Secretary to approve an exploration plan or a development and protection plan within 3 months if the State does not submit a status report explaining why it needs to use more than 3 months. If such a report is submitted the State has the present 6 months.

In conclusion, Mr. Speaker, in my judgment, amendments to the Outer Continental Shelf Lands Act were really not needed. But, because of the improvements in the coastal energy impact program, and the new fishermen's compensation program, both of which are included in S. 9, the bill warrants our support.

Mr. FISH. Mr. Speaker, I yield such time as he may consume to the gentleman from Maryland (Mr. BAUMAN).

Mr. BAUMAN. Mr. Speaker, I want to pay compliments to the chairman of the committee and the members of the conference committee in producing this legislation, which is of great importance to all of us who represent coastal areas, and to the entire Nation.

It is interesting to note, I believe, that this was the first ad hoc committee appointed by the Speaker under the changed rules which permitted this kind of joint legislation effort representing several committees of the House. I think it has worked well but it worked too long. I do not think that it is any secret that this bill might have been law 3 years ago. In fact, the bill before us today bears a striking resemblance to minority proposals made at that time, had various unfortunate events not occurred.

I am pleased, though, after this long and arduous trek, part of it on land and some of it walking on water, that we have finally reached this day when we can pass an OCS bill that will, indeed benefit the Nation.

Mr. Speaker, throughout my service as a member of the ad hoc committee, my primary concerns have been to provide a realistic method by which to develop badly needed energy resources but at the same time to assure that proper protection be given for coastal areas that might be affected, either by accidental pollution or on-shore impact.

Representing as I do Maryland's premier ocean resort, Ocean City, the last thing I wish is to allow off-shore exploration and production of gas and oil to damage the important tourist business or the fragile ecology of both Ocean City and Assateague National Seashore to the south.

I am satisfied that these concerns have been met in this legislation, however belated its passage may be today.

Mr. Speaker, as a member of the Ad Hoc Select Committee on the Outer Continental Shelf and having attempted to amend this bill not only in committee but on the floor, I must admit that I am pleasantly surprised and pleased by the conference report before us today.

In 1976, it was a different story, when a stubborn refusal to make necessary changes caused the defeat of the bill.

In January of this year during floor consideration of H.R. 1614 I raised several points that I felt must be corrected if Congress was going to pass legislation to provide a program that would accelerate production of OCS energy resources and protect the environment, while not providing mountains of red-tape, Federal intervention, and result in the wholesale giveaway of our energy resources on the OCS.

During consideration of H.R. 1614, I expressed my concern over the mandated use of new and experimental bidding systems in 50 to 100 percent of the leases offered each year in frontier areas. The Congressional Budget Office had stated that while they could not make an accurate estimate of the total loss to the American taxpayer, the loss from the application of this provision would be at least in excess of $2 billion over the next 5 years. The House accepted an amendment altering this provision providing for the use of new and experimental systems in no more than 50 percent of the leases offered each year. The conference report accepted the House provision but raised that ceiling to 60 percent.

H.R. 1614 as reported from the Committee also mandated that the Federal Government was to conduct on-structure and core and test drilling which might have turned into Federal oil production. The House, in its wisdom, rejected these provisions and the conference upheld the House action. I do not believe the Federal Government should be in the oil business.

However, the question of Federal exploration is still a bit cloudy. While the conference accepted the House's position on this issue, they retained the 1953 language dealing with exploration which has been a question of controversy as to whether the Government does or does not have authority to explore.

Dual leasing was another provision that was contained in H.R. 1614 and this inadvisable and dangerous section has also been struck from the bill we are considering today.

As a matter of fact, the bill before us

today looks a great deal like the minority substitute offered during consideration of H.R. 1614 which I supported.

While I find little wrong with the provisions of S. 9, it should be pointed out that many of the provisions of the bill currently exist in regulations that were drafted after hearings began on amendments to the 1953 OSCLA.

It occurs to me that if authority existed in the 1953 act for enabling these regulations to be promulgated there is no need for them to appear in statute where they are carved in granite and therefore inflexible.

I plan to vote for the passage of this bill, but will watch closely as regulations are drafted or altered to comply with these new provisions.

Mr. FISH. Mr. Speaker, I have no further requests for time.

Mr. MURPHY of New York. Mr. Speaker, I yield 2 minutes to the gentleman from New Jersey (Mr. HUGHES).

Mr. HUGHES. Mr. Speaker, I rise in strong support of the conference report to accompany S. 9, the Outer Continental Shelf Lands Act Amendments of 1977.

Our consideration of this conference report today culminates more than 3 years' work by the Select Committee on the Outer Continental Shelf to identify and correct the problems that have existed in the past, and make sure that we do not repeat these mistakes as offshore development moves into new and previously unexplored regions.

Unquestionably we have made mistakes in the past. Our leasing policies have tended to favor the very largest oil companies, although there are many smaller companies which are ready, willing and able to help us explore and develop our offshore resources for the benefit of the Nation. Moreover, it is clear that the Treasury of the United States has not always received a fair return for the sale of these public resources to private interests.

We have not adequately planned, in many instances, for the onshore impacts of offshore development. This has resulted in haphazard development, and the loss or destruction of valuable and irreplaceable coastal resources.

State and local government officials have not always enjoyed a meaningful voice in decisions relating to offshore development, even though these individuals represent important and valid concerns. This failure has resulted in numerous lawsuits and delays which were unnecessary.

We have not paid enough attention to the very serious danger of oilspills, both in terms of preventing them, and adequately compensating those who suffer damage or financial loss when an oilspill does occur.

Those are a few of the very important concerns which we have attempted to address in the legislation which is before us today. It is the product of innumerable hours of deliberation, thousands of pages of testimony, and consultation with individuals representing every conceivable point of view. Although I am not happy with everything in the bill it represents a balanced approach to the reforms which are necessary. Just as importantly it will permit us to move forward with the important job of producing offshore resources while paying due heed to the public interest.

Under the provisions of the bill, for the first time, we will have a statutory framework for State and local participation in decisions relating to offshore development. This decisionmaking will take place in an orderly framework which will not delay offshore development, but which will nevertheless provide opportunities throughout the process for State and local government participation.

Offshore producers will be required to use the best and safest available technologies to minimize the chance of a major offshore accident.

In the event that an oil spill should occur, the legislation establishes an oil spill liability program requiring offshore producers to carry up to $35 million in insurance. Beyond that protection, the legislation establishes a superfund of between $100 and $200 million which will be derived from a 3-cents-per-barrel levy on all offshore oil. This superfund will become available to pay damages or cleanup costs in excess of an operator's individual insurance, or if the source of an oil spill cannot be determined. If damages exceed both the operator's insurance and the amounts in the fund, the fund is authorized to borrow any additional amounts it requires from the Treasury at prevailing interest rates.

The oil spill liability provisions of this legislation are extremely important to all areas of the Nation, but especially those areas which have already developed a coastal and ocean economy based upon activities other than oil production. In my home area of South Jersey, for example, fishing and tourism are major economic activities which could be substantially damaged by an oil spill. Because these activities are highly seasonal in nature, an oil spill at the height of the season could very well result in an economic disaster, and this is why the insurance provisions of this legislation are so essential to assure that offshore development does not lead to any unnecessary disruption of other important economic activities.

The conference report also greatly increases the authorization for funding to State and local planning offices under the coastal energy impact program. These increased levels of funding will greatly enhance the ability of State and local governments to plan for and accommodate the onshore impacts of offshore development and minimize the haphazard development which has destroyed so many valuable ecological and economic resources in the past. It will also help State and local governments cope with increased pressures brought by new development and increased population which may result from discovery of oil or gas in one of the frontier regions.

The economic reforms provided in this legislation are also very important. During the long debate on this legislation, we often lost sight of the important fact that the OCS is comprised of publicly owned lands, and it is our responsibility to make sure these lands are administered in the public interest. We found, however, that the Treasury may not be receiving a fair return for the sale of these public lands, that we frequently had very little knowledge of the value of the resources we were selling, and that our bidding systems tends to favor the largest oil companies.

Under the legislation, alternative bidding systems are provided for which will eliminate the artifical, Government-created risks that have resulted in the exclusion of all but the very largest companies from participation in the Outer Continental Shelf. The bill requires that these alternative bidding systems, such as royalty or net profit sharing, be used in not less than 20 nor more than 60 percent of the leases sold. This will greatly improve the ability of smaller oil companies to participate in offshore development, and result in more equitable treatment of both the Treasury and the oil companies in the sale of public lands.

I do not need to remind my colleagues that the discovery of natural gas off the coast of New Jersey this week dramatically underscores the need for the legislation we are considering today. If the preliminary indications prove correct, there can be little question that we will see greatly increased activity and development off the coast of the Mid-Atlantic States. This may very well be repeated off the coasts of New England and the South Atlantic States, Alaska, California, and other areas.

As I mentioned before, we have made mistakes in the past. But we must not see those mistakes repeated in these areas if it can be avoided. The legislation before us today represents a responsible and well thought-out approach to the very important subject of energy development on offshore public lands. I strongly urge my colleagues to support it so that we can place it on the President's desk at the earliest possible time.

I want to compliment the chairman of the committee, my colleague, the gentleman from New York (Mr. MURPHY), the ranking minority member and all of my colleagues for, I think, a great effort. I want to particularly thank the gentlemen from Louisiana (Mr. TREEN), and (Mr. BREAUX), who joined me in constructing a fair and reasonable coastal impact plan for the States. Interestingly enough, we traveled to many of the areas that have or are about to experience OCS development. We were in Louisiana for hearings; we were in California for hearings; we were in Alaska to look at the problems in Alaska; we looked at the experiences in the North Sea area. I think we have come forward with a major effort in bringing our leasing procedures in this country into the 20th century. I am just proud to be a part of this work product. I am proud of the work of this committee. I urge your support for this bill.

Mr. MURPHY of New York. Mr. Speaker, I yield 2 minutes to the gentleman from Massachusetts (Mr. STUDDS).

Mr. STUDDS. Mr. Speaker, I rise in strong support of the conference report,

in spite of the fact that I suspect most of the members of this ad hoc committee will not know quite what to do with themselves in the next Congress absent this committee, which has been a large part of our lives for the better part of 4 years.

No one would quarrel with the observation of the gentleman from Maryland (Mr. BAUMAN) that this process has taken longer than it ought to have. Some might even be able to resist the temptation to remind the gentleman that, had the conference report not been accidentally recommitted 2 years ago in the last week of the last Congress, it might have only taken 2 years.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield?

Mr. STUDDS. I yield to the gentleman from Maryland.

Mr. BAUMAN. I thank the gentleman for yielding.

It was not by accident, I will say to the gentleman, and we got a much better bill as a result.

Mr. STUDDS. Yes. I expected that observation. I assure the gentleman I will agree with him, 4 years is a very, very long time. My support is as strong as it is notwithstanding the unexpected support of the distinguished "thorn," the gentleman from Louisiana (Mr. TREEN). We have enjoyed working together enormously. May I reciprocate very sincerely a compliment extended by the gentleman from Louisiana (Mr. TREEN). In those areas on which we agreed and on which we worked together very diligently, and also perhaps most especially in those areas on which we disagreed, I do not believe I have encountered a minority member who was more diligent and straightforward in expressing his very strong views. It has been an honor to serve with him and with the other members of this committee.

Mr. Speaker, I urge the overwhelming approval of the conference report.

The offshore oil drilling reform bill upon which Congress has now labored for almost 4 years constitutes, I believe, a remedy for the chaotic, unpredictable, and ineffective oil leasing schedule which we have had in the past.

This legislation provides a carefully worked-out balance between the economic and the environmental interests of the United States; it will allow both the public and the industry to have faith in the leasing process; and it will allow all of us to predict with some degree of certainty the future pace of offshore oil drilling in our own region of the country.

This bill will become law despite the lavishly financed campaign of opposition which has been waged by the oil industry, and despite the distortions which have been made concerning the potential delays in offshore drilling which this measure might produce. The truth of the matter is that it has been the absence of this legislation which has created delays and uncertainty; it has been the opposition to the bill by the oil industry and the threat of a veto by President Ford which killed the bill in 1976, which have stifled offshore drilling in this country.

This bill will become law in a matter of weeks. As a result, we can expect to see offshore lease sales held without a hitch in October, December, February, and probably next April. The reason is that we will finally have a system which protects the environment, fishermen, local economies, and those dependent on the tourist industry from the potential hazards inherent in the Federal decision to lease. We will have a leasing system open to all segments of the oil and gas industries, not just those with the greatest resources. We will have a method by which those damaged by an oil spill from an offshore oil rig will be compensated quickly and equitably for their loss.

The major provisions of the bill include—

A greater opportunity for State and local governments to participate in determining the timing, the location, and the extent of the oil drilling to be allowed off their shores;

A change in the methods by which oil tracts are put up for lease in order to increase competition within the oil industry, and to allow relatively small oil and gas companies to participate;

The creation of a fund which will be available to compensate State and local governments for the increased public services which may be needed to accommodate onshore support facilities made necessary by offshore drilling;

A system to protect fishermen from damage to their gear caused by offshore drilling operations; and

The creation of a fund to compensate fishermen, property owners, and those dependent upon tourism for any damages suffered as a result of an oil spill from offshore drilling activities.

The offshore oil reform bill is long, long overdue. I urge the adoption of the conference report.

Mr. MURPHY of New York. Mr. Speaker, I yield 2 minutes to the gentleman from Ohio (Mr. SEIBERLING).

Mr. SEIBERLING. Mr. Speaker, I, too, as one of the conferees, would like to commend the chairman, the gentleman from New York (Mr. MURPHY), as well as the other members of this conference committee for a really outstanding job. The differences between the Senate bill and the bill passed by the House were considerable, and I think a reasonable balance has been struck among all of the various competing considerations. I strongly support the conference report.

In addition, I would like to commend the entire staff of the House OCS Committee—and particularly Marty Belsky and Tom Kitsos—for their exceptionally good work over the past 3½ years.

Although the conference bill does not contain all the provisions I favored, the bill is a reasonable compromise which protects the essential interests of all sides—including consumers, affected States and localities, environmentalists, small or independent refiners, and small and major producers. Everyone wins under the conference bill.

In the next half century—until our use of solar power and other renewable energy sources becomes prevalent, and until we have the technology to use nuclear power and dispose of nuclear waste in a safe and environmentally acceptable manner—the United States will continue to rely heavily on energy from nonrenewable fossil fuels.

In 1976, we took a major step toward increasing our production of coal, particularly in the West, when we enacted the Federal Coal Leasing Amendments Act over President Ford's veto.

Enactment of the OCS bill will be a comparable step towards increasing our domestic production of oil and gas. If the energy bill which is still in conference is not enacted, the OCS bill will certainly be the most important piece of energy legislation enacted by the 95th Congress.

Most of the increased domestic petroleum production this Nation needs in the next 10 to 20 years will come from the OCS. But we could not permit the development and production of oil and gas on the OCS—particularly in the "frontier areas"—to occur without overhauling the 1953 OCS Act in a manner which would respond to current and anticipated needs and concerns.

The conference bill, therefore, requires sound planning by both the government and the companies involved in OCS operations. The bill will ensure the rapid—but careful—development and production of offshore oil and gas.

From the standpoint of the companies, the bill provides the certainty they say they need. The bill enables the companies to make long-range plans and to know the government's long-range plans. It gives the companies the right to have their views heard at all stages. It enables the companies to spend their cash on development and production, instead of having to leave all their money on the table upon winning cash-bonus bids.

From the standpoint of consumers, the bill encourages and promotes and in some cases requires competition, which in the long-run will help achieve cost-based pricing or at least minimize the possibility of monopoly pricing. It requires that pipelines be operated in a manner which will promote competition and which will encourage sound planning in the decisions about initial sizings of pipelines. These decisions, I would stress, are among the most important ones in determining whether and how efficiently particular OCS fields will be developed. Bad pipeline planning leads to dramatically higher transportation costs and final prices and it may well prevent the orderly efficient development of major areas of the OCS because of the creation of "bottleneck monopolies." The bill will also require OCS producers to offer 20 percent of their production to small or independent refiners, in addition to the share they can get from Federal royalty oil. The bill also provides for a Justice Department and FTC antitrust review of OCS lease sales.

In addition, the bill will ensure that the Government—and, thus, the Nation's taxpayers—get fair value for the leasing of OCS lands.

From the standpoint of protecting the environment, the conference bill requires the use of the "best available and

safest technologies" on OCS operations. The bill mandates environmental studies, and it requires the application of Clean Air Act standards. It requires the maximum protection feasible for the human, coastal and marine environments. It authorizes citizens suits in appropriate circumstances, and it makes new regulations apply to old leases.

In addition, the bill provides for advice and participation in the decisionmaking process by affected States and localities.

Mr. Speaker, there were two areas in which I was particularly involved that probably deserve some elaboration: pipeline competition principles and the joint bidding ban.

PIPELINE COMPETITION

Proposed section 5(f) of the act would require that OCS pipelines "provide open and nondiscriminatory access to both owner and nonowner shippers" and (except in the case of Gulf of Mexico and Santa Barbara Channel pipelines) that there be a mechanism for requiring the expansion of throughput capacity under certain circumstances.

These requirements are almost identical to those in the amendment I offered which was defeated in the House committee and to the amendment Senator KENNEDY offered which was adopted on the Senate floor. The purpose is to prevent "bottleneck monopolies" in the transportation of OCS oil and gas and to ensure sound planning in the initial decisions on the sizing of OCS pipelines. In addition, the amendment was intended to—and the conference bill does—address the problem identified by Richard Levy in his paper for the National Science Foundation entitled "The Regulation of Offshore Crude Oil Pipelines and the Consequences for Competition" (1975). Mr. Levy found that—in disregard of the law—the USGS had issued permits for many crude oil pipelines under the old section 5(a) of the OCS Act, on the stated grounds that they were gathering lines, although they were in fact trunk lines. The effect of USGS's actions was to exempt most major transportation pipelines from the requirements of section 5(e) of the existing act.

The conference bill permits FERC to exempt only pipelines or classes of pipelines which are truly gathering lines. Previous USGS exemptions must be reexamined and may be renewed only if they qualify under the language of the bill. Of course, it should be noted that this reexamination might result in requiring existing pipelines to provide open and nondiscriminatory access to owner and nonowner shippers alike under section 5(f) to "transport or purchase without discrimination" OCS oil or gas under section 5(e). These requirements apply to all existing or new oil or gas pipelines except those exempted hereafter under the provisions of section 5(f)(2).

In considering whether to grant exemptions and in determining the particular conditions to be included in regulations and permits, FERC must consult with the Attorney General and should make its decisions in light of the facts found in the Levy report. The Justice Department's reports on the proposed Deepwater Ports and on the Alaska Natural Gas Transportation system and the FTC's report on the proposed Deepwater Ports also contain policy considerations and findings that FERC would do well to consider.

In addition, in determining whether to approve applications for pipeline permits, the issuing authorities should disapprove applications for pipelines which will be inadequate to meet the needs of the area. In other words, greater care is in order to insure that initial pipeline sizing decisions will promote transportation efficiency and prevent bottleneck monopolies.

Because of the interest in the pipeline provisions, particularly those relating to possible expansion of throughput capacity, I have prepared the following explanation in the form of questions and answers:

Q. With regard to OCS pipelines, explain how the expansion and compensation provisions of Section 5(f) will work.

A. This is best done by using an example. Take, for instance, an OCS pipeline built at a cost of $50 million, financed with $40 million of debt and $10 million of equity, with four equal owners. Each owner's equity is in the form of 1,000 shares of stock purchased at $2,500 per share.

Now, suppose that at some later time after the pipeline is operational, someone else seeks to expand capacity by, say, one-third. This could happen at a time when, for example, the owners of the line have already retired $5 million of the line's debt, and have experienced an equity appreciation of $5 million. If the line has not depreciated in value, the debt is now $35 million and the equity $20 million. Each share is now worth $5,000.

Q. What are the possible sources of the $5 million equity appreciation?

A. There are several possible sources of equity appreciation: (1) the owners could have invested some of the earnings in improvements; (2) the FERC could have permitted an allowance for the risks and burdens the initial owners experienced during the construction and start up of the pipeline; or (3) the FERC may have regulated the pipeline in such a way that part of the return to the owners is an increase in the rate base.

Now, getting back to the mechanism of the expansion, assume that this one third capacity increase will cost $15,000,000. The new entrant must agree to guarantee the throughput to fill the expansion. The expansion would require, for example, $5 million of equity and $10 million of debt. The new owners must buy 1,000 new shares at $5,000 each to provide the $5 million in equity. This brings the total number of issued shares to 5,000 or 1,000 for each owner or 20% each.

But, an adjustment is then necessary, because the new owner is responsible for 25% of the throughput but has only 20% of the shares.

Q. How would the share readjustment be accomplished?

A. The ownership would be readjusted so that the new owner's share is in proportion to its throughput in the line. The new owner should have 25% of the 5,000 shares or 1,250. Each of the (4) old owners must sell the new owner ¼ of 250 (or 62.5) shares at $5,000 each to put the ownership proportions in balance. Each of the old owners would then have 1,000—62.5 (or 937.5) shares, as an 18.75% ownership interest.

Q. Isn't this readjustment unfair in that the new owner has had to pay for not only the costs of providing the equity for the expansion but something in addition—equity appreciation to the old shareholders?

A. No, the additional payment is necessary to insure that the economies of the expanded line are shared by all shippers. If the expansion shareholders did not make these additional payments they would be getting a "free ride" on the owners who initially built the line. If that were allowed every shipper would have an incentive to wait until the line was built before seeking to be a shareholder in the expansion process. As a result, there might be no one willing to construct the initial line.

Q. Even so, isn't the expansion shareholder paying an unfairly large amount? Each of the original holders paid $2,500 for each of 1,000 shares, or $2½ million. They have each received $5,000 times 62.5 shares or $312,500 from the expansion holder. They now own shares which effectively cost them only $2,333.33, as compared with $5,000 for the new shareholder.

A. The analysis is incomplete. Since the equity of the line has increased to $5,000 per share even without expansion, the old owners are just receiving the benefits from the equity appreciation—essentially compensation for earnings of the pipeline that were not paid out as dividends or additional payments for the special risks and burdens of the initial construction and operation of the facility.

Q. Don't these additional payments for burdens and risks and retained earnings involve very complicated calculations and agreements?

A. These calculations are not unusually complicated, and virtually all of the information needed is part of proper rate-of-return regulation that would be needed even if there were no expansion sales. And there are precedents from shareholder agreements of the type necessary to accomplish the expansion contemplated, for example, the LOOP Deepwater Port Shareholders' Agreement.

JOINT BIDDING BAN

The second issue deserving amplification concerns the joint venture limitations.

The bill would impose a ban on joint bidding between two major oil companies, where more than one of the joint bidders control average daily worldwide production of 1.6 million barrels a day. However, the bill further provides that the Secretary of Interior may grant an exemption from this general prohibition where, first, the lease involves high cost exploration or development problems, and, second, exploration and development of the tract would not otherwise occur. Two questions arise. First, what does "control" of average daily worldwide production of 1.6 million barrels mean? Second, how does the Secretary of Interior determine whether exploration and/or development of a tract would not occur unless an exception to the general ban is granted?

With respect to the first question, "control" of 1.6 million barrels of crude by an oil producer refers to any crude which the oil company actually produces and also any crude which is attributable to that oil company.

For example, if a producer is participating in a joint production venture, a percentage of the production of the joint venture could be allocated to that oil company based upon its share of the earnings from that production.

However, it may be desirable to devise special attribution rules for any joint

production venture or field unitization agreement wherein one oil producer is designated as "manager," that is, is permitted to determine the level of production from the field without consulting the other members of the venture. In such cases, it might be appropriate to attribute production based on a venture's profit percentage for nonmanager firms or to attribute the entire production of the field to the manager, depending on the circumstances.

The second question—that is how the Secretary of Interior determines whether or not exploration or development would not occur unless an exemption to the prohibition or joint bidding is permitted—raises a series of complex problems. The bill does not prohibit all joint ventures. It merely prohibits joint bidding by ventures which contain more than one producer who controls production of more than 1.6 million barrels per day. In determining whether the field would be developed without granting an exemption, the Secretary must determine whether the tract in question could likely be developed by either a single company or a nonprohibited joint venture. Among the factors to be considered are: What are the estimated costs in developing the tract? Are these costs within the financial capabilities of either a single oil producer or a nonprohibited joint venture? Is the likelihood of finding a "sufficient" quantity of oil high enough to merit the investment? Are the alternative opportunities available to individual companies or nonprohibited joint ventures sufficiently attractive to discourage bidding on the tract in question? However, the Secretary would probably never be in a position to analyze these four factors directly.

Therefore, it would seem appropriate that the regulations governing exemption to joint bidding ventures be drawn so as to permit the Secretary to observe the market for the purpose of deciding whether a given tract would be developed in the absence of an exemption. This can be done by putting the tract up for lease and seeing whether the tract draws bids from either a single producer or from a nonprohibited joint venture.

The regulations could also prohibit any joint venture which consists of two or more oil companies controlling more than 1.6 million barrels per day from bidding on a tract which is being put up for lease for the first time. If a tract failed to draw a bid by a single producer or a nonprohibited joint venture in the first lease sale, the Secretary could then consider granting an exemption. The regulation could then permit an otherwise prohibited joint bidding venture to bid in the next lease sale upon a tract which drew no bids during the previous OCS lease sale. If the tract drew no other bids the second time around, an exemption might then be justified. However, if the tract drew a bid from either a single company or a nonprohibited joint venture, such a party, if otherwise qualified, would be awarded the tract in preference to the bid by the prohibited joint venture.

In this way, the market itself would determine whether it was possible for a single company or a nonprohibited joint venture to explore and develop a given lease tract.

Mr. MURPHY of New York. Mr. Speaker, I yield 2 minutes to the gentleman from Louisiana (Mr. BREAUX).

Mr. BREAUX. Mr. Speaker, I am rising somewhat not as aggressively in support of the bill as my chairman of the committee, but I would like to take this opportunity to say that the members of this committee when it was initially formed were representative of some very divergent views on what we should or should not do on the Outer Continental Shelf.

I was convinced that the OCS leasing system was working very well and we did not need to tinker with a system that has been working and serving us very well for somewhat over 20 years. There were others that felt we needed some rather immediate massive changes. Out of those two divergent views we have a conference report which by and large I think is acceptable.

However there did develop some misunderstanding regarding the ceiling placed on the amounts of grants that any one State can receive and for that reason, along with my colleague from Louisiana, I did not sign the conference report, which indicated we did not agree with some of the language that was in the conference report. I still have that strong feeling and for that reason I have no regrets about not signing the conference report. However, when you look at the whole package, while in some areas we did not agree, I think we took some steps in the right direction, and I ask my colleagues to support final passage of the bill.

I want to point out that the gentleman from New York (Mr. MURPHY) really started the whole idea of putting together a select committee to work on this legislation. It is the first time in the Congress that the House ever asked a select ad hoc committee to bring together three separate major committees to work on one subject. It is true it took 4 years to do so; but I dare say had we approached it with three separate committees battling over jurisdiction, we would not have had a finished product before us. I think the system has worked and we should continue to use it in the future.

Mr. FISH. Mr. Speaker, I yield 1 minute to the gentleman from Maine (Mr. EMERY).

Mr. EMERY. Mr. Speaker, I offered an amendment when this was considered in the House to consider a leasing method of no less than 20 percent and not more than 50 percent of the leases. The committee amended that to no less than 20 and no more than 60. I think that is a desirable change. I am in strong support of that position.

● Mr. MOORE. Mr. Speaker, I voted against the conference report to accompany S. 9, Outer Continental Shelf Lands Act of 1978. I did when it originally passed the House in February 1978. Although I fully realize that the conference report has needed increased coastal zone funds for Louisiana and new funds to recompense damaged fishing interests, I still had to vote no as a protest.

I protest the other provisions of the conference report dealing with the exploration and production of oil in the OCS as they are entirely unnecessary. The difficulties and delays we presently experience in the exploration and production of oil in the OCS are due principally to Federal regulations. This conference report adds more regulations which will no doubt add additional delays and difficulties. No rational energy policy should contain additional delays and difficulties. Therefore, even though this conference report has new and important financial provisions for my State, the regulations which will stem from other provisions in the conference report are not in the best interests of energy production.●

● Mr. DINGELL. Mr. Speaker, I rise in support of the conference report on S. 9, the Outer Continental Shelf Lands Act Amendments of 1978.

At the outset, I want to commend the distinguished gentleman from New York (Mr. MURPHY) who chaired the committee in conference and the Ad Hoc Committee on the Outer Continental Shelf. It is a comprehensive piece of legislation that will protect the environment while encouraging in a proper way development of our resources to meet future energy needs. Mr. Speaker, the gentleman from New York (Mr. MURPHY) has done an effective job in the handling of this legislation during the past two Congresses and he is to be congratulated.

Mr. Speaker, the conference report includes the amendments that I offered on the House floor when we considered the House version of this legislation earlier this year. I offered five amendments. Each of those amendments were adopted by the conferees.

Of particular importance to me is the fact that the conferees agreed to the adoption of the definition of the term Secretary and to the adoption of the provisions in section 608 linking this legislation with the Department of Energy Organization Act of last year. The legislation before us and the managers statement takes recognition of the fact that Congress last year divided some of the responsibilities in the executive branch for the administration of the OCS. The DOE act transferred some of these responsibilities from the Interior Department to the Secretary of Energy and, of course, the Federal Energy Regulatory Commission. This bill does not in any way impinge on the action taken by the Congress last year under the DOE statute. At the same time, the bill defines in a number of places who indeed is the administrative agency responsible for administering the particular provisions.

In this regard, I want to take note of the fact that the DOE statute contemplated that the Secretary of Energy, the Secretary of the Interior, and FERC

would work out arrangements for the delegation of various responsibilities under the Outer Continental Shelf Lands Act and other mineral statues. A year has gone by, and no delegation and division of responsibility has been developed.

One of the concerns that I have is that the continuous squabbling that has gone on between the agencies over this matter would not be ended as a result of this legislation but would be perpetuated to the detriment of the program and those who are interested in it. It might end up in litigation at a future date, which I think would be unfortunate. Accordingly, the conferees, at my suggestion, have in a number of places specified in the legislation who in fact is the appropriate agency.

In other instances, the manager's statement discusses the roles of these agencies. I think that is useful, but at the same time, I urge the agencies involved to resolve their differences quickly and to inform the public and the Congress of the resolution of this matter. I can assure you that the Committee on Interstate and Foreign Commerce and the subcommittee which I chair will be looking after this matter with great interest.

In connection with section 5 of the OCS Act, I want to point out that the provisions in section 5(a) relative to the promulgation of rules and regulations to implement the statute have been retained in the form passed by the House of Representatives earlier this year. All regulations promulgated pursuant to the OCS Act shall apply to existing leases and to new leases, but, of course, they would only apply from the date of the promulgation. That is an important provision and is a provision that has been in existence under the 1953 statute since its inception. It is a provision that I sought to retain in my amendment on the House floor earlier this year and it has been agreed to by the conferees.

Mr. Speaker, the provisions of the new section 26 which is added to the OCS statute relate to the OCS oil and gas information program. It is a very important provision designed to provide additional information to the Government in the context of OCS operations. I want to stress, however, that there is nothing in this provision or in other information-gathering provisions of the OCS Act, as amended by this conference report which affect the authorities of the Secretary of Energy or the Federal Energy Regulatory Commission to collect data and to analyze such data under other provisions of law and to make such data available to other Federal agencies. Those authorities continue to apply to energy data collected by those agencies, including energy data relative to the OCS, under their independent authority. The conference report makes this very clear and my intention is only, at this stage, to reiterate that fact.

Section 603 of the legislation again is an amendment which I offered on the House floor and it has been adopted by the conferees with a few changes which are largely technical in nature. Those changes are discussed in the conference report.

The provision represents a clear understanding on the part of the conferees that the FERC should develop a policy statement as quickly as possible, considering all of its other responsibilities, to permit local distribution companies to acquire or participate in leases for the development of natural gas resources on the OCS and to transport the gas produced to their service areas. The methods, procedures, conditions, limitations, and requirements for doing all of this will be the responsibility of FERC, as is discussed in the statement of managers at pages 157 to 159.

The provision protects and guards against the problems I mentioned at the time of the debate on this provision during consideration of the House version of this legislation. Those problems, which I consider quite serious, should be avoided by the adoption of this amendment. It is my intention as the chairman of the Subcommittee on Energy and Power to keep careful watch over this provision and the development of a policy statement by FERC.

The House bill contained a provision that would have permitted employment of previously unused bidding systems only by rule after opportunity for a hearing. The Senate bill contained no such requirement and the conferees adopted the Senate approach, but the conferees were in agreement that any rulemaking necessary to carry out the new bidding systems authorized by this legislation be done in acordance with the requirements of the Administrative Procedure Act and any other applicable law.

For example, section 205 of this bill continues the requirement of section 8 (a) of the original Outer Continental Shelf Lands Act that bidding occur under procedural regulations promulgated in advance. The conferees recognized, however, that the Department of Energy Organization Act transferred to the Secretary of Energy the discretionary authority to promulgate rules related to the economic terms of leasing, including implementation of alternative bidding systems authorized by law. Section 205 of the conference agreement is not intended to impose any new rulemaking requirements as a condition for conducting lease sales under various bidding systems because such a requirement would hinder the program. However, any rules promulgated to carry out this section's provisions must be adopted in accordance with the Administrative Procedure Act any such rules promulgated by the Department of Energy must be adopted in accordance with section 501 of the Department of Energy Organization Act.

Again, let me congratulate our chairman, Mr. MURPHY, and the other House conferees, for their untiring efforts to develop effective and important OCS legislation applicable in the years to come. I also want to commend all of the staff of the ad hoc committee who were quite helpful during the conference. They worked very hard and well.●

● Mr. UDALL. Mr. Speaker, I would like to take a few minutes to speak in favor of adopting the conference report on the Outer Continental Shelf Lands Act amendments that is before us today.

The Ad Hoc Committee on the OCS has been considering this legislation for almost 4 years now. We have all had to compromise to finally produce the bill we shall vote on today.

The conference committee met often and argued out the many complicated provisions of this bill with our Senate counterparts. I believe all the House conferees were mindful of the views of this body and refused to accept, therefore, any compromises that would be looked upon unfavorably by our colleagues.

This bill includes many important provisions to allow the orderly and safe development of our offshore resources. It provides for State and local involvement throughout the leasing and development procedure. It requires lessees to provide development and production plans to give States the leadtime necessary to prepare for when these resources are brought onshore. The bill changes the leasing system to give greater long-term profits to the American public based on more equitable bidding procedures.

This bill has had a lot of opposition in its time. Most of the arguments about this bill have focused on the question of delay—opponents saying that the bill will cause great delay in leasing and development and supporters arguing that it would not. We modified many provisions in the bill to quiet those fears. I would say to my colleagues, however, that these modifications, to the safety and enforcement provisions, for example, are a drop in the bucket. There are two main reasons for delays in the petroleum industry. One is because drilling is complicated, costly, and risky, and nobody can change that. And the other is because of the regulatory restrictions surrounding the petroleum and most other industries in our Nation.

I would say to my colleagues who oppose delay—and who support it—that the major cause for delays, for burgeoning bureaucracy, for unreadable regulations, and for all the attendant buzzwords on redtape is the increase in economic concentration in our Nation. We would be irresponsible if we did not regulate and oversee those industries who have such a major control over our economic life. But instead of treating the symptom, we should be looking for a cure.

As the size of conglomerates and multinational corporations grow, so do the unions that provides their workers and the government that oversees its operations. We can no longer depend upon market forces to mitigate the mistakes of these giants.

In 1950, the Congress strengthened the Clayton Antitrust Act. I believe that the report of the House Judiciary Committee that accompanied that legislation is apropos to our present dilemma:

Big business too has a tremendous stake in the maintenance of competition—without

which capitalism cannot survive. The only alternative to capitalism is some form of statism—destructive alike to big and small business. The concentration of great economic power in a few corporations necessarily leads to the formation of large nationwide labor unions. The development of the two necessarily leads to big bureaus in the Government to deal with them.

I would ask my colleagues to support this conference report. The OCS Lands Act amendments are fair and equitable and have been honed to reflect the needs and fears of those most effected by offshore development, as well as the American people who are the owners of these great resources. I would just add that someday in the future I think we must examine the structure of the oil industry that has such a hold on our economic life.●

Mr. MURPHY of New York. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore (Mr. ROSTENKOWSKI). The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. DERWINSKI. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 338, nays 18, not voting 76, as follows:

[Roll No. 720]

Mr. Alexander with Mr. Cunningham.
Mr. Risenhoover with Mr. Leggett.

Mr. GOODLING and Mr. ENGLISH changed their vote from "nay" to "yea."

Messrs. ROBERTS, KRUEGER, HAMMERSCHMIDT, HALL, and SNYDER changed their vote from "yea" to "nay."

So the conference report was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

CONFERENCE REPORT ON H.R. 12240, INTELLIGENCE AND INTELLIGENCE-RELATED ACTIVITIES AUTHORIZATION ACT FOR FISCAL YEAR 1979

Mr. BOLAND. Mr. Speaker, I call up the conference report on the bill (H.R. 12240) to authorize appropriations for fiscal year 1979 for intelligence and intelligence-related activities of the U.S. Government, the intelligence community staff, the Central Intelligence Agency Retirement and Disability System, and for other purposes, and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of August 2, 1978.)

Mr. BOLAND (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the conference

report (No. 95–1420) on H.R. 12240, since it has already been printed in the CONGRESSIONAL RECORD of August 2, 1978, and is available to Members, be dispensed with.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

The SPEAKER pro tempore. The gentleman from Massachusetts (Mr. BOLAND) will be recognized for 30 minutes and the gentleman from Virginia (Mr. ROBINSON) will be recognized for 30 minutes.

The Chair recognizes the gentleman from Massachusetts (Mr. BOLAND).

Mr. BOLAND. Mr. Speaker, I yield myself as much time as I may consume.

Mr. Speaker, I call up the conference report on the bill H.R. 12240, to authorize appropriations for fiscal year 1979 for intelligence and intelligence-related activities of the U.S. Government, the intelligence community staff, the Central Intelligence Agency retirement and disability system, and for other purposes, and I ask unanimous consent that the statement of the managers be read in lieu of the report.

(During the reading). Mr. Speaker, in view of the fact that this conference report, 95–1420, was printed in the CONGRESSIONAL RECORD of August 2, 1978, and available to the Members of the House, I ask unanimous consent that further reading of the statement be dispensed with.

Mr. Speaker, House conferees on the Intelligence and Intelligence-Related Activities Authorization Act for fiscal year 1979 reached agreement with the Senate on July 25. The conference report was filed on August 2 and printed in the CONGRESSIONAL RECORD for that day except for a classified annex to the joint statement which has been available to Members in the committee office in the Capitol.

Several of the conference issues involved intelligence-related activities of the Department of Defense. For these matters, authorization is considered by both the Select Committee on Armed Services. In order to address these matters properly and thoroughly, conferees from the Select Committee on Intelligence were joined by the distinguished chairman of the Armed Services Committee, Mr. PRICE, by the chairman of its R. & D. Subcommittee, Mr. ICHORD, and by the ranking minority member of the committee, Mr. BOB WILSON who is also the ranking minority member of the Select Committee on Inteligence. I want to thank these gentlemen and all of the members of the Committee on Armed Services for their cooperation and support. Further, I want to thank the staff of that committee to whom fell many complex technical, administration and legislative matters.

Mr. Speaker, conferees from the Select Committee on Intelligence were drawn from the Subcommittee on Program and Budget Authorization which originally prepared this bill. To them, BILL BURLISON of Missouri, the chairman, NORMAN MINETA and J. KENNETH ROBINSON fell most of the considerable effort required in preparing for and conducting the conference. I turn now and yield to BILL BURLISON for a summary of conference actions which I fully support.

Mr. BURLISON of Missouri. Mr. Speaker, I thank the gentleman from Massachusetts, Mr. BOLAND, for yielding to me. I also thank the chairman for his kind words and for his considerable effort and support throughout the development of this bill. I join the gentleman in extending thanks to the gentleman from California, NORM MINETA, and the gentleman from Virginia, KEN ROBINSON, of our subcommittee and to the chairman, the gentleman from Illinois, Mr. PRICE, and the gentleman from Missouri, Mr. ICHORD, of the Committee on Armed Services, and the ranking minority member, the gentleman from California, BOB WILSON, of both committees.

Mr. Speaker, with regard to title I of the bill, intelligence activities, there were 37 matters at difference with the Senate. Debate on several of these issues was lengthy and spirited but an attitude of cooperation prevailed and sensible compromises were achieved. On matters of fiscal authority, the differences divided rather evenly between House and Senate. This is not to say, however, that the conferees split the difference on each issue simply to achieve agreement. Many programs are not logically subject to division as all parties recognized. Our compromises result in sensible programs and those which are interrelated are consistent.

Title II provides for the intelligence community staff which supports the Director of Central Intelligence in the conduct of the coordination and budgetary role in the national foreign intelligence program. The House bill had authorized a staff well below the size requested by the administration while the Senate bill authorized the full request. In this case an equal division between our two positions appeared sensible and was the compromise to which we agreed.

There were no differences between us regarding title III, the CIA retirement and disability system.

The House bill contained a title IV providing a reporting requirement when certain excludable aliens are admitted to the United States under certain provisions of the Immigration and Nationality Act. The Senate bill contained no such provision.

The conference substitute is essentially the same as the House provision except that the Attorney General is required to submit only one report covering only the period of fiscal year 1979. The conferees note in the joint statement that the report need only describe the general circumstances and need not include names. Further, the conferees note their intent that the FBI should notify the Attorney General of objection to admission of an alien only where the alien would be a legitimate target of FBI foreign counterintelligence or foreign counterterrorism intelligence concern.

Mr. Speaker, I fully endorse this conference report and urge its adoption by the House.

Mr. ROBINSON. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise in support of the conference report on H.R. 12240.

This bill would authorize appropriations for intelligence activities of the United States and is the result of many months of exhaustive examination of the intelligence needs of our Government.

The funding and program details for the intelligence activities authorized under title I are classified and I can, therefore, not discuss specific conference actions. However, details of these actions contained in a classified annex to the joint explanatory statement have been available to all Members for more than a week.

The conference recommendation is a compromise which I believe represents the best judgment of both sides. The House Permanent Select Committee on Intelligence and the Senate Select Committee on Intelligence conferees worked to provide an authorization for national foreign intelligence activities that I consider to be a nearly optimum reconciliation of the two authorization bills. In arriving at this compromise, some program funding levels originally authorized by the House were reduced and others were increased. The net overall authorization level for these classified activities fell about halfway between the levels originally authorized by the House and Senate.

For those programs contained within the defense budget request to provide direct intelligence support to military operations—referred to as intelligence-related activities—the House Permanent Select Committee on Intelligence shares jurisdiction with the Armed Services Committee. Accordingly, the differences between the House and Senate on these activities were worked out by a conference group consisting of both Intelligence and Armed Services Committee Members of both Houses. I would like to join my chairman, the gentleman from Massachusetts in thanking Chairman PRICE, Mr. ICHORD and especially my colleague BOB WILSON who sits on both committees for their counsel in resolving the differences in intelligence-related activities.

As regards title II, which authorizes funding and establishes a personnel ceiling for the intelligence community staff, I consider the conference recommendation an equitable compromise.

As has been mentioned, title III, to authorize funding levels for the CIA retirement and disability system, was not at difference between the House and Senate.

Finally, the conferees agreed to a substitute provision to title IV which is essentially the same as the original House provision. It would require that the Attorney General submit a one-time report by October 30, 1979, generally describing those cases during fiscal year 1979 in which the FBI Director has notified the Attorney General that he has reason to believe an alien is excludable under certain provisions of the Immigration and Nationality Act and that alien is subsequently admitted into the United States.

Overall, I believe the conference committee's recommendation for fiscal year 1979 provides sufficient resources to effectively meet our near-term intelligence needs as well as providing for some growth to modernize existing capabilities and to begin some new initiatives required to keep pace with our intelligence needs in the 1980's.

I urge the Members of the House to adopt this conference report.

Mr. Speaker, I yield such time as he may consume to my colleague, the gentleman from California (Mr. BOB WILSON).

Mr. BOB WILSON. Mr. Speaker, I would like to add my support to this conference report on H.R. 12240.

As a member of both the Select Committee on Intelligence and the Committee on Armed Services, I served as a conferee on intelligence-related matters which fall under the jurisdiction of both committees. I am pleased that this process worked smoothly and that our ability to relate Defense Department operational support intelligence programs to the national foreign intelligence program increases our understanding of these programs.

Mr. Speaker, I am happy with the outcome of this conference and urge the support of the House.

Mr. ROBINSON. Mr. Speaker, I have no further requests for time, and I reserve the balance of my time.

Mr. BURLISON of Missouri. Mr. Speaker, I yield such time as she may consume to the gentlewoman from New York (Ms. HOLTZMAN).

Ms. HOLTZMAN. Mr. Speaker, with respect to title IV of the bill, there is a question raised by the language of the conference report.

Is it the intention of the gentleman from Missouri (Mr. BURLISON), the distinguished chairman of the subcommittee, to preclude the Committee on the Judiciary from getting exactly the same information which the Select Committee on Intelligence would get under the conference report?

Mr. BURLISON of Missouri. If the gentlewoman will yield, Mr. Speaker, it certainly was not our intent to distinguish between the Committee on the Judiciary and the Select Committee on Intelligence. It was our intent that the Committee on the Judiciary would have the same prerogatives as the Select Committee on Intelligence as to the receipt of this information.

Ms. HOLTZMAN. I thank the distinguished gentleman for his assurance.

● Mr. DRINAN. Mr. Speaker, today Congress has another opportunity to consider the authorization of funds for intelligence activities. Described as a step forward in our continuing effort to provide a substantive review of our Nation's intelligence programs, the conference report on the intelligence authorization does nothing to remedy the absence of accountability to the American people. The people still remain totally in the dark as to how much of their money is being spent on intelligence activities and how it is spent. In addition, the bill and report before us today will not affect Executive Order 12036, by which the President is able to authorize the Central Intelligence Agency to conduct covert operations, to engage in surveillance of American citizens, to open mail surreptitiously, and, in general, to perpetuate the abuses which have been revealed in recent years.

There is no convincing reason for the continued refusal to disclose the budget of the intelligence agencies. Our own intelligence experts have for years been able to estimate with reasonable accuracy the amount of money the Soviet Union spends on intelligence; are we naive enough to believe that the KGB is not capable of making similar estimates of our intelligence expenditures? It is only the American people who are not permitted to know how much of their money is being used for intelligence. By failing to make intelligence expenditures public, we deprive the people of their right to know what their Government is doing, and at what cost.

By persisting in our refusal to reveal, even in general terms, the activities undertaken by our intelligence agencies under the banner of "national security purposes," we canot even try to prevent recurrences of past intelligence abuses. Today we take another vote on the intelligence authorization, but this vote is meaningless unless we remove the shroud of secrecy which still surrounds our intelligence activities and which frees the Government from accountability to the people in whose home these intelligence operations are conducted. Despite highly touted reforms, we have done nothing to halt the clandestine activities, at home as well as abroad, which generated so much critism and outrage on the part of the American people in the very recent past.

I was one of only eight Members of the House who took the time to look at the classified documents on this authorization. I spent a number of hours on these papers but due to the constraints placed upon us I am prevented from discussing them. Despite the fact that the amount of the authorization cannot be discussed and the fact that so few of us know its contents, we still present this charade to the American people and pretend that we are carefully considering the expenditure of their dollars.

It is my hope that we may openly discuss these expenditures and authorizations next year. It is also my hope that we will permit discussion of and votes upon the kinds of activities in which our intelligence agencies can engage. Until such time, I believe it is incumbent upon us to vote against the authorization of funds for intelligence purposes.

Mr. Chairman, I also rise against the provision of this conference report that requires the Attorney General to report to Congress on aliens who have been admitted to the United States despite an FBI recommendation that they be excluded. This is clearly an attempt to undermine both the authority of the Attorney General and the integrity of our immigration policy. The provision invites the FBI to make an end run around the Justice Department to the Congress. By law, the decision on exclusion is vested in the Attorney General; are we asked to assume that the Attorney General is unfit to make this determination? I do not believe that any U.S. Attorney General would want spies, terrorists, or the like to enter our country. Why should the FBI, a subordinate agency, have the authority to involve Congress in such decisions?

We must attempt to establish a true starting point toward complete legislative oversight of intelligence programs. We have not even the semblance of an effort to end covert operations abroad and invasions of privacy at home. We must end the insulation of the CIA and other intelligence agencies from the scrutiny of the public. Only then can we act in a truly informed manner in the consideration of funds for such programs. I will continue to oppose authorizations which are cloaked in secrecy and kept hidden from the American people. Approval of this report will only lead to the perpetuation of the abuses which spring from secrecy.●

Mr. BURLISON of Missouri. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. WEISS. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 323, nays 30, answered "present" 2, not voting 77, as follows:

Mr. Conyers with Mr. Stangeland.
Mr. Barnard with Mr. Livingston.
Mr. Fithian with Mr. Sebelius.
Mr. Hightower with Mr. Stanton.
Mr. Preyer with Mr. Nolan.

Mr. KOSTMAYER and Mr. OTTINGER changed their vote from "yea" to "nay."

So the conference report was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. BURLISON of Missouri. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the conference report just agreed to.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

INDEPENDENT SAFETY BOARD ACT AMENDMENT OF 1978

Mr. ANDERSON of California. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 12106) to amend the Independent Safety Board Act of 1974 to authorize additional appropriations, with a Senate amendment thereto, and concur in the Senate amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows.

Strike out all after the enacting clause and insert: That this Act may be cited as the "Independent Safety Board Act Amendment of 1978".

SEC. 2. Section 309 of the Independent Safety Board Act of 1974 (49 U.S.C. 1907) is amended by adding at the end thereof the following: "There are authorized to be appropriated for the purposes of this Act not to exceed $16,420,000 for the fiscal year ending September 30, 1979, and $17,650,000 for the fiscal year ending September 30, 1980, such sums to remain available until expended.".

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

Mr. SHUSTER. Mr. Speaker, reserving the right to object, I do not intend to exercise this right to object, but I do so in order to ask the distinguished chairman of the subcommittee if he would explain the reason for his request.

Mr. ANDERSON of California. Mr. Speaker, will the gentleman yield?

Mr. SHUSTER. Mr. Speaker, further reserving the right to object, I yield to the gentleman from California.

Mr. ANDERSON of California. Mr. Speaker, the House previously passed H.R. 12106, a bill to authorize appropriations for the National Transportation Safety Board for fiscal year 1979. The bill authorized $16,420,000. Last Monday, the Senate passed H.R. 12106, with an amendment in the nature of a substitute. The amendment simply adds additional funding for fiscal year 1980 in the amount of $17,650,000. The levels were increased for that 1 year to cover a proposed additional workload in the area of surface transportation per the Public Works and Transportation Committee's request. This amendment is acceptable, and I urge favorable action by the House on H.R. 12106, as amended by the Senate.

Mr. SHUSTER. Mr. Speaker, further reserving the right to object, as the gentleman knows, I was the author of the section which provided for increased emphasis for highway safety. Because the Senate is accepting that, it seems reasonable that we should accept their position that we go to a 2-year authorization instead of a 1-year authorization. Since I was also the author of the amendment which struck the authorization from 2 years down to 1 year, I am prepared to accept the compromise of the Senate.

Mr. Speaker, I am further informed that the distinguished gentleman from Kentucky (Mr. SNYDER), the ranking minority member on the Subcommittee on Aviation of the Committee on Public Works and Transportation, is also prepared to accept this compromise, so there is no objection, to my knowledge, on this side.

Mr. ANDERSON. Mr. Speaker, I thank the gentleman from Pennsylvania for his contribution, and yield back the balance of my time.

● Mr. JOHNSON of California. Mr. Speaker, on July 14, 1978, the House passed H.R. 12106, a bill to authorize appropriations for the National Transportation Safety Board for fiscal year 1979. The bill authorized $16,420,000. Last

Monday, the Senate passed H.R. 12106 with an amendment in the nature of a substitute. The amendment simply adds additional funding for fiscal year 1980 in the amount of $17,650,000.

This amendment is acceptable, and I urge favorable action by the House on H.R. 12106 as amended by the Senate.●

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. ANDERSON of California. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the Senate amendment to the bill H.R. 12106, just considered.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 1, ETHICS IN GOVERNMENT ACT OF 1977

Mr. MOAKLEY, from the Committee on Rules, submitted a privileged report (Rept. No. 95–1505) on the resolution (H. Res. 1323) providing for consideration of the bill (H.R. 1) to require candidates for Federal office, Members of the Congress, and officers and employees of the United States to file statements with the Comptroller General with respect to their income and financial transactions, which was referred to the House Calendar and ordered to be printed.

REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 12611, AMENDING FEDERAL AVIATION ACT OF 1958

Mr. MOAKLEY, from the Committee on Rules, submitted a privileged report (Rept. No. 95–1506) on the resolution (H. Res. 1324) providing for consideration of the bill (H.R. 12611) to amend the Federal Aviation Act of 1958 to improve air service and provide flexibility in air fares, which was referred to the House Calendar and ordered to be printed.

REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 13059, PUBLIC WORKS AUTHORIZATION BILL

Mr. MOAKLEY, from the Committee on Rules, submitted a privileged report (Rept. No. 95–1507) on the resolution (H. Res. 1325) providing for consideration of the bill (H.R. 13059) authorizing the construction, repair, and preservation of certain public works on rivers and harbors for navigation, flood control, and for other purposes, which was referred to the House Calendar and ordered to be printed.

REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 11733, AUTHORIZING APPROPRIATIONS FOR CONSTRUCTION OF HIGHWAYS

Mr. MOAKLEY, from the Committee on Rules, submitted a privileged report (Rept. No. 95–1508) on the resolution (H. Res. 1326) providing for consideration of the bill (H.R. 11733) to authorize appropriations for the construction of certain highways in accordance with title 23 of the United States Code, for highway safety, for mass transportation in urban and in rural areas, and for other purposes, which was referred to the House Calendar and ordered to be printed.

PROVIDING FOR CONSIDERATION OF H.R. 10898, USRA AUTHORIZATIONS, 1979

Mr. MOAKLEY. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1231 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 1321

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 10898) to amend the Regional Rail Reorganization Act of 1973 to authorize appropriations for the United States Railway Association for fiscal year 1979. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interstate and Foreign Commerce, the bill shall be read for amendment under the five-minute rule. It shall be in order to consider the amendment recommended by the Committee on Interstate and Foreign Commerce now printed in the bill, and all points of order against said amendment for failure to comply with the provisions of clause 7, rule XVI are hereby waived. It shall further be in order to consider the following amendment to said bill and all points of order against said amendment for failure to comply with the provisions of clause 7, rule XVI are hereby waived: "Section 211(d) of the Regional Rail Reorganization Act of 1973 is amended by adding a new sentence at the end thereof as follows: *'Provided*, That with respect to a loan made under subsection (a) of this section to a railroad in the region, the Association may approve any modification of such loan, including increasing the principal amount of the loan, upon a finding that such modification would permit the continuation of rail service determined by the Association, in the final system plan or under the goals of the Act, to be desirable.'". At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

The SPEAKER pro tempore (Mr. NEDZI). The gentleman from Massachusetts (Mr. MOAKLEY) is recognized for 1 hour.

Mr. MOAKLEY. Mr. Speaker, I yield the customary 30 minutes to the gentleman from Illinois (Mr. ANDERSON), pending which I yield myself such time as I may consume.

Mr. Speaker, the resolution (H. Res. 1321) makes in order the consideration of the bill (H.R. 10898) to amend the Regional Rail Reorganization Act of 1973 to authorize appropriations for the U.S. Railway Association for fiscal year 1979.

It is a 1-hour open rule.

It also contains a major provision which makes in order an amendment to be offered by the distinguished chairman of the Subcommittee on Transportation and Commerce (Mr. ROONEY). The rule waives points of order against the amendment under clause 7 of rule XVI. Although technically not germane to the bill, the amendment is related to the subject matter.

Mr. Speaker, as reported from committee, the bill would authorize appropriations for fiscal year 1979 in the amount of $27.2 million for operating expenses of the U.S. Railway Association. It also contains a technical provision to permit members of the Board to serve 90 days after their terms expire, if no successor has been appointed. This provision deals with the problem that vacancies on the Board could prevent a quorum and bring the association's operations to a standstill.

The amendment to be offered by the gentleman from Pennsylvania (Mr. ROONEY) would simply waive certain requirements in law which would otherwise prevent the USRA from making urgent loans to the Delaware and Hudson Railway Co. This was the subject of emergency hearings by the gentleman's subcommittee on Tuesday, August 15. At this meeting, the subcommittee was persuaded that failure to act on this matter before we recess today would force that line into bankruptcy before the Congress returns in September. Although the procedure is unusual, the Committee on Rules is convinced that it is necessary to deal with the urgent situation of the D. & H. Railway and agreed to the bipartisan request of the Committee on Interstate and Foreign Commerce.

Mr. Speaker, I urge the adoption of the rule so that the House may proceed to consider this vital bill and the amendment.

Mr. ANDERSON of Illinois. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, this is a 1-hour, open rule, making in order the bill, H.R. 10898, the U.S. railway authorization for fiscal 1979. The rule waives the germaneness rule against the committee amendment which is section 2 of the bill. That amendment provides that when a board member's term expires, he may continue to serve until a successor has been appointed, but, in any event, no more than 90 days after the expiration of his term.

This rule also provides for the consideration of another amendment, the text of which is printed in this rule, and the germaneness rule is waived against this amendment. That amendment authorizes the association to approve any modification of a loan made to a railroad under the Regional Rail Organization Act, including increasing the principal amount of the loan, if the modification

is deemed necessary to permit the continuation of rail service considered to be desirable in the final system plan or under the goals of the act.

Mr. Speaker, this additional amendment specified in the rule is intended to remove a legal obstacle in the way of further loan advances by USRA to the Delaware and Hudson Railway. The final system plan approved by the Congress called for a rail system competitive to ConRail in the northeastern sector of the United States. The initial plan was for Chessie system extensions into areas in New York and Pennsylvania, but problems were encountered in negotiating the agreements, and the Chessie extensions thus failed to take place.

As a consequence, USRA encouraged the Delaware & Hudson Railway to extend its lines into these areas, and in fact imposed the extensions as a condition for a loan the D. & H. had already applied for to make improvements in its existing system. The D. & H. subsequently became overextended and made some management mistakes. USRA had increased the loan amount to the D. & H. by less than $3 million, even though the extensions more than doubled the D. & H. system. A strike of the Norfolk & Western Railway, the D. & H. outlet to the West further damaged its ability to compete. And USRA declined to grant further moneys to the system because it was not able to meet the financial conditions in the law.

The additional amendment made in order by this rule would enable USRA to increase the principal loan amount to the D. & H. if it finds that such an increase is desirable under the final system plan and goals of the act.

This matter was brought to the Rules Committee as an emergency matter on Wednesday, August 16, and this rule request was supported by the ranking minority member on the Transportation Subcommittee (Mr. SKUBITZ). The rule also had bipartisan support in the Rules Committee and was reported by a voice vote. I urge its adoption.

Mr. MOAKLEY. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the resolution.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. ROUSSELOT. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make a point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 323, nays 6, not voting 103, as follows:

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

PROVIDING FOR ADJOURNMENT OF THE HOUSE FROM AUGUST 17 TO SEPTEMBER 6, 1978, AND OF THE SENATE FROM AUGUST 25, 26, 28, OR 29 TO SEPTEMBER 6, 1978

The SPEAKER pro tempore. The Chair lays before the House the following communication from the Senate.

The Clerk read as follows:

Resolved, That the concurrent resolution from the House of Representatives (H. Con. Res. 696) entitled "concurrent resolution providing for an adjournment of the House from August 17 to September 6, 1978," do pass with the following amendments: Page 1, line 4, after "1978" insert: ", and that when the Senate recesses on Friday, August 25, Saturday, August 26, Monday, August 28 or Tuesday, August 29, 1978, pursuant to a motion made by the Majority Leader in accordance with this resolution, it stand in recess until 10 o'clock a.m. on Wednesday, September 6, 1979".

Amend the title so as to read: "Concurrent resolution providing for an adjournment of the House from August 17 until September 6, 1978, and for a recess of the Senate from August 25, 26, 28, or 29 until September 6, 1978.".

The SPEAKER pro tempore. The question is on the Senate amendments.

The Senate amendments were concurred in.

A motion to reconsider was laid on the table.

USRA AUTHORIZATIONS, 1979

Mr. ROONEY. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 10898) to amend the Regional Rail Reorganization Act of 1973 to authorize appropriations for the U.S. Railway Association for fiscal year 1979.

The SPEAKER pro tempore (Mr. NEDZI). The question is on the motion offered by the gentleman from Pennsylvania (Mr. ROONEY).

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill, H.R. 10898, with Mr. MOAKLEY in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Pennsylvania (Mr. ROONEY) will be recognized for 30 minutes, and the gentleman from Kansas (Mr. SKUBITZ) will be recognized for 30 minutes.

The Chair now recognizes the gentleman from Pennsylvania (Mr. ROONEY).

Mr. ROONEY. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I thought the gentleman from the Committee on Rules gave a very fine statement on the bill, H.R. 10898.

Mr. Chairman, I do have an amendment to offer at the proper time.

Mr. Chairman, H.R. 10898 authorizes appropriations for the U.S. Railway Association for fiscal year 1979 in the amount of $27,200,000.

The bill also adds a provision which permits USRA Board members whose terms have expired to continue serving on the Board for not more than 90 days during the interim before new Board members are appointed and take office.

The authorization of $27.2 million represents an increase of $4.2 million over the amount authorized to USRA for the present fiscal year. Congress created USRA in 1973, to develop a plan under which selected rail properties of the bankrupt carriers in the northeast and midwest regions were transferred to ConRail for continued operation. Subsequently, it was given authority to make loans to other railroads, as well as monitor the operations of ConRail and the railroads to which it awarded loans. USRA has made loans to both the Delaware & Hudson Railway Co., and the Missouri-Kansas-Texas Railroad Co.

The 4-R Act of 1976 gave the Association the responsibility to monitor ConRail's quality of service and its financial condition. The act also extended the planning functions of USRA, by providing the mechanism for a continuing reorganization process with transactions supplemental to the final system plan.

USRA is playing a central role on behalf of the Federal Government in defense of the final system plan, and in particular in connection with the valuation proceedings before the special court, established under the 3-R Act. The United States has a very major financial stake in the outcome of that litigation. In addition to requiring a substantial in-house legal staff, as well as legal fees for highly competent outside counsel, that litigation will require substantial expenditures during fiscal year 1979 for appraisers and other experts employed by USRA in assessing the value of rail properties transferred to ConRail, other railroads and government entities pursuant to the final system plan. ConRail plans to spend $21.5 million for this litigation during fiscal year 1979. This represents almost 80 percent of its authorization request and is $3.5 million more than was spent for this purpose in fiscal year 1978.

USRA must also continue to monitor ConRail's performance during the next fiscal year, which may be a very critical period for ConRail.

In addition, USRA must continue to review the financial condition of both the Delaware and Hudson Railway Co., and the Missouri-Kansas-Texas Railroad Co. in connection with the Federal funds loaned to them by USRA.

ConRail plans to spend $5.7 million on this monitoring during fiscal year 1979. This is approximately the same amount spent for this purpose in fiscal year 1978.

Finally, the provision in this bill with respect to the Board of Directors alleviates a situation which has hampered USRA for some time. The Rail Act of 1973 established a quorum for action by the USRA Board. When a sufficient number of Directors' terms expire without new ones taking office to replace them, the Association Board lacks sufficient membership to constitute a quorum under the statute. This amendment would allow those members whose terms are expiring to continue to serve, for 90 days and thus contribute to a quorum.

Mr. SKUBITZ. Mr. Chairman, I strongly support this piece of legislation. H.R. 10898 as reported by our committee was not so important that it could not be considered after the recess; however, subsequently to our committee reporting the bill, a condition arose on the D. & H. Railroad that made it necessary for our committee to take immediate action in order to stop a disaster. The D. & H. Railroad is on the verge of bankruptcy.

Bankruptcy of the D. & H. could easily happen unless we get off our duff and make available immediately $2.5 million that has already been committed by USRA to the D. & H. Railroad. If we do not do this, the D. & H. will be forced into bankruptcy and trustees will have to be appointed to operate the railroad until a reorganization plan can be formulated. It is estimated this if this took place, directed service might well cost this country $14 million to $17 million.

The issue that faced our committee when we asked that this amendment be added to H.R. 10898 was whether it was warranted, since there was no evidence that the D. & H. has been mismanaged or that it has not done a good job. There is evidence that because of the disastrous way we handled the railroad problem in the Northeast by forcing the D. & H. to take over 750 miles of railroad that it did not want.

If this is true, that this problem is our fault, we have one of two choices to make: Either force or prod USRA to give the $2.5 million, the balance due on the commitment it made to the D. & H. railroad so it can operate for 4 or 5 more months while we work on a reorganization plan, or let the railroad go into bankruptcy next week and probably have to pay out $14 million to $17 million.

Mr. Chairman, that is how clear and simple the issue is. I think the chairman of our committee used good judgment in deciding the thing to do would be to offer this amendment.

The Delaware & Hudson Railway is a special case which may go down in history as one of the worst illustrations of what Government interference can do to a railroad. Through a series of tragicomic regulations, we have uprooted a small but profitable railroad, assigned routes to it with strangling restrictions and, adding rape to incest, have foisted this railroad off in a classical shotgun marriage to another railroad that did not want any part of it. Can we really be

surprised that they come before us today with an urgent and imperative cry for assistance under the threat of immediate bankruptcy?

Yes, Mr. Chairman, I do support this limited assistance, this "organ tent" approach, but nevertheless I share the concern of our current Secretary of Transportation in these stopgap measures and recognize the limitations of holding off reorganization under chapter 77 of the Bankruptcy Act. I do not and could not support this bill and my chairman's amendment if it could only be qualified as a permanent bail out of an insignificant railroad leading us to write yet another chapter in the Guiness Book of Federal Foolishness.

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. SKUBITZ. I yield to the gentleman from Massachusetts.

Mr. CONTE. Mr. Chairman, I commend the chairman of the committee for the outstanding job he has done on this bill, and I commend the ranking Republican member, the gentleman from Kansas (Mr. SKUBITZ), as well.

Mr. Chairman, I rise in support of this USRA authorization bill. Despite the number of times that USRA and ConRail matters have been before this body, there still exists confusions between the two entities. The USRA serves banker to ConRail and monitors ConRail performance but it is not responsible for the daily operations of that railroad.

Serving in the twin roles as financier watchdog, the USRA has brought us a great deal of bad news concerning ConRail performance. As it turns out, USRA's original predictions for ConRail's early success have been erroneous. But, in the main, this has been so because of events outside the USRA control, including such occurrences as exceptionally bad weather, strikes, and poor ConRail car utilization of which it has been a persistent critic. Nevertheless, quarterly reports to Congress have accurately reflected the changed situation. And the findings of its most recent annual report to Congress have been largely confirmed by an independent ICC analysis.

It seems in pointing out the generally bad news about ConRail's financial condition, the USRA has incurred the wrath of some Members of Congress. However, if this body takes out its frustrations with inadequate ConRail performance by denying funds to USRA, it will be tantamount to killing the messenger because of the bad news he bears. This would be nothing to improve overall ConRail performance. Also, cutting back on the USRA would overlook its important role in managing the Government's defense in complex litigation stemming from reorganization of bankrupt railroads in the Northeast. USRA is playing a key role in bringing these Penn Central lawsuits to a successful conclusion. Its presence and expertise in these matters will ultimately save the Government millions of dollars, in reduced conveyance expenses. Without the USRA, it can be expected that ConRail would incur even graver difficulties than it has now in the management of railroads operations. Let us insist that the USRA do a better job in pressing ConRail for improvements through its handling of pursestrings but let us not kill the messenger simply because we do not like the news that he brings.

Mr. McDADE. Mr. Chairman, will the gentleman yield?

Mr. SKUBITZ. I yield to the gentleman from Pennsylvania.

Mr. McDADE. Mr. Chairman, I rise in support of the bill, and, first, I wish to commend the gentleman from Pennsylvania (Mr. ROONEY) and the gentleman from Kansas (Mr. SKUBITZ) for their fine work in bringing this bill to the floor.

Mr. Chairman, I rise to support the amendment and urge my colleagues to join with me in voting in favor of its passage. The amendment will, without the expenditure of new funds, prevent the bankruptcy of the only solvent railroad in the Northeastern United States.

Mr. Chairman, in order to properly evaluate this amendment we must look at the past to explain its necessity. The Delaware and Hudson Railroad has been in operation for more than 100 years. Most of those years were profitable. Suddenly, the D. & H. began to suffer more difficult operating conditions. Unfortunately, these conditions were caused by Federal action. First came the merger of the Pennsylvania Railroad and the New York Central. Our Federal response to this situation was to force the Norfolk and Western to purchase the stock of the D. & H. instead of dealing with the merger-caused loss of its friendly southern connection. We chose the expeditious answer instead of dealing with serious structural problems caused by this ICC approved merger.

Next came the final system plan collapse caused by a failure in negotiations that would have led to competition to ConRail. Because of the rush of events leading to congressional approval of the plan, we allowed, or perhaps forced, the D. & H. to accept twice as much trackage as they had ever before owned, as a remedy for the final system plan collapse. We left the D. & H. with friendly connections over their own tracks only to the east, while forcing them to use a hostile competitor's tracks for access to western and southern markets.

Then, as now, time was extremely important. Let us do the rational thing this time. Let us provide these funds so that the D. & H. can work out its own solutions instead of having unsuccessful ones forced upon them.

The alternatives are certainly not very hopeful. If the D. & H. goes into bankruptcy, we know from FRA's testimony that FRA's Emergency Rail Service Act funds for bankrupts would not be available. Therefore, the ICC would be required to authorize "directed service" by another carrier. That would cost taxpayers at the very least $15 million.

ConRail would be the most likely, in fact, the only real candidate for the operation of the D. & H. trackage. I am convinced that ConRail cannot now, nor in the near future, handle any additional responsibility. ConRail is only now beginning to respond to the probing of USRA's and ICC's substantially increased oversight staff. Its performance over the last 2 years rather clearly shows an inability to take on any more customers or trackage.

This amendment, gentlemen, is the only reasonable answer to this problem and it is the right one. Let D. & H. find its own answers in the marketplace and not on FRA's drawing boards. There will be no new cost if this proposal is adopted. Whereas well over $15 million will be expended if we do not loan this money to the D. & H.

To allow this solvent railroad to collapse would be the last in a string of mistakes and could never be corrected.

Mr. GILMAN. Mr. Chairman, will the gentleman yield?

Mr. SKUBITZ. I yield to my colleague, the gentleman from New York.

Mr. GILMAN. Mr. Chairman, I rise in support of the authorizing appropriations for the U.S. Railway Association.

Mr. Chairman, the Delaware & Hudson Railway Co. has been a successful business enterprise for over 100 years. In the post-World War II era, when railroad companies faced their greatest crises, and line after line went into bankruptcy, the D. & H. was an inspiration to us all, keeping itself operating, in the black, throughout the most trying circumstances.

In 1976, the Delaware & Hudson operated 700 miles of track, located mainly in upstate New York. Their facilities were in need of improvement, and the company applied to the U.S. Railway Association for financial assistance. As a condition for the authorization for a $30 million loan, as required under the "Triple R" Act, the D. & H. was required to take over some 700 miles of lines from other, defunct railroad companies.

Unfortunately, this expansion was too much and too rapid for the D. & H. to absorb. As a result of too great an expansion, the lack of expertise needed to man a railway company which overnight became twice the size it originally was, D. & H. ran into further financial difficulties. Exacerbating their cash flow crisis is the prolonged Norfolk & Western strike which has resulted in daily losses to D. & H. of $50,000.

I have been informed that more than 2,000 D. & H. jobs are at stake in this crisis and that hundreds of shippers throughout New York State, New Jersey, Pennsylvania, and New England rely heavily on D. & H. services.

This amendment would waive the provisions of the Triple R Act which modifies the criteria under which the USRA can permit drawdown of loans by qualifying railroads thereby enabling the D. & H. to avert bankruptcy by a drawdown of the existing balance on the current loan of $2.5 million and to obtain approval of an additional loan of up to $20 million.

Mr. Chairman, I believe that it is essential for the economic well-being of the entire Northeast that this amendment be passed. The Delaware and Hudson provides services for not only the southern tier of New York but also the New York northern corridor and all of New England. As long as the D. & H. is in operation traffic can be diverted from the northern corridor between Buffalo and Albany, which is now so overburdened

that our shippers all through New York are forced to endure delays. Were the D. & H. to close shop, this northern corridor would become even more burdened, and the delays in rail traffic would become worse.

The closing of the D. & H. would drive more shippers away from rail transportation. From an environmental standpoint, rail traffic is ecologically a more desirable way to ship. We should not therefore discourage rail traffic, if at all possible.

Mr. Chairman, as an advocate of the free enterprise system, I believe that a healthy competition works to the advantage of the consumer. The Delaware & Hudson has been giving ConRail healthy competition in the areas that it services. With this additional assistance from Congress, the D. & H. will be able to survive and hopefully grow into a truly productive, profitable, railway concern. The bankruptcy alternative would be much more costly and detrimental to the economy of the State of New York and to the entire Northeast.

Accordingly, Mr. Chairman, I urge all of my colleagues to join in supporting this vital measure and I urge the distinguished chairman of this subcommittee, the gentleman from Pennsylvania (Mr. ROONEY), to provide the same kind of understanding rail relief to the Hudson Valley region or New York State by authorizing ConRail in subsequent legislation, to repair and reopen the Poughkeepsie Rail Bridge, another vital link between New York State and New England.

Mr. SKUBITZ. Mr. Chairman, let me say to my colleague, the gentleman from New York (Mr. GILMAN) that the history of this committee has been that it has made every effort to meet these problems relating to the railroad industry in a forthright manner, and I can assure the gentleman we will try to work out a sound solution.

Mr. GILMAN. Mr. Chairman, if the gentleman will yield further, I thank the gentleman for that assurance.

I wonder if I might just direct a question to the chairman of the subcommittee and ask him to comment with respect to the Poughkeepsie Rail Bridge.

Mr. ROONEY. Mr. Chairman, if the gentleman from Kansas (Mr. SKUBITZ) will yield, I assure the gentleman from New York (Mr. GILMAN) that this matter will be taken up when we discuss the ConRail bill next month.

Mr. GILMAN. Mr. Chairman, I hope we will have the gentleman's support in seeking the repair of that bridge.

Mr. CARTER. Mr. Chairman, will the gentleman yield?

Mr. SKUBITZ. I yield to my colleague, the gentleman from Kentucky.

Mr. CARTER. Mr. Chairman, I thank the distinguished gentleman from Kansas (Mr. SKUBITZ) for yielding.

Mr. Chairman, I want to commend the gentleman and the chairman of the subcommittee for their work on this particular bill. Particularly I want to commend my friend, the gentleman from Kansas (Mr. SKUBITZ), for his excellent explanation of this legislation. I think he has explained it succinctly and has told it as it is.

Mr. Chairman, without this legislation it is entirely possible that this particular railroad in question would be bankrupt within a very few weeks.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. SKUBITZ. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, I appreciate my colleague's yielding.

The gentleman from Kansas (Mr. SKUBITZ) has mentioned to me before that the authorization in this bill is roughly $2.5 million; is that correct?

Mr. SKUBITZ. Mr. Chairman, the authorization is not $2.5 million. In the case of this amendment, we are really not in fact authorizing anything.

What we are doing here is instructing and enabling USRA to fulfill its obligation by loaning the D. & H. Railroad $2.5 million already committed.

Mr. ROUSSELOT. So there is no hidden guarantee or potential major provision in this that could potentially result from this legislation?

Mr. SKUBITZ. None that I know of at all.

Mr. ROUSSELOT. Mr. Chairman, I thank my colleague for his answer. I know the gentleman has worked hard to make sure that this emergency legislation has moved along, and at least we understand it is more necessitated now than it was in the past.

Mr. SKUBITZ. Mr. Chairman, I thank my colleague for his interest.

Mr. ROONEY. Mr. Chairman, I yield such time as he may consume to the gentleman from Pennsylvania (Mr. FLOOD).

Mr. FLOOD. Mr. Chairman, I appreciate the gentleman's yielding this time to me. I wish to express my appreciation for the extraordinary work the chairman of the subcommittee has done on this bill. His efforts in this regard are very important to us in Pennsylvania.

I could not agree more with my colleague from Pennsylvania (Mr. ROONEY), and I rise in support of the committee amendment. When I was a high school student in Wilkes-Barre, Pa., I spent my summers laying ties on the Port Buckley Bridge on the Lehigh Valley Railroad. There were hot summer nights when the smell of creosote was so bad, my family asked me to walk around the block for awhile. That is my first remembrance of the saga of the American railroads; in the days when six competing railroads all came into the center of downtown Wilkes-Barre. The railroads were the spirit of the free enterprise system and they provided the best there was in competition—but now, will the last of the competing railroads in the Northeast United States survive? Or will the D. & H. be left abandoned into imminent bankruptcy and that ugly octopus known as ConRail?

The loss of this loan authority to the D. & H. will cause the demise of the railroad and irreparable harm to rail service in the Northeast—service which is badly needed and without which, counties such as Luzerne in my district cannot live. I urge the support of the committee amendment by all Members, to allow the remaining $2.7 million of a $30-million loan to be drawn down by the D. & H. Railroad. I know that such action is consistent with the goals of the Rail Reorganization Act of 1973 and the final systems plan.

Mr. ROONEY. Mr. Chairman, I yield such time as he may consume to the gentleman from New York (Mr. HANLEY).

Mr. HANLEY. Mr. Chairman, I too, commend the committee for its excellent work on this bill.

Mr. Chairman, I rise in support of the committee amendment to H.R. 10898, the U.S. Railway Association authorization for fiscal year 1979. This amendment is designed to head off a severe financial crisis that would result in the bankruptcy of the last major railroad in the Northeast. I refer to the Delaware and Hudson Railway, a railroad that has fallen victim to events arising out of the Federal reorganization process of rail service in the Northeast. By removing certain constrictions in the Railroad Reorganization Act of 1973 and bringing it more in line with the certain principles of continued competition outlined in the 3 R Act, we hope to keep the railroad running until a Federal reorganization and restructuring study under section 401 of the 3 R Act can be completed and acted upon. The amendment allows continued loan drawdowns on the remaining $2.7 million in USRA section 211(h) and will also enable the USRA to approve further loans on additional moneys expected to be repaid by other railroads into the section 211(h) fund. Specifically, other moneys that should become available are $2 million from the KATY System in October and those funds which will be paid by the Penn Central when it comes out of reorganization. I cannot emphasize strongly enough the critical need for this amendment. It is vital for continued freight service in the New England States and to maintain competition in the Northeast. Without this amendment the only really alternative is bankruptcy. In that event the ICC would have to order a 240-day directed service period by another railroad. The USRA estimates such a move will cost between $15 and $17 million in unrecoverable losses to the Treasury, making this procedure an option we should avoid at all costs. While this amendment does not go as far as the amendment I originally suggested during hearings on the D. & H. situation August 15, it represents an effective solution to the problem and has my wholehearted endorsement. I hope we can all support this very important emergency measure.

Mr. ROONEY. Mr. Chairman, I yield such time as he may consume to the gentleman from New York (Mr. MURPHY).

Mr. MURPHY of New York. Mr. Chairman, I thank my colleague for yielding this time to me.

Mr Chairman I want to join my distinguished colleague from New York (Mr. HANLEY), in support of his timely amendment to H.R. 10898. I think we can safely say that in articulating our concern that the Congress provide ad-

ditional loan authority to prevent the bankruptcy of the Delaware & Hudson Railroad that I am speaking for all my northeastern colleagues.

The D. & H. Railroad offers the only competitive rail freight service to ConRail in most of New York State, parts of New Jersey, Pennsylvania, and Vermont. Moreover, this railroad is a veritable lifeline for the supply and marketing of all of New England's industry.

The amendment which is now before this House would do two things:

First. It would grant an additional $20 million in loan authority to the USRA pursuant to an existing "3R" act rail assistance program.

Second. And of equal importance it modifies the statutory standards which govern the USRA judgment—and so in a manner consistent with the congressionally approved final system plan. That is, it will help to assure the maintenance of competition to ConRail in the Northeast.

The alternatives which face us in bankruptcy are grim indeed. First, hundreds of businesses of which the strength of the Northeast economy so vitally rely will be forced to undertake costly changes to other modes of transportation, or even worse, to close shop entirely. Secondly, and we must not lose sight of this compelling fact, the Federal alternatives in bankruptcy would cost the U.S. taxpayer far more money than the option which the Hanley amendment offers. The Honorable A. Daniel O'Neal, Chairman of the Interstate Commerce Commission, testified as recently as Tuesday before Mr. ROONEY's Subcommittee on Transportation and Commerce that the directed service alternative would cost the Federal Government, in an outright subsidy, between $15 and $17 million to secure a mere 240 days of continued service. The D. & H. estimates that $15 million in loans would see the railroad through the next 12 to 18 months—and without incurring bankruptcy.

Furthermore, a directed service order issued by the ICC to have ConRail operate the D. & H. will result in no competitive rail service. Under this loan program, Federal aid is recoverable as evidenced by the fact that the D. & H. has already begun to pay back earlier loans with interest.

I urge my colleagues not to abandon this railroad. It is imperative that we permit the several federally sponsored studies which are underway to be completed. It hardly makes sense to preempt the congressionally established "401" study mechanism by allowing another bankrupt railroad to occur before proper options are presented.

We have before us an opportunity to work in partnership with our State governments and with an improved and revamped railroad management to save jobs and Federal dollars. New York State alone has provided nearly $25 million in outright grants in an effort to save this railroad. I urge my colleagues to support this amendment which will buy us the time needed to prove it can work.

Mr. ROONEY. Mr. Chairman, I have no further requests for time.

Mr. SKUBITZ. Mr. Chairman, I yield 5 minutes to my colleague, the distinguished gentleman from Texas (Mr. COLLINS).

Mr. COLLINS of Texas. Mr. Chairman, I oppose this authorization for the following reasons:

First. The exigent circumstances leading to the creation of USRA no longer exist.

Second. The political need for USRA no longer exists.

Third. The elimination of USRA will save taxpayer money.

Fourth. The elimination of USRA will foster a stronger, more unified transportation policy.

THE EXIGENT CIRCUMSTANCES LEADING TO THE CREATION OF USRA NO LONGER EXIST

USRA was created by Congress in the Regional Rail Reorganization Act of 1973 to deal with the crisis resulting in the bankruptcy of seven railroads in the Northeast. The USRA submitted a plan to Congress which was approved for the consolidation of most of those bankrupt railroads into ConRail. That consolidation has taken place, and rightfully, the agency should have died. Bureaucratic inertia, however, has continued to lead USRA toward finding excuses for their continued existence. Those bureaucratic excuses add up to the $27,200,000 request contained in this bill for fiscal year 1979. All of the functions presently conducted by USRA can be handled by other Government agencies at far less cost.

THE POLITICAL NEED FOR USRA NO LONGER EXISTS

When USRA was created, one political party controlled the executive branch and another political party controlled the Congress. When the political tensions of 1973 were added to the two-party control of Government, Congress decided that it would be able to trust its own special creation better than traditional transportation agencies of Government.

Today, the political tensions of 1973 have dissipated. Today, one political party controls both the legislative and executive branches of Government. There is no political advantage in having a governmental agency outside of the executive branch.

THE ELIMINATION OF USRA WILL SAVE TAXPAYER MONEY

Everything the USRA does can be done—and done more efficiently—by other agencies of Government. USRA estimates that $21,541,000, or 79 percent of the funds requested, will be needed to finance the litigation on behalf of the United States arising out of the reorganization of the bankrupt railroads in the Northeast. What that really means is that USRA will use most of the money to pay a couple Washington law firms to provide lawyers to argue the case on behalf of Uncle Sam. It also requires large payments to appraisers to prepare new valuations for the law suits. One has to wonder why it is that Justice Department lawyers have suddenly become incapable of arguing a case for the United States. The Justice Department has the staff, has the competency, and I suspect, if permitted, has the will to argue the valuation case growing out of the establishment of ConRail.

USRA estimates that $5,659,000, or approximately 21 percent of the funds requested, will be needed in order to oversee or monitor what ConRail is doing. It is interesting to note that the Federal Railroad Administration in the Department of Transportation also monitors ConRail's activities since it is that Department that must request the additional funds needed by ConRail. That Department also has responsibility for monitoring ConRail to make certain that it conforms to railroad safety laws and manages its business in a way which will minimize the need for future Government handouts. There is no reason that DOT and the FRA could not take full responsibility for monitoring ConRail.

It is entirely likely that the Justice Department and the Department of Transportation could completely absorb all of the things now being done at USRA without having to add a penny to their respective budgets. In my judgment, the elimination of USRA would mean an immediate savings of $27,200,000.

THE ELIMINATION OF USRA WILL FOSTER A STRONGER, MORE UNIFIED TRANSPORTATION POLICY

For years, Congress has urged Government agencies to work toward the development of programs for a sound national transportation policy. In creating USRA, Congress fragmented the development of transportation policy.

In 1965, when we created the Department of Transportation, it was for the purpose of bringing together all transportation functions involving Government regulation and subsidy. Continuation of USRA thwarts the purpose of the Transportation Act of 1965 and continues fragmentation of an area which needs consolidated Government policy. Elimination of USRA will permit the Department of Transportation to do the job it should be doing.

If there is any agency in need of a sunset, USRA is that agency. I urge the rejection of this authorization so that Government processes can be returned to normal and the taxpayers can save $27,200,000 without harming any project or any Government policy.

We all want sunset laws to end unneeded Government agencies. Let us end this authorization and thereby end the USRA agency.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. SKUBITZ. Mr. Chairman, I yield 5 additional minutes to the gentleman from Texas.

Mr. RUDD. Mr. Chairman, will the gentleman yield for one question?

Mr. COLLINS of Texas. I yield to the gentleman from Arizona.

Mr. RUDD. Mr. Chairman, I would like to commend the distinguished gentleman from Texas on his diligence in this matter, but what I am hearing here indicates to me that perhaps this USRA is in the nature of a board of directors that no longer acts, is that correct?

Mr. COLLINS of Texas. They are acting. They have spent considerable time allocating funds. In other words, this is entirely an administrative agency.

They do not operate a railroad. All they do is engage in lawsuits. We have got a Justice Department down here that spends too much time on bussing lawsuits. They ought to have more time to take care of railroad lawsuits. It is just too bad that we are not giving them enough time to work on the essential litigation this country really needs to have to protect the national interest.

Mr. RUDD. I certainly thank the gentleman for the concise, clear explanation.

Mr. COLLINS of Texas. Mr. Chairman, if I can, I would like to call on the gentleman from Pennsylvania (Mr. ROONEY) to give me some background. As I understand it, one of the pressing needs, and probably the most logical reason for this authorization, is because of this railroad that is in dire straits up here. Is that an absolute crisis that has to be acted on now?

Mr. ROONEY. Mr. Chairman, if the gentleman will yield, the authorization request is for the litigation the valuation case pertaining to the transfer of assets from the bankrupt estates to ConRail and the monitoring of ConRail. As I understand it, the USRA will be out of business as soon as the case is settled by the special court. I am in complete accord with the gentleman from Texas. I do not want to see USRA continue indefinitely. I think USRA must, however, continue to perform the essential functions of litigating the valuation case monitoring railroad operations in instances when they have received Federal funds. They are doing an exceptional job.

They have got the expertise and as soon as this case is settled, if I am still in Congress and still chairman of this committee, I can assure the gentleman from Texas the USRA will be back up.

Mr. COLLINS of Texas. Of course based on the average experience and knowledge and life expectancy, I doubt if the gentleman from Pennsylvania will be here when this is finished. When does the gentleman foresee this will be terminated? Can he give any date we can anticipate that?

Mr. ROONEY. The gentleman from Texas knows how the courts operate in this country. It is in the special court in Philadelphia, and the court is trying to settle it as quickly as possible. In fact it is attempting to have the matter settled out of court. If this is possible the matter should be settled expeditiously. As soon as it is settled I think the gentleman will see the USRA go out of existence.

Mr. COLLINS of Texas. Of course, the gentleman did not give a specific date.

Mr. ROONEY. I cannot tell the gentleman how long the court case will take. He knows the courts as well as I do. Sometimes it is like Congress.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Texas. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, I have heard rumbles from several of the gentleman's committee members, Mr. Chairman, and there is a real possibility we ought to pull this thing out of existence next year. Does the gestleman share that idea of putting it to sleep?

Mr. ROONEY. No. There is too much money involved in this, and for them to transfer it over to the Justice Department or the DOT I think would be illogical. The Justice Department and DOT requested that USRA handle this case. I think we need the USRA until this court case is settled.

Mr. ROUSSELOT. Does not the DOT have adequate machinery to handle that?

Mr. ROONEY. Absolutely not, if the gentleman will continue to yield. If the DOT has the responsibility it would be forced to hire outside counsel.

Mr. COLLINS of Texas. Mr. Chairman, I rise in opposition to the amendment.

I would just say that our basic problem with this whole legislation is that it is going on and on and on. The States are given a deadline on the time to act. They just keep putting it off and putting it off.

Mr. Chairman, there is no need for any further extension. The amendment just speaks for itself. Are we going on and on in perpetuity with this matter, or do we want to put a deadline on it?

Mr. FLORIO. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Texas. I yield to the gentleman from New Jersey.

Mr. FLORIO. Mr. Chairman, I am somewhat surprised that the gentleman from Texas (Mr. COLLINS) would reject an opportunity for ConRail to derive revenue from a source other than the Federal Government, knowing of the gentleman's interest in avoiding further Federal support for this particular entity.

This amendment provides ConRail with an opportunity to unload unneeded trackage to someone who wants it. Thus, it will not be a burden on the Federal taxpayer.

I would think that if the gentleman thinks through his position and his rather philosophical statement with regard to the operation of USRA as well as ConRail, he would find this amendment a highly desirable one to support.

Mr. COLLINS of Texas. Mr. Chairman, I would say to the gentleman from New Jersey (Mr. FLORIO) in that regard that this is not a matter of unloading. It is a matter of making a decision. Some people just do not make decisions very quickly. They go over a deadline, and the greater the deadline that is given them, the longer they postpone the decision.

Mr. GARY A. MYERS. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Texas. I yield to the gentleman from Pennsylvania.

Mr. GARY A. MYERS. Mr. Chairman, I am concerned about the gentleman's interpretation.

He said the extension is needed so that the local municipalities can buy these lines at a reduced price. If that is true, that means that there will be less money in the till when the whole bankruptcy is disposed of in the courts; and it will, in fact, be the Federal Government which will have to make up the difference on that equipment which has been sold off at a reduced price. Therefore, I think in the long run, the Federal taxpayer will pay, in some sense, for the extension here, and we ought to recognize that.

Mr. COLLINS of Texas. The gentleman from Pennsylvania is exactly correct.

Mr. SKUBITZ. Mr. Chairman, I have no further requests for time.

Mr. ROONEY. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

H.R. 10898

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 214(c) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 724(c)) is amended to read as follows:

"(c) ASSOCIATION.—For the fiscal year ending September 30, 1979, there are authorized to be appropriated to the Association for purposes of carrying out its administrative expenses under this Act such sums as are necessary, not to exceed $27,200,000. Sums appropriated under this subsection are authorized to remain available until September 30, 1980.".

Mr. ROONEY (during the reading). Mr. Chairman, I ask unanimous consent that the bill be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

COMMITTEE AMENDMENT

The CHAIRMAN. The Clerk will report the committee amendment.

The Clerk read as follows:

Committee amendment: Page 2, after line 2, insert the following new paragraph:

SEC. 2. Section 201(e) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 71 (e)) is amended by adding at the end thereof the following new sentence: "Upon the expiration of their terms of office, members of the Board shall continue to serve until their successors have been appointed and qualified, except that a member shall not serve for more than 90 days after the expiration of his term.".

The CHAIRMAN. The question is on the committee amendment.

The committee amendment was agreed to.

AMENDMENT OFFERED BY MR. ROONEY

Mr. ROONEY. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ROONEY: Page 2, immediately after line 9, insert the following new section:

SEC. 3. Section 211(d) of the Regional Rail Reorganization Act of 1973 is amended by adding a new sentence at the end thereof as follows: *"Provided,* That with respect to a loan made under subsection (a) of this section to a railroad in the region, the Association may approve any modification of such loan, including increasing the principal amount of the loan, upon a finding that such modification would permit the continuation of rail service determined by the Association, in the Final System Plan or under the goals of the Act, to be desirable."

Mr. ROONEY (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

Mr. ROUSSELOT. Mr. Chairman, reserving the right to object, I will not object, can the gentleman explain the amendment?

Mr. ROONEY. Yes, if the gentleman will yield, the Regional Rail Reorganization Act of 1973 requires that in awarding loans to railroads it must assure itself that it receives sufficient security to reasonably protect the interests of the United States and that the funds will be repaid within the time fixed by the loan. It has now been determined that these conditions are too restrictive in the cases of railroads in bankruptcy or bordering on bankruptcy. The proposed amendment would remove these restrictive conditions.

The necessity for this amendment was forcefully brought out last week when the USRA financial committee decided, with regard to an outstanding loan to the Delaware and Hudson Railway, that it was no longer able to make the required findings to the effect that adequate security existed and the loan would likely be repaid in a timely manner. Consequently, it voted to prohibit the draw down of the remaining $2.7 million of the $30 million commitment.

The D. & H. Railway is in very precarious financial condition. This has been of considerable concern for some time to my subcommittee as well as the Government agencies involved. It is now obvious that unless the railroad can receive the additional funds from the existing loan commitment, it will be forced to file for bankruptcy in a very few days.

The Subcommittee on Transportation and Commerce held a full day of hearings on this matter yesterday. It was determined that to a large extent this precarious financial condition is due to an overexpansion 2 years ago resulting from the final system plan. Thus, it is my belief that since the Government placed the railroad in this condition, it has a moral responsibility to keep the railroad from bankruptcy until such time as the presently ongoing restructuring plans are completed. Although this small railroad operates in the Northeast, it provides essential services for the entire Nation.

The amendment that I am proposing would give a needed flexibility to aid ailing railroads. In my opinion, it is much more preferable to aid an ailing railroad rather than to await bankruptcy and go through the horrendous project of restructuring under adverse conditions and undue pressure.

Our hearings disclosed that the action we are proposing is much cheaper to the Federal Government than the alternatives. It was brought out that the alternative to permitting the loan drawdown, which would be accomplished by the proposed amendment, would be for the Interstate Commerce Commission to direct service. The Chairman of the ICC testified that his directed service order would cost between $15 and $17 million and moreover, the funds would not be refundable. Obviously, an unsecured loan is preferable to a known giveaway. In addition, the directed service would only be in effect for 8 months. After the 8-month service period, a permanent solution may still not have been found and no means would remain for providing the essential services provided by this railroad. In addition, it was brought out that directed service may not be requested by the court and the trustees of the bankrupt railroad and hence it could proceed immediately to liquidation. This would create untold economic havoc, not only in the Northeast but in other parts of the country as well.

In a sense, the proposed amendment will buy time for the matter to be thoroughly studied and hopefully a permanent solution will be found. These studies are already in process.

I would also like to emphasize that no new funds are being requested. Rather, it is requested that the railroad be permitted to draw down the small remaining balance of an existing loan commitment and granted a new loan if necessary and justified under the new conditions.

Although I introduced this amendment, I want it clearly understood that I am able to introduce it because of the assistance and cooperation that I have received from a number of my colleagues. These colleagues are from both sides of the aisle and represent districts served by the D. & H. Railroad and districts far removed from this service area. During our hearings yesterday we received testimony and support from Mr. STRATTON, Mr. HANLEY, Mr. MCDADE, and Mr. CONTE. In addition, a number of other Members wanted to testify but were unable due to previous unalterable commitments. Moreover, the ranking minority member of the subcommittee, my good friend Mr. SKUBITZ, has been instrumental throughout all our deliberations and especially during this matter.

We all urge your support in adopting this amendment.

Mr. ROUSSELOT. Mr. Speaker, further reserving the right to object, what it means then is that the rules presently under which this agency operates are so strict that they would not be able to make this additional guarantee or loan?

Mr. ROONEY. That is correct.

Mr. ROUSSELOT. It is a loan?

Mr. ROONEY. That is correct.

Mr. ROUSSELOT. Then I would ask the gentleman this: Who put this railroad in that condition?

As I understand it, part of the problem is that we imposed upon them some additional track, is that correct?

Mr. ROONEY. Yes.

Mr. ROUSSELOT. That they had to take that additional track that was imposed upon them, and consequently the Government has created the bankruptcy?

Mr. ROONEY. That is right.

Prior to 1976 this was a financially profitable railroad that had some 750 miles of track and they added some 900 miles of additional track. This was necessary because the Chessie system failed to take over the part of the system designated to it in the final system plan.

Mr. ROUSSELOT. So that this is another example of the Government forcing upon a profitable operation an unnecessary burden and that is why we are here today.

Mr. ROONEY. Six railroads in the Northeast were bankrupt and had to reorganize. I think the law developing ConRail was the cure for nationalization. I think we would have seen nationalization of our railroads in this country had we not enacted this legislation in 1976.

I am hopeful that we will see ConRail become a profitable railroad. I am still bullish on ConRail because it is the only ballgame in town.

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. ROUSSELOT. I yield to the gentleman from Massachusetts.

Mr. CONTE. Mr. Chairman, I rise in support of the amendment of the gentleman from Pennsylvania (Mr. ROONEY) which would amend section 211(d) of the 3–R Act to give the U.S. Railway Association the authority to modify loans guaranteed under its section 211(a) authority upon finding only that such modifications would permit the continuation of rail services determined by the association in the final system plan or under the act, to be desirable in achieving the goals of the act.

The purpose of this language is to allow the USRA, the banker under the section 211 program, more flexibility in responding to the problems of troubled railroads in the Northeast and Midwest. It provides the association with the tools needed to quickly help railroads through cash emergencies such as the one currently facing the Delaware & Hudson Railroad, where there is a real threat that a cessation of railroad operations otherwise may result. It also provides a means of attacking the railroad problems which have plagued the Northeast and Midwest in a rational manner, during a time when studies and suggestions for long-term solutions to such serious regional problems of overcapacity, deteriorated facilities and shortages of revenues are receiving careful attention.

The wisdom of the amendment is recognized when one considers the alternatives available—or lack thereof.

In the case of the Delaware & Hudson, these alternatives include shorted term "directed" service along its routes by another railroad at unrecoverable Government expense or a total cessation of service in the immediate future. Ultimately, it may mean the D. & H. being swallowed up by its behemoth competitor, ConRail. This is an alternative that should surely be avoided.

I feel that a precipitous event such as the D. & H.'s quick collapse could have a "domino" effect and be very harmful to the financial health of all railroads in the region. The very future of New England's main line, the Boston & Maine Railroad, is tied to the continued operation of the D. & H. The D. & H., along with ConRail, represents B. & M.'s only links to the west and south of New England. The Delaware & Hudson interchanges about one-half of its traffic with the B. & M., representing approximately one-third of the B. & M.'s volume. In order to gain perspective on the size of this freight volume, it can be pointed out that

the Delaware & Hudson's revenues run around $70 to $80 million per year, while the Boston & Maine's revenues reach nearly $100 million.

In addition to the B. & M., the Vermont Railroad and ConRail interchange directly with the Delaware and Hudson on New England shipments. On top of this, quite a number of our other railroads are dependent on the D. & H. through B. & M. as a middle carrier. This is particularly true of States such as Maine and New Hampshire, where the Maine Central and the Bangor & Aroostook ship a good deal of freight through the B. & M. to the Delaware & Hudson lines. Thus it is clear that the continuation of the D. & H. service is very important to the success of New England economy in particular the New England economy in general.

Passage of this amendment will allow the D. & H. to drawdown funds from USRA under the present section 211 program, without an additional appropriation, which could sustain the railroad for approximately 2 years.

Other regional railroads, like the B. & M., Central of Vermont, or Bangor & Aroostook are potentially eligible for loans under this program, but any increase in the size of this program to accommodate any new loan requests would be subject to approval under the appropriations process. This fact provides the Congress with an additional opportunity to weigh the wisdom of this program.

Moreover, this amendment would allow future long-term solutions, such as those available under DOT's section 401 authority to waive certain antitrust provisions to encourage restructure of the railroads. The D. & H. and the B. & M. are now subject to a study under this provision. In addition, we in New England have already begun to deal with the issue of rationalization of our railroad system. The New England Regional Commission has been working with the USRA on a rail transportation study which focuses in large part of restructuring the D. & H. system. Also, Boston and Maine's President, Allan Dustin, recently submitted an interesting plan for reform of the working capital fund under the Emergency Rail Services Act that deserves close consideration as a future remedy.

In sum, we have before us an imperfect, but necessary solution to an imperfect situation brought about in the wake of the Penn Central bankruptcy and its aftermath. If we are to work out a rational cure to the resultant railroad facing the Northeast and Midwest, we should allow USRA the flexibility needed to deal with a crisis like the current D. & H. cash squeeze.

This amendment provides such flexibility and I urge its passage.

Mr. ROUSSELOT. Mr. Chairman, I think the gentleman has made the point. We need the amendment. The point I was trying to make is that it was the Government that caused the problem.

Mr. CONTE. I think the gentleman is right, and ConRail has not helped them at all and if we do not do this ConRail will be taking over the Delaware & Hudson.

Mr. ROUSSELOT. I thank the gentleman, and I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania (Mr. ROONEY) that further reading of the amendment be dispensed with and that it be printed in the RECORD?

There was no objection.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Pennsylvania (Mr. ROONEY).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. FLORIO

Mr. FLORIO. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. FLORIO: Page 2, immediately after line 9, insert the following new section:

SEC. 3. Section 206(d)(5)(C) of the Regional Rail Reorganization Act of 1973 (45 U.S.C. 216(d)(5)(C)) is amended by striking out "900 days" and inserting in lieu thereof "3 years".

Mr. FLORIO. Mr. Chairman, improving the quality of our Nation's commuter rail network was a major concern in the establishment of the Consolidated Railroad (ConRail) system. Congress provided a mechanism in the Regional Rail Reorganization Act of 1973 for ConRail and Amtrak to sell their surplus trackage, stations, and rights-of-way to States and other operating authorities at net liquidation value. States could thereby operate commuter services more efficiently with control of operations and track maintenance. The 900-day period was established as the time during which negotiations for purchases at this price would take place.

The State of New Jersey Department of Transportation and other operating authorities in the ConRail service area have been engaged in active negotiations under these provisions. NJDOT is planning to use property acquired through this option to bring new passenger rail service to seven counties, including direct access to New York from the former Erie Lackawanna lines, and extension of the Lindenwold high-speed line into the suburban areas of southern New Jersey.

The 900-day period runs out on September 17, 1978, and this deadline is becoming an obstacle to the completion of the purchase agreements. My amendment would remove the pressure of this immediate deadline from the negotiation process. The States and ConRail and Amtrak would have the time to settle their remaining differences, and reach agreement on this sale of vital rail property.

I urge adoption of this amendment in the interest of efficient rail transit service and for the immediate benefit of many of our districts in the ConRail service area.

Mr. SKUBITZ. Mr. Chairman, will the gentleman yield?

Mr. FLORIO. I yield to the gentleman from Kansas.

Mr. SKUBITZ. Mr. Chairman, under existing law, the States are allowed 900 days to purchase railroad property; is that not correct?

Mr. FLORIO. That is correct.

Mr. SKUBITZ. And all the gentleman from New Jersey is trying to do here is to help some of the States which are trying to renegotiate with ConRail and take over some of the bankrupt railroads' property by giving them an additional 195 days; is that correct?

Mr. FLORIO. That is correct.

Mr. SKUBITZ. Mr. Chairman, we accept the amendment on this side.

Mr. GARY A. MYERS. Mr. Chairman, will the gentleman yield?

Mr. FLORIO. I yield to the gentleman from Pennsylvania.

Mr. GARY A. MYERS. Mr. Chairman, what would occur if the extension were not allowed with respect to ConRail? Is it not true that they would be able to simply eliminate these lines?

In other words, the question I have is, Will it cost ConRail more money to continue to operate these lines during this extended negotiation period?

Mr. FLORIO. Most of these lines are not being operated. They are excess lines which ConRail is being required to keep up, with all the maintenance costs associated with them.

If, in fact, this period is not extended, ConRail will not be able to continue negotiating with the States and with most of the agencies which desire to purchase these lines. Accordingly, what will happen is that ConRail will be required to keep the lines, and the States will not be able to buy them at the net liquidation price which the States regard as advantageous for their future needs.

Mr. GARY A. MYERS. If the gentleman will yield further, Mr. Chairman, is the gentleman saying that ConRail could not, on its own, even after this 900-day period expired, sell something off if it so desired or could not negotiate to sell it off?

Mr. FLORIO. They will not be in a position to negotiate under the terms of the 900-day option, by virtue of the 4–R Act, which specifically authorized ConRail to sell these lines at the net liquidation price to States desiring to take advantage of these prices so that they will not later have to negotiate at higher prices.

Mr. GARY A. MYERS. Mr. Chairman, I thank the gentleman.

The CHAIRMAN. The question is on the amendment ofiered by the gentleman from New Jersey (Mr. FLORIO).

The amendment was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. MOAKLEY, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 10898) to amend the Regional Rail Reorganization Act of 1973 to authorize appropriations for the U.S. Railway Association for fiscal year 1979, pursuant to House Resolution 1321, he reported the bill back to the House with sundry amendments adopted by the Committee on the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. ROUSSELOT. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 253, nays 67, not voting 112, as follows:

[Roll No. 723]

Mr. White with Mr. Whitehurst.
Mr. Yates with Mr. Charles Wilson of Texas.
Mr. Yatron with Mr. Weaver.
Mr. Nowak with Mr. Nolan.
Mrs. Collins of Illinois with Mr. Livingston.
Mr. Fowler with Mr. Jones of North Carolina.
Mr. Ryan with Mr. Sarasin.
Mr. Pursell with Mr. Quillen.

Mr. LEVITAS and Mr. QUAYLE changed their vote from "yea" to "nay."

So the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. RUSSO. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill H.R. 10898, just passed.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

FURTHER MESSAGE FROM THE SENATE

A further message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 6669) entitled "An act to establish a national climate program, and for other purposes."

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing

votes of the two Houses on the amendment of the Senate to the bill (H.R. 11401) entitled "An act to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and for other purposes."

The message also announced that the Senate agrees to the amendment of the House to the amendment of the Senate numbered 1 to the bill of the Senate of the following title:

H.R. 10878. An act to extend until October 1, 1981, the voluntary insurance program provided by section 7 of the Fishermen's Protective Act of 1967, and for other purposes.

The message also announced that the Senate agrees to the amendment of the House of Representatives to the amendment of the Senate numbered 2 with amendments.

The message also announced that the Senate had passed a concurrent resolution of the following title, in which the concurrence of the House is requested:

S. Con. Res. 103. Concurrent resolution to correct the enrollment of H.R. 6669.

PERMISSION TO FILE CONFERENCE REPORT ON H.R. 8149, CUSTOMS PROCEDURAL REFORM ACT OF 1977

Mr. CORMAN. Mr. Speaker, I ask unanimous consent that the managers may have until midnight tonight to file a conference report on the bill (H.R. 8149) to provide customs procedural reform, and for other purposes.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

LEGISLATIVE PROGRAM

(Mr. RHODES asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. RHODES. Mr. Speaker, I take this time to inquire of the distinguished majority leader as to the program for the week of September 4, 1978.

Mr. WRIGHT. Mr. Speaker, will the gentleman yield?

Mr. RHODES. I yield to the gentleman from Texas.

Mr. WRIGHT. I thank the gentleman for yielding.

Mr. Speaker, in response to the request of the distinguished minority leader, it is our plan, upon resuming at noon on Wednesday, September 6, 1978, to take up first the Civil Rights Commission authorization, H.R. 12432, and complete consideration of that bill.

Then, we will proceed to House Joint Resolution 1088, providing financial assistance for the city of New York. Following that, we will take up H.R. 7308, Foreign Intelligence Surveillance Act. That would be an open rule with 3 hours of general debate.

The House will convene at 10 o'clock on Thursday. Immediately following this colloquy I shall ask unanimous consent that the consideration of any veto message received by the Clerk during the adjournment of the House from August 17 until September 6 may be postponed until Thursday, September 7, 1978, in order that all Members will have ample notice and may be present.

On Thursday, we also would plan again to take up H.R. 7308, Foreign Intelligence Surveillance Act, and complete its consideration.

Then, we will proceed to H.R. 11280, Civil Service Reform Act, and conclude consideration of that bill.

On Friday, September 8, we would meet at 10 o'clock.

We will consider Senate Joint Resolution 4, the Hawaiian Native Claims Study Commission, with an open rule and 1 hour of debate.

Following that, we will take up H.R. 11711, adjustment assistance programs improvements, with a modified open rule and 1 hour of debate.

Finally, we will take up H.R. 11622, fuels transportation safety amendments, also with an open rule and 1 hour of general debate.

The House will adjourn by 3 p.m. on Friday and by 9 p.m. on all other days.

Mr. RHODES. Is the majority leader in a position to inform the House as to the intention of the leadership with regard to the prospective veto of the defense authorization bill? Will the matter be brought to the floor of the House for a vote on Thursday, September 7, or will it be referred to a committee for further action?

Mr. WRIGHT. It is the present plan of the leadership to bring the veto message to the House for a vote on Thursday, if the unanimous-consent request is agreed to. All Members then would know exactly when the vote would be coming and could make their plans.

Mr. RHODES. May I ask the distinguished majority leader if we can look forward for the balance of this session, the second session of this Congress, to evenings which would run to, say, 8 or 9 o'clock? I know the first week we come back every evening, apparently, will run until about 9 o'clock. Is this the type of pattern which probably will be set for the balance of the session?

Mr. WRIGHT. I regret to say that I think we must continue in that pattern if we are to meet our adjournment target.

Mr. RHODES. Of course, I would hope that prior to this final determination of that, the distinguished majority leader and the Speaker and I could sit down, as we have talked before, and look at the list of bills which are pending, which could be brought up, to make sure that we do not waste the time of the House on legislation which cannot possibly become law in this session.

If this is done I am certain all the Members of the House would be perfectly willing to work as late as necessary in order to accomplish the legislative program of those bills which must be taken care of prior to the adjournment, but I certainly would hope that we would not subject the Members of the House to work on bills which might be brought up for the personal convenience of one or possibly two Members to the very inconvenience of the rest of us.

Mr. WRIGHT. If it would be agreeable with the gentleman from Arizona, the distinguished minority leader, I think it would be extremely useful for him and the Speaker and me to sit down together, as he has suggested, perhaps on Wednesday afternoon, the day of our return from our recess.

At that time, assuming the Speaker's availability, we could look at the entire list of legislation and have a discussion about which ones seem to be the most important, or the most necessary, and try to weed out some which would be fruitless effort on our part.

Mr. RHODES. I certainly agree with the majority leader and I will hold myself ready for such a meeting at the convenience of the majority leader and the Speaker.

Mr. McCLORY. Mr. Speaker, will the gentleman yield?

Mr. RHODES. I yield to the gentleman from Illinois.

Mr. McCLORY. Mr. Speaker, I asked the gentleman to yield so I may address a question to the distinguished majority leader.

I note a large number of amendments to the Foreign Intelligence Surveillance Act have been printed in the RECORD and filed by a large number of the Members, and I just wonder on Wednesday if it is the intention to conclude general debate and to defer the offering of amendments until Thursday.

Mr. WRIGHT. Mr. Speaker, if the minority leader would yield, this bill, as my friend knows, has been pending with a rule for some weeks. We think it is important that it be brought before the House and action taken. Depending upon the time available on Wednesday after completion of the Civil Rights Commission authorization and the New York City Financial Assistance Act, we would like to get as far as we can on that bill. We can probably get the general debate out of the way, at least, I should think, and then conclude with amendments on Thursday.

However, if the unanimous-consent request is agreed to, I believe we must reasonably consider that the centerpiece of Thursday's effort will be the vote on any veto that may be received.

Mr. McCLORY. So it is my understanding we would do the rule and the general debate, but the amendments would be on Thursday?

Mr. WRIGHT. If the gentleman would yield further, if we could get to some amendments by reason of any earlier expeditious action, I think we should not be tied down to a promise that we would not take them up. Realistically, however, I see no expectation that we could get to many amendments that evening.

Mr. McCLORY. I thank the gentleman.

Mr. RHODES. I thank the gentleman.

POSTPONING UNTIL THURSDAY, SEPTEMBER 7, 1978, CONSIDERATION OF ANY VETO MESSAGE RECEIVED DURING ADJOURNMENT

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that the considera-

tion of any veto message received by the Clerk during the adjournment of the House from August 17, until September 6, be postponed until Thursday, September 7, 1978.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

AUTHORIZING CLERK TO RECEIVE MESSAGES FROM SENATE AND SPEAKER TO SIGN ENROLLED BILLS AND JOINT RESOLUTIONS NOTWITHSTANDING ADJOURNMENT

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that, notwithstanding any adjournment of the House until Wednesday, September 6, 1978, the Clerk be authorized to receive messages from the Senate and that the Speaker be authorized to sign any enrolled bills and joint resolutions duly passed by the two Houses and found truly enrolled.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

AUTHORIZING SPEAKER TO ACCEPT RESIGNATIONS AND TO APPOINT COMMISSIONS, BOARDS, AND COMMITTEES NOTWITHSTANDING ADJOURNMENT

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that, notwithstanding any adjournment of the House until Wednesday, September 6, 1978, the Speaker be authorized to accept resignations, and to appoint commissions, boards, and committees authorized by law or by the House.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

DISPENSING WITH CALENDAR WEDNESDAY BUSINESS ON WEDNESDAY, SEPTEMBER 6, 1978

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that the business in order under the Calendar Wednesday rule be dispensed with on Wednesday, September 6, 1978.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

EXTENSION OF FISHERMEN'S PROTECTIVE ACT OF 1967

Mr. LEGGETT. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 10878) to extend until October 1, 1981, the voluntary insurance program provided by section 7 of the Fishermen's Protective Act of 1967, and for other purposes, with Senate amendments to the House amendment to Senate amendment No. 2 thereto, and concur in the Senate amendments to the House amendment to Senate amendment No. 2.

The Clerk read the title of the bill.

The Clerk read the Senate amendments to the House amendment to Senate amendment numbered 2, as follows:

Page 5, line 7, of the House engrossed amendments, after "terms" insert: fishery.

Page 6, of the House engrossed amendments, strike out lines 3 to 12, inclusive, and insert:

"(1) in the case of such vessel—

"(A) occurs when such vessel is engaged in any fishery subject to the exclusive fishery management authority of the United States under the Fishery Conservation and Management Act of 1976, and

"(B) is attributable to any vessel (or its crew or fishing gear) other than a vessel of the United States; or

"(2) in the case of such fishing gear—

"(A) occurs when such fishing gear is being used for fishing in any fishery subject to such exclusive management authority, and

"(B) is attributable to (i) any other vessel, whether such vessel is a vessel of the United States, or (ii) an act of God.

Mr. LEGGETT (during the reading). Mr. Speaker, I ask unanimous consent that the Senate amendments to the House amendment to Senate amendment No. 2 be considered as read and printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

Mr. FORSYTHE. Mr. Speaker, reserving the right to object, I do so only in order to offer the chairman of our subcommittee, the gentleman from California (Mr. LEGGETT) an opportunity to explain what we are doing in this unanimous-consent request.

I yield to the gentleman from California (Mr. LEGGETT) for that purpose.

Mr. LEGGETT. Mr. Speaker, I thank the gentleman for yielding me this time.

Mr. Speaker, the only provision of the House version of the bill that was rewritten has to do with the modified no fault insurance program. The change would simply result in the broadening of the coverage of the program to cover damage to U.S. fishing vessels and equipment, occurring beyond the zone as well as within the zone, so long as such vessel is engaged in a fishery subject to the exclusive management authority of the United States, and the equipment is damaged while being used in fishing in such fishery.

Mr. DE LUGO has brought to my attention that in his district of the U.S. Virgin Islands, damages to the equipment and boats of local fishermen are caused primarily by commercial vessels such as cruise ships and steamers. Due partly to a lack of identifiable sealanes, they enter Virgin Islands' waters and overrun the fish pots set by Virgin Islands' fishermen.

In 1 year alone small fishing industry lost over $800,000 in equipment.

I would like to make it clear that H.R. 10878 is applicable to the fishing industry of the Virgin Islands and it is the intent of this legislation to allow for compensation to fishermen for damages to equipment or vessels brought on as a result of the actions of these commercial vessels, as well as any other type of foreign issue.

Mr. FORSYTHE. Mr. Speaker, further reserving the right to object, I thank my chairman, the gentleman from California (Mr. LEGGETT) for his explanation, and I wish to compliment the chairman on his explanation. We have finally gotten to the point where this can now go to the White House. It does, as the gentleman pointed out, add no costs to the taxpayers and adds broad protection for fishing vessels and their gear. Also, as the chairman has pointed out, regardless of where the damage comes from, whether it be from foreign fishing vessels, or whatever, it does afford them protection.I am very happy that we are in this posture.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California (Mr. LEGGETT) to dispense with further reading of the Senate amendments to the House amendment to Senate amendment numbered 2?

There was no objection.

The SPEAKER pro tempore. Is there objection to the first request of the gentleman from California (Mr. LEGGETT)?

There was no objection.

A motion to reconsider was laid on the table.

RESIGNATION AS MEMBER OF BOARD OF REGENTS TO SMITHSONIAN INSTITUTION

The SPEAKER pro tempore laid before the House the following resignation as a member of the Board of Regents to the Smithsonian Institution:

HOUSE OF REPRESENTATIVES,
Washington, D.C.

DEAR MR. SPEAKER: As I have discussed with you, and should like to tender my resignation as a congressional regent of the Smithsonian Institution.

I am most grateful to you for allowing me the privilege of serving as a regent. I have thoroughly enjoyed the experience and hope that I have represented the House diligently and energetically.

Any criticism of the former relationship between the institution and the Congress has hopefully been removed by the newly activated close association among the regents, the staff and the appropriate congressional committees.

All of the regents are devoted citizens and highly interesting personalities. I especially enjoyed my work with Judge Higginbotham on the African Museum.

Thank you very much, Mr. Speaker, for this exciting experience.

Warmest best wishes.

Sincerely,

LINDY.

Also, Mr. Speaker, I should report to you on the splendid arrangements initiated by Dorothy Rosenberg of the Smithsonian and Jan Schoonmaker, my chief legislative assistant, for coordination and cooperation among staff members at the Smithsonian and those appointed by the House and Senate regents. Their work has been most valuable.

LINDY.

The SPEAKER pro tempore. Without objection, the resignation will be accepted.

There was no objection.

APPOINTMENT AS MEMBER OF BOARD OF REGENTS TO SMITHSONIAN INSTITUTION

The SPEAKER pro tempore. Pursuant to the provision of 20 U.S.C. 42, 43, and without objection, the Chair appoints as a member of the board of regents to the Smithsonian Institution the gentleman from California, Mr. RYAN, to fill the existing vacancy thereon.

There was no objection.

APPOINTMENT AS MEMBERS OF DELEGATION TO ATTEND CONFERENCE OF INTERPARLIAMENTARY UNION, BONN, GERMANY, FROM SEPTEMBER 3 TO 14, 1978

The SPEAKER pro tempore. Pursuant to the provisions of section 204(b), Public Law 94–141, as amended, and without objection, the Chair appoints as members of the delegation to attend the conference of the Interparliamentary Union held in Bonn, Germany from September 3 to 14, 1978, the following Members and delegates on the part of the House:

Mr. HAMILTON, Indiana, Chairman; Mr. LEHMAN, Florida, Vice Chairman; Mr. EVANS, Colorado; Mr. DUNCAN, Oregon; Mr. IRELAND, Florida; Mr. WON PAT, Guam; Mr. BROOMFIELD, Michigan; Mr. DERWINSKI, Illinois; Mr. MCCLORY, Illinois; Mr. VANDER JAGT, Michigan; Mr. WIGGINS, California; and Mr. BUTLER, Virginia.

There was no objection.

LEGISLATOR OF THE YEAR

(Mr. SMITH of Iowa asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

● Mr. SMITH of Iowa. Mr. Speaker, I have just been made aware that one of the Nation's largest independent trucker organizations has named MARTY RUSSO their "Legislator of the Year." This award comes but 2 months after MARTY received a similar award from the Independent Bakers Association. As a result, I would like to take a moment or two to commend one of our younger Members on his accomplishments as a subcommittee chairman in only his second term of Congress.

MARTY RUSSO of the Third District of Illinois was chosen as chairman of the Subcommittee on Special Small Business problems at the beginning of this Congress. Since that time he has shown great vigor and sincerity in investigating regulatory and other abuses against many small business persons, among them—independent truckers, movie producers, bakers, funeral directors, and travel agents. In addition to investigations in these areas, MARTY has held an extensive set of hearings on various bills which would lessen the impact of Federal regulation upon small business.

A speech he gave to the National Convention of Independent Bakers highlights his attitudes on the regulatory plight of our Nation's smaller businesses. I would like to share it with you:

SPEECH OF HONORABLE MARTY RUSSO BEFORE INDEPENDENT BAKERS ASSOCIATION, JUNE 8, 1978

Good morning. It certainly is a pleasure for me to be here this morning, and I can't think of a better way to start the day than spending it with my good friends, the independent bakers. We have had a very interesting and, for me, enlightening year together confronting one of this town's many bureaucracies. Quite frankly, before I came to Washington in 1975, I had heard many horror stories about the federal bureaucracy. Much to my amazement, things are even worse than I had imagined.

Now that I chair a small business subcommittee, bureaucratic issues affecting the struggling small businessman or woman reach me almost daily. Often a famous World War II story enters my mind:

During World War II, a Japanese spy was sent to Washington to spot targets for a bombing raid. Reporting back to his superiors, the spy said, "It is useless to bomb Washington. The American government has been very farsighted. If you completely destroy one building and everyone in it, you accomplish nothing, for they already have two other buildings completely staffed with people doing exactly the same thing."

Filling out forms, receiving federal inspectors and the like is not a funny business by any stretch of the imagination. But we have to admire the ingenious among us who fight fire with fire. Recently, a small businessman in the Midwest walked into his office on a Monday morning. He already was in a sour mood when he got the day's mail. There at the bottom of the pile was yet another federal form to be filled out. Our businessman took out his pen and began scrawling out answer after answer. Finally, when he reached the last question, he saw his chance for revenge. The last question read: How many employees do you have, broken down by sex? Our friend responded: Not a one, our problem is alcohol!

Before discussing the Subcommittee's final report on the labeling regulation, I would like to express my deep appreciation to all of you for presenting me with your prestigious Annual Congressional Award last evening. As usual, your reception was one of the year's highlights for all Members of Congress, more so obviously for me. I sincerely hope that last evening signaled not the end, but just a partial beginning of a warm, cordial long-time friendship.

Today the Small Business Committee will release its final report on the FDA's food labeling regulation and its effect on small business. We have copies with us to distribute. I would like to share with you some of our findings and conclusions and most important, our recommendations.

An accelerated decline in independent bakeries can only lead to a concentrated group of dominant companies which may well create a baking monopoly or oligopoly. Characteristics of monopolies and/or oligopolies are all too well known—controlled output, high prices, and excess profits. Such a situation would confront the consumer with a market functioning according to the whims of a few. An objective of federal regulation is to stop such concentration, not to create it.

In August 1977 the President asked for a comprehensive review of federal food and nutrition policy. The review was to focus on, among other things, regulatory activities affecting food which now involve 14 agencies and over 2,000 regulations. The objective of the review is to improve our ability to address the nation's need for adequate supplies of reasonably priced, safe, and nutritious foods. This goal was kept in mind during the Subcommittee's investigation.

The importance to the economy of independent bakers is evident in their employment statistics alone. Each IBA member has an average of close to 200 employees.

The small business entrepreneurs in this nation have been our vital source of innovative products and innovative techniques within an industry. The story is the same in the baking industry. The list of baking innovations attributed to independents is an impressive one: wrapped bread, sliced bread, baking of a continuous mixed bread, bag bread, end labels, bread in cellophane, bread without holes, and bake and serve items. One of the disturbing features of the new labeling regulation is its possible elimination of new product development by smaller- to medium-financed independents.

The Congress recognizes that it is the activities of the various government agencies that have the strongest effect on small business firms and their economic opportunities. That is why the Small Business Act of 1953 declared that: '. . . The government should aid, counsel, assist, and protect, insofar as is possible, the interests of small business concerns in order to preserve free competitive enterprise . . .' This means part of the role of the entire federal government is to be cognizant of the status and problems of small business.

Traditionally, small business has lacked specialized personnel, great resources, and a massive productive capacity. So too do the independent bakers. That is why they have established cooperatives. But it is also traditional that small business is known for its openness to new ideas and consumer grievances, and also for its ease of personal contact. So too is this true of our independent bakers. An example of this is the New York bakery that bakes items specifically for the children of the Feingold Association members.

If the Nation's small businesses departed the national scene tomorrow, one-half of our work force would be unemployed. Ninetenths of all businesses would be gone. Innovation would be severely hampered. The independent bakers are but one rail on the small business track. Their elimination would further weaken an already battered and worn track. Such an event would foreshadow a world moving on a new track directed by a corporate board led by the few. This is not a pleasant thought. The Subcommittee, following the spirit and the letter of the Small Business Act of 1953, is not about to let this happen to independent bakers or anyone else.

The purpose of 21 CFR 101.4 sounds simple enough—to disclose fully the ingredients of a food product on the product's label. One of the main reasons the Subcommittee began an investigation of this rule's effect upon bakers was due to the nature of bakery products. They are unique foods. Bakers do not bake for inventory. Their success in the marketplace depends on readily available, fresh products. Flexibility is essential in their business.

Recognition of the baker's unique status is by no means new. As far back as 1940, the federal government recognized that bakery products were a special breed. From 1940 until the present, the terms dough conditioners, yeast nutrients, and leavening have been used by bakers seemingly without problems.

The Subcommittee accepts the idea that people are entitled to know what ingredients are in the food we eat. From all we have heard, the bakers accept this too. The problem comes in how we can best do it.

The most urgent and logical reason for full disclosure labeling is that of concern for the consumer's health and well-being. Vari-

ous people are allergic to certain food products. The ingredients in bread, for example, are not exotic nor have they changed greatly over the years. Nor are bakers slipping mysterious chemicals into products and trying to conceal this.

The exemptions sought by the bakers would not have any bearing on health matters. Ingredients which would be added on occasion would be from an FDA approved list. IBA even mentioned some borderline ingredients in their petition. Such ingredients would have to be disclosed and clearly are disqualified from the exemption. All fats and oils by source also will be declared on all products. It also has been mentioned that the FDA did not receive one complaint in 5 years over a severe allergic reaction to a bakery product.

Obviously, we are at the present time in an age where there is a great controversy over ingredients going into our food. Bakers and the FDA are aware of this. Neither is going to allow any unsafe item to be put into a food product. However, it is impossible to produce an all-informative label that will satisfy everyone. Economics simply will not allow it. Testimony indicates independent bakers stand ready to work with consumers to insure people know what they are eating. Bakers also have shown that they are capable of making special products for a group of people if the demand is there. For example, in addition to Entermann's Bakery on Long Island, Ottenberg's Bakery in Washington, among others, bakes goods for hyperactive children. Other bakeries also bake special dietary products.

Admittedly, consumer pressure and demand created the original and some of the continuing impetus for this rule. The Congress responded, in part, by requiring careful and detailed labeling. Of course, what is detailed labeling for one person may not be for another. The full disclosure labeling regulation that was finally produced by the FDA was a strict one that independent bakers believed would be economically detrimental to them.

As we have seen, some of this rule's implications could have been very damaging. Without the 2 percent exemption, an inventory of 34 different labels would be required for an ordinary loaf of bread. With the exemption, a baker now probably will have only four or five different types of labels per product. This points out an interesting phenomenon. Consumer pressure for a certain point of view without exploring all the issues and ramifications involved can backfire by creating higher prices and an economic shakeup of an industry which may well come back someday to haunt all of us consumers.

On the basis of the testimony, evidence, and findings and conclusions, the Subcommittee recommends:

That the Department of Health, Education, and Welfare and the Food and Drug Administration review the matters incorporated in this report and:

A. In all future regulatory proceedings concerning the baking industry, consult with representatives of independent bakeries among others at the earliest possible date.

B. In all future economic impact statements done on regulations which will affect the baking industry, prepare an analysis of the regulation's effect on the industry's small businesses.

C. Consult current Small Business Administration size standards to determine which baking firms are small.

D. Send copies of any future proposed regulations with impact statements affecting the baking industry to both the Chairman of the House Small Business Committee and the Chief Counsel for Advocacy of the Small Business Administration.

E. As expeditiously as possible, consider pending petitions on new product innovation, catastrophic events, and snack food labeling and issue their decisions.

F. Prior to the end of 1978, fully consider printing problems created by 21 CFR 101.4 and subsequent exemptions when contemplating enforcement procedures after July 1, 1978. For example, no labels printed prior to April 7, 1978, would have the now-required statement, "Contains 2 percent or less of each of the following."

That copies of this report be forwarded to the chairman and ranking minority members of the appropriate legislative committees of the Congress so that they are advised of the issues in this matter, and finally, that representatives of the Independent Bakers Association establish an ongoing dialog with officials of the Food and Drug Administration so that they may be aware of new regulatory developments at the earliest possible date.●

THE MOVE AFOOT TO CHANGE CRITERIA FOR DESIGNATION OF STANDARD METROPOLITAN STATISTICAL AREAS

(Mr. WOLFF asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. WOLFF. Mr. Speaker, I would like to bring to the atteniton of my colleagues an action by an obscure, and nonelected bureaucracy which threatens the districts and constituents of hundreds of Members of this Congress. I refer to an unpublicized sleight-of-hand by the Office of Federal Statistical Policy and Standards of the U.S. Department of Commerce, whereby there is a move afoot to change the criteria for designaiton of standard metropolitan statistical areas (SMSA's).

These changes are being proposed so that SMSA designations may be changed following the 1980 census. I am at a loss to understand why these changes are being proposed now, instead of after the 1980 census data is available. The proposed changes can have a great impact on local governments and business because SMSA data is used for Federal program administration purposes, for determining how many Federal dollars will flow into our districts, and in the private sector as a basis for assessing markets and placing advertising.

The question is, will these changes be rammed through without input from Members, constituents, local officials, and business leaders, or will we be given opportunity to participate in a matter so vital to our districts?

I call upon the President and the Department of Commerce to order a halt in these changes in the criteria until after the 1980 census so that these important decisions will be made in the light of available information and not in the darkness of ignorance and in secret.

If you believe as I do that the proposed changes are fraught with serious consequences and should not be made hastily then I urge you to join with other concerned Members in signing a letter to the President calling for a halt.

Mr. Speaker, I rise today to vehemently protest the recent Federal Commission on Standard Metropolitan Statistical Area's proposed rule that would remove SMSA status from Nassau and Suffolk Counties. The Commission intends to place this area into the larger New York SMSA.

Back in 1972, after a concerted effort by government, political, and business leaders, the Nassau/Suffolk region received SMSA designation. Since that time, the Nassau/Suffolk SMSA, as an individual SMSA, has grown and prospered. The Standard Rate and Data Services, a national marketing service, ranks the Nassau/Suffolk region as the eighth largest in the United States in terms of retail sales. The region ranks as the ninth largest SMSA area with a total of about 2.75 million people residing in the two counties.

The logic and necessity of this proposed rule concerns me. It was only a few months ago that OMB Director, James McIntyre, granted separate regional planning status to the Nassau/Suffolk area thus demonstrating the fact that the area must be set apart from New York City. Yet, if the proposed regulation is put into effect, the planning process would be totally unworkable. Further, the reasons given for the proposal—the commutation rate and the lack of a core city in either county—have both proven to be of little consequence to the area's growth. These reasons give evidence that the suburban character of our country is threatened by administration policy.

I was also extremely distressed by the lack of departmental notification to any of the members of the Long Island delegation. The Department of Commerce has not bothered to consult with me or my staff concerning this matter.

The proposed rule would seriously hamper any attempts by suburban areas, such as Nassau and Suffolk Counties, to secure Federal assistance. A separate SMSA designation is also a key factor in the attraction of business to the area. Stripping this status would be a devastating blow to not only the economy of Long Island, but would hurt our country's continued economic growth. Let me state also, that I do not oppose the administration's urban policy per se, what does bother me is the administration's insensitivity to the concerns of suburbia. I urge the Department of Commerce to reconsider and withdraw this unjust and insane proposal.

PROTEST TO PRESIDENT ON SMSA DATA CHANGE

(Mrs. SPELLMAN asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Mrs. SPELLMAN. Mr. Speaker, we have just heard from our colleague, the gentleman from New York (Mr. WOLFF) about the way the SMSA data is about to be changed. There are many such changes that are being made without our being aware of them. As far as this particular item is concerned, we are drafting a letter to the President to protest the action that is being taken. As our colleague has pointed out, it affects the districts of at least 150 Members. We

hope to get the Members' signatures here on the floor today, so if they will check with us, we will let them know whether they are among those whose districts are affected, and, if so, we know they will want to join with us. They will probably want to join with us in becoming much more watchful of these kinds of things, and we will tell them at the same time how we hope they might do that.

FUSION—VAST NEW SOURCE OF ENERGY

(Mr. PURSELL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PURSELL. Mr. Speaker, recent developments in our national fusion program have given this potentially vast new source of energy the widespread public attention it deserves. I congratulate the media for excellent coverage of this issue, and call your attention to the Washington Post editorial of August 16, which I had printed in yesterday's RECORD.

Fusion can provide both electrical power and synthetic fuels in a way that is clean, safe, and virtually limitless.

The important evolutionary advances in the magnetic fusion program give us greater confidence than ever that fusion energy can be achieved, whether by lasers, magnetic devices, or other means.

Fusion power can be a base for a secure, inexhaustible future energy supply for America and all the people of the world. This is the great opportunity and the great challenge of our time.

The test of this Congress is whether we will seize this opportunity and launch an intensive, national commitment to develop fusion, and other alternative energy sources.

I invite my colleagues to join fully in this effort. We should pursue alternative energy sources with all the vigor of our successful space program. And I would ask the membership to look carefully at H.R. 12922, which I have introduced as a blueprint for a "space-program" type effort to accelerate the development of fusion and other alternative sources of energy which must provide the energy supply for coming generations.

We should be careful not to overplay the importance of the advances in the Princeton University fusion experiments; but neither should we allow the significance of these developments to escape us.

There is still a tremendous amount of scientific and engineering work to do before the potential of fusion is translated into real benefits for the American people; before we prove that we can overcome all the obstacles. There is still much experimental toil ahead before we know which method of inertial confinement or magnetic fusion can best fulfill our needs. But the Princeton experiments lend greater credence to what I, and other Members of Congress have long believed, and what experiments at many outstanding laboratories in our country have indicated: that fusion energy can be achieved, and that the real question is not so much if we can do it, but when and how.

All of us are aware of the precarious position of this Nation because of our energy problems, and the lack of a national drive to solve them. This situation is undermining the strength of the dollar, distorting our foreign trade, influencing our foreign policy, threatening both our economy and our national security.

I believe that if we can show our Nation and the world that the United States has a determined policy to overcome these energy problems, that we can correct some of the short-term difficulties of the dollar. With our Government and private sectors working in partnership, and in cooperation with other nations, to deliver new sources of energy to the world, we can begin to reverse our trade deficits. And a successful program of research and development for alternative energy sources can help to fully restore our economic vitality and solidify the security of our Nation.

America has the knowledge and the ability to achieve these goals. We are limited far more by our commitment than by our scientific, engineering, and innovative capabilities. Let us adopt policies that will focus the creative genius of this country full force on this great test of our wisdom and leadership.

RECREATIONAL BOATING AND FACILITIES SAFETY IMPROVEMENT ACT INTRODUCED

(Mr. BIAGGI asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BIAGGI. Mr. Speaker, I am today introducing a bill—entitled "The Recreational Boating and Facilities Safety Improvement Act of 1978"—on behalf of myself and my colleagues, JOHN MURPHY of New York and DAVID TREEN of Louisiana.

Great progress has been made under the Federal Boat Safety Act of 1971 in promoting safety for recreational boaters. One of the key elements in this success has been the forging of a Federal-State partnership under which the Federal Government and the States have worked together to promote recreational boat safety.

This partnership was made posssible by a program which was authorized by the 1971 act—of the Federal Government matching grants to the States for boating law enforcement.

Civil law enforcement on the Nation's waterways is a constitutionally shared responsibility between the Federal Government and the States in our dual sovereign system of government.

The matching grant program is now being extended for 2 more years—but it appears unlikely that the program will be continued after fiscal year 1980.

I am afraid that the termination of this program could result in undoing much of the good that has been accomplished under the Federal Boat Safety Act—unless a viable alternative is developed.

The uniformity in approach in the administration of State boating safety programs—encouraged by the Federal Boat Safety Act—might be undermined.

The program's extension through fiscal 1980 gives the Congress some time to develop an alternative that will assure continuation of the safety benefits which have been obtained to date. However, we must start considering this issue now if we are to develop a satisfactory alternative program in a timely fashion.

A closely related issue is the increasing safety problems which are resulting from serious overcrowding of inadequate and unsafe recreational boating facilities. This is another issue which the Congress should address and, since it is so closely related to the question of Federal-State relationships in boating safety, it should be addressed at the same time.

Seventy-six percent of all Coast Guard search and rescue (SAR) cases are attributable to the rapid growth of recreational boating in this country in recent years. Virtually all of the annual 6 percent rise in SAR cases fall into this category. Boating accidents killed 1,312 persons in 1977; 1,779 persons were injured; and property damage in the sum of $11,572,500 resulted from 6,815 reported accidents.

My approach to promoting marine safety is predicated upon the notion that "an ounce of prevention is worth a pound of cure." This proposed legislation is aimed at reducing future search and rescue incidents involving recreational boaters by improving overall boating safety and by providing safe boating facilities for boaters—now estimated at 50 million nationwide.

Accordingly, I am introducing this bill in order to begin the process of developing a satisfactory program that will adequately address these two issues.

I do not contend that the program contemplated in this legislation is the only approach or the best solution. I do believe that it is deserving of serious consideration. Further, I hope that it will be a starting point for addressing these two and, eventually, other Federal and State shared responsibilities—including search and rescue, marine environmental protection and law enforcement, as well as boating safety.

Several important principles underlie this proposed legislation. I would like to briefly outline some of the most important of these.

Where an easily identifiable class of individuals benefits from a specific governmental service, they should ordinarily be willing to share the financial burden incurred in providing the service. This bill provides that boating safety and facility improvement services will be funded by motorboat fuels tax revenues—and thus insures that those who will benefit from the program are the same ones who will pay for it.

A boating and facilities safety program should be founded on and further existing Federal-State partnership that has been so instrumental in the demonstrated success of the Federal Boat Safety Act. This arrangement promoting Federal-State cooperation is the cornerstone for this program expansion.

The new program should have a reasonably assured source of funding. If

those who benefit from the program are to pay for it, they should be entitled to such an assurance.

Finally—the Coast Guard—with its experience in administering the Federal Boat Safety Act—is the obvious candidate for carrying out any new program.

Mr. Speaker, these are the basic considerations that prompted my introduction of this bill. In so doing, I have taken the first step in what will hopefully culminate in the development of a landmark program to assure continued progress in recreational boating and facilities safety.

THE CRIMINAL JUSTICE IMPROVEMENTS ACT OF 1978

(Mr. MANN asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. MANN. Mr. Speaker, I am today introducing, for myself and all of the members of the Subcommittee on Criminal Justice—ELIZABETH HOLTZMAN, SAM B. HALL, JR., LAMAR GUDGER, BILLY LEE EVANS, CHARLES WIGGINS and HENRY HYDE—a bill to begin the process of modernizing and updating Federal criminal laws. This bill is the product of a substantial amount of work by the subcommittee, and it embodies what the subcommittee believes to be the proper approach to modernizing Federal criminal laws.

The basic question confronting us, and anyone who considers the matter, is how to go about modernizing and updating Federal criminal laws in the most effective and responsible way. There are essentially two options. One is to take an omnibus approach—do everything, or nearly everything, at one time, in a single, comprehensive bill. The other option is to take an incremental approach—process a series of bills, each one making appropriate substantive changes in a specific area of the criminal law.

The Senate, in passing S. 1437 earlier this year, has adopted the first option. The Subcommittee on Criminal Justice, for reasons I will spell out, believes that the second option is the sounder and preferred approach and has adopted it. Our bill, then, should not be viewed as the end of the process of modernization, but as the beginning of it.

Before looking at the reasons why the subcommittee finds the omnibus approach undesirable, let me outline the subcommittee's efforts during this Congress on the subject of recodification of Federal criminal laws. The subcommittee began its work early in the first session with roundtable discussions involving people interested in the recodification of Federal criminal laws. Participants included several House colleagues, BOB KASTENMEIER, Bob MCCLORY, TOM RAILSBACK, and ABNER MIKVA; our colleague from the Senate, Senator EDWARD M. KENNEDY; together with representatives of the Justice Department, the Judicial Conference of the United States, the National Council on Crime and Delinquency, the American Civil Liberties Union, Americans for Effective Law Enforcement, the National Prison Project, and the Metropolitan Crime Commission of New Orleans; a Federal Public Defender; and a member of the National Commission on Reform of Federal Criminal Laws, as well as the Commission's staff director and deputy staff director.

Last fall the subcommittee began the first of some 16 briefing meetings. At these meetings, we went over, section by section, the Senate-passed bill, S. 1437, as well as the other recodification proposals, and we focused our attention upon how the proposals would change current law. Representatives of the Justice Department and Senate staffers familiar with the legislation participated in those meetings and were helpful in responding to questions.

The full subcommittee then held 23 hearings on recodification, receiving testimony from more than a hundred witnesses. The breadth of viewpoints and interests involved can be seen in the list of witnesses I am including as an appendix to these remarks. Nevertheless, it must be realized that for a number of issues there are no constituencies organized to affect the legislative process.

Upon completion of our hearings, the subcommittee began its markup. The subcommittee's work product was fashioned during the course of 19 markup meetings.

There are both practical and philosophical reasons why the omnibus approach is undesirable. Truly modernizing criminal laws means making substantive changes in them—"reforming" them to conform them to modern mores and to integrate court interpretations into statutory language. An omnibus reform bill, however, stands little chance of success because constituencies against change multiply in proportion to the number of reforms involved, particularly where the legislation deals with criminal laws and procedures that have governed human conduct for many decades and that supposedly have some relationship to basic concepts of right and wrong and, particularly in the Federal model, to practices that permeate our ways of doing business. The negative legislative impact of massive change upon an informed representative body is enormous.

At the beginning, the subcommittee idealistically and enthusiastically undertook to work with the Senate bill. However, it soon became apparent that the deliberative process customary in the House, which we think is the essence of good legislation, does not lend itself to massive changes in laws unless we satisfy ourselves that their effects have been thoroughly analyzed, that there has been adequate public input, and, indeed, that each change has been shown to be an improvement in existing law.

We tend to refer to Federal criminal law as if it were a unified body of criminal law that serves as the principal set of legal rules governing the lives of people. Federal criminal law is not that—the States in our federal system are primarily responsible for the maintenance of law, order, and justice. Federal criminal law is a collection of separate and distinct statutes which supplements State criminal statutes. Federal criminal laws are intended to protect or vindicate substantial Federal interests, not to be the basic set of rules regulating morality. Reforms in Federal criminal laws, therefore, are appropriately dealt with separately, after a careful, thorough, and conscientious consideration of all of the policy issues and constitutional questions that each proposed change presents.

It is clear that the Senate bill make more changes in current law than its proponents would admit, especially when the cumulative effect of all of the bill's changes is considered. Nevertheless, the Senate bill does not attempt to reform every area of Federal criminal law. It does not, for example, deal with capital punishment, nor does it codify defenses, as previous Senate bills have done. While this failure to deal with such issues is understandable in the light of legislative realities in the Senate, it is not consistent with omnibus reform.

Another problem with the omnibus approach is that it is objectionable on policy grounds. Federal criminal laws ought not to be the product of extensive horse trading. The greater the numbers of substantive changes, the more likely it is that such trade-offs will occur. The tremendous investment of time, energy, and emotion that goes into an omnibus bill results in a tremendous pressure to agree to things in order not to hold up the legislation. This sort of pressure was clearly evident during the Senate's debate on its bill.

The other policy objection to the omnibus approach concerns assessing the impact of the legislation. If we are going to enact an omnibus reform bill and change substantially our present criminal justice system, we must be able to state with reasonable certainty that the new system is a material improvement over the present one. The broader and more comprehensive the reforms made in the legislation, the more difficult it is to make such an assessment. Quite frankly, the record does not reflect that the Senate had available to it when it passed its bill the information and data necessary to make a reasoned assessment of the impact of its bill.

No thoroughgoing analysis appears to have been made by the proponents of the Senate bill as to what the bill will do to the present Federal criminal justice system. For example, there was no assessment of the bill's impact on the Federal prison population. The Criminal Justice Subcommittee generated a congressional research service study which suggests that the Senate bill will result in increased crowding in the Federal prisons. No such study was done before the Senate acted. Likewise, no careful analysis appears to have been made of the impact of the Senate bill's rather sharp curtailment of judicial discretion. Such an analysis would consider the effect on plea bargaining and on the power of the prosecutor. The budget implications of the Senate bill are uncertain, for no cost statement on it was issued by the Congressional Budget Office.

One particularly important area to analyze closely is the extent to which the legislation expands Federal criminal jurisdiction at the expense of the State.

I agree with Solicitor General Wade H. McCree that "We should reduce the role of the Federal Government in enforcing the criminal laws—the constitutional feasibility of asserting Federal law ought not obscure the fact that in many cases the investigation and prosecution might be better left to State authorities."

During the subcommittee's section-by-section analysis, we became aware of the expansion in Federal criminal jurisdiction brought about by the Senate bill. Testimony at our hearings underscored what we saw at our briefing sessions. California Attorney General Evelle Younger told us that the bill would "unnecessarily expand Federal criminal jurisdiction." The American Civil Liberties Union advised that—

Perhaps the greatest threat posed by (the legislation) is its dangerous expansion of Federal criminal law. In section after section, the bill either creates new law, expands existing law, or erodes various procedural protection for defendants."

The National Conference of State Legislatures noted its support for revising Federal criminal laws, but pointed out that "as drafted the proposed revision may have the effect of expanding Federal criminal jurisdiction into areas of traditional State responsibility. Such broadened jurisdiction could lead to a much expanded Federal law enforcement role and lay the foundation for a national police force."

The subcommittee concluded that, overall, the effect of all of the changes made by the Senate bill is to expand significantly Federal criminal jurisdiction. In the subcommittee's opinion, this expansion is unwise.

For these and other reasons, the subcommittee unanimously and firmly concluded that the omnibus approach pursued by the Senate is fraught with pitfalls and is not legislatively feasible in the House of Representatives.

The subcommittee has concluded that the incremental approach—limiting legislation to making substantive changes in a discrete area of the criminal law—is the most appropriate way to proceed. This approach permits the thorough and careful study, analysis and drafting that ought to go into changing any Federal law, and especially Federal criminal laws. Because this approach limits the area where substantive changes are made, it does not foster legislative horse trading across a broad spectrum. Each change must stand on its own merits, and no one, even in the enthusiasm of reform, can challenge that principle. Moreover, the limited area of change means it is possible to assess with reasonable certainty how the bill will affect the people and the criminal justice system.

The subcommittee drafted its bill with the premise that substantive changes ought to be undertaken carefully and thoroughly, and this necessarily means incrementally. The subcommittee's bill does make significant substantive changes to limited parts of current law. It is, as I previously indicated, a beginning. If it is enacted, the subcommittee would turn to another part of current law and prepare legislation making any appropriate substantive changes in it. Even if it is not enacted, however, the subcommittee is firmly committed to the course of modernizing Federal criminal laws by dealing individually and deliberately with distinctive areas of the law.

During the course of the subcommittee's work on recodification, we asked the proponents of the Senate bill to identify the reasons for recodifying Federal criminal laws. They identified five goals for the legislation—first, the elimination of outmoded and unnecessary statutes; second, the updating of fine levels; third, reform of an unfair sentencing structure that permits unjustified disparity in the treatment of Federal offenders; fourth, a revised format and structure for title 18 of the United States Code that will eliminate inconsistent and overlapping provisions in current Federal criminal laws; and fifth, "reform" of various parts of the criminal law.

The subcommittee has concluded that these goals of recodification can be accomplished by the approach it has taken.

Let me turn now to the subcommittee's bill and describe in general terms what it does. First, it repeals as outmoded or unnecessary, several provisions of title 18 of the United States Code. For example, it repeals the oft-cited carrier pigeon statute (18 U.S.C. 45) which makes it a misdemeanor offense to detain or interfere with a carrier pigeon belonging to the United States. There are sections of present title 18 that consist entirely of a cross-reference to one of the Federal Rules of Criminal Procedure. The bill repeals these provisions also, as well as others.

Second, the bill establishes a uniform and graded fine structure with higher fine levels. These fines will be applicable to all title 18 offenses, as well as to criminal statutes in other titles of the United States Code—with the exception of title 26, the Internal Revenue Code.

Third, the bill makes substantive changes in the area of sentencing in order to promote greater fairness and eliminate unjustified and unwarranted disparities in punishment. In addition, some changes in maximum penalties are made in order to achieve a greater degree of consistency among title 18 offenses, and minor substantive changes are made in a number of other criminal statutes in the area of corrections. The latter changes were discussed with the agencies involved and should not, in all probability, be controversial. For example, the bill provides that the Chief of the Division of Probation of the Administrative Office of the U.S. Courts shall be a member of the National Institute of Corrections—other members include the Director of the Bureau of Prisons, the Chairman of the Parole Commission, and the Assistant Secretary for Human Development of the Department of Health, Education, and Welfare.

Finally, the bill restructures present title 18 in an effort to improve its organization. Part of the restructuring involves transferring into title 18 six criminal provisions presently located in other titles of the United States Code. It is interesting to note that one of the claims made for the Senate bill is that it consolidates Federal criminal statutes. Yet, as its proponents admit, the Senate bill leaves more criminal statutes outside of title 18 than it puts in title 18. While this may be understandable, it is inconsistent with the goal of total recodification and merely confirms that Federal criminal law is not a unified whole, that it is not the basic set of rules regulating morality.

In order to restructure title 18, so our legislative drafting experts advise, it is necessary, as a practical matter, to reenact it. We on the subcommittee recognize that there are many proponents for changing one or more existing provisions of title 18. In order to avoid creating the inference that by reenacting the provisions of title 18 we are putting a congressional imprimatur on each of them, or on any judicial or agency interpretation of any of them, the subcommittee has included a disclaimer provision making it clear that the reenactment of the provisions of title 18 is for the purpose of restructuring title 18, except insofar as the bill makes substantive changes.

The effective date of the bill is January 1, 1980. This should give the bench and bar sufficient time to become familiar with it and adapt to the new provisions and structure.

The subcommittee's bill makes a good start toward the fifth goal of recodification—substantive reform. As I indicated earlier, the subcommittee believes that substantive reform is best accomplished on an incremental basis. The subcommittee has begun the process with substantial reform in the area of sentencing. Let me emphasize again that the subcommittee's bill is the beginning of the modernization process, not the end of it.

This is an appropriate time to begin the recodification process. I hope that the subcommittee's bill will be acted upon favorably by the Committee on the Judiciary and will come before the House for its consideration in the remaining days of the 95th Congress. If the subcommittee's bill is acted upon favorably, we on the subcommittee will approach a conference with the other body ready to work out an honest compromise in areas where the subcommittee's bill makes substantive changes. Whatever the outcome of a conference, I expect the subcommittee next Congress to continue the process of reforming Federal criminal laws by dealing individually and deliberatively with discrete areas of Federal criminal law.

WITNESSES TESTIFYING BEFORE THE SUBCOMMITTEE ON CRIMINAL JUSTICE

Advisory Corrections Council, Hon. Harold R. Tyler, Jr., Chairman.

American Bar Association, Prof. William Greenhalgh, Chairperson, Criminal Code Revision Committee, Criminal Justice Section, accompanied by Laurie Robinson.

American Civil Liberties Union, John H. F. Shattuck, Director, Washington Office, accompanied by David E. Landau, Esq.

American Insurance Association, Wilfred J. Perry, Assistant Vice President, Claims-Administration.

American Newspaper Publishers Association, Jerry W. Friedheim, Executive Vice President and General Manager, accompanied by Arthur B. Hanson, General Counsel.

American Society of Newspaper Editors, Anthony Day, Chairman, Freedom of Information Committee.

Americans for Democratic Action, Prof.

Louis B. Schwartz, University of Pennsylvania Law School.

Anderson, Rep. Glenn M., 32d Congressional District, California.

Associated Builders and Contractors, Joseph Fagen, General Counsel, accompanied by Hon. John Reed, Director, Governmental Relations.

Associated Press Managing Editors Association, Frank Johnson, Chairman, Freedom of Information Committee.

Association of American Publishers, Henry Kaufman, Legal Counsel.

Association of the Bar of the City of New York, Murray Mogel, Esq.

Bazelon, Hon. David, United States Circuit Judge, District of Columbia Court of Appeals.

Bennett, Rep. Charles E., 3d Congressional District, Florida.

Bislock, Ira, Chairman, Oregon Parole Board.

Burke, Massachusetts State Rep. Kevin M., accompanied by Massachusetts State Rep. Paul Means.

Burns, Hon. James M., United States District Judge, District of Oregon.

Children's Rights, Inc., Arnold I. Miller and Rae Gummel.

Church of the Brethren General Board. See National Interreligious Service Board for Conscientious Objectors.

Citizens Commission on Human Rights, Lee Coleman, M.D., accompanied by Kathleen Wiltsey, Director.

Clark, Sheldon Esq., Cleveland, Ohio.

Coalition to End Grand Jury Abuse, Mary Emma Hixon, Executive Director, accompanied by Linda Backiel, Esq., Grand Jury Project of the National Lawyers Guild.

Commission of Social Action of Reform Judiasm, Rabbi David Saperstein, Director, Religious Action Center.

Communist Party U.S.A., Simon W. Gerson, accompanied by John J. Abt, General Counsel.

Community Services Society of New York, Harold Baer, Jr., Esq, Chairman, Committee on Criminal and Juvenile Justice.

Conyers, Rep. John Jr., First District, Michigan.

Creative Alternatives to Prison, Ira Lowe, Esq., accompanied by Tom Donelson.

Dennis, Hon. David W., Dennis, Reinke & Vertesh, Richmond, Indiana.

Direct Selling Association, Neil H. Offen, President.

Drinan, Rep. Robert F., 4th Congressional District, Massachusetts.

Dunn, James, Federal Public Defender, Central District of California.

Federal Bar Association, Arthur L. Burnett, Esq., Chairman, Criminal Law Committee.

Federal Bureau of Prisons, Norman Carlson, Director.

Fiske, Robert B. Jr., United States Attorney, Southern District of New York.

Frankel, Hon. Marvin E., United States District Judge, Southern District of New York.

Freed, Prof. Daniel J., Yale Law School, accompanied by Matthew Heartney.

Freeman, David, Federal Public Defender, Western District of Missouri.

Friends Committee on National Legislation, Prof. Harrop Freeman, Cornell Law School.

Georgetown Juvenile Justice Clinic, Ramona Powell and Wallace Mlyniec, Director.

Zimring, Prof. Franklin E., Director, Center for Studies in Criminal Justice, University of Chicago Law School.

TENTH ANNIVERSARY OF SOVIET INVASION OF CZECHOSLOVAKIA

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. DERWINSKI) is recognized for 60 minutes.

(Mr. DERWINSKI asked and was given permission to revise and extend his remarks, and to include extraneous material.)

Mr. DERWINSKI. Mr. Speaker, in commemorating the 10th anniversary of the Soviet invasion of Czechoslovakia, I first wish to insert a copy of House Concurrent Resolution 667, which I introduced on July 17 and now has the support of 35 co-sponsors:

H. CON. RES. 667

Whereas in 1968 Czechoslovakia was a peace-loving country whose government, headed by Alexander Dubcek, enjoyed positive support from the vast majority of Czechs and Slovaks; and

Whereas the invasion of Czechoslovakia by the military forces of the Soviet Union in 1968 contravened the independence of a sovereign state and denied its peoples the right of self-determination; and

Whereas such an unprovoked intervention was in violation of the United Nations Charter which stipulates that "All Members re-

frain in their international relations from the threat or use of force against the territorial sovereignty or political independence of any state"; and

Whereas the occupation of Czechoslovakia by a fellow member of the United Nations has continued for ten years and alters the European balance of power; and while opponents of such occupation and defenders of human rights are increasingly subjected to harassment, repression, persecution, and incarceration; and

Whereas their continued yearning for freedom has found a new expression in Charter 77, the Human Rights Manifesto which requests of the Government of Czechoslovakia the implementation of the principles of the Final Act as well as adherence to the Czechoslovak Constitution; and

Whereas the signers of Charter 77 and other champions of human rights in Czechoslovakia continue to oppose and to expose violations of human rights by the Soviet-imposed government of Czechoslovakia: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that the President should use his influence and leverage to induce the Soviet Union to withdraw all troops occupying Czechoslovakia and, should such withdrawal not be effected by December, 1978, to—

(1) reevaluate sales of United States commodities and technology to the Soviet Union;

(2) reevaluate all licenses for the export to Warsaw Pact countries who participated in the invasion of all paramilitary and other high technology products, including computers and any other products used in the expansion of industrial development and communications systems;

(3) express support for the people of Czechoslovakia (as they commemorate August 21, 1968, as the "Soviet Day of Shame") in their efforts to achieve the withdrawal of the troops of the Soviet Union from Czechoslovakia;

SEC. 2. It is further the sense of the Congress that the President, acting through the United Nations and other international organizations, should take such additional steps as may be necessary to end as quickly as possible the continuing intervention in Czechoslovakia by the Soviet Union.

Next week, on August 21, it will be 10 years since the Soviet Union crushed the reform-minded government of Alexander Dubcek, but as the Congress will be in recess for a district work period, we are commemorating this historic tragedy today.

However, it is especially important to note that despite 10 years of Soviet military presence in Czechoslovakia, the spirit of the people remains uncrushed. This is especially evident by the continued activities of those brave men and women, known for their love of Democratic principles, who are demanding restoration of their fundamental civil and political rights in a charter entitled, "Petition 78." Following the signing of Charter 77, the country's human rights manifesto, which was signed by over 900 brave individuals in Czechoslovakia last year, the signatories and their supporters are still being persecuted by the Government of Czechoslovakia. "Petition 78" was developed for the practical purpose of supporting the signers of Charter 77.

The Soviet Union continues to suppress Czechoslovakia dissent in violation of the Helsinki Accords. The process of regeneration of national culture and Democratic public life remains arrested by the Communist oppressive rule.

In continuation of my remarks, I wish to insert an appeal to end the occupation of Czechoslovakia which was issued by the Council of Free Czechoslovakia, located here in Washington:

AN APPEAL: END THE OCCUPATION OF CZECHOSLOVAKIA

On the tenth anniversary of the invasion of Czechoslovakia by the armed forces of the Soviet Union we appeal to all the peoples of the world and the United Nations to support the demand of the Czechoslovakia people for the immediate withdrawal of all Soviet forces from the territory of their Republic.

On August 21, 1968, the Soviet army invaded and occupied Czechoslovakia. On August 28, 1968, the Soviet Communist Party leaders forced Czechoslovakia's kidnapped leaders in Moscow under duress to sign a communiqué sanctioning the temporary occupation of the Czechoslovak Republic.

This act of aggression was in violation of the Czechoslovak-Soviet Treaty of Friendship and Alliance of 1943, of several agreements among the Allied Powers on liberated Europe, of Article 2 of the Charter of the United Nations, and of the Soviet government's own declaration of October 30, 1956. The Soviet Union invaded Czechoslovakia on the pretext that the country was to be protected against a nonexistent "West—German revanchism."

The continuing occupation of Czechoslovakia is in violation of the agreement between the governments of Czechoslovakia and the Soviet Union of October 16, 1968, according to which Soviet armed forces were to be stationed in Czechoslovakia only provisionally. In this document to the Soviet Union acknowledged that its forces had entered Czechoslovak territory only temporarily and undertook to withdraw them as soon as the situation in Czechoslovakia had been normalised. Since then Czechoslovak as well as Soviet Communist leaders have declared on numerous occasions that conditions in Czechoslovakia have been normalized. But the country continues to be occupied.

The occupation also violated the provisions of the Final Act of Helsinki. But above all else it continues to violate the three principles which the Soviet Union itself has recognized as essential for the peace, stability, and prosperity of Europe:

The principle of the sovereignty of all European states and nonintervention in their internal affairs.

The principle of the independence of all states including the right of self-determination.

The principle of the renunciation of the use of force against any state.

The Soviet invasion and occupation of the Czechoslovak Republic have dangerously upset the military balance that had existed in Europe since the end of the Second World War. They violate wartime agreements about the deployment of Allied forces in Continental Europe. Czechoslovakia was to have neither Western nor Soviet troops on its territory. The occupation of Czechoslovakia keeps Soviet forces in the heart of Europe in such numbers that the military balance along the dividing line between East and West is heavily weighted in Soviet favor.

It is therefore imperative not only for Czechoslovakia's sovereignty, independence, and freedom but also for the peace, stability, and prosperity of Europe that the Soviet Union withdraw its armed forces from the territory of the Czechoslovak Republic.

This appeal is backed by documents in which the Soviet Union has committed itself to evacuate the territory of the Czechoslovak Republic, and by Czechoslovak citizen's to declarations of protest against the occupation of their country and resolutions demanding its end. The CHARTER 77 movement in Czechoslovakia and Czechoslovak exiles' endorsement of PETITION 78 bear witness to the determination of all Czechs and Slovaks to see their Republic rid of Soviet occupation forces and once more sovereign, independent, and free.

In submitting this appeal, we speak for the Czechoslovak exiles who left their country after the coup d'état of 1948 as well as for those who had to leave when Czechoslovakia was invaded by the Soviet army in 1968. We are absolutely certain that, speaking in their names, we speak for all Czechs and Slovaks. We believe that a new European order based on the principles of true sovereign equality, independence, self-determination, nonintervention, and renunciation of the use of force would be a great step toward satisfying the hopes, aspirations, and interests of all the European peoples.

It is of paramount importance for us to encourage the brave people of Czechoslovakia in their ongoing struggle for their fundamental rights. We must recognize that by its very nature, communism deprives people of their basic rights.

Czechoslovakia, between World I and World II was a progressive and thriving democracy. But this democratic structure of government was eliminated by the Communist takeover in 1948, when the Communist Party seized absolute control.

In 1968, the Soviet army and forces of Eastern European satellite states occupied the country to crush any resurgence of Czechoslovakian democracy. This day, which has been appropriately called the "Soviet Day of Shame" dealt the final deathblow to the liberalization that was developing in that small country.

The crushing of the Dubcek government was nothing but an unprovoked act of aggression that must not be forgotten.

Therefore, I wish to join with the millions of freedom-loving people throughout the world in supporting the people of Czechoslovakia in their efforts to achieve the withdrawal of Soviet troops.

In closing, I wish to express my appreciation to the Members who joined with me this afternoon to give support to the commitment of freedom for all those held captive behind the Iron Curtain.

GENERAL LEAVE

Mr. DERWINSKI. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the subject of my special order today.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. RUDD. Mr. Speaker, will the gentleman yield?

Mr. DERWINSKI. I yield to the gentleman from Arizona.

Mr. RUDD. I thank the gentleman for yielding.

Mr. Speaker, I am pleased to join with my distinguished colleague from Illinois (Mr. DERWINSKI) in this solemn observation of the tragic 1968 Soviet invasion of Czechoslovakia.

My office inquired of the White House whether the President planned to issue

any proclamation or statement in connection with this anniversary, and the continued repression of human rights in Czechoslovakia.

I was informed that no such Presidential action was planned.

I cannot help but feel a sense of moral outrage that opposition to communism and chastisements of Soviet-supported tyranny in Eastern Europe and elsewhere around the world are no longer voiced at opportunities such as this at the highest levels of our own Government.

Where is the administration's denunciation of the Kremlin and the Soviet-backed Communist puppet Government of Czechoslovakia on this anniversary of the day that Soviet tanks rolled into Prague in violation of international law?

Where are the President's and U.N. Ambassador Andrew Young's strong protests against the continuing violations of human rights that are still taking place this very day against the freedom-loving people of Czechoslovakia?

Our leaders must be aware of published accounts of the inhumane ordeal suffered by the Czech people under Communist rule.

They have had no freedom since World War II, when Stalin ordered the Czech political hierarchy to be publicly hanged, and others imprisoned because of mere policy differences.

The ashes of Stalin's hanged Czech victims were poured into a potato sack, carried in the car that bore the other surviving prisoners to jail outside Prague, and then used to give the car traction when it skidded to a standstill on the icy road to the concentration camp.

Such is the total disregard for human life under communism.

Some apologists for Communist regimes throughout the world would have us believe that conditions under Soviet domination have improved since Stalin.

This is just a part of the propaganda line.

To be sure, some change has taken place.

But it is only a matter of degree.

Under Stalin, hundreds of thousands of anti-Communists and potential political opponents were exterminated.

Under current Communist regimes, mere tens of thousands are slaughtered.

And it is done quietly, in a more secret, sanitary way than under Stalin, so that the sensibilities of the rest of the world are not so badly hurt by the bloodshed and torture that still occurs.

But how does this make it any better?

How does this relieve our own leaders of the responsibility to exert moral leadership against such totalitarianism?

The aim of such atrocities is still the same, and just as effective.

It is to intimidate and frighten all the people into total submission to the Soviet Union and to Communist domination.

It is to impose a police state terror that allows no freedom for the people, no free press, no elections, and no religious observance.

I share with my colleagues the belief that our country still has a moral obligation to speak out, and to do everything possible to end Communist totalitarianism in all its forms throughout the world.

An administration that has made human rights a principal hallmark of its foreign policy has a moral obligation to do everything possible to bring about political, economic, social, and religious freedom for all people—especially those enslaved under Communist domination.

Opponents of a hard line against Communist dictatorships and their expansionist policies express fear that the United States must make peace with the likes of Brezhnev, Castro, and their ilk, in order to avoid political or military confrontation.

Their second article of faith is that the United States must disarm unilaterally in order to avoid a possible nuclear war.

Such statements have even been made by members of the President's top level national security staff, right in the White House.

Certainly our valiant Founding Fathers, who fought the American Revolution to preserve freedom for future generations of Americans, did not believe that war is the worst activity of mankind.

They believed man's worst activity to be acquiescence to slavery.

The refusal of many thousands of dissidents in Communist-dominated countries to acquiesce under slavery today is a heroic continuation of what our own country's struggle for freeodm was all about.

These victims of purge trials and other police-state terror are no longer succumbing to human degradation being imposed upon them by Communist slavemasters.

Far from confessing to trumped-up charges and alleged crimes, these dissidents now reaffirm through word and deed their belief in freedom, defy the police terror, and sometimes find ways to tell the world what is happening.

These valiant people have many friends in the United States and throughout the world.

I am proud with my colleagues here to count myself among those friends.

The administration should also be among these ranks, taking every available opportunity to publicize and bring pressure against international Communist atrocities.

Next week's 10th anniversary of the Soviet rape of Czechoslovakia would have been a perfect opportunity for the President to take public note of yet another sad event in the history of Communist imperialism.

I am sorry that the opportunity will be missed by the President.

But I am proud to join with other Members of Congress to reaffirm for the people of the world the commitment of the American people to their freedom.

I hope that one day we will also have leaders at the highest levels of our Government who will join us in proudly voicing the hopes for freedom—against tyranny—of all people under Communist domination, and who will take resolute action to turn those hopes into reality.

Mr. DERWINSKI. I thank the gentleman for his comments.

Mr. DORNAN. Mr. Speaker, will the gentleman yield?

Mr. DERWINSKI. I yield to the gentleman from California.

Mr. DORNAN. I thank the gentleman for yielding.

Mr. Speaker, I also want to commend the distinguished gentleman from Illinois (Mr. DERWINSKI) on recalling to our memory this tragic series of events in that hectic summer of 1968, which also saw much violence in Chicago and the flying of Communist flags in our major cities. I had the opportunity to travel to Prague shortly thereafter, and the death figure that was released around the world for the young "Freedom Fighters" in the city of Prague was about 300 killed in action. I met with some of the young students there, and they told me the figure was much closer to 3,000, that in one morgue alone there were more than 300 bodies, and they took me down the main impressive street of the center of Prague and showed me some of their main buildings, literally covered and chipped from top to bottom by machine gun bullets and ricocheting rifle firing. I think that to have seen this death toll of 3,000, compounded on top of the death toll in Hungary 12 years before of 50,000 of both of those countries' finest young men is a world tragedy that should never go unremembered, particularly on a decade date. The fact that the White House, which will not be in recess during this period, is not calling the Nation's attention to it is just another sign of the confused foreign policy that is emanating therefrom.

Mr. DERWINSKI. I thank the gentleman for his comments.

● Mr. MURPHY of Illinois. Mr. Speaker, I join my colleague from Illinois (Mr. DERWINSKI) in commemorating the 10th anniversary of Czechoslovakia's invasion by the Soviet Union.

This tragic event, which has rightly become known as the "Day of Shame," is a vivid reminder of the Soviet Union's suppression of human rights in that country.

As a free people, the United States must speak out against the Soviets' denial of self-determination to Czechoslovakia and other Eastern European countries. This includes a denunciation of the Soviet Union's violation of the Czechoslovak Constitution, and more broadly, its flouting of the Helsinki accords and the U.N. Charter.

Mr. Speaker, as we remember those who suffer under the yoke of Soviet oppression, I call on all Americans to voice their support of the captive nations' right to independence and self-determination.●

● Mr. SARASIN. Mr. Speaker, on August 21, 1978, the people of Czechoslovakia and their friends of the free world will commemorate the 10th anniversary of that tragic day in 1968 when 600,000 Soviet and other Warsaw Pact troops illegally invaded the borders of Czechoslovakia. The Soviet oppression was not

only in direct contradiction to article 2 (4) of the United Nations Charter, which explicitly opposes any members' "use of force against * * * the potential independence of any State * * *," but their action also suppressed the Czechoslovak's political and economic attempts under the Dubcek regime to institute reforms and secure a semblance of civil liberties within a Communist system.

This day, appropriately termed "Soviet Day of Shame," illustrates the little regard Russia has had for the objectives that nations have advocated under the auspicies of the United Nations. In the world's efforts for peace and harmony amongst all peoples, it is distressing to witness the Soviet Union's continued intervention and captivity of Czechoslovakia by their 80,000 troops. We must wonder to what extent we can believe any Soviet pledges for better understanding cooperation among all nations on the basis of true progress and humanity with the continuance of this act.

It is only fitting that we, the representatives of freedom-loving people who cherish the principles of self-determination, display our support and empathy for the plight of the Czechoslovakian people who suffer the denial of basic human rights under Soviet bondage. Since the imposition of the Moscow agreement on August 26, 1968, I think that we are all too aware of the harsh repercussions that men and women must face when they attempt to exercise political and intellectual freedoms that differ from the firmly established Soviet ideology.

We have a responsibility to the millions of Czech citizens who have lost most of their human liberties, but who have not lost their aspirations and yearnings for a future day when they will once again be able to control their own destiny. We must help them maintain their spirit for that day when their independence will become a reality. Our rememberance of the "Soviet Day of Shame" and our denouncement of Soviet tactics of Czechoslovakian oppression will encourage them in upholding their ideals which led to the birth of our own country.●

● Mr. VANDER JAGT. Mr. Speaker, 10 years ago, August 21, the people of Czechoslovakia suffered one of the most outrageous and brutal intrusions into their internal affairs ever witnessed by modern world. It has been just 10 short years since Soviet tanks and armed soldiers pushed their way into the lives of Czech citizens. The wounds opened by that Soviet invasion have never healed, and, in fact, are reopened daily by the ominous presence of more than 80,000 Soviet troops that patrol the land.

And today, following the Soviet elimination of Alexander Dubceks government and his Soviet-enforced, in-state exile, the peoples of Czechoslovakia are being denied their most fundamental human rights—the right of free expression; the right of equal educational opportunities; the right of religious freedom; and the right to assemble and participate in public affairs.

The best of the Czech people—those gifted with talents and skills and deserving of the chance to be productive—have been forced into lifestyles of subjugation. Citizens protesting the insidious force of Soviet intervention are faced with political ostracism or prison confinement, both of which strip them of the chance to fully exercise their human potential.

Suffering from the Soviet induced emigration of those Czechoslovakians who refuse to tolerate the injustice and repression, a country once upon the edge of reform and progress, is now forced to call upon memories and distant dreams to fuel its hope of freedom. A country once fundamentally supportive of democratic representation for her citizens has today become a gray satellite of the Soviets, a land filled with repressed people of unused talent.

However, Mr. Speaker, contrary to the oppressive intentions of Soviet occupation, the courage of Czechoslovakia's citizens has brought forth a statement of popular indignation—charter 77. Their appeal to the forces who impose inhuman persecution and neglect the Helsinki Final Act is daily signed and supported by Czeck citizens of all walks of life.

Mr. Speaker, taking our cue from the example of the signers and supporters of charter 77, I urge that each Member of Congress and the President fully embrace and support the principles which guarantee the right of self-determination for the people of Czechoslovakia; the restoration of a political process created and sustained by free Czech citizens; and all efforts which will contribute to making possible a society in which all citizens of Czechoslovakia can live and work as free people.●

● Mr. GREEN. Mr. Speaker, 10 years ago on August 21, 1968, over 500,000 troops of the Warsaw Pact entered Czechoslovakia under the leadership of the Soviet Union to crush the popular, reform-minded government of Alexander Dubcek. Today we take note in the House of Representatives of this tragic anniversary.

As recent press reports indicate, these past 10 years have not been hopeful ones for the people of Czechoslovakia. A June 23, 1978 article in the Christian Science Monitor described the mood in this nation as follows: "* * * in Czechoslovakia, after 10 years of narrow, Soviet-alined rule, many people appear to be resigned—and even indifferent—to the declining state of their economy and culture * * *. Czechoslovakia presents an unimaginative political and economic conservatism alined more submissively to Soviet precepts than almost any other of the Soviet Union's allies. The leadership has essayed no move whatever toward assuaging popular memory of 1968. Instead, the Czechoslovak leadership harps on the justification of Russia's forcible intervention." Human rights violations by the government, contrary to the "law" in the country, abound.

The last year has witnessed a dramatic flair of hope for all free-Czechoslovakia sympathizers. On January 7, 1977, a group of 242 leading Czechoslovaks published the charter 77 document calling for the observance of human rights embodied in the Helsinki accords of 1975, the U.N. Covenants and the Czechoslovak Constitution. While close to 1,000 signatures have been added in the last 18 months, the Moscow-backed Czech Government persists in harsher oppression against the signers. This document resurrects the hopes and ideals that were present during the Dubcek era.

Mr. Speaker, on the 10th anniversary of this sad day in the pages of world history, I speak out for the oppressed peoples of Czechoslovakia and express my hope that the human rights of the people there will be treated with the dignity and respect they deserve.●

● Mr. BURKE of Florida. Mr. Speaker, I rise to join my colleagues in this special order on the 10th anniversary of the Soviet invasion of Czechoslovakia. I commend our esteemed friend from Illinois (Mr. DERWINSKI) for his initiative and concern in bringing about this special order. We would indeed be remiss if we did not take a moment to remember the grisly events of August 1968 and their implications for today A momentary glimpse of liberty in Czechoslovakia, a fleeting moment of freedom from the politics of Communist dogma, led to a brutual act of intervention. Soviet tanks and infantry forceably crushed at the same time the Czechoslovakian moment of liberty and the fierce, but futile, resistance by the brave people of Prague.

There is a lesson in this. I think it worth noting that until 1968 Czechoslovakia was the best argument the Communists had that people would willingly submit to Communist rule. Even that example was questionable, because Czechoslovakia originally went Communist only after the suspicious suicide of Jan Masaryk in February 1948. For a decade no one in Eastern Europe dared assume that they were out of reach of Soviet armed might. For those who forgot this fact of life there was the Soviet intervention in Hungary and Poland in 1956 as a lesson to the contrary. Nonetheless, Czechoslovakia communism continued as the so-called showplace of communism for another dozen years.

By 1968 there was a false sense of progress with regard to Soviet relations with the West. While détente was not yet upon us, the cold war in Europe had abated slightly. American involvement in Vietnam had reached its peak. Vociferous critics blasted U.S. efforts on behalf of the Republic of Vietnam. The Soviet Union had not directly caused any international incidents since the Cuban missile crisis of 1962—too busy, perhaps, aiding Hanoi's aggression in South Vietnam. Short memories and wishful thinking lulled many in the United States and the West into believing that the Soviet Union had reformed.

The events of August 1968 should have permanently dispelled any doubts as to the Soviet Union's attitudes and behavior. They had not changed. Now 10 years later, the treatment of Shcharansky and thousands like him serve to remind us that Soviet attitudes have not changed. Soviet power still controls half the globe and, as much as possible, the minds of the Soviet people. Further, Soviet actions remembered should remind us that with very few exceptions no na-

tion has gone Communist and stayed that way except by force of arms. Of all the Socialist and Marxist states, it is hard to argue that any reflects the free will of its people as demonstrated in a genuine election. From the Gulf of Tonkin to the Baltic, from the polar north to the Tropics, Communist rule, of whatever stripe, remains an ugly imposition on subject peoples.

August 21, 1968, was clearly a day of infamy. It should remind us never to assume that peace is self-maintaining. We dare not conclude that the forces which threaten the security of the United States, or the West, or any of the increasingly fewer free states in the world, will go away after a year or 10 years or even 50 years of peace. We dare not forget the anniversaries which remind us of that truth.

Finally, and most important, we dare not forget that the ones who suffer first and most brutally are those, like the brave citizens of Prague, who fought Soviet tanks with clubs and stones, who resisted bravely but fatally. More than any other we honor them today. There is nothing more that we can say, except that if we remember, they did not resist, they did not die, in vain.●

● Mr. ZABLOCKI. Mr. Speaker, as we approach the 10th anniversary of the Soviet occupation of Czechoslovakia, I think it is fitting that we remind the world once again that a sense of outrage still exists toward the act of aggression committed by the Soviet Union against that small but courageous country on August 21, 1968. Who of us can forget the chagrin and sense of frustration that we felt as the news came in of Soviet tank forces occupying the major cities of that country? The Soviets did pay a heavy price in whatever good will and perhaps mistaken sense of trust they may have built up in some parts of the world at that time.

We should remember not only to condemn the Soviet Union but also to pay tribute once again to the valiant freedom-loving citizens of Czechoslovakia who gallantly and bravely resisted overwhelming Soviet forces.

Our thoughts and prayers continue to go out to the people of Czechslovakia who yearn for the freedoms and human rights that we in the United States take for granted. They should know that they are not alone in the struggle for their basic human rights, as promised in the Helsinki Final Act.●

● Mrs. HOLT. Mr. Speaker, 10 years ago Soviet tanks and armies rolled into Czechoslovakia to crush the popular spirit of self-determination. How well we recall the stories of civilians heroically resisting the armor and troops of the invaders.

Let us remember what provoked this cruel aggression. Czechoslovakia had installed a more liberal Communist regime that was relaxing some of the totalitarian controls which had been placed on the people. There was a spirit of nationalism among the people, and a longing for greater freedom.

To the Russian tyrants in the Kremlin, this was heresy. They were uneasy What if this heresy of liberalization spread beyond Czech borders, even to the Soviet Union itself?

The despots of the Soviet Union cannot tolerate even the smallest whiff of the fresh air of freedom. Wherever freedom exists in the world, wherever people are allowed to think and speak freely, that is where the Soviet leaders perceive a threat to their power.

Indeed, the very survival of freedom anywhere in the world is perceived by the Soviet rulers as aggression against them.

That, Mr. Speaker, describes the nature of our adversary, and it explains what happened in Czechoslovakia. It explains why the Soviet Union sends its own citizens to cruel labor camps for no offense except speaking their minds against the totalitarian system that rules them.

There is another lesson here, Mr. Speaker. The United States must not drop her defenses when such a power is loose in the world. We must support the right of the people of Czechoslovakia and others of Eastern Europe to self-determination.●

● Mr. MICHEL. Mr. Speaker, 10 years ago Russian tanks invaded Czechoslovakia and crushed the attempt of the Czech people to attain a measure of freedom. I say a "measure of freedom" because that, after all, is what was at stake. Alexander Dubcek, then head of the Czech Communist Party was experimenting with reforms of the Communist system and not attempting a wholesale overthrow of it. But even these reforms were too much for Leonid Brezhnev. He sent in the tanks. the ultimate argument of Communists everywhere. The rest is silence, the silence of a nation and a people whose brief "spring" is all but forgotten by the outside world.

Today there are still more than 80,000 Soviet troops in Czechoslovakia which is ruled by a puppet regime that dares not institute a single reform for fear of what might happen.

What more is there to say? The Soviets know they are breaking the Helsinki accord by their actions in Czechoslovakia. We know they are breaking the accord. They knew when they signed the accord that they would break it. But the United States, knowing all this, turns its face from the sight, as if it had come across the victim of a horrible accident and did not want to look at what had happened for fear of getting involved. And Leonid Brezhnev smiles and smiles and smiles and knows we will not even complain.

A few weeks ago I remarked about the amazing burst of outrage that came from unexpected places during the recent trial of the Soviet dissidents. I wondered why the same outrage was not shown over the long agony of the Captive Nations. No one has volunteered an answer to that question so I am left with my own guess which is that only when the media pays attention to a denial of human rights will certain prominent figures in politics and the media pay attention.

And so there will be no great public outcry over the fate of Czechoslovakia. But I am glad to have this opportunity to join with those who care and to express my condolences to the Czechs and Slovaks in their native country and to Americans who share their ancestry. But I want to do more than offer condolences on the Soviet occupation. I want to say that no matter what the present looks like and no matter how grim the past has been, the Czechoslovakian people should not give up hope. They have a right to self-determination. That fact should be at the heart of our Nation's policies toward Czechoslovakia and the Soviet Union.

Ten years after the tanks the tragedy of the Czechoslovakian people is all but forgotten. But I am happy that some of us in the Congress have not forgotten. I am equally glad that the Voice of America will be carrying a special report on "Czechoslovakia since 1968" during the period of the anniversary, and that its Czech language broadcasts will definitely speak to the people of Czechoslovakia about this subject. I also understand that the VOA will report on what we are doing here today and on demonstrations that will take place in this country.●

● Mr. OTTINGER. Mr. Speaker, August 21, 1978, marks the 10th anniversary of the invasion of Czechoslovakia by the Soviet Union, an event resulting in the severest violation of the human rights of the people of Czechoslovakia. On this occasion, we are obliged to denounce the Soviet Union's unwillingness to abide by the provisions of the Helsinki accords, the United Nations Charter, and the Czechoslovak Constitution.

The Soviet Army invaded Czechoslovakia on August 21, 1968, on the pretext that their occupation would protect the country against an aggressive action by the West Germans. The following week, Soviet Communist Party leaders forced the Czech leaders to sign a communique sanctioning the temporary occupation of Czechoslovakia. This act of aggression violated the Czechoslovak-Soviet Treaty of Friendship and Alliance of 1943, agreements among the allied powers, article 2 of the United Nations Charter, and a declaration of the Soviets of October 30, 1956.

An agreement of October 16, 1968, provides for the stationing of Soviet forces in Czechoslovakia for a temporary period. The Soviet Union acknowledged that it would maintain its forces in Czechoslovakia until the situation in that country was normalized. The conditions in Czechoslovakia have been normalized, yet the Soviet forces remain.

The people of Czechoslovakia, as well as other peoples of Eastern Europe, have a right to self-determination, a principle which the Soviet Union itself has recognized but flouted. The Soviets continue to deny three basic principles: The principle of the sovereignty of all European states and nonintervention in their internal affairs, the principle of the independence of all states including the right of self-determination, and the principle of the renunciation of the use of force against any states.

On this occasion, the anniversary of the initial violation of the Czech people's human rights, we express the concern of Congress for the renewal of the rights of self-determination, independence, sovereignty, and nonintervention for a country illegally deprived of these basic

rights. In the interest of Czechoslovakia's freedom, as well as the peace, stability, and prosperity of Europe, it is imperative that the Soviet Union withdraw its forces from Czechoslovakia. ●

● Mr. WEISS. Mr. Speaker, August 21 marks the 10th anniversary of the Soviet invasion of Czechoslovakia. This is therefore a most appropriate time to call public attention to the deplorable human rights situation in that nation today.

And we should also view this sad occasion as an opportunity to express our unyielding support for the continuing struggle being waged by thousands of Czechs for freedom and justice.

On August 21, 1968, the Czechoslovokian people were, both figuratively and literally, placed under house arrest. A systematic policy of brutal repression was then initiated.

The leaders of the short-lived movement to liberalize Czechoslovakia were exiled from Prague and imprisoned. Soviet troops were stationed throughout the country to enforce Moscow's dictates and to defend its puppet rigime.

Governmental oppression has not significantly lessened in the intervening decade. In some ways, the human rights record of the Czech Government is worse today than in 1968. Amnesty International reports, for example, that in 1977 "there were more known violations of human rights in Czechoslovakia than in the preceding year."

One of the most vivid examples of the degree of repression being experienced by the Czech people involves the official reaction to circulation by private citizens of a human rights declaration called "charter 77." This document urges the Czech Government to implement the International Covenant on Civil and Political Rights and the International Covenant on Economic, Social and Cultural Rights which are included in the Czech legal code.

As a result of signing charter 77, 41 people have had their apartments searched and their personal possessions confiscated, Amnesty International reports. Karol Sidon, a writer, was held in custody for more than 100 hours without charges being brought against him. Many persons active in the charter 77 have been severely beaten by the Czech authorities, Amnesty International adds. More than 80 people have been dismissed from their jobs because of their involvement with human rights advocacy.

Charter 77 and the state's attempt to crush it and all it represents stand as testimony to the heroic resistance of the Czech people and their determination to be free. Let us take the opportunity afforded by this grim anniversary to express our solidarity with the unconquerable spirit of the people of Czechoslovakia.●

● Mr. WINN. Mr. Speaker, on August 21 concerned individuals everywhere will commemorate the 10th anniversary of a shocking and tragic event, the massive and brutal 1968 invasion of Czechoslovakia by armed forces of the Soviet Union and four of its obedient Warsaw Pact satellites, East Germany, Poland, Hungary, and Bulgaria. In a matter of a day or two the courageous Czechoslovak people were hopelessly overwhelmed by the tanks and bayonets of some 650,000 of the aggressors' troops.

Without the knowledge or consent of any legitimate Czechoslovak Government authorities or even of the officials of the Communist Party of Czechoslovakia, and in violation of the United Nations Charter and existing treaties, the heavy fist of Soviet imperialism struck a defenseless Czechoslovakia late on the night of August 20, 1968. This blatant act of aggression was allegedly justified by the absurdly transparent, flimsy, and bizarre explanation that the Soviet Union and its accomplices were responding to an anonymous Czechoslovak request for armed aid to protect true "socialist progress" against unidentified internal and external "counterrevolutionary forces." In fact, as was readily apparent, the purpose of the invasion was to crush the traditional spirit of freedom and dedication to self-determination of the Czechoslovak people which had begun to be manifested in the reforms of the popular Dubcek government.

With considerable difficulty the Soviets eventually recruited and installed a puppet government of contemporary "quislings." That present government in Czechoslovakia has now become infamous for its fanatically orthodox and servile adoration and limitation of Soviet communism. As Amnesty International's reports indicate, the current Czechoslovak Government is imitating the recent Soviet crackdown on human rights proponents, dissidents, and particularly former supporters of the Dubcek reform regime purged and harrassed since the invasion, and doing so with a vengeance.

Although an 80,000-man Soviet occupation force still garrisons Czechoslovakia, Russian language is compulsory in their schools, and their inflexible Soviet-style economy is stagnating, the traditional love of the Czechoslovak people for freedom has not been extinguished. People everywhere who share that love of freedom and the principle of self-determination applaud the patience, perseverence, and courage of the Czechoslovak people in their stoic efforts to adapt to and survive the burdens and constraints which they now endure. We join them in their inner hope that in the long run the sickness of Soviet tyranny will succumb to its own cancerous nature.●

● Mr. ADDABBO. Mr. Speaker, 10 years ago, on August 21, 1968, the Soviet armed forces, aided by troops from four other Warsaw Pact nations, invaded and occupied Czechoslovakia and overthrew its government. Realizing that resistance was futile, Czech leaders urged their people not to fight back. Yet, in spite of such warnings, the Czech people staged a general strike and various protests to the Soviet violation of their sovereignty. Invading troops fired at curfew violators, circular distributors, and other passive resistors. Within 3 days, 20 persons had been killed and more than 300 wounded in Prague alone.

International condemnation was quick and fierce; still, the Soviets were unmoved by the protests. Not only were non-Communist nations appalled by the invasion, but so were most of the world's Communist parties not involved in the crisis, including those of France, Italy, Rumania, Yugoslavia, and China. On August 22, the U.N. Security Council supported a seven-nation resolution condemning the invasion and calling for the withdrawal of occupying forces. The resolution was vetoed by the Soviet Union.

The Soviet invasion was a reaction to Alexander Dubcek's efforts to democratize Czechoslovakia. His government sought to give greater autonomy to the courts, trade unions, and economic enterprises. Perhaps more important, he sought a more independent stand from the Soviet Union in foreign affairs.

That great defender of all so-called wars of national liberation, the Soviet Union, reacted with a blatantly imperialistic, armed invasion to the Czech movement toward greater autonomy.

As a free people, we Americans have the responsibility of remembering the invasion and all other violations of human rights. For 10 years and more, the Soviet Union has imprisoned the people of Czechoslovakia in its sphere of influence and has denied to these people, as it has to so many milions of others, the fundamental right of self-determination.

The Czechoslovakian people have a long and commendable history of democratic free government. The Soviets have subjugated that brave and determined people twice, against all semblance of international law and human decency. I have faith that the Czech people will overthrow their Soviet oppressors and once again take control of their destiny. Let us pray that next year at this time the people of Czechoslovakia will once again stand as our brothers in the family of free and independent nations.●

● Mr. BOB WILSON. Mr. Speaker, with our commitment to human rights and in assuring the peoples of all nations of our commitment to peace and freedom, it is most important to note that this coming Monday, August 21, marks the 10th anniversary of the brutal takeover and forced suppression of the people of Czechoslovakia by the Armed Forces of the Soviet Union.

Prior to that date, the Czech people had struggled for years to end Soviet repression and to once again live in peace and freedom. That struggle was crushed 10 years ago, and the Czech people once again are under the domination of the Soviets.

Mr. Speaker, we must never forget, and must never let the world forget just how precious freedom is, and that America will never give up the battle against oppression. Let us hope and pray that the people of Czechoslovakia, and all over the world will one day gain that most priceless of all gifts—the right to live out their lives in peace and freedom.●

Mr. DERWINSKI. Mr. Speaker, I yield back the remainder of my time.

MOORHEAD REPORT TO THE HOUSE ON INFLATION

The SPEAKER pro tempore. Under a previous order of the House, the gentle-

man from Pennsylvania (Mr. MOORHEAD) is recognized for 15 minutes.

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, last year at about this time I reported to the House on the inflation situation and outlook. I did so in my capacity as chairman of the Subcommittee on Economic Stabilization of the Banking Committee, which has legislative jurisdiction over the Council on Wage and Price Stability and, as an outgrowth of that, a general oversight role in the inflation problem.

Today I make a second "annual report" on inflation. The news that I convey is not good. Not only are the figures worse than a year ago but also there is a clear lack of consensus—among the experts and among ordinary people—as to what we ought to do about the problem. However, while in no sense minimizing the seriousness of inflation, I want to begin by making a distinction between a problem and a catastrophe.

Although inflation has worsened over the past 12 months—contrary, I must say, to my own hopes and expectation of a year ago—we are not facing the kind of runaway situation that renders currencies worthless. There is legitimate debate over whether our fiscal and monetary policies are sufficiently restrictive, but in no sense are we resorting to the "printing press" on a grand scale. The best proof of this is in the price indexes for raw commodities, agricultural and nonagricultural. These prices are the most sensitive indicators of excess demand in the economy, and they are behaving very calmly, with most of them below their peaks of earlier this year. We are not in a world of shortages and bottlenecks, of "too much money chasing too few goods," of uncontrolled budget deficits.

To cite Paul Samuelson, one of our leading economists:

> Neither galloping inflation nor malignant slump are suggested for America by the visible signs.

It is instructive to look back over the past years and identify some of the things that have worsened the inflation picture, several of them unforeseen.

Food: Basic grain supplies have been ample all through this period, but we have learned that there can be large upward swings in meat prices even with moderate feed grain prices. Particularly troublesome—and unpredictable—was the impact of the severe winter on the supply of hogs. Fruit and vegetable prices also reflected weather conditions.

We must remember that there is an "underlying" inflation rate in food prices that is not much different from the rate for the economy as a whole, reflecting the inexorable rise in costs all along the chain of processing and transportation. Last year for the first time, as one of our hearings brought out, the identifiable cost of labor is getting food prepared and into the consumer's shopping bag exceeded for the first time the value of the food at the farm gate, though labor in the food industry did not receive wage gains out of line with those of workers generally.

But the sudden jump in food prices was another matter. We did not anticipate the severity of the beef cycle, with herd liquidation of earlier years now succeeded by reduced supplies, and the weather dealt us a harsh blow in other food sectors. Grain supplies, fortunately, remain ample and the food price picture may look better from now on, as indicated by the latest wholesale price index for July.

The dollar: The decline in the dollar's exchange rate against most of the other leading currencies went much farther than it was reasonable to expect a year ago, and this has added upward of half of one percent to our inflation rate according to estimates of the Federal Reserve Board, chiefly through higher prices for imports. The decline in the dollar's exchange rate reflected a trade balance that turned out to have a far larger deficit than had been anticipated—a deficit stemming mostly not from a further major worsening of our oil balance but rather from trade in all other goods.

Here again, there is reason to believe that the worst is over. The trade deficit has begun to diminish, thanks in part to the delayed effect of the exchange rate depreciation itself. In the past 3 or 4 months the only major decline of the dollar has been against the yen and the Swiss franc. I do not know, of course, whether the weighted exchange rate of the dollar will improve a little or worsen a little from now on, but it is doubtful that we face another huge drop such as occurred in late 1977 and early 1978.

Government actions: Contrary to the wishes of many of us, social security payroll taxes were raised substantially at the beginning of this year. Together with a catch-up increase in the minimum wage, this added about a half percent to labor costs and therefore to prices, according to the Council of Economic Advisers. Environmental, health, and safety regulations are increasingly reflecting the major legislation of recent years—legislation that in all principal respects I fully support—and are now adding about three-quarters of 1 percent a year to the price level, as estimated by the Council on Wage and Price Stability. To relieve a situation of genuine distress we acted legislatively to raise the domestic price of sugar above the world price. Some people would include in this list of Government actions contributing to inflation the handful of measures to curb imports that have been taken, but I doubt that this was of any importance. For example, the reduction in steel imports made possible by the new "trigger price" system has been a factor in improving the operating rate of the domestic industry, with a consequent check on the upward pressure of unit costs.

Monetary policy: I pointed out a year ago that one of our defenses against inflation was the new system by which the Federal Reserve establishes quarterly targets for the growth rate of the principal monetary aggregates and reports them to Congress. As it happens, over the past year the growth of one of those aggregates—the narrowly defined money supply, or M–1—has been significantly higher than the Federal Reserve's own targets. To those who place heavy emphasis on monetary developments in explaining inflation, this "excessive ease" of monetary policy has been a major cause of the worsening of the inflation picture.

While I do not want to be dogmatic in this arcane field, my own view is that the Federal Reserve acted sensibly on the whole during this period. If it had adhered with theological consistency to its targets for M–1, it would have had to force up short-term interest rates even more than it did. This could have brought on a credit crunch and possibly a needless recession. The payoff in reduced inflation would have been slight at best, based on the experience with recessions in this decade, but the suffering would have been widespread.

Mr. Speaker, I do not want to pretend that I have a solution for the inflation problem. As testimony before our subcommittee from Government and non-Government witnesses alike has impressively demonstrated, inflation has acquired its own momentum—a momentum that is resistant to the classic medicine of reduced demand. We must remember that the familiar "cures" of a balanced budget and slower growth of the money supply cannot halt inflation by magic; they can work only through reduced total spending in the economy, that is, reduced demand. The economists that we and other committees have had show a considerable consensus that this kind of medicine would indeed reduce the inflation rate, but only very slowly and at a high cost in the form of unemployment, lower profits and reduced output for the economy. I do not mean to imply unanimity on this point, but even those who still favor the "old-time religion" concede that the anti-inflation payoff is likely to be gradual at best and that there will be a cost in production and employment. In my view, the most striking economic lesson of our generation was the resistance of inflation to the extremely deep recession of 1974–75, when unemployment hit a 35-year peak and yet wages and prices kept right on rising at a pace to yield an inflation rate of about 6 percent. There is no reason to think that another recession would produce any better results on the inflation front.

It was in recognition of this new phenomenon that the Carter administration adopted its policy of voluntary "deceleration" for wages and prices, asking that the rise in each be kept below the average of the two preceding years. If voluntary methods have any usefulness at all, there was nothing wrong with this formula. It seemed preferable in some ways to numerical guidelines. But despite the heroic efforts of Robert Strauss, the President's inflation counselor, I think we have to concede that the program has not succeeded, and perhaps never could have succeeded. Individual labor unions, dealing with their

own particular bargaining situations, have never accepted the formula. A few large industries, including steel and automobiles, have announced conditional support and may turn out to be in compliance, but it is an open question whether this is because of the President's program or because of market and cost factors in those industries. Recognition that voluntary restraint of this kind has largely failed does not, I should emphasize, lead to the conclusion that there should be mandatory wage and price controls.

Mr. Speaker, we in Congress are frustrated by this problem and we are largely limited, for the time being at least, to an exercise in damage control. What that means in practice is a firm effort to keep inflation from accelerating, and I believe we are doing so—above all in fiscal policy. The tax cut we have passed in the House is much less than the President originally proposed and the second budget resolution incorporates a noticeable reduction in aggregate outlays. The combination will mean an impressive reduction in the size of the budget deficit from that planned by the President as recently as last January. To repeat what I said earlier, we must not expect a lower budget deficit to solve the inflation problem, but it constitutes a meaningful restraint on further acceleration. I believe that Federal Reserve monetary policy, despite the straying of M–1 above the Fed's targets, is operating in the same direction—not an effort to crush the expansion of the economy, but an effort to curb the tendency of inflation to get worse.

Our subcommittee will continue to explore the inflation problem and will keep our minds open to any constructive solutions that may be offered. We plan an early hearing, for example, on H.R. 13865, which I have cosponsored, that would require the President to proclaim more precise wage and price guidelines for the private economy, without going the route of controls. Among other things, the bill would mandate a serious study by the administration of the use of tax incentives to foster compliance with the guidelines—the interesting idea known as TIP, or tax based incomes policy.

But I do not want to create any illusions. We have good reason to hope that inflation will moderate from the 10.4 percent annual rate of the first half of this year, as measured by the Consumer Price Index. But the momentum of inflation is such that an era of price stability is nowhere in sight.

WHY A VOTE AGAINT KEMP-ROTH WAS A VOTE FOR HIGHER TAXES: THE BATTLEGROUND IN THE HOUSE NOW SHIFTS TO THE NOVEMBER ELECTIONS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. KEMP) is recognized for 10 minutes.

● Mr. KEMP. Mr. Speaker, political debates can be influenced by halftruths, and there is no more convincing evidence of this than what has happened in the House with respect to the Great Tax Cut Debate" in 1978. Under the guise of cutting taxes, the House has consciously acquiesced in allowing an increase in taxes.

One week ago today, August 10, the House passed the Revenue Act of 1978. It was billed by its sponsors as a major tax cut. Parenthetically, I was pleased it was in fact a cut in tax rates for capital gains. But the headlines the next morning carried the message, "House Passes $16 Billion Tax Cut," of which $10-plus billion was earmarked for individuals. But, that is far from the whole truth.

Why? Because Congress knew then, as it knows now, that the $10-plus billion cut for individuals will still leave the American taxpayers paying $16 billion more in 1979 than they paid in 1978. Plus, $29 billion more in 1980 and $52 billion more in 1981. A staggering $262.5 billion more through 1983.

There are two reasons why taxes are going up.

First, Congress has passed a $120 billion increase in social security taxes over the next 5 years. While there are many of us in Congress who voted against the payroll tax increase, there are just as many, or more, who want to keep it in place.

Second, inflation pushes taxpayers into tax brackets where the percentages they pay in additional tax dollars of income are increasingly higher, from 14 to 70 percent. The steep climb of these rates, coupled with inflation, has resulted in the middle class paying at rates once reserved for the wealthy. What is worse, the effects reduces incentives for workers, savers, and investors and those men and women who take economic risks. That causes an economic slowdown. It also accounts for another $215 billion in additional taxes through 1983.

The result? Unless individual income tax rates are reduced drastically, the American people will be paying $262 billion in additional Federal taxes through 1983. That's a quarter of a trillion in only 5 years. What is even worse to the incentive side of the economy is the fact that tax rates are increasing so rapidly that blue-collar men and women will soon be in the 50-percent marginal tax brackets when Federal and State tax rates are combined. I submit this will Britainize our economy and threaten every social program in our Nation.

What should Congress do? It should enact the Individual Income Tax Rates Reduction Act, which I offered as the substance of the motion to recommit last week. That measure would reduce individual income tax rates by about 30 percent over the next 3 years, starting January 1, 1979.

During the debate on that motion, I read into the proceedings a chart which showed that if the House rejected the motion and passed the committee-reported bill, H.R. 13511, instead and in tact, that the American people would still be facing the $262.5 billion tax increase to which I have just referred. That information was before my colleagues when they cast their vote on the motion to recommit. Here is that information, once again:

PENDING TAX INCREASE/(DECREASES) UNDER CURRENT LAW, UNDER THE HOUSE-PASSED REVENUE ACT OF 1978, AND UNDER KEMP-ROTH

[In billions of dollars]

	1979	1980	1981	1982	1983	Total
Pending tax increases due to:						
Inflation [1]	16.8	27.8	40.8	55.2	72.4	213.0
Social security [1]	9.6	13.1	25.3	34.3	37.5	119.8
Total	24.6	40.9	66.1	89.5	109.9	332.8
Alternatives to offset these pending tax increases would result in the following tax ncreases/(decreases):						
H.R. 13511, the Revenue Act of 1975, as passed by the House	16.0	28.9	52.3	73.7	91.6	262.5
Kemp-Roth amendment [2]	3.6	(12.8)	(15.9)	(16.1)	(9.1)	(60.2)

[1] Based on calculations of the Joint Committee on Taxation, assuming 7.5, 7.0, 6.5, 6.0, and 6.0 inflation.
[2] To sec. 101 of H.R. 13511.

Now, what does that mean to the average family of four?

There are several ways to depict this. But irrespective of the way used, it means that the committee bill will result in substantial net tax increases over the next 3 years, whereas the Kemp-Roth amendment would have resulted in significant net tax decreases.

The first is a table prepared by the Associated Press and appearing around the country the morning after the vote. It shows what the cuts would be—without taking into account inflation or social security—according to the committee bill, the administration-backed Corman-Fisher substitute, and the Kemp-Roth amendment. This table shows, as will those which follow, that the Kemp-Roth amendment would have provided the greatest level of cuts over the next 3 years. It follows:

TAX CUT TABLE

Here is what congressional tax experts estimate federal income tax cuts would be under the bill which the House passed Thursday night and sent to the Senate.

Also shown are estimates for the two major alternative tax-cutting proposals which the House rejected.

This table is computed for typical taxpayers with deductible personal expenses of 23 percent of their income.

In this comparison:

"Income" is basic annual salary, wages, or self-employment income.

"Bill" is what the cut would be next year under the bill, which the House passed and sent to the Senate.

"Plan" is what the cut would have been next year under the Carter administration-backed plan sponsored by some Democrats. The House rejected this.

"GOP" is what the cut would have been under a Republican-sponsored alternative that would have phased in an average one-third reduction in personal tax rates over three years. The House rejected this.

"na" is figures which were not immediately available.

SINGLE PERSON

40,000	486	654	2,336

Now, taking inflation-pushed and social security tax increases into consideration, which we must do, because those are the realities we face, what does this mean to the average family of four, one with an adjusted gross income in 1978 of $12,000, $17,000, $20,000, $30,000, and $40,000?

In terms which do reflect inflation-pushed and social security tax increases, which we must if we are to have an accurate picture, here is what will happen if the committee bill becomes law, in contrast to what will happen if the Senate enacts Kemp-Roth and it is kept in the joint House-Senate conference committee:

1979–1981 CUMULATIVE TAX INCREASE/(DECREASE) OVER 1978 TAXES [1]

[1978 constant dollars]

Adjusted gross income family of 4 in 1978	Kemp-Roth	Ways and means
$12,000	($260)	$335
$17,000	(749)	246
$20,000	(598)	660
$30,000	(1,756)	1,287
$40,000	(2,406)	1,579

[1] Includes social security and income taxes.

That is a dramatic difference in the amount of Federal income taxes paid over that 3-year period by those families.

I have had this cumulative information broken out for 1979, 1980, and 1981, for those with adjusted gross incomes of $12,000, $17,000, $20,000, $30,000, and $40,000. That information—showing the consequences just considering Federal individual income taxes, then showing those consequences when coupled with the increased social security taxes—follows:

CHANGE IN PERSONAL INCOME TAX LIABILITY UNDER WAYS AND MEANS BILL AND UNDER KEMP-ROTH FOR A FAMILY OF 4

[1978 constant dollars]

	Increase (decrease) over 1978 taxes under Kemp-Roth	Increase (decrease) over 1978 taxes under Ways and Means bill
1979 adjusted gross income: [1]		
$12,900	(82)	(2)
$18,275	(159)	(32)
$21,500	(225)	(66)
$32,250	(425)	(131)
$43,000	(663)	(160)
1980 adjusted gross income: [1]		
$13,803	(109)	85
$19,554	(286)	42
$23,005	(384)	33
$34,508	(734)	72
$46,010	(1,142)	174
1981 adjusted gross income: [1]		
$14,700	(160)	162
$20,825	(431)	107
$24,500	(558)	124
$36,750	(1,084)	260
$49,000	(1,688)	478

[1] Adjusted gross incomes shown reflect inflation rates of 7.5 percent in 1979, 7 percent in 1980, and 6.5 percent in 1981. The adjusted gross incomes were $12,000, $17,000, $20,000, $30,000, and $40,000 in 1978.

CHANGE IN PERSONAL INCOME TAX AND SOCIAL SECURITY TAX FOR A FAMILY OF 4 UNDER WAYS AND MEANS BILL AND UNDER KEMP-ROTH

[In 1978 constant dollars]

	Increase (decrease) over 1978 taxes under Kemp-Roth	Increase (decrease) over 1978 taxes under Ways and Means bill
1979 adjusted gross income: [1]		
$12,900	(73)	7
$18,275	(146)	(18)
$21,500	(70)	89
$32,250	(190)	104
$43,000	(428)	75
1980 AGI: [1]		
$13,803	(100)	94
$19,554	(273)	56
$23,005	(229)	188
$34,508	(425)	382
$46,010	(832)	484
1981 AGI: [1]		
$14,700	(87)	234
$20,825	(330)	208
$24,500	(299)	383
$36,750	(543)	801
$49,000	(1,146)	1,020

[1] Adjusted gross incomes shown reflect inflation rates of 7.5 percent in 1979, 7 percent in 1980, and 6.5 percent in 1981

Mr. Speaker, a vote against the Kemp motion to recommit was a vote for higher taxes, especially in the lower- and middle-income categories.

There is still time for Congress to reverse the House's position. The Senate will consider the bill in the coming weeks. And, there will be a newly elected House and Senate in January.

This, clearly, is the people's battle, and the outcome will depend on how much they demand these tax rates be reduced through their expressions to their Senators and through pulling the levers in the voting booths in November for those Senate and House candidates committed to a 30-percent tax rate reduction. This ambitious new idea and strategy may not have yet won a majority in the "income-redistribution" oriented House, but it clearly has the majority of the American people's support.

Despite the stridency of the rhetoric against Kemp-Roth and against my motion to recommit, I firmly believe those who believe in these tax rate reductions have succeeded in advancing that new idea. We have raised the consciousness level of the debate in America as to how to achieve noninflationary growth and jobs creation in our Nation. We will not give up our efforts to restore incentive to America.

Mr. Speaker, I think Irving Kristol, the Henry Luce professor of urban values at New York University, summed up this debate and the need for the Kemp-Roth legislation most articulately and perceptively in his column from the morning of last week's debate:

POPULIST REMEDY FOR POPULIST ABUSES

(By Irving Kristol)

The spirited quarrels among economists, in The Wall Street Journal and elsewhere, about the Kemp-Roth bill are interesting—also more than a little confusing.

That liberal economists should oppose the bill—which would slash individual income tax rates by 30 percent over the next three years, and slightly reduce corporate rates as well—is understandable. Most of them believe, basically, that government can spend the people's money more wisely than the people themselves. They are also committed to the egalitarian principle that affluent citizens should always pay more, never less, taxes.

That some businessmen and some business publications (e.g., Business Week and Forbes) should be distrustful of it is only a little less understandable. For a good portion of the business community still believes that national economic policy should be governed by a simple and static principle: first balance the budget by cutting government's expenditures—and then cut taxes. This is prudent bookkeeping but betrays a naive ignorance of the dynamics of political economy.

What is extraordinary, however, is that so many conservative economists have such ambivalent attitudes toward the bill. Only a few are opposed to it outright. Most of them take the odd position that the thinking behind the bill is all wrong—"the Kemp-Roth Free Lunch," Milton Friedman calls it scornfully—but they (including Dr. Friedman) support it anyway. Why so critical? And why such support, nevertheless?

There are two main arguments offered in favor of the Kemp-Roth bill. The first is to the effect that, without such a tax cut, and assuming an average inflation rate of 7% annually, marginal tax rates 10 years from now will be absolutely horrendous. Specifically, a four-person household with an annual income of $15,000 (in inflated dollars) in 1987 will then find itself paying a 50% tax at the margin. This would be ruinous to all economic incentives, and would probably provoke a major political convulsion as well. The Kemp-Roth tax cut would permit the taxpayer to avoid the "double whammy" created by inflation combined with the progressive income tax.

The second argument is in response to those who worry about the inflationary impact of such a tax cut at this time, and who insist that it be accompanied by substantial cuts in government spending. This argument is to the effect that, while every effort should

certainly be made to hold down government spending—both Kemp and Roth, after all, are conservative Republicans—the tax cuts themselves will be so conducive to economic growth that government's revenues will eventually increase to such an extent as to make the budgetary deficit a negligible concern. And it is this issue—centering around the "Laffer curve" and its seemingly perverse promise of increased revenues through tax cuts—that creates a storm of controversy among conservative economists.

In fact, the argument from inflation, though it has a superficial plausibility, is—as Dr. Friedman would agree—beside the point. Paul Craig Roberts has shown persuasively in these pages that a cut in tax rates need not be inflationary. Inflation is a monetary phenomenon, and if the government does not finance its deficits via the printing press, there will be no inflation (though there can, of course, be other undesirable economic consequences). A tax cut can be funded by new debt, by borrowing from the public, rather than with newly-printed money.

Ah, Milton Friedman then intervenes, in that case you are not talking about a "real" tax cut at all! "The total tax burden on the American people," he writes, "is what the government spends, not those receipts called 'taxes.' And any deficit is borne by the public in the form of hidden taxes . . . ," for an increased deficit surely will have to be paid for with future tax revenues.

He is, as usual, absolutely right—from the point of view of academic economics. But academic economics is not quite the same thing as real-world economics. In the academic universe, little attention is paid to entrepreneurial innovation—an activity which, since it is not quantifiable in its extent or effects, is largely ignored by modern economic theory. Businessmen, who are growth-oriented, ought to understand this aspect of public economic policy better than they do. They are familiar enough with the example of a stagnant firm, already heavily in debt, restructuring itself internally to increase growth, and financing this process by increasing its debt in the hope that this will be more than compensated for by that future growth. In effect, Kemp-Roth represents such a restructuring and refinancing of the national economy, for purposes of growth.

That Dr. Friedman and other conservative economists nevertheless support Kemp-Roth, despite their continual sniping at it, is testimony to the fact that, if their economics is overly academic, their politics is not. They have learned the lesson of Proposition 13, which is that tax cuts are a prerequisite for cuts in government spending. The politics of the budgetary process is such that a cut in any particular program will provide intense opposition from a minority, and only indifference from the majority. In such a case, it is unreasonable to expect politicians to pay the high political costs involved. They can only cut when they are seen to have no alternative. The Federalist Papers refers to our complicated constitutional structure, with its checks and balances, as offering a "republican remedy for the abuses of republican government." The tax-cut movement represented by Proposition 13 and Kemp-Roth can, I think, with justice be described as a populist remedy for the abuses of populist government.

But to return to the controversial though by no means central economic question: Will, in fact, the Kemp-Roth tax cut generate enough economic activity, enough growth, and a sufficiently enlarged tax base, so that government's revenues actually increase to such a degree as to close the initial budgetary gap which such a tax cut will create? The only honest answer is that we don't know—no one knows—for certain. But we do know two things for certain.

First, it will surely generate a substantial degree of economic growth and will therefore probably result in some increase in government's revenues. The theory behind the Laffer curve is validated by both current and historical experience, even if—to the annoyance of academic economists—it does not lend itself to the kind of quantification that fits neatly into their macroeconomic procedures. Thus, one picks up The New York Times for Aug. 1 and reads a story on the sports pages which begins as follows:

"SARATOGA SPRINGS, N.Y.—With a 'new deal' tax structure taking effect, New York horseplayers turned out in record numbers today for the start of Saratoga's 24-day thoroughbred meeting.

"With the parimutuel takeout reduced from 17 percent to 14 percent, a crowd of 21,228 showed up as America's oldest active race track opened its 110th meeting in 115 years. No first day here has ever been so busy."

As for our historical experiences with tax cuts, when Reg Jones of G.E. testified before the Senate Finance Committee last year he pointed out that we have had 11 tax cuts since World War II and that, in 10 out of those 11 cases, government revenues increased within a year. In the eleventh case—1948—it took two years for that to occur.

Secondly, if government's revenues should fail to increase sufficiently, and the budgetary imbalance is not ameliorated, then (and only then) can we anticipate that our political leaders will find it possible to make sharp cuts in spending. In politics, the necessary is sometimes a precondition for the possible.

So it seems to me that, for reasons both economic and politic, the Kemp-Roth bill is exactly the right medicine for what ails us at this time. It also seems a shame that so much intellectual energy should be expended in quarrels over whether the right medicine is being prescribed for precisely the right reasons.●

LEGISLATION TO AMEND INTERNAL REVENUE CODE WITH REGARD TO REAL ESTATE INVESTMENT TRUSTS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. CONABLE) is recognized for 10 minutes.

● Mr. CONABLE. Mr. Speaker, I am today introducing, on behalf of Mr. CORMAN of California, and myself, a bill to amend sections 856 and 857 of the Internal Revenue Code of 1954, as amended, in certain respects. The amendments included in the bill would help solve some difficult problems faced by real estate investment trusts (REIT's) under the present provisions of section 856(e) and section 857(b)(6) of the code, which relate to the "foreclosure grace period" and imposition of the 100 percent "prohibited transactions" tax on gains from certain sales, respectively.

The Tax Reform Act of 1976 (Public Law 94-455) enacted a number of substantial changes regarding taxation of REIT's. Some of these changes were designed to reduce the consequences of certain acts which would result in the "disqualification" of a REIT. One area which has long been a problem relates to the limitation that a "qualified" REIT cannot hold "property primarily for sale to customers in the ordinary course of its trade or business." Since the determination in advance of what will constitute holding property for sale in the ordinary course of business is generally extremely difficult, the 1976 tax reform changed the statutory sanction against holding property for sale in the ordinary course of business for "disqualification" of the REIT to imposition of a 100-percent tax on the net gain from any such sales.

The substitution of the 100 percent "prohibited transactions" tax under section 857(b)(6) for "disqualification" was considered to be a helpful change for the REIT industry, although during the consideration of this measure in 1976, the industry urged that further refinement of this provision was needed. While both the Treasury Department and the Joint Committee on Taxation staffs recognized potential problems, there was not sufficient time to make the needed changes. Since enactment of the 1976 Tax Reform Act, trustees, in the management of their respective REIT's, have found themselves in an extremely difficult position as a consequence of the 100-percent tax possibility. Specifically, they have found it difficult to fulfill their fiduciary duty to manage their investment portfolios by upgrading their holdings to reflect changes in the economic climate affecting real estate investments.

Because the tests under present law as to what constitutes property "held for sale", as opposed to held for investment, are so subjective, tax counsel for trusts are unable to assure clients that a given sale may not constitute a "prohibited transaction." In addition, were trusts to make sales which could potentially be subject to the 100 percent tax, their auditing firms have indicated that they would be unable to certify subsequent financial statements of the trusts without indicating a large contingent liability related to the 100 percent tax danger. Given these difficulties, under present law trusts find themselves precluded from making certain sales which they otherwise should make, in the normal portfolio management of their trusts.

Accordingly, the bill is intended to aid both administration and compliance in the "prohibited transactions" area. It would establish guidelines as to certain sales, which, if met, would permit trustees to fulfill their responsibilities to their trusts' shareholders without unnecessary fear that any gain from such sales would later be subject to the 100 percent penalty tax. Basically, any sale of property which fits within such guidelines would possess the essential characteristics of an investment property, the sale of which is compatible with the overall policy underlying the REIT provisions in the code. The basic characteristics of the proposed "safe haven" contained in this bill are as follows:

First. A "qualifying" property would have been held by the taxpayer for a minimum of 4 years.

Second. The taxpayer may not make more than five sales of property in a given taxable year.

Third. During the 4-year holding period prior to sale all improvements to the property could not exceed 20 percent of the net selling price;

Fourth. The property sold would have to have been held for the production of rental income for at least four years within the period during which the trust held the property.

The "safe haven" created by the bill would affect only the applicability of the 100 percent "prohibited transaction" tax, and would have no impact upon the question of whether or not a particular gain would be treated as either a capital gain or ordinary income. On the other hand, a failure to meet the requirements for "safe haven" treatment would not create any negative inference as to whether or not such sale constituted a "prohibited transaction," that is, the failure would not be taken into account in determining whether or not the "nonqualifying" sale constituted a "prohibited transaction." That determination, as provided for in the bill, would be based on the facts and circumstances of each particular case by applying the general principles in the "holding for sale" area.

My cosponsor and I believe that the creation of this "safe haven" in the "prohibited transactions" area would greatly aid prudent investment management by REIT directors and trustees, permiting them to meet their fiduciary responsibilities to their shareholders, and at the same time reflect congressional intent in the enactment of the "prohibited transactions" tax to prevent "ordinary retailing activities" by real estate investment trusts.

EXTENSIONS IN THE FORECLOSURE GRACE PERIOD

The bill would also amend the Internal Revenue Code to permit the Internal Revenue Service to extend the "foreclosure grace period" provided for in section 856(e) to a maximum of 6 years, from the present maximum of 4 years. The "foreclosure property" provisions of the code were enacted in early 1975 (Public Law 93-625), when the real estate industry was in a substantial recession. The 1975 legislation permitted "qualified" real estate investment trusts to engage in certain otherwise nonqualified activities regarding properties which they had acquired through foreclosure and as to which they elected foreclosure property treatment, including the management of any such properties in a way not otherwise permitted. However, any profits from nonqualified activities are fully subject to taxation at the usual corporate income tax rates. This gives the trusts time within which to work out problem loans through completion and management of foreclosure properties until they can be sold.

Although it was realized in 1975 that recovery of real estate values would lag behind improvement in general economic conditions, the traditional lag in real estate recovery has been much longer in the most recent cycle than usual, as a consequence of the depth of the real estate recession. Therefore, the maximum 4-year "foreclosure grade period" thought to be sufficient at that time now appears to be too short. Conditions in the real estate market are beginning to improve and the REIT industry, in accord with the objectives of the original foreclosure property legislation, should have additional time to dispose of their remaining foreclosure properties in an orderly fashion. Accordingly, the bill would extend the maximum foreclosure grace period by 2 years.

Given the immediacy of the two problems faced by REIT's which this bill is designed to address, I urge its prompt consideration. I understand that these problems have been discussed with the Treasury Department and that the Treasury is in general agreement with the two proposals contained in the bill.●

TRIBUTE TO MANNY GORDON

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. McDADE) is recognized for 5 minutes.

● Mr. McDADE. Mr. Speaker, I would like to take this moment to salute the individual who, for four decades, has been the environmental and conservation conscience of northeastern Pennsylvania, Manuel M. Gordon of Scranton.

Since his youth, Manny has had an abiding interest in the preservation of our land and has been actively engaged in forestry activities in the northern portion of our State.

In 1935, fresh out of Penn State University with a degree in forestry, Manny began his distinguished conservation career working at the Clearfield, Pa., CCC camp as a junior forester.

Four years later, Manny was named district forester of the Lackawanna Forest District headquartered in Scranton, a position he has held ever since. As district forester, Manny is in charge of programs in northeastern Pennsylvania dealing with forest management, including fire prevention and suppression. In fact, over the years, Manny has spearheaded a vigorous campaign to encourage individuals to take care of our precious land resources.

Folks throughout northeastern Pennsylvania feel as though they know Manny personally, for he has been featured in countless radio and TV spots urging the public to guard against initiating forest fires. His friendly admonitions have apparently been well taken, for the area has a first-rate record in forest fire prevention.

Manny has worked diligently to inform the public of the need to conserve our natural resources. He has been instrumental in efforts to locate a center for conservation education studies at the Milford, Pa., estate of noted conservationist Gifford Pinchot. This plan has been widely received and already has been accorded a measure of support from this House.

Manny's enthusiastic and effective approach to land conservation in the Lackawanna District has won him acclaim from numerous local and national organizations. His many recognitions include the Boy Scout Save Our American Resources award and the United Nations Distinguished Service Award.

I can think of no other person who has done more to promote the preservation of our natural resources in northeastern Pennsylvania than Manny Gordon. He is well deserving of our gratitude.●

THE QUESTION OF NITRITES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Virginia (Mr. WAMPLER) is recognized for 15 minutes.

● Mr. WAMPLER. Mr. Speaker, last Friday the Department of Agriculture and the Department of Health, Education, and Welfare issued a joint statement to the press which initiated the following headlines: "New Study Calls Nitrite Carcinogen—Findings May Bring a U.S. Ban on Use of the Meat Additive," "Nitrite-Cancer Link Cited in MIT Study; FDA Hedges on Ban." "Preservative Linked to Cancer—Meat Industry Pledges a Fight on Nitrites," and "United States Moves Cautiously on Nitrite Decision After Study Suggests Direct Cancer Link."

Our purpose in calling this press conference is to make our concern known about the MIT nitrite study and the way it was handled and might be handled by USDA and HEW in the future.

First, we want to reassure the consuming public, the farmers of America, and the meat processing industry that as Members of Congress, we are going to insist that our Government is on solid and undisputed scientific ground before we allow any Federal agency to take precipitous action to ban nitrites, which we consider to be an essential preservative used to guarantee the safety of a major portion of our food supply—as was attempted last year by FDA with a far less important substance—saccharin.

Second, we want to insure that the American people are properly and fully informed of the fact that there are most serious economic, cultural, and health consequences involved in any consideration to ban or remove nitrites as a preservative in meats, poultry, and fish. In this regard, we believe this matter has not been adequately explained to the public.

Third, we, as Members of Congress, are deeply perturbed that our Government has not addressed the real issues involved here, which are: What is a carcinogen; what tests should be used to determine the carcinogenic nature of a substance; how should test results be interpreted; and how much exposure can be permitted? If we do not make these determinations, we will further confuse the public, create unnecessary inflationary pressures on the economy, and create needless adversarial pressures between business, labor, and Government.

Fourth, we are deeply concerned that the Department of Agriculture and the Food and Drug Administration, under extreme pressures from activist consumer groups, will take some precipitous action against nitrites between the time that Congress adjourns and a new Congress can be organized.

Finally, we note that while FDA and USDA in their joint statement acknowledged specific problems in reaching decisions on this case, they nonetheless announced they are assessing several options open to them and that a decision on these options would be forthcoming. In this regard, neither FDA nor USDA have approached the appropriate committees of Congress with these problems, which we feel they should have done, especially since they have been aware of these problems for several months.

Accordingly, Congressman MARTIN and I took action yesterday to introduce

two separate pieces of legislation to assure that before any action is taken on nitrites, we receive answers to the same scientific questions which the Congress required in Public Law 95-203, in disposing of the saccharin situation last year.

The first bill, H.R. 13899, referred to the House Committee on Agriculture, delays the Secretary of Agriculture from taking any action respecting nitrites as a food preservative on the basis of any carcinogenic effect nitrites may be represented to have until 3 months after the saccharin study is completed.

The second action is House Resolution 1320, also introduced yesterday and referred jointly to the House Committee on Agriculture and Interstate and Foreign Commerce. This resolution states that it is the sense of the House of Representatives that any action respecting nitrites by the Secretary of Agriculture or the Secretary of Health, Education, and Welfare because of any carcinogenic effect that nitrites may be represented to have, should be delayed until after the completion of the saccharin study.

We expect to open both of these two pieces of legislation for cosponsorship to all Members of Congress shortly.

Before turning this press conference over to Congressman MARTIN, I would like each of you to note that the average value of processed meats, poultry, and fish sold in retail outlets in our country amounts to over $12.5 billion each year and that over two-thirds of the 5.6 million metric tons of pork produced in the United States in 1976 were cured and preserved with some form of nitrites. And that these nitrite-containing products, which appear daily on the breakfast and dinner tables of millions of American families—and in the lunch bags of our school children and the dinner pails of our working men and women, were made safe from deadly botulism and many stomach and intestinal disorders due to nitrite preservatives. Additionally, it should be noted that we have no known substitute that would be as cost effective to the American consumer for preserving and curing meat, poultry, and fish products as nitrites.

I would now like to turn this press conference over to my distinguished colleague from North Carolina, JIM MARTIN, who holds a Ph. D. in chemistry and taught in that field at Davidson College for 10 years before coming to the Congress.●

● Mr. MARTIN. Mr. Speaker, my colleague, Congressman WAMPLER, has described the legislation which we have introduced to head off any nitrite ban while Congress is adjourned. I will discuss briefly the benefits and risks associated with the normal use of nitrite as a preservative.

IS SODIUM NITRITE CARCINOGENIC?

The recent MIT study concludes that it is, though with some qualifications. When 1,380 Sprague-Dawley rats were fed a variety of diets laced with varying large amounts of sodium nitrite, averaging about 0.15 percent $NaNo_2$, or roughly 75 mg $NaNo_2$ per kilogram of body weight, 172 (12.5 percent) of them developed neoplasms of the lymphoreticular system. Significantly, 8.4 percent of the nitrite-free control group of this standard hypersensitive test animal also had lymphomas. No distinction was made between benign and malignant growths, except to point out there was no association with leukemia.

No proportionality between dose and tumorgenesis was reported. Increasing nitrite in an agar diet showed two ascending plateaus; while on a chow diet, the highest dose level of nitrite resulted in the same incidence of lymphomas as the control group, but one-third less than at an intermediate dose. When nitrite was added in water, doubling the dose led to a slight decrease in tumors.

The authors conclude that the average 4 percent elevation in response is grossly attributable to the 75 mg of $NaNo_2$ per kilogram of body weight, but offer no explanation for the wandering irregularity plotted against dose level. They summarize their own results as "a somewhat less than convincing case that nitrite is lymphomagenic." We do not quarrel with either conclusion, and acknowledge that in order to produce this small but statistically significant increase it was necessary to feed these cancer-prone rats 1,500 times as much nitrite on average as humans ordinarily ingest from cured meats, the human equivalent of eating 586 pounds of cured meats per day.

Now what does all this mean?

It means that if humans are proportionately as sensitive to very small amounts of nitrite as these rats are to rather large doses, which is a debatable assumption among toxicologists, then the normal intake of preservative $NaNo_2$ in cured meats would be expected to cause 267 additional cases of lymphoma per 10 million population, or 6,000 per year for the U.S. population—not all of which would be fatal.

The actual daily human intake of $NaNo_2$ in cured meats is 3.5 milogram, or 0.05 milogram per kilogram for a 155 lb. (70 kilogram) person. If you assume (which I do not) a proportional dose-response, then if 75 milogram per kilogram induces 4 percent incidence, 0.05 milogram per kilogram would induce 0.00267 percent of 27 per million, or one in 37,000.

The assumption of proportionality at low doses is very probably invalid, leading to a very high prediction. At least 2 dozen carcinogens have now been studied that show a threshold level, below which the cancer incidence drops off markedly.

More specifically, the 3.5 milogram amount of human ingestion of sodium nitrite from cured meats is about one-fourth the naturally occurring nitrite in your natural saliva, another 12.9 milogram (as $NaNo_2$). An additional 148 milogram is naturally generated from protein in the intestines and absorbed into the bloodstream. That is 42 times as much as is ingested.

To ban cured meats alone, thus would only remove about 2.1 percent of your daily exposure of nitrite, the other 98 percent not being readily subject to regulatory prohibitions. It would take a curious ban indeed to eliminate more than 2 percent of nitrite exposure.

So 6,000 cases—27 per million—is far too high. Even if all 18,600 a year in the United States were assigned to nitrite, which would be unjustified and highly improbable, only about 390—2.1 percent—would be the burden of cured meat, the other 18,210 being the share of saliva and digested protein. Cut these estimates in half, and 200 a year—1 per million—is the estimated toll for cured meats.

Bear in mind that the dose used on 1,380 rats was an average of 1,500 times as great. The equivalent human dose would be—3.55 times 1,500—or 5,325 milograms, almost 2 ounces a day.

Again, the outside risk of nitrite as a preservative in cured meat is on the order of 1 per million, or so.

Now, what about benefits?

ANTI-SPOILAGE BENEFIT OF NITRITE

The benefit from nitrite is best defined as the risk from not adding it: Botulism. Nitrite is processed into various meat products because it is unmatched in retarding spoilage. Nitrite inhibits the formation of botulinum toxin, as well as other less deadly food poisons.

There is, unfortunately, no satisfactory substitute. A sufficient amount of sodium chloride would increase the risk of various circulatory disorders. Freezing and drying and pickling have some applications but are limited. Only with nitrite can we confidently protect hotdogs, Vienna sausage, corned beef, canned ham, coldcuts, many poultry products, and so forth. Substitute meat products would not have the shelf life or the outdoor picnic convenience.

With nitrite curing, botulism in the United States has been reduced to five deaths a year, none due to cured meats. Without nitrite, we would frequently have outbreaks of this fatal nervous disorder.

WHAT IS THE ALTERNATIVE?

As indicated already, nitrite is nearly indispensable. Neither would it be sensible to avoid cured meats. What could you turn to that is free from any theoretically small risk of carcinogen?

Most natural foods contain small amounts of naturally occuring carcinogens, like estrogens, calcium salts, selenium, ergot, the potent aflatoxin, and other mycotoxins. Broiling meat will cause some steroid decomposition to form polycyclic aromatic hydrocarbons, fortunately in very small amounts. All protein contains the essential amino-acid tryptophan, which in large dose studies shows effects similar to saccharin.

Of all the factors associated with cancer, clearly the most indicated is a rich diet in animal fat.

Anyone who insists on avoiding exposure to all carcinogens in the food supply must starve. There is no escape from risk.

In the case of nitrite, we believe the risks for banning it far outweigh the moderately small risk derived at worst from this new evidence. We oppose any efforts to ban it. We will seek to counteract the pressure exterted by certain consumer advocates who insist on banning nitrite—just as we earlier successfully opposed their pressure to ban saccharin.

Real consumers are entitled to a bal-

anced diet where all the inherent risks of food are balanced to a minimum level.

Anyone who conscientiously and consistently insists on a zero-risk diet would be, by definition, a nonconsumer.

We recognize that the so-called consumer division of the Department of Agriculture has earnestly sought to ban nitrite. We believe that goal does not serve the best interest of real consumers, or their nutrition and health needs. While the Agriculture Department is "assessing several options" we suspect that one such option would be to wait until the Congress adjourns and then impose their ban before we return in January. A secret plan disclosed today by United Press International seems to confirm our suspicion.

Accordingly, we will seek to alert and persuade our colleagues that the best way to secure the benefits of nitrite is to move before we adjourn to address the issue and direct the Secretary of Agriculture to make no drastic moves on nitrate.●

LEGISLATION TO PERMIT VA LOANS DESPITE USURY PROVISIONS OF STATE CONSTITUTIONS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Arkansas (Mr. HAMMERSCHMIDT) is recognized for 5 minutes.

● Mr. HAMMERSCHMIDT. Mr. Speaker, the banking industry in Arkansas has reached a crisis state due to rising interest rates, and the State constitution's usury provision that forbids interest rates that exceed 10 percent on certain loans. As a result, billions of dollars may soon be leaving Arkansas, to be invested in other States where no such limitation exists.

I am a strong believer in the rights of States, and particularly our State, to control their own destinies, and have always opposed Federal intervention into State matters. However, I have been informed that mortgage and other loans in Arkansas are now rapidly drying up, and may be nonexistent by October. We have reached a crisis period for those who depend on Veterans' Administration insured or guaranteed loans. As a result, I am introducing legislation that will exempt Veteran's Administration insured or guaranteed loans from State constitutional limitations, unless the State Legislature votes to preserve such limitations. This will allow an immediate solution to the crisis, and at the same time preserve the right of Arkansas to control its own usury laws.●

ENORMOUS AMOUNT OF WASTE EXISTS IN CATEGORICAL GRANT SYSTEM ADMINISTERED BY HEW

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Hampshire (Mr. CLEVELAND) is recognized for 5 minutes.

● Mr. CLEVELAND. Mr. Speaker, as most Members of Congress know, the HEW budget has grown enormously during the 25 years of its existence. Its budget ranks third in the world and is surpassed only by the budgets of the U.S. Government and the Soviet Union.

For this reason, it comes as no surprise that there have now been published reports of substantial waste and fraud in this enormous budget. What to do about this is a question of importance.

A while ago I received from a constituent, Robert W. Ray, chairman, school board of New Hampshire Public Schools Supervisory Union No. 47 in Peterborough, N.H., a letter which in my opinion deserves our attention. In an interesting and forthright manner he advocates less rather than more Federal aid to education. It came as quite a surprise to receive such a request. For this reason, I wish to share this interesting letter with my colleagues.

Mr. Ray points out in his letter "that the tax dollar which travels the least distance from its sources provides the most service." In my opinion, he is right.

Based on my experience over the years with Federal aid to education there is an enormous amount of waste inherent in the categorical grant system administered by HEW and supported by the Federal and State bureaucracies which enrich themselves by administering those programs. It is regrettable that any attempt to improve this delivery system by block grants is consistently opposed by the bureaucracies and special interests involved. The last attempt to adopt the block grant approach, by Mr. ASHBROOK of Ohio, occurred on July 13, 1978. It was rejected by a vote of 79 to 290.

Mr. Ray's thought-provoking letter follows:

NEW HAMPSHIRE PUBLIC SCHOOLS
SUPERVISORY UNION NO. 47,
Peterborough, N.H., October 14, 1977.

Hon. JAMES C. CLEVELAND,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN CLEVELAND: Our school system does not have sufficient funds to meet the needs of all handicapped children. Therefore, we request that you reduce Federal support for health, education, and welfare. A contradiction? Not at all! Sufficient funds are already available to meet the needs of handicapped children and a host of other problems. We do not need to collect a single additional penny in Federal taxes. The reason for our belief is apparent only when one stops looking for more money and starts looking at how current money is used. The truth might be stated as a principle; that the tax dollar which travels the least distance from its source provides the most service.

We have experienced (even participated in) the proliferation of Federal programs for human services during the past ten years. The legislative intent of statutes reducing discrimination due to race, sex or handicap is to be applauded and actively supported. The implementation of these intentions through Federal funding is to experience frustration, anger, rage, tears and finally cynicism. Add the waste of dollars through our staff time in application forms, budget reports, evaluations, and changes in guidelines for twenty or thirty different packages of Federal funding (approximately $1.00 in every $5.00) to the $1.00 in every $4.00 lost as the money is passed through the State and finally to the $1.00 in every $3.00 to $4.00 lost in the massive bureaucracy of HEW. The cumulative effect is almost beyond our imagination when viewed nationwide. In our small piece of New Hampshire we estimate that for every (dollar) of Federal taxes earmarked for human services less than fifty cents returns to produce real service. Even if we are only half right the effect on people is unforgivable.

Our small school system receives approximately $100,000.00 in a variety of packages from the Federal Government (the packaging alone is a source of much misdirected use). If we had allowed the original tax dollars to be raised and used locally, over $200,000.00 would have been available for services. This difference of at least $100,000.00 lost in bureaucracy is more than we need to provide complete programs for all handicapped children in our schools. Unless you change the system, the waste of our dollars will increase and the needs will continue unmet.

Our message is simple. Drastically reduce the scale of HEW. Hold us accountable to meet the requirements of the law with dollars raised and expended at the local level, and pass the savings along to the people through decreased Federal Income Taxes.

Very truly,

ROBERT W. RAY,
Chairman, School Board.●

INDIVIDUAL RETIREMENT ACCOUNTS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. CORCORAN) is recognized for 5 minutes.

● Mr. CORCORAN of Illinois. Mr. Speaker, today I am introducing legislation to amend the Internal Revenue Code to allow a savings deduction for persons covered by certain pension plans.

It has been brought to my attention by several of my constituents that the tax laws regarding pension plans serve to prohibit individuals from taking advantage of the maximum contribution allowed by an individual retirement account (IRA). This situation is common to many small businesses with more modest pension plans.

This legislation also addresses the situation in which an employee does not work enough years with his/her company in order to qualify for the company plan. A change in the law would allow this person to set up his own IRA even though his company operates a pension program.

This proposal is similar to many others which have been introduced in Congress, in that it allows a taxpayer to supplement his contribution to a tax-exempt fund for retirement security.

I urge my colleagues to support this legislation as soon as possible.●

AUGUST 21 MARKS 10TH ANIVERSARY OF INVASION OF CZECHOSLOVAKIA

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida (Mr. YOUNG) is recognized for 5 minutes.

● Mr. YOUNG of Florida. Mr. Speaker, August 21 will mark the 10th anniversary of the invasion of Czechoslovakia by the Soviet Union. It is important that Americans take time to memorialize the plight of the people of Czechoslovakia who have been overcome by the ruthless tyranny of the Soviet Union.

Our Nation carries a great burden and responsibility as the leader of the free world and the champion of oppressed people everywhere. We take for granted many of the rights that citizens of captive nations, like Czechoslovakia, are systematically denied. Our leaders have

made human rights a major consideration of our foreign policy, but the basic human right of freedom of the individual is still denied to many millions. We must not take this obligation lightly. Our Nation was founded on the principles of liberty and democracy which are spelled out in our Constitution and Declaration of Independence. The human right of freedom knows no political or geographical boundaries and we who lived under a free government for all of our lives must be concerned with the plight of the freedom-loving Czechs and Slovaks.

Czechoslovakia exemplifies the true meaning of human rights. Soviet repression has been consistent and harsh. Human rights have been violated in numerous ways and these violations are continuing. This ongoing repression makes it even more incumbent upon us to uphold our heritage of a free and open society and we must champion the cause of self-determination for the Czech people. The United States must continue to support the aspirations for freedom, independence, and national self-determination of all peoples. We cannot accept foreign domination by any nation over another nation. To this end we remain committed and we must not waiver from our responsibility.●

KIM DAE JUNG: PRISONER OF CONSCIENCE

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from New Jersey (Mrs. FENWICK) is recognized for 5 minutes.

● Mrs. FENWICK. Mr. Speaker, I would like to bring to the attention of my colleagues the situation of Mr. Kim Dae Jung, who staged a hunger strike earlier this month to commemorate the fifth anniversary of his illegal kidnapping from Japan by agents of the South Korean Government.

A leading opposition leader and presidential contender in South Korea, Mr. Kim spoke out in 1976 against continuation of emergency rule in Korea, and in favor of releasing political prisoners and restoring basic liberties to the people of South Korea. Found guilty of agitating to overthrow the Government, Kim and 17 other men and women were arrested and sentenced to long prison terms.

Last spring, the last of the 17 other people were released, after signing statements repudiating their past actions. Only Kim has refused to do this, and only Kim remains incarcerated. He is now seriously ill with sciatica.

The case of Kim Dae Jung is a classic case of a prisoner of conscience. I join many others, including such organizations as Amnesty International, who have called for his unconditional release from prison.●

THE THWARTING OF LEGISLATION TO REFORM AND EXTEND THE RENEGOTIATION ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Jersey (Mr. MINISH) is recognized for 15 minutes.

● Mr. MINISH. Mr. Speaker, a concerted effort by defense and aerospace lobbyists, working with their allies in the Congress, has temporarily thwarted legislation to reform and extend the Renegotiation Act. Funding for the Renegotiation Board now is set to expire sometime early next year.

It is appropriate, at this point, to ask why the giant defense conglomerates and their lackeys in the House, have devoted such massive time and resources to the abolishment of the Renegotiation Board. Who benefits if there is no longer a Renegotiation Board to recapture excessive profits?

When the ancient Romans had to decide who had committed a crime, the first question they asked was "Who benefits?" The answer to this question usually gave them a good idea of who did what and for what reasons. Similarly in deciding whether to abolish a Federal agency, we, as Members of Congress, should ask, "Who benefits?" Who stands to gain from killing renegotiation?

DOES THE FEDERAL GOVERNMENT BENEFIT?

The basic reason for having renegotiation is that there is very little true competition in the defense industry. The Government consistently awards well over 50 percent of its defense contracts on a sole source basis. In 1977, 62.4 percent of Government business was awarded to sole sources. This figure is up from 57.4 percent in 1976. Most of the remaining Government contracts are awarded in situations where there are only a few competitors for Government business. The basic fact of life in defense procurement is little or no competitive pressure to keep price and profits at a reasonable level. Excessive profits occur because the defense industry is a sellers' market. In a sellers' market, the Government, as the buyer, is at a disadvantage. In most cases, Government contracting offers cannot foresee or prevent excessive profits. The only way to deal with the contractor's advantage of the sales in defense procurement is for the Government to go back and look at profits after contracts are completed. Only the Renegotiation Board can do this.

The defense contractors and those who support them suggest that the safeguard built in to the contracting process can prevent excessive profits. This simply is not so. In 1976, despite all the refinement in the contracting process, the Renegotiation Board found excessive profits of about $40 million dollars. The Renegotiation Board remains the only governmental agency which examines profits in retrospect, on an aggregate fiscal year basis. As the GAO report, entitled "Causes of Excessive Profits on Defense and Space Contracts" recognized, renegotiation is needed as a supplement to the contracting process. The GAO report said:

> While procurement is concerned with prices, including costs and profits, paid by the Government, renegotiation is concerned with eliminating excessive profits made by contractors. Renegotiation operates generally after contracts have been completed, to determine retrospectively, whether the profits made were excessive.
>
> Even assuming we had efficient and effective price renegotiation for contract awards, we believe that renegotiation of actual profits realized is desirable to prevent excessive profits which result from changed conditions that cannot be anticipated at the time of contract award.

The defense contractors and their supporters put much stock in the protections afforded the Government with the contracting process. What they have not told the American public is that at the same time they talk about the protections within the procurement process they are trying to do away with them. At the same time, the contractors are trying to kill renegotiation they are pushing a bill called the Federal Acquisition Act which would substantially inhibit the effectiveness of the Cost Accounting Standards Act and other procurement safeguards which the contractors say make renegotiation unnecessary.

Clearly, the Federal Government does not benefit if renegotiation is abolished.

DOES SMALL BUSINESS BENEFIT?

Opponents of renegotiation continually moan about the affect of renegotiation on small businesses. Its about time they admitted who will profit most if renegotiation is killed. Many thousands of companies receive government contracts but over two-thirds of defense business goes to the largest 100 defense contractors every year. My bill, H.R. 5959, which would extend the Renegotiation Act, would also exempt practically, all small businesses from renegotiation. If renegotiation is killed, the bonanza will go to the big multi-million dollar defense contractors. This Congress and the American people should realize that when Congressmen oppose renegotiation they are doing so on behalf of Lockheed and McDonald Douglas and Hewlett-Packard and not on behalf of small businessmen.

DOES THE AMERICAN TAXPAYER BENEFIT?

Mr. Speaker, we all realize that the one thing that people want from their government more than anything else is accountability. People want their government to do everything in its power to insure that their money is not being wasted. Yet, if the Government pays more than it should for military hardware, it is wasting peoples' money. If there is no Renegotiation Board, the Government will not even know when excessive profits are occurring, much less be able to recoup them. Since 1971, the Renegotiation Board has made excessive profit determinations of over $230 million. Since the inception of the act, the Board has made excessive profit determinations of more than $1.3 billion and $1.168 billion has been recovered or is owed to the Treasury. During this entire period of time, the full 27 years, the Board's total salary and expenses totaled approximately $98 million, much less than 10 percent of the recoveries.

Renegotiation is not an unreasonable burden for defense contractors. Defense contractor lobbyists cite phoney studies to claim that it costs hundreds of millions of dollars to comply with Renegotiation Act requirements. This is pure baloney. Most of the data required by the Board is information companies need in their normal course of business. The cost of renegotiation is more than offset by the money recovered for the Government. But even if this were not the case,

renegotiation is necessary to deter those who would overcharge the Government.

Over the last 2 years, the Board has experienced internal and other problems. This and the need to reorganize with the new Board appointees, has slowed its work somewhat. Nevertheless, the Board during fiscal year 1978, with a budget of $6 million, has issued excessive profit determinations of $27.590 million. The reorganization is now behind them and it is my hope, that with a full and more stable Board, recoveries will increase significantly.

Mr. Speaker, I, for one, do not want to have to explain to my constituents why there is no longer a Federal agency to monitor and prevent the Government from overpaying defense contractors. It would be very hard to explain, given today justifiable concern with unchecked Government spending, to the voters why this Congress decided to do away with one of the few Federal agencies which actually returns money to the Treasury.

WHO DOES BENEFIT?

Opponents of renegotiation contend that it is useful only in wartime and is unnecessary in peacetime. This allegation does not stand up to the facts. We spend more for military hardware now than we did during many of the war years. For example, the Military Procurement Budget in dollar figures was higher for fiscal year 1977 than it was for any of the Vietnam war years. The Government spent $55.6 billion dollars on military procurement in 1977, as compared to $44.6 billion dollars in 1967, and $43.8 billion dollars in 1968; the peak Vietnam years. Just last week the House passed the largest appropriation bill in the Nation's history—$119.2 billion for the Department of Defense. Because of our increasingly high volume of military spending, the economic justifications for renegotiation exist in peacetime as well as in wartime.

In addition to allowing future excessive profits to go unchecked, elimination of the renegotiation process would wipe out a backlog of over $150 billion in defense contracts which were awarded in the last few years. Some of the largest corporations in the defense industry have billions of dollars worth of unexamined contracts in the Board's backlog. Not surprisingly, these corporations have lobbied the hardest—but quietly—through both their trade associations and various Members of the House, to see that the Renegotiation Board is abolished. Who are these contractors and how much do they have to gain from an end to renegotiation?

Amount of renegotiable sales in board's backlog (end of 1977)

[In billions]

McDonnell Douglas	$7.355
Lockheed	7.198
United Technologies Co	5.127
Boeing	5.055
General Electric	4.928
Rockwell International Corp	6.519
Grumman Corp	3.550
General Dynamics Corp	3.352
Hughes Aircraft	2.946
Northrup	1.906
Total	47.916

Mr. Speaker, if Congress does abolish the Renegotiation Board and wipe out its backlog, it will be very difficult indeed to explain to our constituents why we looked the other way as literally hundreds of millions of dollars in excessive profits were ignored or wiped away. We will have neglected our duty to make Government accountable for its actions.

There is a lot of talk around the country about a tax revolt. Many Members of this House have associated themselves with this movement—calling for reduced Government spending and reduced taxes. There is a strong feeling among many taxpayers that their money is being squandered by the Government—that there is considerable waste and inefficiency in defense procurement. They look to their Representatives in Congress to watch over the executive branch. And what do they see Members of Congress doing?—kowtowing to the lobbying pressures of large defense contractors who do not want to refund excessive profits they make on defense contracts. If defense contractors are not, in fact, making excessive profits, why should they object to a requirement that they demonstrate that fact to the Renegotiation Board?

Mr. Speaker, my constituents want accountability in government. They want to be reassured that their Government is not wasting their taxes—that it is not paying more than it should for military hardware. They do not want to see the Government dismantle their safeguards against excessive profits.

A vote against renegotiation is a vote against economy and integrity in government. It would signify to the people back home that when it comes to complex issues involving big business, their representatives in Washington are unable to stand up to the pressures that high-priced lobbyists can bring to bear.

How can a Member, in good faith, tell his constituents that he is looking out for their interests and then vote to kill the only agency in Government that saves taxes? He cannot. If the efforts of certain Members of this House in trying to kill the Renegotiation Act were fully known to their constituents, I doubt these Members would be with us next session.

In summary, renegotiation is necessary. It is economical. It helps insure some integrity in defense contracting. It safeguards against excessive profits. It actually helps small business by curbing excessive profits by its large competitors. It is preferable to the profit-limiting provision of the Vinson Trammell Act. It is in the public interest.

Therefore, I urge House support of the renegotiation process and strongly recommend that the House defeat those bills which would abolish, weaken, or curtail proper funding of the Renegotiation Board.●

TRADE NEGOTIATIONS MUST AID AGRICULTURE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. McFALL) is recognized for 10 minutes.

● Mr. McFALL. Mr. Speaker, I want to share with my colleagues in the House some thoughts and observations concerning the position of the United States in international trade, and more specifically, the ongoing multinational trade negotiations in Geneva.

First, I wish to point out that I have been impressed with the efforts and dedication to purpose demonstrated by Ambassador Robert Strauss in heading the U.S. trade negotiating team.

By July 13, 1978, the negotations had resulted in the "Framework of Understanding" issued on that date in Geneva. Unfortunately, the goal of achieving agreement on the basic principles for a new trade pact by mid-July could not be achieved. A month has now passed since the "Framework of Understanding" was issued, and I believe an appraisal of where we are now is appropriate.

December 15, 1978 is the new target date for agreement in the negotiations. I sincerely hope that the negotiations can be successfully concluded by that date. However, I am not willing to describe as "successful" any agreement that could be produced at the Geneva negotiations. I believe significant new opportunities for U.S. agricultural products, and particularly California fruit and vegetable crops, in foreign markets is the key to a "successful" new trade pact. I also believe that foreign market access for U.S. agricultural products is the primary item on the agenda to be resolved before the negotiations can move forward.

In previous MTNs, the United States has maintained that it must improve the access to foreign markets for American agriculture. The European Community and Japan responded that such market access concessions could not be made. The United States insisted. The European Community and Japan insisted. The United States backed down. American agriculture got much less that it deserved, and certainly much less than it needed.

The United States is now paying the price for its performance in past multinational trade negotiations. From all reports I have heard, the European Community and Japan have thus far shown no true willingness to open their markets more fully to American agricultural exports. I suspect that they believe the United States will again backdown and negotiate away the needs of American agriculture. Ambassador Strauss has consistently stated that to have a new trade pact, American agricultural exports must have improved access to foreign markets. I urge the European Community and Japan to heed the Ambassador's words. The needs of American agriculture are no longer the price the United States is willing to pay in order to get a trade pact—any trade pact.

I have heard some speculation that the European Community and Japan would rather have no new trade agreement than agree to any pact that would allow significantly increased volumes of American agricultural products to enter their countries. This may be true. I cannot say. But if it is true, Japan and the European Community will be pursuing a very dangerous trade policy.

If the December 15 deadline is not met and there are no prospects for an early conclusion to the MTN, then I believe the domestic pressures for unilateral trade action by the United States may easily become impossible to restrain. The resulting deterioration of trading relations could be rapid, and threaten the entire framework of international commercial ties. Which country would come out on top is impossible to predict, although I suspect that all would lose more than any would gain.

Japan and the European Community must realize that the American people will not constantly endure the United States accepting an inferior trading position. Many Americans believe the United States should not allow European and Japanese products to enter this country if our exports, particularly agricultural commodities, are not allowed to enter their countries with equal ease. I expect that the Congress due to convene next January will be more "American first" and less "free trade" than the current Congress.

If the next Congress is more protectionistic, and the MTN has not produced a successful trade agreement, then our foreign trading partners must be prepared for the United States to take a more forceful stance regarding foreign trade. Mechanisms to protect American markets from foreign imports could be strengthened to the detriment of foreign producers.

On the other hand, if the next Congress is presented with a new trade pact that offers American agriculture improved access to foreign markets, I believe the Congress would not only ratify it, but also adopt a conciliatory posture toward international commerce generally.

The options are clear. The European Community and Japan must decide what the outcome will be. I note that Japan is sending to the United States in early September, a team of negotiators well versed in agriculture for discussions with our trade officials. Additionally, the European Community Council of Ministers is expected to meet at the end of September to consider the European Community posture on agriculture in the MTN. They should pay close attention during their deliberations to the clear, consistent, and absolute message from the American negotiators: American agricultural access to their markets must be increased significantly.●

ACHIEVEMENTS CHECKLIST FOR PRESIDENT CARTER AND THE 95TH CONGRESS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Indiana (Mr. BRADEMAS) is recognized for 5 minutes.

● Mr. BRADEMAS. Mr. Speaker, as Congress tonight begins a District Work Period, I take this time to make a few comments upon the work of the 95th Congress and of President Carter so far in dealing with the problems that face the American people.

Only yesterday the House of Representatives, by a vote of 217 to 178, approved the binding second budget resolution for fiscal 1979 setting a deficit of $39.790 billion—the lowest deficit in 5 years.

This action, Mr. Speaker, marks a one-third reduction from the $60.586 billion budget deficit requested by the President in January 1978, and a one-fifth cut from the $50.9 billion deficit proposed by the target first budget resolution in May.

In the budget resolution passed yesterday, the House cut outlays for fiscal 1979 by more than $10 billion from the President's January request and by $9 billion from the May target.

Following are the House-approved Federal budget figures for fiscal year 1979:

[In millions of dollars]

	President's budget	1st resolution	2d resolution	Difference from 1st
Revenues	439,588	447,900	450,000	+2,100
Budget authority	568,172	568,850	561,019	−7,831
Outlays	500,174	498,800	489,790	−9,010
Deficit	60,586	50,900	39,790	−11,110
Debt subject to limit	867,547	849,100	838,127	−10,973

Last week, Mr. Speaker, the House of Representatives passed a $16.3 billion tax reduction bill after first rejecting an inflationary alternative that would have reduced Federal revenues by 30 percent over 3 years and forced huge deficit spending.

Mr. Speaker, the 95th Congress and President Carter, working together, have already achieved the distinction of helping provide more jobs for Americans over a 12-month span—almost 4 million jobs in the year ending July 1978—than for any year since 1940.

Mr. Speaker, during the period since the coming to office of President Carter and the 95th Congress, we have seen an addition to the American economy of approximately 6 million new jobs. This remarkable employment surge is in part the result of the farsighted economic stimulus package of early 1977 which included tax cuts, local public works, anti-recession assistance to States and other localities, and other job-creating measures.

The unemployment rate for July, after correction for an abnormal dip in joblessness during the June summer hiring season, was down to 6.2 percent, a decrease in the rate of 1.6 percent since November 1976.

Mr. Speaker, I shall not now take time to try to analyze all of the legislative achievements of the 95th Congress to date.

I do however believe that it will be useful to Members if I here list these achievements as of August 11, 1978.

This "achievements checklist," which was prepared by the staff of the House majority whip, which responsibility I have the honor to hold, is organized by the following categories:

ACHIEVEMENT CHECKLIST

The Economy.
Housing and Other Economic Items.
Energy.
Social Services.
Special Tax Provisions.
Ethics Reform and Other House Activities.
General Government.
International Affairs.
National Defense.
Science.
Health.
Education.
Labor.
Consumers.
Justice.
Environment.
National Parks and Recreation Areas.
Maritime.
Transportation.
Indian Affairs.
Drought and Disaster Relief.
Federal Employees.
Veterans.
District of Columbia.
Appropriations.

THE ECONOMY

Revenue Act of 1978

The House has passed a bill cutting 1979 income taxes by $16.3 billion—$12.8 billion for individuals and $3.8 billion for business. The bill would provide substantial benefits to middle-income taxpayers, homeowners, small businesses, foster capital formation and make substantive changes in capital gains. Elements of the individual cuts include rate cuts in certain tax brackets, a widening of existing brackets, the effect of an increase in the standard deduction of prior law and an increase in the personal exemption to $1,000 per person (from $750). Capital gains changes include a new maximum tax of 35 percent, a 10-percent alternative minimum tax on certain gains, a one-time exclusion of up to $100,000 from sale of a principal residence, and an inflation adjustment to the basis of assets sold for gain. The bill would create a new targeted jobs tax credit program and cut corporate tax rates and make permanent and broaden the 10-percent investment tax credit. (H.R. 13511)

Tax Reduction and Tax Simplification

A new law will cut taxes by $34-billion over three years and give businesses a tax credit for certain new employees they hire in 1977 and 1978. The law also provides for simplication of tax computation for individuals, extends the sick pay exclusion and makes other revisions of the Tax Reform Act of 1976. (PL 95–30)

Public Works Jobs

A new law triples, from $2 billion to $6 billion, the authorization for federal grants for local public works. The projects will create an estimated 600,000 jobs, largely in construction and related industries in areas of high unemployment. (PL 95–28)

CETA Extension

Congress enacted a law providing for a simple extension through fiscal 1978 for existing programs under the Comprehensive Employment and Training Act. (PL 95–44)

CETA Amendments

The House began consideration of an extension of the Comprehensive Employment and Training Act that has the targeted aims of, first, combining the current Title I comprehensive manpower and Title II public employment programs into a single employment and training program for the structurally (without job skills) unemployed poor; and, second, creating a countercyclical public service employment program to employ 25 percent of the jobless in excess of four percent unemployment. The bill would also strengthen anti-abuse provisions, reauthorize Job Corps, summer youth jobs and the Young Adult Conservation Corps and create a new private sector initiative program. (HR 12452)

Supplemental Appropriations

Congress enacted a law appropriating $28.9 billion, mostly for federal programs, includ-

ing $13 billion for assisted housing. The law also contains $200 million to help low- and moderate-income homeowners meet unexpectedly high home heating costs occasioned by the harsh winter. (PL 95–26)

Unemployment Compensation

Congress enacted a law extending unemployment compensation under the Federal Supplemental Benefits (FSB) program for seven months, to November 1, 1977, plus a three-month phase-out period through February 1, 1978. FSB, together with regular and extended benefits, provides 52 weeks of compensation. The law also requires roll call votes in the House and Senate on future congressional pay raises under PL 90–206. (PL 95–19)

Extended Unemployment Compensation Eligibility

The House passed a bill providing a 2-year limitation on the time within which an individual could receive any unemployment compensation benefits to which he or she is entitled under the federal-state extended unemployment compensation program. (HR 12380)

Economic Stimulus Appropriations

Congress enacted a law appropriating $20 billion for economic stimulus, including $7.9 billion to increase CETA public service jobs to 725,000 from 310,000 in fiscal 1978; $59 million for 14,800 jobs for older Americans; $4.9 billion for revenue sharing; and $100 million for railroad rehabilitation. (PL 95–29)

Second Budget Resolution, Fiscal 1978

Both houses adopted in final form the Second Budget Resolution for fiscal 1978 which sets guidelines for a national economic policy aimed at reducing unemployment to 6.5 percent and fostering a 4.8 percent rate of growth in the Gross National Product. The resolution sets a spending target of $458 billion in fiscal 1978 and a deficit of $61 billion. (HConRes 341)

First Budget Resolution, Fiscal 1979

Congress adopted in final form the First Budget Resolution for fiscal 1979, which would accommodate tax reductions effective January 1, 1979, totaling $19.4 billion on an annual basis, including further income tax cuts for individuals and business and $1.4 billion in structured cuts. The resolution provides for $498.8 billion in outlays—$2 billion less than the Administration's request, and a deficit of $50.9 billion—$10 billion less than the Administration. (SConRes 80)

Youth Jobs

A new law creates about 203,000 jobs and training positions for young persons by establishing a Young Adult Conservation Corps and authorizing a variety of innovative youth employment and training projects. The programs would be funded at an estimated $1.5 billion for fiscal 1978, including $350 million for the Young Adult Conservation Corps. (PL 95–93)

Anti-Recession Assistance

A new law authorizes $2.25 billion for countercyclical assistance to states and local governments through fiscal 1978. (PL 95–30)

Joint Economic Committee Investigation

Congress adopted in final form a concurrent resolution providing $900,000 for an 18-month study of United States and world economic changes and the impact of such changes on the economies of the U.S. and other nations. (HConRes 248)

River Basin Authorization

A bill in conference would authorize $1.2 billion for the continuation of projects in 18 river basin plans and $44 million for special projects in the states of California and Ohio. (H.R. 5885).

Temporary Debt Limit

A new law provides for a six-month, $52 billion increase in the public debt ceiling. (P.L. 95–120).

Temporary Public Debt Limit

A new law sets the public debt ceiling at $798 billion through March 31, 1979. (P.L. 9533).

HOUSING AND OTHER ECONOMIC ITEMS

Housing and Community Development Amendments

A bill in conference authorizes a $29.3-billion fiscal 1979 housing program, including $27.8 billion in annual assisted housing contract authority; establishes a new program in lieu of operating subsidies that emphasizes improved management as well as dollar aid for financially troubled low-and-moderate-income multi-family projects; raises authorizations and loan limits for rural housing programs; and create a deep subsidy rural home ownership program. S. 3084).

Housing and Community Development

A new law authorizes $13.7 billion over three years for the Community Development Block Grant Program and assisted housing programs. The new law includes special assistance for older, declining communities, especially at urban centers. Other provisions promote single family homeownership by decreasing down payments and increasing mortgage loans. (P.L. 95–128).

Supplemental Housing Authorization

Congress enacted a law providing $378 million in fiscal 1977 in additional contract authority for housing assistance programs, to support a total of some 400,000 assisted housing units. The law also authorizes an additional $19 million for last winter's heating costs in public housing projects, extends HUD crime insurance and riot reinsurance programs, and creates a National Commission on Neighborhoods. (P.L. 95–24).

Securities Investor Protection

A new law streamlines liquidation procedures to facilitate payment to an investor in the event of a broker or dealer failure, doubles to $40,000 and $100,000 respectively the insurance for customer cash and securities maintained with a brokerage firm, increases to $2.5 million (from $500,000 the public offering amount which SEC may exempt from registration and prospectus requirements, and delays until May 1, 1979, the ban on securities exchange transactions for a member's own account and certain other transactions. (P.L. 95–283).

New York City Loan Guarantee Act

A new law authorizes a maximum $1.65 billion in federal loan guarantees for 15 years for New York City debt issued during the next four years and held by state and local pension funds, subject to specific requirements for improved financial management by the city and a mandate for a balanced city budget by 1982. (P.L. 95–339).

Substitute Treasury Checks

The House passed a bill authorizing the Treasury to simplify the replacement of Treasury checks that are lost, stolen, damaged or destroyed. (H.R. 13087).

Investment of Public Funds

A new law authorizes the Secretary of the Treasury to invest for up to 90 days in obligations of depositaries maintaining Treasury tax and loan accounts. The law also authorizes federally insured and certain other savings and loan associations to act as fiscal agents and depositaries in the Treasury tax and loan account system. (PL 95–147)

Depository Institutions Amendments

A new law extends Regulation Q interest rate control authority until December 15, 1977, revives the authority of the Federal Reserve banks to purchase up to $5 billion in public debt obligations directly from the Treasury (until August 31, 1977), and modernizes the Federal Credit Union Act. (PL 95–22)

Regulation Q

A new law extends through December 15, 1978 the authority for federal regulation of depository institutions interest rates and sets guidelines for Federal Reserve Board monetary policy. (PL 95–188)

Treasury-Federal Reserve Draw Authority

A new law extends until April 30, 1978, the authority of the Federal Reserve to purchase U.S. obligations up to a limit of $5 billion from the Treasury on a direct basis. (PL 95–154) The House passed a joint resolution extending the direct purchase authority for one year. (HJRes 816)

SEC Authorization

A new law provides $1.5 million supplemental authorization for the Securities and Exchange Commission for fiscal 1977, increasing its total authorization for fiscal 1977 to $56.5 million (PL 95–20) A new law authorizes $67 million for fiscal 1978 for the Securities and Exchange Commission. (PL 95–211) The House passed a bill authorizing $70 million, $80 million and $91 million for fiscal 1979–81 respectively for the Securities and Exchange Commission. (HR 11567)

Exchange Stabilization Fund

Both houses passed in differing forms a bill prohibiting and payment of administrative expenses from the Economic Stabilization Fund and authorizing $23 million for fiscal 1979 for Department of Treasury international affairs functions. (S 2093)

Council on Wage Price Stability

A new law extends the Council on Wage Price Stability Act for two years to September 30, 1979. (PL 95–121)

SBA Act Amendments

A law increased SBA's overall loan ceiling to $7.4 billion from $6 billion and increased the surety bond guarantees fund to $110 million from $56.5 million. (PL 95–14)

Small Business Amendments

A new law authorizes an additional $2.96 billion for small business programs in fiscal 1978 and 1979; increases loan authorization and surety bond guarantee authority; and improves the disaster assistance, certificate of competency and small business set-aside programs. (PL 95–89) A bill in conference would authorize small business programs, including disaster assistance, for fiscal 1980 through 1982, at an estimated maximum cost of $2.65 billion, and would continue present low interest rates on loans to homeowners for natural disasters occuring during fiscal 1979 through 1982. (HR 11445)

Minority Small Business

The House passed a bill allowing minority enterprise small business investment companies to obtain additional capital through SBA and to provide that SBA section 8a contracts for government supply be let only to economically and socially disadvantaged small businesses. (HR 11318)

ENERGY

National Energy Act

A bill in conference would establish a comprehensive energy policy for the nation. It would provide for pricing natural gas, levying certain taxes on oil and gas, allowing tax credits for business investment in energy efficiency and for home insulation, stepping up the weatherization program, creating a variety of conservation measures, setting mandatory energy standards for major appliances and requiring that utility rate structure reflect peak and slack periods, and other energy actions. (HR 8444)

Energy Authorization

The House passed the bill authorizing $4.5 billion for energy research and development

in fiscal 1979, including $1.4 billion for nuclear energy of which $17.5 milion is for the Clinch River breeder reactor and other funds are for the President's breeder conceptual design study; $749 million for fossil fuels research; $458 million for solar energy research; and $417 million for conservation. (HR 12163)

Energy Research and Development Administration

Congress enacted a law authorizing $1.6 billion for non-nuclear energy programs and amounts estimated at $3.9 billion for nuclear non-weapons programs for the Energy Research and Development Administration in fiscal 1977. (PL 95–39) A new law authorizes $6 billion for ERDA civilian research and development in fiscal 1978 and also authorizes loan guarantees for energy technology demonstration programs. (PL 95–238)

Ad Hoc Committee on Energy

The House established a House Ad Hoc Committee on Energy (40 Members appointed by the Speaker who also appointed Congressman Thomas L. Ashley as Chairman); the committee facilitated House consideration of President Carter's energy package. (HRes 508)

FEA Authorization

A new law authorizes an additional $60.7 million in fiscal 1977 (making a total of $404.6 million and $1.443 billion for fiscal 1978, including $1.210 billion for the Strategic Petroleum Reserve. (PL 95–70)

Department of Energy

A new law creates a Cabinet-level Department of Energy to coordinate the nation's energy programs. (PL 95–91)

Outer Continental Shelf

A bill in conference would guide federal policy on bidding and leasing offshore lands for oil and gas explortaion and development, give states a greater say in the process, authorize $125 million a year for amelioration of onshore impacts, and establish an offshore oil pollution control fund. (S 9)

Alaskan Natural Gas Pipeline

A new law approves the President's decision selecting the Alcan system as the means of transportation for Alaska natural gas. (PL 95–158)

Emergency Natural Gas

A new law authorized the President to make emergency allocation of natural gas and to permit emergency purchase of unregulated gas during the 1976–77 winter shortage. (PL 95–2)

Urgent Power Supplemental Appropriations

A new law appropriates $6,400,000 for fiscal 1977 to meet the urgent power purchase requirements of the Southwestern Power Administration. The law also lifted limitations on use of ERDA funds. (PL 95–3) A new law provides $13 million for fiscal 1978 to meet the urgent power purchase requirements of the Southwestern Power Administration. (PL 95–246)

ERDA Budget Deferrals

The House passed three resolutions to disapprove deferrals of $25,600,000 for ERDA programs. (HRes 305, HRes 306, HRes 307) The House passed four resolutions to disapprove deferrals of $38,800,000 for ERDA programs. (HRes 851, HRes 852, HRes 853, HRes 854)

Deepwater Ports

Congress enacted a law extending the Deepwater Port Act of 1974 for three years and authorizing $2.5 million for each fiscal 1978, 1979, and 1980. (PL 95–36)

Solar Energy

The House passed a resolution authorizing $50,000 and directing the Architect of the Capitol to conduct a feasibility study on the use of solar energy in the House Office Building Complex. (HRes 322)

Solar Photovoltaic Energy

The House passed a bill authorizing funds to establish a Department of Energy ten-year solar photovoltaic energy research, development and demonstration program leading to commercial applicability. (HR 12874)

Solar Power Satellite Program

The House passed a bill authorizing $25 million for the Department of Energy in fiscal 1979 for research, development and demonstration of a solar power satellite for commercial purposes. (HR 12505)

SBA Solar Energy and Energy Conservation Loans

A new law authorizes $36.75 million to carry out a program of $30 million in direct and immediate participation loans and $45 million in guaranteed loans in fiscal 1979 for small businesses involved in the fields of solar energy, renewable energy sources or energy conservation. (PL 95–315)

Nuclear Regulatory Commission

A new law authorizes $297.7 million for the Nuclear Regulatory Commission for fiscal 1978. (PL 95–209)

SOCIAL SERVICES

Social Security Financing

A new law assures Social Security solvency in the short and long term by increasing employer-employee contributions from 6.05 percent in 1978 in steps to 7.65 by 1990, increases the taxable wage base, authorizes automatic loans from the Treasury whenever the trust funds drop below 25 percent of annual outgo, and includes a "decoupling provision" to guard against disproportionate growth in benefits for future generations. (PL 95–216)

Public Assistance Amendments

The House passed a bill to make administrative improvements in the Supplemental Security Income program and to extend SSI recipients' eligibility for food stamps to October 1, 1978; extend SSI to Puerto Rico, Guam and the Virgin Islands and revise funding provisions for these areas for welfare and social services; make permanent last year's $200 million increase in the Title XX social services annual limitation ($2.7 billion); improve funding and establish an entitlement rather than an authorization for the child welfare program; improve protection for children in foster care programs; allow federal matching funds for welfare children voluntarily placed in foster care, and authorize protective or vendor payments to benefit 20 percent (rather than 10 percent) of a state's welfare recipients. (HR 7200)

Social Services: Protective and Vendor Payments

A new law extends last year's $200 million increase (to $2.7 billion) in the Title XX social services annual limitation through fiscal 1970, continues the delay in the imposition of federal day care standards and authorizes protective or vendor payments to benefit 20 percent (rather than 10 percent) of a state's welfare recipients. States are forgiven payments made in violation of the 10-percent requirement for claims already officially made for periods between 1968 and April 1, 1977. (PL 95–171)

Public Assistance Medicare-Medicaid Amendments

Congress enacted a law extending for 15 months, until October 1, 1978, the current eligibility of SSI recipients for food stamps; extending until September 30, 1978, federal matching funds for child support collection and paternity establishment services provided for persons not receiving AFDC; extending the due date to April 1, 1978, for HEW day care standards appropriateness study; and to prevent the cut-off of $142 million in medicaid funds for 20 states which have not achieved certain statutory requirements for evaluations of long-term patient care. (PL 95–59)

Social Services Amendments

The House passed a bill to increase the entitlement ceiling to $2.9 billion in fiscal 1979 and $3.45 billion by fiscal 1981 and thereafter, and otherwise provide for an expanded social services program (child day care, homemaker, welfare work training, senior citizens, handicapped and other services), extend certain child care and other provisions for one year, and provide for better cooperation among states, localities and local public and private agencies. (HR 12973)

SSI Work Disincentives

The House passed a bill to remove certain work disincentives for the disabled under the supplemental security income benefits program by increasing the amount of earnings such individuals may have and still be considered eligible for SSI disability payments. (HR 12972)

SSI Presumptive Disability

The House passed a bill providing that an individual who applies for supplemental security income benefits on the basis of disability shall be considered presumptively disabled if he has received social security or supplemental security income benefits as a disabled individual within the preceding five years. (HR 10848)

Economic Opportunity and Community Services Amendments of 1978

A bill in conference would reauthorize the Community Services Administration and Headstart programs for two years and Follow Through programs for five years at an estimated $774 million in fiscal 1979 rising to $1.6 billion by fiscal 1981, restoring the 80/20 ratio of federal financing for community action agencies (from the present 60/40) and making other changes. (HR 7577)

Reimbursements for Social Services

A new law authorizes $543 million for settlement of claims for certain social services provided by states before October 1, 1975. (PL 95–291)

Rehabilitation Services Amendments

The House passed a bill to authorize $6.9 billion for the Rehabilitation Act of 1973 for five years, to establish a community service employment program for handicapped individuals and to provide for independent living rehabilitation services for the severely handicapped. (HR 12467)

Older Americans Act

A bill in conference would authorize $4.2 billion over three years to continue existing service and employment programs for the elderly; to establish new programs for legal services, ombudsman services for residents of long-term care facilities and home-delivered nutrition services; and to conduct a White House Conference on Aging in 1981. (HR 12255)

SPECIAL TAX PROVISIONS

Tuition Tax Credit

The House passed a bill providing a tax credit for tuition costs at undergraduate colleges and elementary and secondary schools. The credit, to be subtracted directly from taxes, would be limited to $100 in 1978 and $250 by 1980 for college and to $50 in 1978 and $100 by 1980 for grade and high schools. (HR 12050)

Tax Treatment Extension

Both houses passed in differing forms a bill to delay until 1978 Internal Revenue Service rulings on community expenses to temporary worksites and tax treatment of fringe benefits. The bill would also delay for various periods various provisions of the Tax Reform Act of 1976, including the new more restrictive exclusion on income earned abroad; the freeze on existing tax treatment of certain salary reduction plans; cash and

deferred profit sharing plans and fringe-benefit selection plans; the income exclusion for the Armed Forces health professions scholarship program; the special five-year amortization rules for certain rehabilitation of low income housing; and the new limitations on net operating loss carryover. (HR 9251)

Technical Corrections Act

A House-passed bill would make numerous changes in the Tax Reform Act of 1976, including provisions to except for one year from the tighter foreign-income loss recapture rules income earned in possessions of the United States; to limit to agricultural commodities futures the six-month holding period for long-term capital gains; to grandfather the appreciation in value of certain stock to be taxed under the new estate and gift tax provisions; and to extend the dead line by which charitable lead trusts may be made eligible as tax deductions. (HR 6715)

Miscellaneous Revisions of Timing Requirements of Revenue Laws

The House passed a bill revising the times for (1) payments of expenses owed to certain relatives, (2) election of special corporate liquidation treatment for involuntary conversions, (3) election of subchapter S status (tax treatment similar to partnerships) by corporations, (4) filing of income tax returns for tax-exempt organizations, (5) determining the status of a taxpayer as a farmer or a fisherman for estimated income tax purposes, (6) claiming credits or refunds arising from carrybacks, and (7) collection of penalty for failure to pay no withholding taxes where a bond is furnished. In addition, the bill also would provide a basis for adjustment for property distributions received by a corporation where gain is recognized by the distributing corporation. (HR 7320)

Rate of Interest on Individual Retirement Bonds

The House passed a bill allowing the interest rates paid on U.S. retirement plans and individual retirement bonds to be increased to the rate paid on U.S. series E savings bonds. (HR 6635)

Taxation of Fringe Benefits

Both houses passed in differing forms a bill to delay until 1980 Internal Revenue Service rulings relating to the taxation of fringe benefits and certain transportation expenses and to provide for the tax treatment of certain statutory subsistence allowances for state law enforcement officers. (HR 12841)

Tax Credit for Household and Dependent Care Expenses

The House passed a bill amending the Internal Revenue Code with respect to the treatment of certain payments to relatives as credit for household and dependent care expenses. (HR 8535)

Certain Telephone Company Income; Securities Lending Transactions

A bill cleared for the President would clarify the income-source requirement for mutual or cooperative telephone company exemption from federal income taxation. Other provisions concern securities lending transactions and would (1) permit payments on loans of securities from a tax-exempt organization or a mutual fund to a broker to be treated as dividends or interest for income tax purposes, and (2) establish the general rule that the lending of any securities to a broker and the return of identical securities does not constitute a taxable sale or exchange. (HR 7581)

Investment Income of Private Foundations

The House passed a bill to reduce the excise tax on the investment income of private foundations. (HR 112)

Utility Holdings of Private Foundations

The House passed a bill to permit certain private foundations to continue to hold certain stock in certain public utilities without being subject to the excise tax on excess business holdings. (HR 4030)

Tax Treatment of Magazine Returns

The House passed a bill to provide an exclusion from gross income with respect to magazines, paperbacks, and records returned after the close of the taxable year. (HR 3050)

Tax Treatment of Certain Crop Payments

A new law provides for 1977 tax year treatment of certain crop payments and extends for one year the deduction for state legislators' travel expenses. (PL 95–258)

Excise Tax on Tires and Tread Rubber

The House passed a bill revising the excise tax treatment of tires and tread rubber under certain conditions and imposing a tax on certain imported retreaded tires. (HR 5103)

Excise Tax on Certain Trucks and Buses

The House passed a bill to eliminate the "cost-floor" method for determining the constructive sale price with respect to taxable sales of certain trucks, buses, and highway tractors. (HR 1337)

Exemption of Certain Trailers from Excise Tax

The House passed a bill providing excise tax exemptions for trailers and semi-trailers suitable for use with a light duty towing vehicle designed for farming purposes or for transporting horses or livestock. (HR 2984)

Excise Tax on Fuels Used by Aerial Applicators

The House passed a bill permitting crop-duster aircraft operators, rather than farmers, to claim the excise tax refund or credit provided for aviation fuels used for farming purposes. (HR 2852)

Changes in Excise Taxes on Distilled Spirits

A new law amends certain provisions of the Internal Revenue Code relating to distilled spirits. (PL 95–176)

Home Production of Beer and Wine

The House passed a bill allowing any individual 18 years of age or older to produce wine and beer for personal and family use up to certain quantities without incurring the wine or beer excise taxes or any penalties. (HR 2028)

Excise Tax on Alcoholic Beverages Destroyed by Vandalism

The House passed a bill providing for repayment of excise tax on alcoholic beverages held for sale but destroyed by fire, flood, casualty, other disaster, vandalism or malicious mischief. (HR 1920)

Customs Procedural Reform

A bill in conference would provide customs procedural reform, simplify certain entry procedures, and revise certain personal duty-free exemptions for liquor, cigarettes and articles. (HR 8149)

Duty-Free Entry of Certain Canadian Petroleum

A new law permits the duty-free entry of Canadian crude oil if an equivalent amount of domestic or duty paid oil is exported to Canada. (PL 95–159)

Duty Suspensions

The House passed a bill to suspend the duty on 2-methyl 4-chlorophenol until June 30, 1980. (HR 5551)

Temporary Suspension of Duty on Strontium Nitrate

The House passed a bill to suspend a portion of the duties on strontium nitrate (used in making flares) until January 30, 1978. (HR 5044)

ETHICS REFORM AND OTHER HOUSE ACTIVITIES

Ethics Code

The House adopted a strong new financial ethics code as part of the rules of the House. The rules require broad financial disclosure by House Members and key staff; a 15-percent of salary limit on outside earned income by Members; a $750 limit on any honorarium; limits on gifts; prohibition on personal use of campaign funds; abolition of unofficial office accounts; restrictions on the use of the frank; and curbs on lameduck travel. (H Res 287)

Select Committee on Ethics

The House adopted a resolution establishing a Select Committee on Ethics to issue regulations to implement and interpret the financial ethics code, to render advisory opinions, and to work with the Senate in putting the new rules into permanent law. (H Res 383) The House passed a resolution to continue the Select Committee on Ethics into the second session of the 95th Congress. (H Res 871)

Korean Inquiry

The House adopted a resolution authorizing the Committee on Standards of Official Conduct to make an inquiry to determine whether Members of the House, their immediate families or associates accepted anything of value from the government of the Republic of Korea. (H Res 252)

U.S.-Korean Relations

The House authorized an International Relations Subcommittee to examine United States-Korean relations, including activities of the Korean CIA in the United States. (H Res 319)

Korean Cooperation With House Investigation

The House passed a resolution expressing the sense of the House that the Republic of Korea cooperate fully with the Committee on Standards of Official Conduct and with its special counsel to provide complete access to all facts relevant to the Committee's investigation to determine whether Members of the House were involved in accepting anything of value from the Government of the Republic of Korea. (HRes 868)

Korean Investigation

The House passed a resolution expressing the sense that the government of Korea should cooperate fully, in accordance with the principle of comity between allies, with the Committee on Standards of Official Conduct and its special counsel in that committee's efforts to obtain necessary information from former Korean Ambassador Kim Dong Jo. (HRes 1194)

Public Disclosure of Lobbying Act

The House passed a bill to require certain organizations to disclose specific information on their lobbying activities and expenditures. (HR 8494)

Select Committee on Assassinations

The House authorized the continuation of the Select Committee on Assassinations throughout the 95th Congress. The committee is to investigate the assassinations of President Kennedy and Martin Luther King, Jr. (HRes 433) The House passed a resolution granting the Select Committee authority to make applications to the courts and bring and defend certain lawsuits. (HRes 760)

Contempt Citation

The House passed a resolution certifying the case of Claude Powell, Jr., for contempt of Congress for failure to testify in the Martin Luther King, Jr., assassination inquiry. (HRes 1159)

Select Committee on Intelligence

The House passed a resolution establishing a permanent Select Committee on Intelligence in the House to oversee the CIA and other intelligence activities. (HRes 658)

Congressional Operations

The House established a House Select Committee on Congressional Operations to continue the work and functions of the now defunct Joint Committee on Congressional Operations. (HRes 420)

FEC Authorization

A new law authorizes $8.1 million for the Federal Election Commission for fiscal 1978. (PL 95–127) Both houses passed in differing forms a bill authorizing $8.6 million for the FEC for fiscal 1978. (S 3025)

Franked Mail Act of 1977

The House passed a bill establishing certain limitations on the use of the franking privilege. (HR 7792)

Eliminating October Pay Increases

A new law denies the October, 1977, pay comparability adjustment to senior officials of the executive, legislative and judicial branches. (PL 95–66) Earlier, Congress enacted a law requiring that future pay raises for Members of Congress recommended by the Quadrennial Commission on Executive, Legislative and Judicial Salaries be approved by a recorded vote in both the House and Senate. (PL 95–19)

District Office Space

The House passed a resolution providing an additional amount for district office rental. (HRes 687)

House Radio and Television Coverage

The House passed a resolution authorizing closed-circuit televising of House floor sessions to Member, Committee and other House offices; a study through February 15, 1978, of methods of providing radio and television coverage of House sessions to the media and public; and establishment after the study of a radio and television broadcasting system for the press and public under the direction of the Speaker. (HRes 866)

GENERAL GOVERNMENT

Reorganization Act of 1977

A new law gives the President authority for three years to transmit to Congress executive branch reorganization plans; such plans would take effect after 60 days unless either house of Congress passed a resolution of disapproval. (PL 95–17)

Reorganization Plan No. 1 of 1977

The House approved the President's Reorganization Plan No. 1 of 1977, providing for a reorganization of the Executive Office of the President. (HRes 688)

Reorganization Plan No. 2 of 1977

The House approved an executive reorganization plan consolidating the functions of the United States Information Agency and the State Department's Bureau of Educational and Cultural Affairs into a single agency, the International Communication Agency. (HRes 827)

Reorganization Plan No. 1 of 1978

The House approved the President's Reorganization Plan No. 1 of 1978, to consolidate several equal employment opportunity programs into the Equal Employment Opportunity Commission. (HRes 1049)

Reorganization Plan No. 2 of 1978

The House approved the President's Reorganization Plan No. 2 of 1978 relating to the Civil Service Commission. The Plan is the structural framework of the President's proposed civil service reform. (HRes 1201)

Federal Grant and Cooperative Agreement Act

A new law standardizes the meaning of the terms federal "contract," "grant" and "cooperative agreement" as recommended by the Commission on Government Procurement in 1972. (PL 95–224)

Federal Program Information

A new law provides for the efficient and regular distribution of current information to the public on federal domestic assistance programs. (PL 95–220)

Federal Banking Agency Audits

A new law authorizes the General Accounting Office to audit the operations of the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation and the Federal Reserve System. (PL 95–320)

Federal Reserve Reform

The House passed legislation setting guidelines for Federal Reserve monetary policy, requiring the Board to consult with Congress, broadening representation on the 12 Federal Reserve Bank boards, requiring Senate confirmation for the chairman and vice chairman of the Federal Reserve Board and prohibiting conflicts of interest. (HR 8094)

Postal Service Act

The House passed a bill providing for presidential appointment of the Postmaster General, increasing congressional oversight of the U.S. Postal Service, increasing public service authorizations by $800 million in each of the next three years for the U.S. Postal Service and revising postal rate setting procedures. (HR 7700)

Changes in Postal Services

The House passed a bill to provide for Congressional review of proposed changes in postal service before they become effective. (HR 9146)

GAO Audits of the IRS and the Bureau of ATF

A new law authorizes the GAO to audit and review the operations of the Internal Revenue Service and the Bureau of Alcohol, Tobacco, and Firearms of the Department of the Treasury. (95–125)

White House Personnel

A bill in conference would clarify the authority for employment of personnel by the White House Office, the Executive Residence, the Domestic Policy Staff, the Office of Administration and the Office of the Vice President. (HR 11003)

Offices of Inspector General

The House passed a bill establishing Offices of Inspector General in certain executive departments and agencies. (HR 8588)

Insular Areas Authorization

A bill cleared for the President would authorize funds and otherwise foster the continued economic and political development of the insular areas of the United States (Guam, the Virgin Islands, the Northern Marianas, American Samoa, and the Trust Territory of the Pacific Islands). (S 2821)

Intelligence Authorization

A bill reported from conference would authorize funds for intelligence and intelligence-related activities of the United States. (HR 12240)

INTERNATIONAL AFFAIRS

International Development and Food Assistance

A new law authorizes $1.6 billion for international food and economic development assistance in fiscal 1978. (PL 95–88) A bill in conference would authorize $3.7 billion in foreign economic assistance in fiscal 1979, make certain changes in the foreign assistance laws, and improve coordination and administration of U.S. development programs. (HR 12222)

International Security Assistance

A new law authorizes $3.2 billion for international security assistance in fiscal 1978, including funds for grant military assistance programs, grant military education and training programs, foreign military sales credits and guarantees, security supporting assistance, the Middle East Special Requirements Fund, the contingency fund, International Narcotics Control, and the Southern African Special Requirements Fund. (PL 95–92)

International Security Assistance

A bill in conference would amend the Foreign Assistance Act and the Arms Export Control Act, to authorize $999.3 million for international security assistance programs for fiscal 1979, to repeal the embargo on arms assistance to Turkey and to lift sanctions against Rhodesia after 1978 unless the President determines that a freely elected government has not been installed. (S 3084)

Foreign Relations Authorization

A new law authorizes $1.6 billion in fiscal 1978 for the Department of State, the U.S. Information Agency, and the Board for International Broadcasting. (PL 95–105) A bill in conference would authorize $1.9 billion for fiscal 1979 for the Department of State, the International Communications Agency, and the Board for International Broadcasting. (HR 12598)

State Department Supplemental

Congress enacted a law authorizing $89,650,000 in supplemental funds for the Department of State for fiscal 1977. (PL 95–45)

Nuclear Antiproliferation Act

A new law amends the Atomic Energy Act of 1954 to apply uniform standards for licensing of nuclear exports, defines specific criteria for the negotiation of new Agreements for Cooperation in the exchange of nuclear technology, and promulgates regulations for timely action on nuclear export licenses by the concerned government agencies. The law also spells out numerous multilateral steps to combat nuclear proliferation and instructs the President to pursue them. (PL 95–242)

Export-Import Bank

A new law realigns the authorization of the Export-Import Bank with the new fiscal year and requires certain bank actions concerning human rights, export subsidy programs and nuclear proliferation. (PL 95–143)

Export-Import Bank Extension

The House passed a bill to extend the Export-Import Bank for five years, to improve its ability to promote U.S. exports by increasing bank commitment authority by $15 billion (to $40 billion), to seek an end to predatory international competition and to prohibit financing of exports to South Africa unless its racial policies improve. (HR 12157)

Export Administration Act Amendments

Congress enacted a law to extend the Export Administration Act for two years and prohibit American compliance with foreign boycotts of nations friendly to the U.S. In addition, the bill would prohibit the export of Alaskan oil for two years if the President makes certain findings. (PL 95–52)

International Financial Institutions

A new law authorizes $5.2 billion for the World Bank and five other international development lending institutions. The law directs U.S. representatives to oppose loans to countries violating human rights unless programs are specifically directed to basic human needs. Representatives must consider the responsiveness of Vietnam, Cambodia and Laos in accounting for MIAs, and oppose loans for production of palm oil, sugar or citrus crops if the U.S. is a competing producer of that commodity. (PL 95–118)

International Monetary Fund

Both houses passed in differing forms a bill authorizing the United States to invest about $1.8 billion in the $10.5 billion Supplementary Financing Facility of the International Monetary Fund for loans to developing nations with oil cost problems. The bill would require the U.S. executive director of the new facility to oppose Fund transactions which would contribute to the deprivation of human rights. (HR 9214)

Overseas Private Investment Corporation Act Amendments

A new law strengthens the federal role in OPIC which insures operations of American companies in developing nations, extends OPIC through fiscal 1981, reinforces the de-

velopment mandate of OPIC and prohibits claims if an investor has been determined to be involved in bribery of foreign officials. (PL 95–268)

International Banking Act

The House passed a bill setting guidelines for foreign bank operations in the United States with respect to federal charters, reserve and FDIC insurance requirements, interstate branching and other banking activities. (HR 10899)

International Investment Survey Act

Both houses passed in differing forms a bill authorizing an additional $3 million for the Departments of Commerce, Treasury, and Agriculture for fiscal 1979 to continue collection and analysis of data on international investment, including foreign investment in the United States. (S 2928)

Trading With the Enemy Act Reform

A new law limits the provisions of the Trading With the Enemy Act to declared wars and authorizes the President to regulate international economic transactions during national emergencies. (PL 95–223)

International Trade Commission

A new law authorizes $11.5 million for the International Trade Commission (ITC) in fiscal 1978 and makes administrative improvements in the commission's operation. (PL 95–106) Both houses passed in differing forms a bill authorizing $12.8 million for the United States International Trade Commission (ITC) for fiscal 1979. (HR 11005)

United States-Hungary Trade Agreement

Both houses passed a concurrent resolution approving nondiscriminatory (most-favored-nation) trade treatment for Hungary pursuant to a bilateral trade agreement. (HConRes 555)

Export of Uranium to India

The House approved the export of 7,638 kilograms of low-enriched uranium for India as proposed by Executive Order on April 27, 1978. (HConRes 599)

International Safe Container Act

A new law would implement the International Convention for Safe Containers of 1972 and the Annexes thereto by establishing uniform structural requirements for intermodal cargo containers within United States jurisdiction and designed to move in international trade. (PL 95–208)

Rhodesian Chrome

Congress enacted a law authorizing the President to reimpose the embargo on imports of chrome ore, ferrochrome and nickel from Rhodesia as a sanction against minority rule. (PL 95–12)

Military Assistance to Portugal

Congress enacted a law authorizing $32.25 million in supplemental military assistance to Portugal for fiscal 1977. Funds would be used to help equip and train a newly established 4,000 man air-transportable Portugese brigade which would be assigned to NATO. (PL 95–23)

Peace Corps Authorization

A new law authorizes $82.9 million for the Peace Corps in fiscal 1978. (PL 95–102) A new law authorizes $112.4 million for fiscal 1979 and a fiscal 1978 supplemental of $3.7 million for the Peace Corps. (PL 95–331)

American MIA's in Southeast Asia

The House passed a concurrent resolution expressing the sense of Congress that the Administration should work through United Nations agencies to secure a full accounting of Americans missing in Southeast Asia (HConRes 583)

Permanent Residence Status for Indochina Refugees

A new law authorizes the creation of a record of admission for permanent residences in the cases of certain refugees from Vietnam, Laos, or Cambodia. (PL 95–145)

Human Rights in Cambodia

The House passed a resolution expressing its concern over human rights violations in Cambodia. (HRes 724)

Human Rights Violations in Uganda

The House passed a concurrent resolution condemning violations of rights by the Government of Uganda and urging the President to take certain actions with respect to those violations. (HConRes 612)

Soviet Jews

The House and the Senate adopted in final form a concurrent resolution expressing the concern of Congress regarding the harassment of Soviet Jews and other minorities. (SConRes 7)

Expressing Concern About Repressive Acts in South Africa

The House passed a concurrent resolution expressing the concern of Congress about the circumstances surrounding the death of Steve Biko and other acts of repression by the Government of the Republic of South Africa. (HConRes 388)

Prisoner Exchange

A new law implements U.S. bilateral treaties with Mexico and Canada for exchange of nationals in each other's jails. (PL 95–144)

Romanian Earthquake Relief

Congress enacted legislation authorizing $20 million for relief and rehabilitation assistance to victims of earthquakes in Romania. (PL 95–21)

Commission on Domestic and International Hunger and Malnutrition

The House passed a resolution expressing the sense of the House that the President should establish a Commission on Domestic and International Hunger and Malnutrition. (HRes 784)

Diplomatic Relations

The House passed a bill repealing the immunity statute for the foreign diplomatic community in the United States. The bill also would require liability insurance for all embassy personnel and their families who plan to operate motor vehicles, vessels or aircraft while in the U.S. (HR 7819)

Cultural Property

The House passed a bill to implement Articles of the UNESCO Convention on the Means of Prohibiting and Preventing the Illicit Import, Export and Transfer of Ownership of Cultural Property. (HR 5643)

European Economic Community Regulations on Processed Fruits and Vegetables

The House passed a resolution expressing the sense of the House with respect to removal of certain regulations and import restrictions imposed by the EEC on imports of certain U.S. canned fruits, juices and vegetables. (HRes 238)

NATIONAL DEFENSE

Department of Defense Authorization

A new law authorizes $36 billion in fiscal 1978 for military procurement, research and development and civil defense and authorizes active-duty and reserve forces strength of 2.9 million and civilian personnel of 1 million. (PL 95–79)

Department of Defense Authorization

A bill cleared for the President authorizes $36.9 billion in fiscal 1979 for military equipment procurement, including $1.9 billion for a nuclear-powered aircraft carrier, and for research, development, test and evaluation and civil defense and authorizes active duty and reserve military strength of 2,890,625 and civilian personnel strength of 1,005,500. (H.R. 10929)

DOE National Security Programs

The House passed a bill authorizing $2.89 billion for fiscal 1979 for the national security programs and functions of the Department of Energy, including nuclear weapons research, development, test, and production; of special nuclear materials and military waste management; naval reactor development; special detection and intelligence; inertial confinement (laser and electron beam) fusion research; and program management and support. (H.R. 11686)

ERDA National Security Authorization

A new law authorizes $2.61 billion in fiscal 1978 for the national security functions and programs administered by the Energy Research and Development Administration (ERDA), including enhanced radiation weapons. (PL 95–183)

Arms Control and Disarmament Agency

A new law authorizes $14.6 million for the Arms Control and Disarmament Agency in fiscal 1978. (PL 95–108) A new law authorizes $18.4 million for the Arms Control and Disarmament Agency in fiscal 1979. (PL 95–338)

Military Construction Authorization

A new law authorizes $3.7 billion in fiscal 1978 for certain construction at military installations. (PL 95–82) A bill reported from conference would authorize $4.128 billion for fiscal 1979 for certain construction at military installations. (H.R. 12602)

Nuclear Rescission

A new law rescinds $664 million, including $453 million which had been intended for a new nuclear carrier and conversion of an existing ship to a nuclear-armed vessel. (PL 95–15)

Military Enlistment Bonus Extension

A new law extends for fifteen months, to September 30, 1978, existing authority to pay enlistment bonuses up to $3,000 and re-enlistment bonuses up to $15,000 for enlisted military personnel in the Armed Services. (PL 95–57)

Defense Production Act

A new law extends the Defense Production Act by two years, until September 30, 1979. (PL 95–37)

Battle Monuments Commission

The House passed a bill providing that any retired member of the Armed Forces recalled to active duty with the American Battle Monuments Commission shall not be chargeable against the authorized end strengths and grade limitations of the Department of Defense or the military departments concerned. (H.R. 7678)

Strategic and Critical Materials

The House passed a bill to amend the Strategic and Critical Materials Stock Piling Act by establishing a stockpile procurement fund, encouraging barter for stockpile materials, and requiring specific rather than standing authorization for acquisition of materials. (H.R. 4895)

National Defense Reserve Fleet

A new law authorizes the Secretary of Commerce to acquire Mariner class and other suitable vessels in exchange for obsolete vessels in the National Defense Reserve Fleet. (PL 95–177)

Department of Defense Supplemental Authorization

A new law authorizes $476.4 million in fiscal 1978 for military procurement of missiles and aircraft, and military research, development, test and evaluation, including funds for the air-launched cruise missile in lieu of the B–1 bomber and studies for converting commercial transports to cruise missile carriers. (PL 95–184)

Survivor Benefit Plan for Military Retirees

The House passed a bill making certain improvements in the Retired Serviceman's

Family Protection Plan (RSFPP) and the Survivor Benefit Plan (SBP). (H.R. 3702)

Defense Officer Personnel

The House passed a bill revising the retention, promotion and other personnel management procedures of the commissioned-officer active-duty force of the Armed Forces. (H.R. 5503)

Defense Cargo Capacity for Civil Aircraft

The House passed a bill authorizing contracts with civil air carriers to provide greater cargo capacity for national defense purposes. (H.R. 2637)

Military Retirement Pay

The House passed a bill revising the rule for recalculation of military retired or retainer pay to reflect later active duty. (H.R. 10342)

Reserve Enlisted Members' Retirement

The House passed a bill permitting Reserve enlisted members of the Army and Air Force to retire with 20 years of service. (H.R. 10341)

Reserve Retired Pay Eligibility

The House passed a bill to make certain otherwise ineligible reservists eligible for reserve retired pay if they served on active duty during the Berlin or Cuban Crises or the Vietnam War. (H.R. 11823)

SCIENCE

NASA Authorization

A new law authorizes $4.05 billion for the National Aeronautics and Space Administration for fiscal 1978. (PL 95–76) A bill in conference would authorize $4.42 billion for NASA for fiscal 1979. (HR 11401)

NSF Authorization

A new law authorizes $884 million for the National Science Foundation in fiscal 1978. (PL 95–99) Both Houses passed in differing forms a bill authorizing $934.4 million for the NSF for fiscal 1979. (HR 11400)

Standard Reference Data Act

A new law authorizes $13.1 million over three years for the National Bureau of Standards to carry out the National Standard Reference Data Act. (PL 95–322)

HEALTH

Health Programs Extension Act of 1977

A new law authorizes $3.8 billion for health programs in fiscal 1978, including health services research; health statistics; comprehensive public health services; hypertension programs; migrant health; community health centers; medical libraries; the National Cancer Institute; the National Heart, Lung, and Blood Institute, National Research Service Awards; population research and voluntary family planning programs; sudden infant death syndrome; hemophilia; national health planning and development; health resources development; and community mental health centers. (PL 95–83)

Renal Disease

A new law provides incentives to encourage the use of lower cost, medically appropriate self-dialysis as an alternative to high-cost institutional dialysis by suitable patients suffering from renal disease. (PL 95–292)

Medicare-Medicaid Antifraud Abuse

Congress enacted a law to strengthen the capability of the government to detect, prosecute and punish fraudulent activities under the medicare and medicaid programs. (PL 95–142)

Black Lung Benefits

A new law creates an industry financed trust fund for black lung benefits for coal miners disabled by pneumoconiosis (black lung disease) and their widows. (PL 95–227) Another new law expands eligibility and improves the black lung benefits program. (PL 95–239)

Mine Safety and Health

A new law improves health and safety protection for metal and nonmetal miners and transfers coal and noncoal mine safety enforcement to the Department of Labor. (PL 95–164)

Medicare-Medicaid Coverage for Rural Health Clinics

A new law provides medicare and medicaid eligibility for rural health clinics and authorizes demonstration projects for clinics in medically underserved urban areas and for outpatient mental health centers. (PL 95–210)

Saccharin Ban Moratorium

A new law authorizes a review of information on food additives, prohibits certain restrictions on saccharin for 18 months and authorizes during that period warnings in stores of health risks of saccharin. (PL 95–203)

Health Professionals Education Amendments of 1977

A new law revises capitation requirements for schools of medicine and dentistry by requiring medical schools in order to be eligible to receive capitation grants to increase third-year enrollment by five percent, authorizes an additional $1 million for public health traineeships in fiscal 1979 and 1980, expands traineeship eligibility and makes technical amendments to the health professions guaranteed student loan program. (PL 95–215)

Medicaid Payments to Guam, the Virgin Islands and Puerto Rico

The House passed a bill to increase the dollar limitation and federal medical assistance percentages for the medicaid programs of Puerto Rico, the Virgin Islands and Guam. (HR 9434)

Uranium Radiation Remedial Action Program To Protect Public Health

A new law authorizes $1.5 million and extends for four years the program to eliminate certain radiation hazards in buildings in Grand Junction, Colorado. (PL 95–236)

EDUCATION

Education Amendments of 1978

The House passed a five-year extension of the Elementary and Secondary Education Act, authorizing $10.3 billion in the first year rising to $12.9 billion in fiscal 1982 for the nation's major education programs, including grants for the disadvantaged to local education agencies, a revised allocation formula beginning in fiscal 1980 to focus aid on the neediest, $400 million in fiscal 1979 supplemental grants for school districts with large concentrations of poor children, $1.5 billion rising to $1.9 billion for impact aid, and other authorizations including the National Institute of Education, adult and Indian education, bilingual education and women's educational equity. (HR 15)

ESEA Extension

A new law extends through fiscal 1979 advance funding for Titles I (disadvantaged aid) and IV (libraries and other support) of the Elementary and Secondary Education Act of 1965 and the Adult Education Act. (PL 95–112)

ESEA

The House passed a bill to extend for one year the authority of the Commissioner of Education to waive provisions of Title I of the Elementary and Secondary Education Act for certain educational agencies. (HR 10551)

Vocational Education

A new law makes technical and miscellaneous amendments to the Vocational Education Act, including provisions relating to the use of federal funds for state and local administrative support. (PL 95–40)

School Lunch, Child Nutrition Amendments

A new law extends the summer feeding program three years through fiscal 1980, tightens administration, extends commodity purchase authority for the nutrition for the elderly program, makes improvements in the food service equipment program and the free breakfast program in extremely needy schools and authorizes federal grants of 50 cents per child for a national nutrition education program. (PL 95–166).

Education of the Handicapped

Congress enacted a law authorizing $1.1 billion over five years for the Education of the Handicapped Act. (PL 95–49)

Higher Education

A new law makes higher education technical amendments and authorizes $75 million for each fiscal 1978 and 1979 for Title VI of the National Defense Education Act—Foreign Area Studies and Language Development. (PL 95–43)

Law School Depository Libraries

A new law provides for the designation of libraries of accredited law schools as depository libraries of government publications. (PL 95–261)

Pacific Islands

A new law includes the Trust Territory of the Pacific Islands in the definition of "state" for the purpose of participating in programs authorized by the Higher Education Act. (PL 95–180)

Library Services

A new law extends the Library Services and Construction Act for five years, through September 30, 1982, and authorizes use of funds for services provided by urban libraries. (PL 95–123)

Center for the Book

A new law establishes a Center for the Book in the Library of Congress. (PL 95–129)

Appalachian Regional Development Act Amendments

A new law amends the Appalachian Regional Development Act to extend for two years the demonstration period for child development projects. (PL 95–193)

Career Education Act

A new law authorizes $325 million over five years to encourage programs of career education in elementary and secondary schools and $75 million for postsecondary educational demonstration projects over five years. (PL 95–207)

Grand Canyon School Districts

A new law authorizes $1.5 million minus impact aid for payments to Grand Canyon school districts for educational services to dependents of persons living at or near the Grand Canyon National Park on real property owned by the United States and therefore not subject to local school district taxation. (PL 95–244)

Alcohol and Drug Abuse Education Act Amendments

A new law authorizes $42 million over three years for the Alcohol and Drug Abuse Education Act. (PL 95–336)

Environmental Education Act Amendments

The House passed a bill authorizing $45 million over five years for the Environmental Education Act. (HR 10570)

American Folklife Preservation Act

A new law extends the authorization for the American Folklife Center at the Library of Congress for an additional three years. (PL 95–259)

White House Conferences on Arts and Humanities

A new law authorizes the President to call a White House Conference on the Arts and a White House Conference on the Humanities. (PL 95–272)

Hubert H. Humphrey Fellowship

A new law authorizes $1 million for a Hubert H. Humphrey Fellowship in Social

and Political Thought at the Woodrow Wilson International Center for Scholars at the Smithsonian Institution. (PL 95–286)

Humphrey Institute and Dirksen Center

A new law authorizes $7.5 million for the Hubert H. Humphrey Institute of Public Affairs and Everett McKinley Dirksen Congressional Leadership Center. (PL 95–270)

Education Advisory Councils

The House passed a resolution disapproving the Commissioner of Education's proposed consolidation of certain education advisory councils. (H. Res. 1072)

LABOR

Full Employment and Balanced Growth

The Humphrey-Hawkins bill, reaffirming the federal commitment to jobs for every American able and willing to work, has passed the House. The bill sets a goal of four-percent unemployment in five years, emphasizes our reliance on the private sector as the prime employer, provides for strong anti-inflation measures, and universally aims at work and wages, instead of welfare, for the unemployed. (HR 50)

Minimum Wage

A new law raises the minimum wage to $2.65 an hour on January 1, 1978, (from the present $2.30) and to $2.90 in 1979, $3.10 in 1980 and $3.35 in 1981, and decreases the allowance for tip credit. (PL 95–151)

Labor Law Reform

The House passed a bill to enlarge and strengthen the NLRB and expedite union representation elections under the National Labor Relations Act. (HR 8410)

Mandatory Retirement

A new law raises to 70 the age for mandatory retirement in the private sector and eliminates the mandatory retirement age for most federal workers. (PL 95–256)

Labor Act Exemption for Religious Objectors

The House passed a bill to exempt employees on grounds of religious objection from joining or financially supporting a labor organization. (H.R. 3384)

Employee Retirement Income Security Act Amendments

A new law increases to $2.60 (from the previous $1) per participant per year the premium for single-employer pension plans insured against termination by the Pension Benefit Guaranty Corporation. In addition the law would postpone for 18 months the date on which the Pension Benefit Guaranty Corporation begins mandatory insurance coverage of multi-employer pension plans. (PL 95–214)

Pregnancy Disability Anti-Discrimination

A bill in conference would prohibit sex discrimination in employment on the basis of pregnancy, including refusal to hire or promote pregnant women, termination of jobs of pregnant women, mandatory maternity leaves or refusal to cover pregnancy under an existing disability plan. (S 995)

National Commission on Unemployment Compensation

The House passed a bill to provide per diem compensation for members of the National Commission on Unemployment Compensation and to extend the period for filing of reports by the Commission. (HR 12232)

Summer Youth Jobs

A new law provides $63 million for a total of 1,165,000 summer youth jobs in 1978. (PL 95–284)

CONSUMERS

National Consumer Cooperative Bank

A bill cleared for the President would create a National Consumer Cooperative Bank to make loans at market interest rates to consumer cooperatives. The bill would also provide technical assistance to consumer cooperatives and establish a Self-Help Development Fund to assist emerging cooperatives in the inner cities and rural areas. (HR 2777)

Utility Pole Attachments

A new law requires the Federal Communications Commission to regulate the attachment of communication wires to utility poles when a state does not provide such regulation. (PL 95–234)

Debt Collection Practices

A new law prohibits professional debt collectors from harassing or intimidating any person in connection with the collection of a debt and from making false or misleading representations. (PL 95–109)

Saturday Mail Delivery

The House passed a concurrent resolution expressing the sense of the Congress that the U.S. Postal Service should not reduce the frequency of home mail delivery service. (HConRes 277)

Bankruptcy Reform

The House passed a bill to establish a system of independent bankruptcy courts, define creditors' and debtors' rights, facilitate the use of debt repayment plans, and protect the "fresh start" that bankruptcy is intended to give debtors. (HR 8200)

Petroleum Marketing Practices

A new law protects motor-fuel marketing franchises from arbitrary or discriminatory termination or non-renewal of their franchises. The law also requires the disclosure of octane ratings of automotive gasoline to consumers and approves a study of the subsidizing of motor fuel marketing by refiners and other suppliers with the profits from crude oil production, refining or other marketing activities. The study is to explore questions of market structure, competition and consumer costs. (PL 95–297)

Public Telecommunications Financing Act

The House passed a bill authorizing $720 million over five years to continue and increase long-term federal funding for noncommercial public telecommunications and to improve equal employment opportunity, fiscal accountability and public participation in public broadcasting. (HR 12605)

Insulation Safety Standards

A new law requires the Consumer Product Safety Commission to adopt as a mandatory interim standard modified General Services Administration specifications for flame resistance and corrosiveness of cellulose home insulation. (PL 95–319)

Fire Prevention

Both Houses passed in differing forms a bill authorizing $20.5 million for the National Fire Prevention and Control Administration and $5.1 million for the National Bureau of Standards Fire Research Center for fiscal 1979. (HR 11291)

FTC Amendments

A bill in conference would amend the Federal Trade Commission Act to authorize $63 million for fiscal 1978 and $70 million for fiscal 1979 for the FTC. (HR 3816)

JUSTICE

Privacy Protection Commission

Congress enacted a law extending the life of the Privacy Protection Study Commission two and a half months until September 30, 1977. (PL 95–38)

Federal Rules of Criminal Procedures

A new law approves certain proposed amendments to the Federal Rules of Criminal Procedure and disapproves other proposed changes. (PL 95–78)

Commission on Uses of Copyrighted Works

A new law extends until July 31, 1978, the term of the National Commission on New Technological Uses of Copyrighted Works. (PL 95–146)

Age Discrimination Report

A new law extends for six months the deadline for the U.S. Commission on Civil Rights' report on age discrimination. The law also extends the commodities provision of the Older Americans Act through fiscal 1978 and permits the acceptance of cash in lieu of commodities. (PL 95–65)

Drug Enforcement

A new law authorizes $645 million for three years for drug enforcement under the Controlled Substances Act. (PL 95–137)

Juvenile Justice

A new law extends the Juvenile Justice and Delinquency Prevention Act of 1974 and authorizes $150 million in fiscal 1978, $175 million in fiscal 1979 and $200 million in fiscal 1980. The law also authorizes $25 million in each fiscal 1978, 1979 and 1980 for the Runaway Youth Act and permits the President to submit a plan to transfer the latter program from HEW after April 30, 1978. (PL 95–115)

Sexual Exploitation of Minors

A new law protects children from sexual exploitation through juvenile prostitution and the making of films or photographs of children engaging in sexual conduct. (PL 95–225)

Child Abuse Prevention and Treatment Amendments

A new law authorizes $147 million for the Child Abuse Prevention and Treatment Act for four years, through September 30, 1981, and prohibits sexual exploitation of minors. (PL 95–266)

U.S. Commission on Civil Rights

A new law authorizes $10,480,000 for fiscal 1978 for the U.S. Commission on Civil Rights. (PL 95–132)

Associate Attorney General

A new law establishes the position of Associate Attorney General within the Department of Justice. (PL 95–139)

Victims of Crime Compensation

The House passed a bill authorizing $25 million in fiscal 1978, $30 million in fiscal 1979 and $35 million in fiscal 1980 to assist states in compensating innocent victims of crime. Federal assistance would be limited to $25,000 per person. (HR 7010)

Additional Federal Judgeships

A bill in conference would authorize the creation of 110 additional judgeships for the U.S. district courts and 35 additional appellate judgeships for the U.S. circuit courts. (H.R. 7843)

Administrative Conference of the United States

Both Houses passed in differing forms legislation to authorize funds over three fiscal years for the Administrative Conference of the United States. (S. 1792)

Diversity of Citizenship Jurisdiction

The House passed a bill to abolish diversity of citizenship jurisdiction in the federal courts and to abolish the amount-in-controversy requirement in federal question cases. (HR 9622)

Legal Services Corporation

A new law authorizes $205 million in fiscal 1978 and necessary sums for each fiscal 1979 and 1980 for the Legal Services Corporation. (PL 95–222)

Unlawful Corporate Payments Act

A new law prohibits corrupt use of interstate commerce by U.S. corporations and other domestic concerns to bribe foreign officials or foreign political parties or candidates. (PL 95–213)

Immigration and Naturalization of Adopted Children

The House passed a bill to facilitate the admission into the United States of more

than two adopted children and to provide for the expeditious naturalization of adopted children. (HR 12508)

Worldwide Ceiling on Immigration

The House passed a bill to combine two hemispheric ceilings into a single worldwide ceiling on immigration of 290,000 a year and to create a Select Commission on Immigration and Refugee Policy. (HR 12443)

Civil Rights Commission

The House has under consideration a bill extending the U.S. Commission on Civil Rights for five years, clarifying its current jurisdiction and expanding it to include discrimination based on age and handicap status, and authorizing $12.7 million and $14 million for fiscal 1979 and 1980. (HR 12432)

Civil Rights of Institutionalized Persons

The House passed a bill authorizing the Attorney General under certain conditions to initiate or intervene in civil actions to protect the rights of persons in institutions for the mentally or physically incapacitated or in pretrial detention or juvenile facilities or correctional facilities if a court determines that conditions in a prison or correctional facility warrant civil action by the Attorney General, and to encourage the development of grievance mechanisms in correctional facilities. (HR 9400)

ENVIRONMENT

Clean Air

A new law would authorize $211.5 million for the Clean Air Act in each fiscal 1978–80; extend pollution compliance deadlines for automobiles, plants, and other emission sources and enlarge state authority to deal with significant deterioration of clean air areas and to permit growth in "non-attainment" (dirty air) areas. (PL 95–95)

Surface Mining Control and Reclamation

A new law provides for a state-federal program to regulate the surface mining of coal and the surface impact of underground mines, to provide for the reclamation of abandoned mines and to establish mining and mineral institutes, coal research laboratories and graduate research fellowships. Mining is prohibited on developed farmlands of alluvial valley floors, and procedures are established to determine areas unsuitable for surface mining. (PL 95–87)

Surface Mining Control and Reclamation Act

Both houses passed a bill authorizing additional funds through fiscal 1980 for certain programs under the Surface Mining Control and Reclamation Act. (S 2463)

EPA Authorization

A new law authorizes $253.6 million for research, development and demonstration activities of the Environmental Protection Agency (EPA) during fiscal 1978. (PL 95–155) The House passed a bill authorizing $431 million for environmental research, development and demonstration activities for fiscal 1979, mostly for the Environmental Protection Agency. (HR 11302)

Land and Water Conservation Fund

A new law establishes a special account of $450 million in the Land and Water Conservation Fund to be used for a 3-year program to acquire remaining private land in previously authorized units of the national park system. (PL 95–42)

Water Pollution Control

A new law authorizes $27.75 billion over seven years for federal water pollution control programs, including $25.5 billion over six years (fiscal 1977–82) for 75 percent grants to cities by the Environmental Protection Agency for construction of wastewater treatment works. The law sets July 1, 1984, generally, as the deadline for application of best available technology against toxic pollutants. The law redefines Corps of Engineers jurisdiction over dredged or fill materials, limiting such jurisdiction to traditionally navigable waters and adjacent wetlands. The law authorizes $200 million in fiscal 1979 and $400 million in fiscal 1980 for farm pollution control contracts. The law extends liability for oil spills to the 200-mile offshore limit. (PL 95–217)

Federal Water Pollution Control Act

The House passed a bill authorizing $13.9 million for fiscal 1979 and $14.039 million for fiscal 1980 for certain operating programs of the Federal Water Pollution Control Act. (HR 12140)

Water Research and Development

Both houses passed a bill re-enacting into one statute authority for water research and saline conversion programs and authorizing $36.5 million for such programs in fiscal 1979 and $72.9 million in fiscal 1980. (S 2704)

Water Resources Planning

A bill in conference would authorize $8.6 million for the Water Resources Planning Act for fiscal 1979 and abolish the Water Resources Council, transferring its functions to the Secretary of the Interior. (S 2701)

Water Resources Council

A new law authorizes $3,905,000 for the U.S. Water Resources Council in fiscal 1978 for coordinating and directing river basin planning. (PL 95–41)

Saline Water Conversion

A new law authorizes $61,950,000 for saline water research and general water research grants. (PL 95–84)

Oceans and Atmosphere

A new law establishes qualifications for individuals appointed to the National Advisory Committee on Oceans and Atmosphere (NACOA), sets the number of members at 18 and authorizes $520,000 for the committee in fiscal 1978. (PL 95–63) A new law authorizes $572,000 for the National Advisory Committee on Oceans and Atmosphere for fiscal 1979. (PL 95–304)

Ocean Pollution Research

A new law authorizes $5 million to establish a program of ocean pollution research and monitoring. (PL 95–273)

National Sea Grant Program

A new law authorizes $58 million for the National Sea Grant Program in fiscal 1978. (PL 95–58). Both houses passed in differing forms a bill authorizing $63 million in fiscal 1979 and $64.6 million in fiscal 1980 for the National Sea Grant College Program. (HR 10822)

Rivers and Harbors Improvements

A new law establishes a policy with respect to the roles of the Corps of Engineers and private industry in meeting national dredging needs. (PL 95–269)

Oil Pollution Liability and Compensation Act

The House passed a bill establishing a fee-funded $200,000,000 oil pollution damages fund and imposing a primary liability on the owner or operator of the pollution sources. (HR 6803)

Earthquake Hazards Reduction

A new law authorizes $56 million in fiscal 1978, $72 million in fiscal 1979 and $82 million in fiscal 1980 for national earthquake hazards reduction programs. (PL 95–124)

National Climate Program

A bill in conference would authorize $50 million in fiscal 1978 for the establishment of a national climate monitoring program. (HR 6669)

Navigation Development

A bill in conference authorizes replacement of locks and dam 26 near Alton, Illinois; levies a fuel tax of four cents in 1979 rising to six cents in 1981 for certain inland waterway users and requires a three-year study of user charges. (HR 8309)

Aquaculture Act of 1977

The House passed a bill to establish a national program for aquaculture—the cultivation of aquatic plants, fish, shellfish, and other creatures in marine, brackish and fresh water; the program would include technical assistance, information, $500 million in loan guarantees, $250 million for disaster loans and $1 billion in insurance coverage. (HR 9370)

National Wildlife Refuges

A new law authorizes $31.8 million for the National Wildlife Refuges at San Francisco Bay and the Great Dismal Swamp in Virginia and North Carolina. (PL 95–299)

Refuge Revenue Sharing Act

The House passed a bill revising the method of compensatory payments to local governments for National Wildlife Refuge System acreage within their boundaries. (HR 8394)

Endangered Species Act

A new law authorizes $16 million for fiscal 1978 through 1981 for cooperative agreements with the states under the Endangered Species Act and revises criteria to facilitate the making of such agreements. (PL 95–212)

Marine Mammal Protection (Tuna-Dolphin Bill)

The House passed a bill to reduce mortality and serious injury of dolphins incidental to commercial tuna fishing operations and to provide some relief to the United States tuna fleet when taking dolphins during such fishing. (HR 6970)

Marine Mammal Protection Authorization

A new law authorizes $15.7 million for marine mammal protection programs in fiscal 1978. (PL 95–136) A new law authorizes $47 million for fiscal 1979 through fiscal 1981 to carry out programs under the Marine Mammal Protection Act. (PL 95–316)

Marine Protection Authorization

A new law authorizes $11,800,000 in fiscal 1978 for the Marine Protection, Research and Sanctuaries Act and prohibits ocean dumping of municipal sewage sludge after 1981. (PL 95–153)

Council on Environmental Quality

A new law authorizes $8.1 million over three years for the Office on Environmental Quality which is used by the Council on Environmental Quality to carry out Council programs. (PL 95–300)

Tinicum National Environmental Center

A new law authorizes an additional $7.25 million for acquisition of land and development of the Tinicum National Environmental Center in Pennsylvania. (PL 95–152)

NATIONAL PARKS AND RECREATION AREAS

Chattahoochee River National Park

A bill cleared for the President authorizes $73.4 million for the establishment of the 48-mile-long Chattahoochee River National Recreation Area in Georgia, increases the development authorization for Fort Scott Historic Area in Kansas by $2.75 million and authorizes $6 million over three years for transportation projects by the Secretary of the Interior directly or by contract to provide public access to and within parks, especially those near urban areas. (H.R. 8336)

National Parks and Recreation Act

The House passed a $1.25 billion bill raising development and acquisition ceilings for national parks and recreation areas throughout the nation, revising boundaries within specific parks, designating nine new wilderness areas, establishing new areas of the National Trails System and adding segments to the Wild and Scenic Rivers. (H.R. 12536)

Alaska National Lands Conservation

The House passed a bill to preserve 123 million Alaska acres, thus doubling the nation's parkland, and creating in Alaska 10 new national parks and several new units of the National Wildlife Refuge, Wild and Scenic Rivers and National Wilderness Preservation System. (H.R. 39)

Redwood National Park

A new law authorizes necessary sums for a 48,000-acre expansion of the Redwood National Park in California, $33 million for land rehabilitation, and authorizes job training and aid for affected timber industry workers. (PL 95–250)

Absaroka-Beartooth Wilderness

A new law designates the Absaroka-Beartooth Wilderness in the Custer and Gallatin National Forests in Montana. (PL 95–249)

Appalachian National Scenic Trail

A new law authorizes an additional $85 million from the Land and Water Conservation Fund for the purchase of additional portions of the 2,000-mile Maine-to-Georgia Appalachian National Scenic Trail. (PL 95–248)

Wilderness Lands

A new law provides for the study of 970,000 acres in Montana for inclusion in the National Wilderness Preservation System. (PL 95–150)

Endangered American Wilderness Act

A new law designates 1.3 million acres in 10 western states for preservation under the national wilderness system. (PL 95–237)

Eleanor Roosevelt Memorial

A new law authorizes $995,000 for land acquisition and development of the Val-Kill retreat of Eleanor Roosevelt as a National Historic Site. (PL 95–32)

Manassas National Battlefield Park

The House passed a bill authorizing an 1800-acre expansion of the existing Manassas National Battlefield Park in Virginia. (H.R. 2437)

Bull Run Reserve

A new law permits general recreational access and other multiple uses for six months within a 42,500-acre portion of the Bull Run Reserve, Mt. Hood National Forest, Oregon. (PL 95–55)

Lowell National Historical Park

A new law authorizes $40 million for the establishment of the Lowell National Historical Park in Lowell, Massachusetts. (PL 95–290)

Oregon Trail

Both Houses passed in differing forms a bill authorizing $5 million for the establishment of the Oregon National Historic Trail and establishing National Historic Trails as a new category in the National Trails System. (H.R. 6900)

Friendship Hill National Historic Site

The House passed a bill establishing the Friendship Hill National Historic Site in Pennsylvania. (H.R. 10984)

Recognition of General Kosciuszko

Congress passed in final form a resolution calling for recognition of the sites of service of the Polish patriot, General Kosciuszko. (S. Con. Res. 44)

Boundary Waters Canoe Area Wilderness

The House passed a bill designating the one-million-acre Boundary Waters Canoe Area in northern Minnesota as wilderness. (H.R. 12250)

DuNoir Wilderness Addition

The House passed a bill providing for the DuNoir Basin Addition to the Washakie Wilderness in Wyoming. (H.R. 12349)

Bureau of Land Management Authorization

A bill cleared for the President authorizes $479.2 million, $544.9 million, $594.9 million and $658.4 million for fiscal 1979 through 1982 respectively for Bureau of Land Management programs, and increases the interest rate for mineral impact loans to states to the prevailing rate for tax exempt bonds (about 4.5 percent to 5.5 percent) in lieu of the present statutory three percent. (H.R. 10787)

MARITIME

Maritime Authorization

A new law authorizes $553.6 million for maritime activities in fiscal 1978, including ship construction and operating subsidies, research and the Merchant Marine Academy, and requires action against illegal rebating. (PL 95–173)

Maritime Authorization

A new law authorizes $496.8 million for fiscal 1979 for certain maritime programs, assists state marine schools in paying training ship fuel cost increases, and increases the Title XI Ship Construction Guarantee Program ceiling to $10 billion from $7 billion. (HR 10729)

Rebating Practices in U.S. Foreign Trade

The House passed a bill to increase civil penalties for illegal rebating in ocean shipping, authorize the Federal Maritime Commission to suspend tariffs if a carrier refuses to provide information and for the first time require foreign-flag ocean carriers to comply with FMC subpoenas and discovery orders or face exclusion from U.S. ocean trades. (HR 9518)

Intervention on the High Seas Act

A new law authorizes the implementation of the Protocol Relating to Intervention on the High Seas in Cases of Marine Pollution by Substances Other Than Oil of 1973. (PL 95–302)

Ocean Shipping Act

The House passed a bill providing for the regulation of rates or charges by certain waterborne carriers owned by other nations in the foreign commerce of the United States. (HR 9998)

Deep Seabed Hard Minerals Act

The House passed a bill establishing an interim licensing program to encourage and regulate deep ocean mining of manganese and other minerals by U.S. citizens pending adoption of a superseding international agreement, and to create an industry-supported trust fund to be shared among nations when a treaty takes effect. (HR 3350)

Intercoastal Shipping Act

The House passed a bill setting deadlines for Federal Maritime Commission determinations on shipping rate adjustments and prohibiting the Commission from suspending general rate adjustments of five percent or less. (HR 6503)

Fishing Vessel Loan Guarantees

A new law authorizes the Secretary of Commerce to guarantee private loans up to 87½ percent of the cost of constructing or reconstructing commercial fishing vessels. (PL 95–257)

Commercial Fisheries Research and Development

Congress enacted a law authorizing an additional $33.9 million through fiscal 1980 for the Commercial Fisheries Research and Development Act. (PL 95–53)

Fishery Conservation and Management Act

Congress cleared for the President a bill authorizing $30 million in fiscal 1979 for implementing the Fishery Conservation and Management Act of 1976, and providing U.S. fish processors with priority access to United States harvested fish. (HR 10372)

Fishermen's Protective Act

A new law extends the cooperative insurance program of the Fishermen's Protective Act of 1967 through fiscal 1978. (PL 95–194) A bill passed by both Houses in differing forms extends for three years the cooperative insurance program under the Fishermen's Protective Act, establishes a fishing gear damage compensation fund and provides additional protection to endangered and threatened species of wildlife. (HR 10878)

Central, Western and South Pacific Fisheries Development

A new law authorizes $16 million over four years for development of tuna and other latent fishery resources in the Central, Western, and South Pacific Ocean. (PL 95–295)

Fish and Wildlife Programs

The House passed a bill to provide uniform authority for enforcement of federal fish and wildlife laws. (HR 2329)

Great Lakes Fishery Act Amendments

The House passed a bill increasing from three to four the number of U.S. Commissioners serving on the Great Lakes Fishery Commission. (HR 2203)

North Pacific Fisheries Act

A new law implements the renegotiated International Convention for the High Seas Fisheries of the North Pacific Ocean signed on February 10, 1977, by the countries of Canada, Japan and the United States. (PL 95–326)

U.S.-Canadian Reciprocal Fisheries Agreement

A new law gives congressional approval to a Reciprocal Fisheries Agreement between the United States and Canada during 1977. (PL 95–73)

Fishery Conservation Zone Transition Acts

A new law sanctions 200-mile international fishing agreements with six nations; another new law sanctions such agreements for three other countries and the Common Market. (PL 95–6; PL 95–8)

Atlantic Tuna Convention Act

Congress enacted a law authorizing necessary sums through 1980 to carry out the Atlantic Tuna Convention Act of 1975. (PL 95–33)

International Fisheries Agreement With Mexico

A new law sanctions a 200-mile fishing limit agreement with Mexico and permits a reorganization of the National Oceanic and Atmospheric Administration. (PL 95–219)

International Navigational rules

A new law implements the 1972 Convention on the International Regulations for Preventing Collisions at Sea. (PL 95–75)

Harp Seals

Congress adopted in final form a concurrent resolution expressing the concern of Congress with respect to the killing of newborn harp seals in Canadian waters. (H. Con. Res. 142)

Polar Living Marine Resources Act

The House passed a bill to establish a program for the study and assessment of living marine resources in the Arctic and Southern Oceans. (HR 12668)

International Maritime Satellite Telecommunications

Both Houses passed in differing forms a bill to provide for the establishment, ownership, operation, and governmental oversight and regulation of international maritime satellite telecommunications services. (HR 11209)

Merchant Marine Academy Nominations

A new law entitles Delegates in Congress from the District of Columbia, Guam and the

Virgin Islands to make nominations for appointments to the Merchant Marine Academy at Kings Point, New York. (PL 95–323)

TRANSPORTATION

Emergency Highway and Transportation Repair Act of 1978

The House passed a bill authorizing $250 million in fiscal 1978 from the Highway Trust Fund for repair of paved roads and surface rails of urban mass transportation systems damaged by 1977–78 winter weather. (HR 10979)

Highway Funds

Both houses passed in final form a concurrent resolution directing the Secretary of Transportation to apportion highway sums authorized for fiscal 1979 for immediate expenditure on Interstate and Defense highways. (H. Con. Res. 282)

Federal Highway Obligations

The House passed a bill limiting obligations for federal-aid highways and highway safety construction programs to $7,445,000,000 in fiscal 1978. (HR 7462)

AMTRAK Improvement Act

A bill in conference would authorize $755 million for the National Railroad Passenger Corporation (AMTRAK) for fiscal 1979, would prevent changes in existing routes until October 1, 1979 and would provide for a reexamination of the AMTRAK route structure. (S 3050)

Rail Passenger Service

Both Houses passed a concurrent resolution expressing the sense of Congress that AMTRAK is permitted but not mandated to provide rail passenger service sought to be discontinued by the Southern Railway Company. (HConRes 494)

Rail Commuter Service

A new law authorizes without new funding an increase to 80 percent (from 50 percent) in the federal share of assistance to certain commuter rail lines and eliminates a restrictive eligibility requirement. In addition, the law authorize $30 million for the program in each 1979 and 1980 with a 50 percent federal matching ratio and adds $20 million for other commuter rail lines not covered by previous law. (PL 95–187)

U.S. Railway Association

A new law authorizes $13 million in fiscal 1978 for U.S. Railway Association litigation arising from the reorganization of the bankrupt railroads in the Northeast and Midwest. (PL 95–199) A new law provides $13 million in new budget authority in fiscal 1978 for administrative expenses of the Association. (PL 95–282)

Rail Public Counsel

A new law authorizes $1 million in fiscal 1978 for the Office of Rail Public Counsel in the Interstate Commerce Commission. (PL 95–231)

Premium Payments by ConRail

Both Houses passed in differing forms a bill requiring ConRail to assume the obligations of the estates of certain insolvent railroads for medical and life insurance coverage of employees who retired prior to the date the assets of such railroads were transferred to ConRail. (HR 5646)

National Transportation Safety Board

The House passed a bill authorizing $16 million for the National Transportation Safety Board in fiscal 1979. (HR 12106)

Air Cargo Deregulation

A new law provides for deregulation of all-cargo air service, for 15 days notice to the public of new freight rates and passenger fares and for standby reduced air fares for older persons and the handicapped. (PL 95–163)

Air Cargo Service

A new law permits certified supplemental air carriers to apply for all-cargo certificates under the cargo deregulation program. (PL 95–245)

Federal Aviation Act Amendments

A new law clarified United States registration requirements for aircraft owned by United States and foreign controlled corporations. (PL 95–241)

FAA Authorization

The House passed a bill authorizing $85 million for Federal Aviation Administration research in fiscal 1978 (HR 3965); and passed a bill authorizing $78.47 million for research and development in fiscal 1979. (HR 11495)

Coast Guard Authorization

A new law authorizes $1.3 billion for the Coast Guard in fiscal 1978. The law also authorizes active duty personnel of 38,145 and provides for average military training student loads. (PL 95–61) A new law authorizes $1.4 billion for the U.S. Coast Guard for fiscal 1979. (PL 95–308)

Coast Guard Employees' Transportation

The House passed a bill authorizing transportation for Coast Guard employees to remote work areas. (HR 185)

AGRICULTURE

Emergency Agricultural Act of 1978

A new law authorizes the Secretary of Agriculture to increase target prices for wheat, feed grains or cotton for the 1978 through 1981 crops whenever an acreage set-aside is in effect, increases the maximum cotton loan level for those crop years whenever an acreage set-aside is in effect, increases the maximum cotton loan level for those crop years to 48 cents a pound (from 44) and revises the cotton loan formula. The Administration was expected to use its discretionary authority to increase the target price for wheat (the only announced set-aside crop) to $3.40 a bushel (instead of $3) for the 1978 crop. The law will provide farmers with an estimated $699 million in fiscal 1979 and $1.58 billion over five years. (PL 95–279)

Agricultural Credit Act

A new law expands eligibility and increases loan limits for Farmers Home Administration loan programs; establishes a $4-billion, two-year emergency economic loan program for farmers facing economic stress conditions and sets a $650,000-per-borrower combined ceiling for both programs; extends the Emergency Livestock Credit Act through fiscal 1979; and authorizes target price adjustments for rice on a basis comparable to authority for wheat, feed grains and upland cotton in the Emergency Agricultural Act of 1978. (PL 95–334)

Commodity Exchange Act Extension

A bill in conference would extend the Commodity Futures Trading Commission for three years at an estimated cost of $13 million rising to $16 million a year; provide for consultation with the Treasury Department, the Federal Reserve System and the Securities and Exchange Commission on the trading of futures in securities issued or guaranteed by the United States; add stronger anti-fraud and abuse provisions; and authorize state prosecution in federal courts for certain violations. (S 2391)

Food and Agriculture Act of 1977

A new $12 billion, four-year farm and food law adjusts price supports, increases the limitation on payments to individual farmers, establishes an on-farm grain reserve program, extends the Food for Peace program, makes major revisions in the food stamp program and authorizes a variety of farm and rural conservation programs. (PL 95–113)

Disaster Payments

A new law exempts natural disaster payments from the individual payment limitation for the 1977 crop of wheat, feed grains, upland cotton, and rice. (PL 95–156)

Deferral of Wheat Referendum

Congress enacted a law deferring a 1977 wheat marketing quota referendum. (PL 95–48)

Federal Crop Insurance Corporation

Congress enacted a law to increase the authorized capital stock of the Federal Crop Insurance Corporation from $100 million to $150 million. (PL 95–47)

Paperwork Reduction in Agricultural Census

The House passed a bill providing for a 40-percent reduction in farmers' paperwork for the 1979 agricultural census and expanding the census to smaller farms. (HR 7012)

Grazing Fee Moratorium

A new law places a one-year moratorium on any planned or proposed increases in public lands grazing fees to give Congress time to legislate a grazing fee formula equitable to both the United States and public grazing lands lessees and permittees. (PL 95–321)

Public Range Lands Improvement

The House passed a bill that would authorize $360 million for a twenty-year public rangeland improvement program, establish on a 7-year trial basis a fair market value grazing fee formula which is tied to the costs of beef production and beef prices, and require adoption or humane destruction of excess wild horses and burros on the range. (HR 10587)

Federal Crop Insurance

A new law authorizes $200 million in capital stock for the Federal crop Insurance Corporation, an increase of $50 million, and authorizes a study of alternative insurance programs. (PL 95–181)

Timber Sales

A new law authorizes the Secretary of Interior to select the bidding method which best insures fair competition in the timber industry, economic stability for communities dependent on timber sales, and prevention of collusive practices. (PL 95–233)

FIFRA

A bill in conference would make major revisions in the Federal Insecticide, Fungicide and Rodenticide Act. The bill would expedite pesticide registration by EPA. It would aid small formulators by authorizing generic registration of chemicals. It would aid the industry by authorizing conditional registration under certain conditions which safeguard against risk to the environment. The bill would encourage research by allowing proprietary rights to manufacturers and formulators who develop safe and effective pesticides, and it would direct the Agriculture Department to give priority to research on biologically integrated alternates to pest control. (S 1678)

Forest and Rangeland Renewable Resources Research

A new law authorizes the Secretary of Agriculture to conduct forest and rangeland renewable resources research and to provide cooperative assistance for such research to states. (PL 95–307)

Renewable Resources Extension

A new law authorizes the Secretary of Agriculture to conduct a comprehensive extension program on forest and rangeland renewable resources in cooperation with state and eligible college and university officials. (PL 95–306)

Forest Service Volunteer Program

A new law removes the $100,000 annual authorization ceiling on payment of incidental expenses for the Forest Service's volunteer program (PL 95–289)

Cooperative Forestry Assistance

A new law consolidates into one statute authority for existing cooperative forestry assistance programs. (PL 95–313)

INDIAN AFFAIRS

Indian Claims Commission Act Amendments

A new law authorizes a U.S. Court of Claims review of a Sioux claim for interest on unlawfully taken lands in the Black Hills. (PL 95–243)

Wichita Indian Claims

A new law authorizes the Wichita Indian Tribe of Oklahoma and its affiliated bands and groups of Indians, to file with the Indian Claims Commission certain land claims against the Untied States. (PL–95–247)

Indian Business Development

A new law authorizes $14 million for each fiscal 1978 and 1979 for the Indian Business Development program established by the Indian Financing Act of 1974. (PL 95–68)

Siletz Indians Restoration

A new law restores federal recognition, services, and assistance to the Confederated Tribe of Siletz Indians of Oregon and its members. (PL 95–195)

Indian Claims

A new law authorizes $2.25 million for the Indian Claims Commission for fiscal 1978 and facilitates the transfer of cases from the Commission to the United States Court of Claims. (PL 95–69)

Indian Claims Statute of Limitations

A new law extends until April 1, 1980, the deadline for commencing tort or contract actions for Indian claims which accrued before July 18, 1966. (PL 95–103)

Water Rights for Ak-Chin Indians

A new law authorizes $43 million over five fiscal years for emergency and permanent water supplies of the Ak-Chin Indian community of Arizona in settlement of claims against the United States. (PL 95–328)

Zuni Indian Land Claims

A new law directs the Secretary of the Interior to purchase and hold certain lands in trust for the Zuni Indian Tribe of New Mexico and confers jurisdiction on the Court of Claims for Zuni land claims. (PL 95–280)

Navajo-Hopi Relocation Commission

The House passed a bill authorizing an additional $500,000 a year for the Navajo-Hopi Relocation Commission. (HR 11092)

American Indian Religious Freedom

Congress cleared for the President a joint resolution affirming the right of native Americans to exercise their traditional religions. (SJRes. 102)

Pascua Yaqui Indians of Arizona

A bill reported from conference would extend federal recognition to the Pascua Yaqui Indians of Arizona, including eligibility for all federal services and benefits provided to Indians, recognition of tribal powers of self-government, and reservation status for the Yaqui lands. (S 1633)

DROUGHT AND DISASTER RELIEF

Congress enacted four related laws authorizing $325 million and appropriating $275 million for drought assistance. Another law appropriated $200 million under a previous authorization for drought and cold disaster assistance.

Drought Emergency Relief

A new law authorizes $100 million in fiscal 1977 for water acquisition and other drought relief activities to mitgate the 1976–77 drought in several western States. (PL 95–18)

Community Emergency Drought Relief

Congress enacted a law authorizing $225 million in grants and loans to augment community water supplies in drought areas. (PL 95–31)

Two Appropriations Laws

The Supplemental Appropriations Act (PL 95–26) appropriates $100 million for the drought emergency authorization in PL 95–18, and the Economic Stimulus Appropriations Act (PL 95–29) appropriates $175 million for the community drought relief act. (PL 95–31)

Disaster Relief

Congress enacted an urgent supplemental appropriations law providing $200,000,000 under a previous authorization for disaster relief in several western and midwestern states suffering from drought or cold in 1976 and 1977. (PL 95–13)

Disaster Relief

A new law extends the Disaster Relief Act of 1974 through fiscal 1978 and authorizes certain drought assistance by the Corps of Engineers. (PL 95–51)

Disaster Relief

An emergency act provided $300 million for urgent disaster relief activities resulting from the severe weather conditions during 1977 and the winter of 1977–78. (PL 95–255)

SBA Disaster Loans

A new law provided an urgent supplemental appropriation of $758 million for Small Business Administration disaster loans which increased sharply in the wake of severe physical disasters in 1977 and 1978. (PL 95–284)

FEDERAL EMPLOYEES

Federal Life and Health Benefits During Retirement

The House passed a bill reducing from 12 to 5 years the length of service required to retain federal employee group life insurance and health benefits coverage during retirement. (HR 4319)

Restoration of Certain Annuities

A new law restores survivor annuities to certain surviving spouses of federal employees which were terminated because of the remarriage of the spouse before July 18, 1966, and the annuity of a surviving spouse of a Member of Congress who died before January 8, 1971, which was terminated because of the remarriage of such spouse. (PL 95–318)

Uniformity for Federal Employees Health Benefits

Both Houses passed in differing forms a bill providing that any contract under the Federal Employees Health Benefits Program shall preempt any conflicting state or local law. (HR 2931)

Hatch Act Reform

The House passed a bill to repeal the prohibitions on candidacy or campaign participation by most federal workers in partisan political elections. (HR 10)

Increase in Number of Hearing Examiners

A new law increases by 100 the number of hearing examiner positions which the Civil Service Commission may establish in grade GS–16. (PL 95–251)

U.S. Postal Service Arbitration Board

The House passed a bill to establish 3-member arbitration boards to consider disputes between the Postal Service and a supervisors' organization. (HR 7132)

Retirement Pay for Tax Court Judges

The House passed a bill permitting a United States Tax Court Judge to choose between the Tax Court retirement system and the civil service retirement system. (HR 8811)

Civil Service Retirement Credit for Japanese-Americans

The House passed a bill authorizing civil service retirement credit for employees and Members of Japanese ancestry who were interned during World War II. (HR 9471)

Payments to Former Spouses

The House passed a bill authorizing the Civil Service Commission to comply with the terms of a court decree or property settlement in connection with the divorce, annulment, or legal separation of an employee who is entitled to payments under the civil service retirement program. (HR 8771)

Travel Expenses of Government Officials

The House passed a bill to permit a private foundation to pay or reimburse government officials for certain expenses of foreign travel under similar limitations as apply currently to expenses of domestic travel. (HR 810)

Civil Service Annuities of Federal Judges

The House passed a bill authorizing the discontinuance of civil service annuity payments to former federal employees who, in the future, are appointed federal judges and to permit election of survivor annuities for certain retirees. (HR 4320)

Part-Time Career Employment in the Federal Service

The House passed a bill requiring agencies to establish programs to increase part-time career employment in the federal service. (HR 10126)

Retired Comptrollers General

The House passed a bill providing for cost-of-living adjustments in the annuities of a retired Comptroller General and survivors. (HR 12196)

Survivor Annuity

A new law gives civil service annuitants a year after remarriage to elect a survivor annuity for the new spouse and eliminates the survivor annuity reduction made by an unmarried annuitant if the proposed beneficiary predeceases the annuitant. (PL 95–317)

VETERANS AFFAIRS

Veterans Education Benefits

A new law provides a 6.6 percent $510-million-a-year increase in education benefits to some 1.9 million veterans and dependents effective October 1, 1977. The law authorizes accelerated payments for veterans going to higher-cost schools; increases veterans' loan limits to $2,500 (from $1,500) per school year and liberalizes eligibility; authorizes for veterans who successfully complete their education programs a joint state-federal cancellation of up to two thirds of the loan to be applied against tuition-and-fee charges in excess of $700 per school term; extends loan entitlement for each of the two years following the 10-year delimiting period for veterans with loan eligibility; and makes Women's Air Forces Service Pilots (WASPS) of World War II and certain other civilian federal employees eligible for veterans benefits, provided that the Secretary of Defense determines that their service constituted active military duty and issues to each eligible person an honorable discharge. (PL 95–202)

Pension Improvement Act

Both houses have passed in differing forms a bill overhauling the veterans' and survivors' pension system, increasing the maximum pension for a veteran alone to $4,000 a year (up $1,600), providing an additional $804 a year for veterans aged 80 and older, improving benefits for survivors, providing for automatic cost-of-living increases on the same basis as social security and giving the recipient the full pension and social security increases, at a net cost of $730 million in fiscal 1979 and $2.6 billion by fiscal 1983. (HR 10173)

Veterans Compensation

A new law increases by 6.6 percent service-connected disability compensation and dependency and indemnity compensation for veterans and their survivors. (PL 95–117)

Veterans and Survivors Pension Adjustment Act of 1977

A new law increases veterans and survivors pensions by 6.5 percent, provide a 25 percent differential to World War I surviving spouses age 78 or older, and increases the limits on outside income which beneficiaries may re-

ceive and still be eligible for a full pension. (PL 95–204)

Veterans' Disability Compensation

Both Houses passed in differing forms a bill providing a 6.5-percent increase in service-connected disability compensation and dependency and indemnity compensation for veterans and their survivors. (HR 11886)

Disabled Veterans' Compensation

The House passed a bill changing to 40 percent from 50 percent the minimum disability rating necessary to qualify a veteran for additional compensation for dependents. (HR 11888)

Severely Disabled Veterans Compensation

The House passed a bill providing entitlement to a higher monthly aid and attendance allowance to severely disabled veterans in need of constant medical aid and attendance. (HR 11891)

VA Dependency and Indemnity Compensation Benefits

The House passed a bill providing that certain survivors of a veteran who was rated totally and permanently service-connected disabled for at least ten years would be entitled to dependency and indemnity compensation as though the veteran had died from a service-connected disability. (HR 11890)

Veterans Housing Improvement

Both Houses passed in differing forms a bill to increase the maximum VA home loan guaranty to $25,000, to increase housing grants for disabled veterans to $30,000 and to liberalize the mobile home loan program. (HR 12028)

Disabled Veterans Housing Assistance

The House passed a bill providing specially adapted housing assistance to veterans with a permanent and total service-connected disability due to the loss or loss of use of one upper and one lower extremity. (HR 7658)

Veterans Benefits Entitlement

A new law denies veterans benefits to certain Vietnam-era veterans with upgraded discharges unless a Discharge Review Board makes a separate recommendation. (PL 95–126)

Physicians and Dentists Pay Comparability Act

A new law extends through September 30, 1978, special pay and incentive pay to physicians and dentists in the Veterans Administration. (PL 95–201)

Eliminating Mobile Home Inspections by the VA

The House passed a bill eliminating the requirement for inspections of the mobile home manufacturing process by the Administrator of Veterans Affairs. (HR 4341)

Veterans Home Facilities

A new law authorizes $15 million for each fiscal 1978 and 1979 to revise the program of grants to states for construction, remodeling, and renovation of state home facilities for veterans. (PL 95–62)

Medical Services for Veterans in the Philippines

Both houses passed in differing forms a bill extending for 15 months through fiscal 1979 at a rate of $2.1 million per year authority to provide hospital care and medical services for certain Philippine veterans. (H.R. 5029)

Hospital Care for Certain Veterans

The House passed a bill continuing the authority of the Administrator to furnish hospital care to certain eligible veterans living in the two non-contiguous states or in territories, Commonwealths, and possessions of the U.S. on a basis equal to VA hospital care in the contiguous 48 states. (H.R. 12011)

VA Medical Facilities Acquisition

The House passed a bill revising procedures relating to the construction, alteration, and acquisition of VA medical facilities. (H.R. 5025)

VA Medical Services for Veterans in Hawaii and Alaska

Both houses passed a bill in differing forms clarifying a requirement that medical services continue to be provided on a fee basis to service-connected disabled veterans in Alaska and Hawaii. (H.R. 5027)

Automobile Assistance Allowance for Disabled WWI Veterans

A new law provides an automobile assistance allowance and automotive adaptive equipment to certain disabled veterans of World War I. (PL 95–116)

Veterans Compensation for Paired Extremities

The House passed a bill providing increased awards of service-connected compensation to certain veterans who have suffered the loss or loss of use of paired extremities. (H.R. 6501)

Veterans Readjustment Appointment Authority

The House passed a bill extending and expanding eligibility for Vietnam-era veterans readjustment appointments in the federal service. (H.R. 12353)

Plot Allowance to State Veterans Cemeteries

The House passed a bill providing a $150 allowance to any state or agency or political subdivision of a state in reimbursement for expenses incurred in the burial of veterans. (H.R. 12252)

Medal of Honor Recipients' Pension

The House passed a bill to increase from $100 to $200 the monthly rate of special pension payable to each person who has been awarded the Medal of Honor. (H.R. 11889)

DISTRICT OF COLUMBIA

Borrowing Authority for the District of Columbia

A new law provides the District of Columbia with authority until October 1, 1979, to borrow from the U.S. Treasury to finance capital projects. (PL 95–131)

Retirement Funds for D.C. Police and Firemen, Teachers and Judges

The House passed a bill to establish actuarially-sound retirement funds for D.C. police and firemen, teachers, and judges and to make certain changes in retirement benefits. (HR 6536)

Federal Payment for D.C. Water and Sewer Services

A new law provides for a revised system for the billing and collection of charges incurred by the federal government for the consumption of water and sewer services provided by the District of Columbia. (PL 95–122)

Pretrial Release or Detention in the District of Columbia

The House passed a bill to restrict the pretrial release or detention of persons charged with certain violent crimes in the District of Columbia. (HR 7747)

Air Space Use for Postal Conveyor

A new law permits the construction of a conveyor bridge across First St., N.E., to carry mail between the post office and Union Station. (PL 95–235)

D.C. Armory Board Fiscal Year Change

A new law allows the D.C. Armory Board (which manages both the Robert F. Kennedy Stadium and the D.C. Armory, to operate on a calendar year basis, rather than, as present, under a fiscal year as observed by other D.C. government agencies. (PL 95–185)

Revenue Bonds for Private Colleges and Universities

A new law expedites the revenue bond process for private D.C. colleges and universities, by allowing the proceeds from the bond sales to be remitted to the institutions without further legislative action. (PL 95–218)

Home Rule Charter Amendment for Initiative and Referendum

Both houses passed in final form a concurrent resolution approving an amendment to the District of Columbia Home Rule Charter to provide for initiative and referendum. (HConRes 464)

Home Rule Charter Amendment for Recall of Elected Officials

Both houses passed in final form a concurrent resolution approving an amendment to the District of Columbia Home Rule Charter to provide for recall of elected officials, except the Delegate to Congress. (HConRes 471)

District of Columbia Representation in Congress

The House passed a joint resolution proposing an amendment to the Constitution to provide to the citizens of the District of Columbia full voting representation in Congress, fuller participation in the election of the President and Vice President, and the right to participate in the process of amending the Constitution (HJRes 554)

Appropriations, fiscal 1979

First Rescission

A law rescinded $47,500,000 in fiscal 1977 contract authority for purchase, processing or transportation of helium. (PL 95-10)

Second Rescission

A law rescinds fiscal 1977 appropriations totaling $644 million, including $453 million originally intended for a new nuclear carrier and adaptation of an existing ship to nuclear arms and $143.6 million for military retired pay. (PL 95-15)

Third Rescission

A new law rescinds fiscal 1977 appropriations of $21,090,000 for foreign military credit sales and $75,000,000 for the General Services Administration Federal Buildings Fund. (PL 95-186)

Deferrals

The House passed three resolutions disapproving deferrals totaling $25.6 million for energy research and development programs and required the Administration to spend the money. (HRes. 305, 306, 307)

Deferrals

The House passed four resolutions totaling $38.8 million for energy research and development programs and required the Administration to spend the money. (HRes 851, 852, 853, 854)

First Rescission, Fiscal 1978

A new law rescinds fiscal 1978 appropriations and borrowing authority totaling $55 million, including $10 million in borrowing authority for the Federal Home Loan Bank Board, $40 million in appropriations for military assistance funds, and $5 million in appropriations for contributions for international peacekeeping activities. (PL 95-254) ●

PERSONAL EXPLANATION

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from New Jersey (Mrs. MEYNER) is recognized for 5 minutes.

● Mrs. MEYNER. Mr. Speaker, I regret that, due to illness, I was unable to be present for all of the legislative session of August 16, 1978. If I had been present, I would have voted as follows:

Rollcall No. 709: "No";
Rollcall No. 710: "Aye";
Rollcall No. 711: "No";
Rollcall No. 712: "No";
Rollcall No. 713: "Aye." ●

COMING EUROPEAN CURRENCY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 5 minutes.

Mr. GONZALEZ. Mr. Speaker, coming events cast their shadow before. In reading and looking through the 10 or 12 volumes of the collected speeches and addresses of President Eisenhower, you find no reference whatsover to the European Common Market and its formation, all of which transpired during the period of his regime. It was not until 1962 when President Kennedy had the GAT, or the General Agreement on Trade, in Paris, that we had the first significant information on the development of the European Common Market.

Likewise, recently in the conference in Bonn where the German leader actually took over the conduct of the conference, there was one last sentence to the agreements by the President and the others representing their respective countries meeting there which like the development of the European Common Market I predict will be a coming tremendous challenge to the United States. That was an agreement by which President Carter agreed to for purposes of developing a common currency for Europe.

Mr. Speaker, we are just on the threshold of beginning to see what that means and implies to the United States. Similarly, very few Americans paid attention to the last sentence of the recent Bonn agreement.

The acquiesence of the United States to a drive toward European currency integration may or may not have been essential, but it certainly will give great impetus toward that.

Unfortunately for Americans, we paid little attention to this and less to its importance. The world at large has not been blind to these events however, and this may account for the continuing fall of the dollar—a fall that is far below anything that economic events would justify.

Americans did not recognize the strength and vitality of the Common Market until it was fully developed, when our trade balance began to fall off into persistent deficit. When the Bretton Woods monetary system collapsed, it was as much due to the inability of American commerce to maintain a favorable balance against the Common Market and Japan as anything else.

At the time we were told that with dollar devaluation we would be more competitive and the balance would soon be restored. Nothing like that has happened; we are still in deficit, though the value of our currency has dropped steadily.

This suggests—to me at least—that our competitors have much greater economic strength than we are willing to recognize. Now that economic strength is about to get a powerful new impetus, in the form of a common currency.

Few recognize it, but the unique growth and power of the United States came about not just because we occupied an empty and rich continent. There was more to it than that. A key, maybe the key, ingredient was the fact that the Constitution struck down trade barriers between the States and established a common currency for the whole Federal Union. We had the first common market on Earth, a vast area that traded freely and used a single currency.

It was just in this century, and after World War II at that, when Europe caught on and started breaking down the trade barriers between countries. The result was nothing less than an economic miracle, one that grew up without our even recognizing it. Today Europe produces nearly as much of the free world's goods as we in the United States do. Their economic power very nearly matches our own. But few Americans realize this.

If the vast productive power of the Common Market is now augmented by a common currency, we will see another European economic miracle. The power of that trading bloc will increase dramatically, and with that increase will come a further decline in our own relative ability. Rather than being dominant, if we even can claim that we are today, we will become a junior partner on the world economic scale.

There is the danger that the world will split into three great economic blocs: the United States, Europe, and Japan, with the Pacific area. Suppose that these trading blocs begin to place restraints on trade; suppose that the United States would be powerless to prevent that. Where then would we be? We would be in a mercantilist world, a world poorer and more volatile than ever before.

Possibly all this lies far in the future. Possibly there is nothing to be concerned about. But it is astonishing that we pay so little heed to the world's greatest economic events, which in turn have such fundamental impact on what happens to ourselves, and what will happen to our country.

How many Americans truly understand how great the economic power of Europe has become? How many Americans even know the importance of currency integration to the development and vigor of basic trade and commerce?

Ordinary citizens who are not touched by the world of international commerce, except as consumers, might be forgiven if they do not know these things or recognize their import. The real question is how well our national leaders understand these things, and how well they are prepared to deal with the consequences.

If the Common Market could grow up to full strength and maturity without once ever being publicly mentioned by President Eisenhower, it is not unreasonable for me to wonder if similarly, equally enormous events could also escape the notice of our national leadership today. I fervently hope that this is not so; and yet, despite all the exhortation about the declining dollar, I see very little evidence that basic trade issues are being treated with anything other than similar, and equally ineffective cosmetology. The times demand more than that. History is an impatient teacher.

IN SUPPORT OF THE EQUAL RIGHTS AMENDMENTS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida (Mr. PEPPER) is recognized for 5 minutes.

● Mr. PEPPER. Mr. Speaker, this past Tuesday, August 15, I had the pleasure of listening to my colleagues debate the pros and cons of extending the deadline for ratification of the equal rights

amendment; and the arguments had a familiar ring to them, as if I had heard them before.

Thirty-five years ago during the 1st session of the 78th Congress (January 1943) as a Member of the Senate I cosponsored Senate Joint Resolution 25, "An amendment to the Constitution of the United States relative to the equal rights for men and women," along with Mr. Gillette and a number of my other distinguished colleagues in the Senate. As I rose in support of the resolution that day, I told my peers, "Women are entitled to enjoy all rights equally with all human beings, and that sex is not a sufficient line of demarcation for different rights." Today I say the same thing.

Two years later in the 79th Congress I again cosponsored, along with a number of my colleagues in the Senate, Senate Joint Resolution 61, "A proposed constitutional amendment providing equal rights for women and men." A year later in July of 1946 that resolution came to full debate. The beginning of the amendment began:

Equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex.

I shared the following with my colleagues as I now share with you:

Is there anything extraordinary or revolutionary in that concept? Does anyone wish to stand up in the Senate or anywhere else and say that women, because they are women, should be discriminated against in respect to the enjoyment of civil rights?

Today I say the same thing.

Needless to say that proposed amendment, along with another attempt in the 80th Congress never got beyond the floor of the Senate. That was over 30 years ago. Today I feel privileged and honored that as a Member of the House of Representatives we have passed this so very important resolution; and to my colleagues in the Senate I say today as I said 32 years ago in that Chamber: (This constitutional amendment) "was intended to give, and in my opinion would be construed to give, to the wife, to the girl, to the woman, the same privilege, the same right, in that sense the man has. In doing that it is simply lifting the dignity of woman up from inferiority to equality, it is raising her from a position of servility and subordination to equality, to the same plane with man."

I will not ask to incorporate into the RECORD all my speeches in support of equal rights for women, but the first speech that I made in support of this amendment in the Senate back in January 1943.

Mr. PEPPER. Mr. President, I regret very much that the very few remarks I shall make should appear so proximate to contrary sentiments expressed by my distinguished colleague, for whom I have not only the greatest affection and deepest friendship, but to whose opinion I always very much defer. However, I cannot escape the conclusion that those of us who have advocated by our signatures the equal-rights amendment, which is now upon the desk and properly referred, as well as those who are favorably inclined toward it, advocate an ideal too long delayed, the complete emancipation of women.

The whole question of the evolution of human rights is a matter of interesting historical trend. There was a time when men were not regarded as entitled to many privileges or prerogatives, and protected by few immunities, if they happened to be men of poverty or without estate. I have read that at the time of the French Revolution in France it was permissible for one of the grand gentlemen of France, a member of the nobility, on a cold morning's hunt to have the privilege of warming his feet in the bowels of not to exceed two peasants.

We all know what great progress was made in the protection of human rights when the Magna Carta was promulgated.

There was a long time in this country when able, earnest, and honest men and women opposed the extension of the suffrage to women because they really thought that association with politics would contaminate women and to subject women to such taint was unworthy of men.

I remember very distinctly a clever gentleman who was later in the Senate, making a remark in my high school, when I was a high school student, when he spoke against woman's suffrage, to the effect that John was a suffragist and Mary was a suffragette, and they were both suffering it. Those were just a few of the sentiments of ridicule and scorn which were hurled at those who advocated what we all now take as a matter of fact and right, and the right of women to vote.

I feel, therefore, that the trend toward women enjoying equal rights has progressed until today they are entitled to enjoy all rights equally with all human beings, and that sex is not a sufficient line of demarcation for different rights. There may be instances where there would be a difference in duties, but that will depend upon the ability of the person or persons affected to perform the obligation required, not to their rights equally to share and to enjoy the benefits which are derived from citizenship and equality due to all.

When the Declaration of Independence was written, and those moving words that "all men are created equal" were incorporated therein, to lift the hopes and the hearts of the oppressed everywhere in the world, I do not believe that Thomas Jefferson was thinking only of mankind which happened to be masculine in sex. I think he spoke about human beings, and therefore that it is in accordance with the principles of the Declaration of Independence to say that women are born equal with men in the rights of citizenship and civil prerogatives.

I hope, therefore, that this may be the last hurdle which it will be necessary to surmount; that the race to bring equality, complete freedom, independence, and liberty for women shall at long last be won.●

OPPOSITION TO COMMERCE DEPARTMENT PROPOSAL TO CHANGE CRITERIA FOR DESIGNATING SMSA'S

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. AMBRO) is recognized for 5 minutes.

● Mr. AMBRO. Mr. Speaker, late last week, I was startled to discover that some rather innocuous sounding regulations published in the Federal Register on June 22, 1978, dealing with standard metropolitan statistical areas (SMSA's) were actually a far-reaching set of new criteria by which these geographical areas would be categorized after the 1980 census. In truth, hundreds of communities would be effected by these changes. While I must admit to having a vested interest in this proposed change, because my own area—the Nassau-Suffolk, N.Y., SMSA—would be abolished as a separate entity and would instead be folded into the already huge New York City SMSA, I think that the implications across the entire Nation are of such a magnitude as to require extensive further study in the future and an immediate halt in the regulations—changing procedure for the present.

By changing the definition of SMSA's hundreds of localities would be either included or excluded from the boundaries of dozens of old and new statistical areas. While this might seem like a minor technical adjustment, it involves a major alteration in the way in which the Federal Government and countless private organizations collect and organize their data affecting everything from Federal grants-in-aid to advertising rate schedules.

It is my understanding that these regulations have been undergoing in-house consideration in the Commerce Department's Office of Federal Statistical Policy and Standards since early 1976. Frankly, I am at a loss to understand the Commerce Department's haste. If, indeed, they are not to take effect until after the 1980 census, then why do we not wait until after the decennial enumeration has been completed and analyzed—probably sometime in 1982—so that we are in a better position to determine just what criteria ought to govern the designation of an SMSA in the 1980's. Something that seems important today may becloud the picture 4 years from now.

Mr. Speaker, yesterday, I joined with my colleagues of the suburban caucus and others concerned about these proposed regulations in a letter to President Carter suggesting that he call a halt to this premature alteration of the SMSA regulations. It is my hope that the President will listen to our arguments and will render a decision to halt the change in criteria.●

SECTION 1903(g) OF TITLE XIX OF THE SOCIAL SECURITY ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Colorado (Mr. WIRTH) is recognized for 5 minutes.

● Mr. WIRTH. Mr. Speaker, I thought the following exchange of letters would be of interest to the Members.

AUGUST 16, 1978.

Hon. PAUL ROGERS,
U.S. House of Representatives,
Rayburn House Office Building,
Washington, D.C.

DEAR PAUL: The Health Care Financing Administration recently notified me that Colorado may be penalized federal funding for its Medicaid program due to Colorado's alleged failure to comply with Section 1903 (g) of the Social Security Act. I consider such a penalty unwarranted and unnecessary at this time, for, to the best of my knowledge, Colorado is in compliance with the Medicaid program and has shown that it can and will comply with the provisions of

Section 1903(g). As the Chairman of the Subcommittee on Health and the Environment and a principal author of the Medicaid legislation, I think you would agree with me that the Department's interpretation of the statute is incorrect. Let me explain.

The problem grows out of the Department of HEW's interpretation of what a state would have to do to avoid the penalty prescribed in Section 1903(g). As you know, the Section requires each State to have an "effective" program of utilization control. An effective program must include an annual review of the care provided each patient in the State's Skilled Nursing Facilities, Intermediate Care Facilities, and Mental Hospitals. Additionally, each state must demonstrate every quarter to the Secretary the results of the utilization control program. HEW alleged that Medicaid reviews in Colorado were inappropriately performed during the first three quarters of 1977 and that to come into compliance with the statute, the State would have had to re-perform all reviews conducted during the first three quarters of the year.

My understanding is that the Congressional intent in passing PL95–142 was to require states to come into full compliance for inspections regularly scheduled during the last quarter of 1977. States which met this obligation would be free from the risk of penalties for the first three quarters of 1977. Assuming that a state also continued to comply after the last quarter of 1977, then no penalties would be necessary in the future.

The State of Colorado made the same interpretation of PL 95–142 as I do and was never informed of the contrary by HEW during 1977. Indeed, HEW, through its own action transmittal (HCFA A.T. No. 77–106) which was sent to each state, supports this interpretation. Therefore, the State proceeded in good faith with the inspections originally scheduled for the last quarter of 1977 and the first two quarters of 1978. These reviews were completed in an appropriate manner within the framework of the Act. The State has not gone back to re-do the earlier allegedly deficient inspections because of this understanding of the intent of PL 95–142.

Hoping you agree with me that the authors of this legislation would not have intended that a state be penalized under these circumstances, I propose that we submit this letter and one from you as an official exchange of correspondence for the record.

With best wishes,
Sincerely yours,

TIMOTHY E. WIRTH.

AUGUST 16, 1978.

Hon. TIMOTHY WIRTH,
U.S. House of Representatives,
Washington, D.C.

DEAR TIM: Thank you very much for your letter concerning the possibility of action by the Department of Health, Education and Welfare against the State of Colorado for alleged failure to comply with the provisions of Section 1903(g) of the Social Security Act. As an author of Section 20 of P.L. 95–142 relating to this section and the applications of penalties thereunder, I certainly agree with your interpretation that HEW action against Colorado under the present circumstances would be inappropriate and not in keeping with the intent of the law.

In passing Section 20 of P.L. 95–142, we meant to give States an opportunity to wipe the slate clean of all penalties which might otherwise be assessed under Section 1903(g) for quarters falling in 1977 if they conducted reviews of facilities in conformity with the requirements of the law in the fourth quarter. We certainly did not intend to require any State to review all facilities in the State in one quarter because the review done in the previous three quarters was in some way insufficient.

There can be no doubt that the penalty being considered now would be counterproductive and could seriously undermine the State's ability to administer a Medicaid program for its low income citizens. No one wants this to occur, and I believe it can and should be avoided.

I understand that Colorado is now in full compliance with the law, and was in compliance for all reviews conducted during the final quarter of 1977, and, therefore, it is my opinion that no penalty should be applied.

I gladly submit to the Record these remarks along with yours as an official exchange of correspondence.

Sincerely yours,

PAUL G. ROGERS, M.C.,
Chairman, Subcommittee on Health and the Environment.●

FRENCH NEWSPAPER RECONSTRUCTED AND FABRICATED ANDREW YOUNG INTERVIEW

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Arkansas (Mr. ALEXANDER) is recognized for 5 minutes.

● Mr. ALEXANDER. Mr. Speaker, last month when the uproar broke over the interview our Ambassador to the United Nations, Andrew Young, gave to a French newspaper I decided to try to find out for myself just what was said in that interview. It seemed the only fair and just thing to do. I would have wanted to do that even if Andy Young has not been my friend.

The outcome was that I obtained from the Department of State a transcription of the tape recording of the interview which was conducted in English. And, I made that transcription a part of the CONGRESSIONAL RECORD of July 24.

After the transcript appeared in the RECORD, one of our colleagues, the gentlelady from New Jersey (Mrs. FENWICK), raised a question about differences between its content and the content of a news article in the July 14, 1978, New York Times. The differences are substantial.

The Paris newspaper—Le Matin—translated the interview from English to French after which it misrepresented what Young said. The French Communist newspaper reconstructed and fabricated a story from the interview. The Associated Press translated this injustice to English. The New York Times compounded the situation by publishing the AP account in its prestigious newspaper. Andy Young, and the United States, were seriously damaged because of this outrageous misrepresentation.

The transcript and newsstory have been closely compared. I submit a copy of the Times account and relevant parts of the Young interview for your review and judgment.

I wanted to make my colleagues aware of the debate and of my correspondence with the Times because I would think any responsible, free news media institution would consider it its duty to correct such a miscarriage of justice. A copy of my letter to Arthur Ochs Sulzberger, Times publisher and to A. M. Rosenthal, executive editor, follows:

CONGRESS OF THE U.S. OF AMERICA,
August 15, 1978.

Mr. A. M. ROSENTHAL,
Executive Editor, The New York Times Co.,
New York, N.Y.

DEAR MR. ROSENTHAL: During the recent row over the alleged statements by United States Ambassador to the United Nations Andrew Young, I requested from the Department of State a transcription of that complete interview with Nina Sutton for Le Matin.

It was in the interest of providing my colleagues in the Congress with the opportunity of studying the full transcription of that interview that I subsequently inserted it into the Congressional Record. A copy of the section of the CR containing this reprint is attached (Attachment I). Following publication my attention was drawn to the fact that the transcript which I had received from the Department of State and the "Excerpts from Interview" which the New York Times published on July 14, 1978, under the headline "Young's Remarks to Paris Paper" are substantially different. The Times article was prepared by Associated Press, apparently.

I am advised that the interview between the Ambassador and Ms. Sutton was conducted in English and that the State transcript was made directly from the tape recording of that interview. The AP story notes that the interview was in English, that Le Matin translated at least portions of it into French and published them, and that AP then translated the Le Matin material into English for its own distribution.

The material in the AP story does not make clear whether Le Matin represented its material as an exact, sequential translation or whether the French newspaper condensed the material from the interview. A careful review of the transcript provided by State indicates that a non-sequential, inexact condensation of the actual remarks in the interview could have resulted in the "excerpts" included in the AP story which the Times published generating a misleading impression of what had been said in the interview. For reference, may I suggest that you compare the "excerpts" from the AP story and from the reprint of the official transcript shown on Attachment II of this letter.

Assuming that the transcription provided by the Department of State is an accurate representation of the interview, the image that you have presented of Andy Young has resulted in a miscarriage of justice which I would think that any responsible, free news media institution would consider its duty to correct.

Have the appropriate officials of your organization reviewed the official Department of State transcription of the interview, comparing it with the AP transmission printed in the Times and the whole of the articles published by Le Matin? If so, what conclusion or conclusions have been reached? And, may I ask, what do you plan to do about it?

With kindest regards, I am
Sincerely,

BILL ALEXANDER,
Member of Congress.

YOUNG'S REMARKS TO PARIS PAPER

EXCERPTS FROM INTERVIEW

Question: How do you explain the opening of the trials of Scharansky and Ginzburg on the eve of a Vance-Gromyko meeting?

Answer: Oh, it's certainly a challenge, a gesture of independence on their part. But that will not prevent them from pursuing the SALT negotiations. And then, one doesn't know what can happen to the dissidents. After all, in our prisons, too, there are hundreds perhaps even thousands of people whom I would call political prisoners. Ten

years ago I myself was tried in Atlanta for having organized a protest movement. And, three years later, I was a Georgia Representative. It's true that things do not change that quickly in the Soviet Union, but they do change.

Q: But one cannot compare the two systems . . .

A: I do not agree that these systems should be considered as opposing each other. Take the United States, for example. The society of today has nothing in common with the pre-Roosevelt one. In the years 1930–40 the trade union movement launched a radical revolution in American life, a revolution without which we certainly couldn't produce nine million automobiles a year today. In the 1950's there was a revolution of civil and racial rights. Today it is women who are participating more and more in our economy. And this constant evolution is the rule everywhere. I think the current Soviet dissidents could well be the salvation of the Soviet Union. They are a natural development of Soviet society, but the leadership has not yet realized it.

STATEMENT IN GENEVA

A lengthy interview has been excerpted to give an erroneous impression of my views on the trial of Mr. Anatoly Scharansky.

Let me assure you that I am fully in accord with the strong statements condemning the persecution of Soviet dissidents issued by President Carter and Secretary Vance and have actively supported the movement for universal human rights and freedoms and especially the cause of Soviet Jewry from my earliest days in the U.S. Congress.

Nor have I ever equated the status of political freedom in the United States with that in the Soviet Union. I know of no instance in the United States where persons have received penalties for monitoring our Government's position on civil or human rights.

Last June in Atlanta at a service of worship memorializing the Holocaust, I met the younger brother of Mr. Scharansky and I was greatly impressed by the courage and determination he expressed toward the pursuit of full cultural and religious freedom in his country. He said that Soviet citizens wanted and needed strong reactions from all freedom-loving people and praised the human rights concerns that we have expressed.

EXCERPT FROM CONGRESSONAL RECORD OF JULY 24, 1978

S: The strongest part of what you say is we don't have to compete with the Russians, we're better, have more to offer so let's not worry about what they do. What if you're right? Aren't you afraid that could lead to a very dramatic confrontation?

Y: No, I think we have been able to successfully avoid the confrontation because our restraint and our reasonable approaches to things have prevailed everywhere so far.

S: But the U.S. has more to offer.

Y: Not necessarily. The truth of it is in terms of natural resources yet to be developed, Russian has a tremendous amount. I think Russia's problems that we don't have are weather, and I think they haven't learned to master their bureaucracy as yet. And I am no authority on Russia, but I think for all the things that are wrong with the free enterprise system, one of the things that is right about it is it provides for rapid changes in producing things more efficiently.

Our system maximizes efficiency and their system, I guess, gets encumbered with bureaucracy.

S: OK, what you are telling me is the Russians will be OK once they understand our way of doing things and they can catch up with us peacefully, but that in other words, they have to destroy their own society in order to be competitive.

Y: No, they don't have to destroy it because I think that there is a kind of bureaucracy in the Japanese too and the Germans have been very rigid and bureaucratic in the past. They've got to find a healthier mixture just like I think we've got to find a healthier mixture to provide more government response to the problems of unemployment and inflation and more particularly, I think there has got to be more government involvement in our economy as we become more and more export-oriented.

Y: Our free market system was perfectly adapted for the continental United States. But as we start having to compete with the Japanese and the Germans and everybody else, we are going to have to do a little more for our businesses to help them function abroad. We're going to have to do a little more for American citizens working abroad. I resist this competition between systems. The United States as it was prior to Franklin Roosevelt just doesn't exist any more. The trade union movement in the 1930s and 1940s made a radical revolution in American lifestyle. And without the trade union revolution, we wouldn't be able to produce approximately nine million cars. In the 1950s and 1960s, we had a civil rights revolution and that has produced another whole qualitative difference in the American life and politics. In the 1970s, you had women becoming much more aggressive and involved in our economy. We have not yet been able to see the changes that that is going to produce. So, our system is constantly evolving just as their system is constantly evolving. I think the present Soviet dissidents may turn out to be the salvation of Russia.

S: But listen, they are all going on trial, they are being dismantled.

Y: It was just ten years ago that I was on trial. I was on trial in Atlanta, Georgia, for organizing garbage workers and ended up spending fortunately not long in jail. And three years after that, I was the Congressman from the district. Now, in Russia things don't move that fast. In Russia, the dissidents are an intellectual and cultural elite who just happen to be Jewish.

S: What about the trade unions?

Y: They haven't emerged yet as far as the dissident movement. Down South in the 1950s, they used to try to say that we were Communists and that everything the civil rights movement did was communist inspiration. And the Russians are saying it's the influence of the Capitalists and the CIA. That's ridiculous. It's a natural progression in development of Russian society that they don't have sense enough to understand.

S: So, in other words, the present Russian policy is one being pushed against the wall and possibly leading to some very, very big conflict.

Y: I don't think so. Our relations are too good.

S: On what level?

Y: On almost every level except publicly, Vance and Gromyko meet every month.

S: Yes, but what about? Decide to judge Scharansky the day before they meet?

Y: Yes, but judging Scharansky is one thing that is probably an act of defiance and independence on their part but they will continue to negotiate arms limitations and there's no telling what's liable to happen. We still have hundreds of people that I would categorize as political prisoners in our prisons. Maybe even thousands, depending on how you categorize them. During the war in Vietnam, whenever there was domestic pressure, most of these young people who went to jail for conscience were political prisoners. Where they had good legal assistance most of the time they got free. Our political system, especially our court system, does have a great deal more flexibility in it, but you still have to fight for it.●

"LEGISLATION ON GROUND WATER: A NEGLECTED PART OF THE WATER CYCLE"

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. BROWN) is recognized for 5 minutes.

● Mr. BROWN of California. Mr. Speaker, today I am introducing legislation which addresses a problem of growing concern in the management of our environmental resources. The problem is the lack of consideration we have given to understanding, planning and managing our ground water resources throughout the country. This legislation is an outgrowth of several years of interest, and extensive efforts over the past year by the Subcommittee on the Environment and the Atmosphere of the Committee on Science and Technology, which I chair.

Ground water is a major source of water supply in the United States, supplying approximately 24 percent of all fresh water used, 95 percent of the total domestic, agricultural and industrial needs of the rural population and 50 percent of all water used for agriculture, serving 48 percent of the total population.

There is inadequate information about the ground water resource, leading to increased importance of the socioeconomic impacts resulting from contamination and closing of wells. Although considerable progress has been made in the understanding of water shortage and movement in aquifer systems, there is inadequate technical data and other information about ground water resources—information which is needed to make sound decisions with regard to its management. Much needs to be done to fully understand the physical and chemical processes involved in the changes of water quality that take place within the aquifer. Detailed measurements and knowledge of the interactions are essential in all aspects of ground water use and conservation.

Furthermore, the ground water resources is now experiencing a broad and growing focus related to prominent public issues, including among others pollution, energy, water supply, land use, waste disposal, and urban development. We believe that providing for the protection of the ground water resource, assuring an adequate supply of ground water of good quality, and increasing the efficient use of the ground water resource and its conjunctive management with surface water are essential to national economic stability and growth, and to the well-being of our people. We therefore maintain that the Nation's capabilities for technological assessment and planning and policy formulations for ground water resource and its conjunctive use with surface water must be strengthened at both the Federal and State levels.

Several Federal agencies conduct research on and have responsibilities re-

lated to ground water. It is noteworthy that 22 Federal agencies are spending a total of $225 million annually on water resources research, of which only $12–$13 million—less than 6 percent—is being allocated to ground water R. & D. This discrepancy between the vital importance of ground water resources to our Nation's well-being and economy, and the inadequate rsources allocated to ground water R. & D. is symptomatic of the broader issues associated with ground water.

Following an intensive period of subcommittee hearings and workshop, an informal interagency task force was formed to address these problems. The legislation which I am introducing today is largely a product of these initial efforts and is aimed at rectifying past and current dangerous trends toward fragmented and duplicative efforts by promoting and fostering Federal interagency coordination, transfer of technical information and assistance, training of professionals, and research and development in ground water.

Title I of the bill establishes an Interagency Coordinating Committee (ICC) with a strong mandate to produce a comprehensive Federal budget analysis of ground water R. & D. efforts, interagency coordination and prioritization of R. & D. issues, and a comprehensive 5-year plan for ground water R. & D. which is responsive to and consistent with the purposes of the bill. The involvement of users of ground water research results is insured by the establishment of an advisory council which would consist of scientists, the academic community, the private sector, State, local and regional government officials, and other interest groups concerned with ground water R. & D.

Title II is devoted to the important issue of technical information transfer and assistance. The active involvement of State and local government in the technology transfer process is viewed as an essential prerequisite to the success of such a program. The bill thus provides incentives to State and local government to induce their participation. The ICC, with the advice of the advisory council, is responsible for examining the technology transfer mechanisms which presently are scattered throughout universities, industry, and State and Federal agencies. The ICC is then to submit to Congress within 6 months its recommendations for improving existing technical information transfer mechanisms related to ground water.

Title III concerns itself with the issue of training and retraining of professionals in the broad range of subject areas associated with ground water. The National Science Foundation and other Federal agencies that might be designated by the President would carry out the provisions of title III, resulting in the promotion and development of skilled manpower needed in the area of ground water technology and management, including scientists, engineers, and technicians.

Title IV of the bill addresses extramural ground water R. & D. by authorizing the National Science Foundation and other agencies to manage grants and contracts addressing ground water R. & D. issues.

We fully recognize the intrinsic relationship between ground and surface water and that between water quality and quantity. The entire water resource program should, of course, be integrated. As I have cited previously, however, there is good evidence that ground water has been ignored in the past and is continuing to be ignored in the present. This legislation is the result of the subcomittee's deliberations on the subject, singles out ground water in recognizing the critical national value of this vital resource and providing remedies to past and present inadequacies in ground water research, development, and conjunctive use with surface water. Because of the severe lack of attention to ground water problems, a mere effort to urge more attention to ground water R. & D. at this late date would be insufficient. Rather, it is essential that ground water R. & D. be given the kind of attention mandated in this bill.

It is my intention to consider this legislation as a basis for action in the next session. We will continue to work with all interested persons in this endeavor and to make appropriate legislative changes, as we continue our efforts to address this important national issue.●

REGIONAL POWER POOLING

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Washington (Mr. MEEDS) is recognized for 5 minutes.

● Mr. MEEDS. Mr. Speaker, today, on behalf of eight of my colleagues from the Pacific Northwest and myself, I have introduced legislation intended to assure adequate future power supplies for the Pacific Northwest. The fact that this legislation is being sponsored by so many of the Members from the Northwest on both sides of the aisle testifies to our belief that this proposal is the long-sought answer to problems we all recognize in our area. Most importantly, this answer is without cost to the taxpayers of this Nation.

Mr. Speaker, this legislation will assure long-term regional power self-sufficiency for the Pacific Northwest; will preserve the preference clause for existing and new public bodies and cooperatives; will extend the benefits of low-cost Federal power to residential and family farm irrigation customers regardless of who serves them; will assure industries of long-term power supplies; will maintain the diversity of ownership of power facilities while achieving the benefits of a "one-system" regional approach; assure the maximum feasible use of conservation and of renewable resources before adding conventional thermal generating plants to the region's supply. Additionally it will provide a means whereby the public can participate effectively in the shaping of regional policies and programs, giving Congress the veto power over any future acquisition of power or adoption of major programs by BPA.

Mr. Speaker, the pathway leading to this comprehensive solution has been marked with difficulty and dissension. We began shaping legislation on this matter at the beginning of the 95th Congress. Hearings were held in Washington, Oregon, and Idaho on various proposals. Objection was raised to all the existing proposals based on their failure to provide real impetus for conservation. I concluded I would not support any legislation which failed to provide this focus. I am happy to inform my colleagues that the legislation we are introducing today not only provides impetus for conservation, it mandates conservation and assures the funds to pay for it.

The great benefit to the Nation in this legislation is that it is a regional solution to a regional problem. And that solution is effected without cost to the taxpayers of this country. By combining the marketing system of Bonneville with Federal and private dams and other facilities in a "one-system" approach, savings are effected which can be used to finance the benefits of this program. Direct service industries in the Pacific Northwest will pay considerably more for their power but they have enjoyed exceedingly low rates for many years. In return for substantially increased rates, the direct service industries will be provided what they do not now have, which is long-term certainty of their power supply.

Finally, Mr. Speaker, this proposal sets up mechanisms for much greater local public input in planning and programing. Lack of such mechanisms was one of the major objections to earlier proposals.

Mr. Speaker, this is a carefully considered and precisely balanced response to power problems in the Pacific Northwest. My colleagues from that area join me in urging expeditious handling and strong support of this legislation by all individuals and committees of this body.●

EXPORT-IMPORT BANK FINANCING NOTIFICATIONS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from North Carolina (Mr. NEAL) is recognized for 5 minutes.

● Mr. NEAL. Mr. Speaker. I call to the attention of my colleagues two communications from the Export-Import Bank which have been referred to me as chairman of the Banking Subcommittee on International Trade, Investment, and Monetary Policy. Pursuant to 2(b)(3) and 2(b)(3)(iii), respectively, of the Export-Import Bank Act of 1945, the communications notify Congress of proposed transactions to assist in construction of an ammonia plant in Trinidad and Tobago and to provide nuclear fuel enrichment services to Spain.

Section 2(b)(3) of the act requires the Bank to notify the Congress of proposed loans, financial guarantees or combination thereof in an amount of $60 million or more at least 25 days of continuous

session of the Congress prior to the date of final approval. Upon expiration of the period, the Bank may give final approval to the transaction unless the Congress dictates otherwise.

The Bank proposes to loan $66,170,000 to Fertilizers of Trinidad and Tobago Limited (Fertrin) to provide U.S. goods and services for the construction of a new plant to manufacture anhydrous ammonia. Fifty-one percent of Fertrin is owned by the Government of Trinidad and Tobago and 49 percent by Amoco International Oil Co. The Eximbank loan will facilitate $155,700,000 in U.S. exports and represent 42.5 percent of the total U.S. goods and services for the plant. Additional funds will be provided by private lenders and a cash payment by the purchaser.

The loan will bear interest at the rate of 8.375 percent and be repaid in 16 semi-annual installments beginning January 5, 1982. The first eight installments will be applied to repayment of the private financing and the final eight to the Eximbank credit. A commitment fee of 0.5 percent per annum will be charged on the undisbursed portion of the Eximbank credit.

I am inserting at this point in the RECORD the letter from the Eximbank pertaining to this transaction together with the accompanying materials and I welcome any comments any of my colleagues may wish to offer concerning this proposed loan.

EXPORT-IMPORT BANK
OF THE UNITED STATES,
Washington, D.C.

Hon. STEPHEN L. NEAL,
Chairman, Subcommittee on International Trade, Investment and Monetary Policy, Committee on Banking, Finance and Urban Affairs, U.S. House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: In accordance with Section 2(b)(3)(f) of the Export-Import Bank Act of 1945, as amended, I have reported to the President of the Senate and the Speaker of the House of Representatives on an application currently pending consideration by the Bank. I am taking the liberty of providing you with a copy of this statement.

Sincerely,

JOHN L. MOORE, Jr.

EXPORT-IMPORT BANK
OF THE UNITED STATES,
Washington, D.C., August 15, 1978.

The SPEAKER OF THE HOUSE
OF REPRESENTATIVES,
The Speaker's Room, U.S. Capitol, Washington, D.C.

DEAR MR. SPEAKER: Pursuant to Section 2(b)(3) of the Export-Import Bank Act of 1945, as amended, Eximbank hereby submits a statement to the United States House of Representatives with respect to the following transaction involving U.S. exports to Trinidad and Tobago.

A. DESCRIPTION OF TRANSACTION

1. Purpose

Eximbank has received a request from Fertilizers of Trinidad and Tobago Limited (FERTRIN) to assist in financing the export from the United States of goods and services of U.S. manufacture or origin required by FERTRIN for the construction of a new plant to manufacture anhydrous ammonia (Plant). The Plant is to be constructed at Point Lisas in Trinidad and Tobago and is one of several projects being developed to take advantage of the extensive natural gas reserves in the area.

The Plant will consist of a two train, 2,086 metric ton per day ammonia plant, plus ancillary equipment and systems. Construction is expected to be completed by mid-1981. The total costs of the Plant are estimated to be $250,000,000, of which 75% will be provided in the form of borrowings and 25% will be provided by equity contributions to FERTRIN from its two owners, the Government of Trinidad and Tobago (GOTT) and Amoco International Oil Company (Amoco).

Of the total estimated costs of the Plant, $155,700,000 represents the costs of U.S. goods and services. To meet the request of FERTRIN, Eximbank is prepared to extend a direct-credit of $66,170,000 to FERTRIN to assist in financing the export from the United States of the U.S. goods and services required for the Plant. Additional financing will be provided by private lenders.

2. Identity of the Parties

FERTRIN is a joint venture incorporated under the laws of Trinidad and Tobago for the purposes of the Plant and is owned 51% by GOTT and 49% by Amoco. Amoco is a subsidiary of Standard Oil Company of Standard Oil Company of Indiana.

GOTT and Amoco will enter into a cash deficiency and completion agreement with FERTRIN and Eximbank and the other lenders to the Plant whereby GOTT and Amoco will undertake, in proportion to their respective ownership interests in FERTRIN, to make up all cash deficiencies of FERTRIN required to complete the Plant and to cover all cash deficiencies in the operating costs of the Plant, including debt service to the lenders, until such debt has been paid in full. The undertaking of Amoco will be supported by a back-up undertaking of its parent company, Standard Oil Company of Indiana.

3. Nature and Use of Goods and Services

The principal U.S. goods and services to be exported from the United States for use in the construction and operation of the Plant will be piping and valves, tankage, piling, insulation, a boiler, heat exchangers, pumps and compressors, condensers, seawater pumps, refrigeration equipment, a demineralization plant, switchgear, transformers, instruments and engineering, design and construction services. It is anticipated that a wide range of suppliers located throughout the U.S. will provide the U.S. goods and services. The estimated value by category of the U.S. goods and services is set forth in Annex I to this letter.

The Pullman-Kellogg Division of Pullman Incorporated, Houston, Texas, has been designated as the prime contractor for design, engineering and construction. Technical leadership of the Plant will be provided by Amoco during the design, construction and start-up phases and for the first ten years of operation under a proposed technical assistance agreement.

B. EXPLANATION OF EXIMBANK FINANCING

1. Export Financing Support

The Eximbank credit of $66,170,000 will facilitate the export of $155,700,000 of United States goods and services. Although FERTRIN has indicated its preference to effect its procurement in the U.S., it has also made clear that, if Eximbank financing is not available, procurement can be accomplished from foreign sources. Any foreign procurement would be supported by the official export credit agencies of the exporting countries.

2. Impact of Imports on the U.S. Economy

The anhydrous ammonia to be manufactured by the Plant will be exported for agricultural and industrial use throughout the world. Approximately one-half of the anhydrous ammonia from the Plant is expected to be marketed in the United States. In evaluating the impact of these imports on the U.S. domestic economy, Eximbank has addressed itself to whether the net economic benefit to the United States resulting from Eximbank's financing of U.S. goods and services for the Plant is positive or negative. The net economic benefit measures the benefits gained by the U.S. from the jobs supported by the sale of U.S. goods and services to the Plant as well as any benefits gained from importing into the U.S. some of the output of the Plant, as compared to the potential costs to the U.S. of such imports. The economic analysis made in response to this issue strongly supports Eximbank assistance for the Plant.

U.S. suppliers estimate that the exports, excluding already manufactured components, would support the employment of some 2,200 American workers. Annual shipments of spare parts of approximately $5 to $7 million would support another 50 jobs a year (or a total of 400 jobs for the eight year repayment period of the Eximbank credit). The total favorable job impact should, therefore, reach approximately 2,600 jobs. Given the potential competition for this order from Europe and Japan, these jobs would very probably be lost to the U.S. if Eximbank financing support were not available.

The potential for adverse economic impact depends on the state of the world food and fertilizer markets in the mid and late 1980's when the Plant's output is expected to come on to the market. There currently is a substantial amount of excess ammonia capacity worldwide. Absent unusual incidents such as a drought, both the U.S. and world surpluses are projected to last into the early 1980's.

In times of a surplus, high cost producers are forced either to lose money or to shut down production. In this environment, producers who receive gas at a cost-of-extraction price have a decisive advantage. Only those U.S. producers who have long-term gas-purchase contracts entered into before 1970 have access to such low-priced gas. Other U.S. producers generally must pay approximately $2.00 per 1,000 cubic feet of gas (MCF). The Plant, however, will be able to purchase natural gas at a cost of $.25 per MCF and therefore be able to produce and sell ammonia in the U.S. at a price substantially less than that feasible for the U.S. producers. If there is still a surplus of ammonia during the peak years for the Plant (1985 to 1990), the product from the Plant probably would displace U.S. production. The present consensus forecast by experts in the field, however, calls for balanced markets by the mid-1980's; hence, there should be little or no adverse impact from the Plant. In such a situation, the net economic benefit to the U.S. would be a favorable job impact of over 2,000 jobs.

In addition, even if one assumes the worst situation, that is, the world surplus will continue throughout the 1980's and each imported ton of ammonia from the Plant will displace a ton of U.S.-produced ammonia, Eximbank's support will provide a net economic benefit to the U.S. of approximately 500 jobs. In the worst situation, the Plant would displace some 350,000 tons of U.S. ammonia production, or approximately 1.0 to 1.5 percent of expected U.S. ammonia capacity in the mid-1980's. This volume approximates the annual production of one 1,000 ton/day ammonia plant, which generally employs some 115 workers. As very few plants can profitably operate below 50 to 60 percent capacity, 350,000 tons of imports would probably put the workforce of slightly more than two plants out of work. Hence, the worst-case annual adverse employment impact is about 250 jobs. Using the projected production figures for 1981–89 and assuming a worst-case situation for each year, the total potential jobs displaced could come to some 2,100. As indicated below, however, even assuming the worst case, Eximbank's support produces a net economic benefit to the U.S. of approximately 500 jobs:

	Year											
	1979	1980	1981	1982	1983	1984	1985	1986	1987	1988	1989	Total
Jobs supported	1,100	1,100	----	50	50	50	50	50	50	50	50	2,600
Jobs displaced	----	----	125	225	250	250	250	250	250	250	250	2,100

If one assumes more likely conditions prevailing in the 1980's, Eximbank financing assistance supports over 2,000 U.S. jobs and offers the following other potential benefits for the United States:

The 350,000 tons of product imports would free 13.5 billion cubic feet of natural gas in the United States for higher priority uses. This volume of gas would heat a Northern city of 100,000 people through an entire winter.

Lower cost fertilizer enhances the price competitiveness of U.S. agricultural exports without impairing the financial health of America's farmers.

Lower cost food inputs could help alleviate some domestic inflationary pressures.

In sum, even in the worst-case situation Eximbank financing for the Plant should produce a net employment benefit to the U.S. Assuming a more realistic case, the employment benefits to the U.S. improve markedly. In addition, irrespective of the employment situation, Eximbank financing for the Plant offers other significant economic benefits to the U.S.

With or without Eximbank support and with or without U.S. procurement, FERTRIN is determined to construct the Plant. If Eximbank refuses to provide support for the U.S. goods and services, the Plant will be supplied by foreign exporters who will be supported by the official export credit agencies of the exporting countries.

3. The Financing Plan

Commercial banks are prepared to extend financing for this transaction without an Eximbank guarantee for a term not to exceed 7 years. In this transaction, there is a total term of approximately 11 years consisting of a three-year construction period and an eight-year repayment period. Thus, private financing is inadequate to meet the total financial requirements of the transaction and the Eximbank credit is necessary in order to generate sufficient financing for the U.S. exports.

The financing plan for the total U.S. goods and services of $155,700,000 is as follows:

	Percent of U.S. Costs	Totals
Cash payment	15.0	$23,360,000
Eximbank credit	42.5	66,170,000
Private credits not guaranteed by Eximbank	42.5	66,170,000
	100.0	155,700,000

The Eximbank credit will bear interest at the rate of 8⅜ percent, payable semiannually. A commitment fee of one-half of 1 percent per annum will be charged on the undisbursed portion of the Eximbank credit. The financing will be repaid in 16 semiannual installments beginning January 5, 1982. The first eight installments will be applied to repayment of the private financing and the final eight installments to repayment of the Eximbank credit.

Sincerely,

JOHN L. MOORE, Jr.

[Annex I]

Export-Import Bank of the United States
Re: FERTRIN
Estimated Costs of U.S. Goods and Services

Estimated U.S. costs including contingency and escalation

[In millions]

Major items:	
Piping and valves	$12.14
Tankage	3.43
Piling	2.65
Insulation	3.11
Boiler	2.18
Heat exchangers	9.65
Plate type (exchangers)	4.67
Pumps and compressors	3.89
Condensers	0.78
Seawater pumps	5.92
Refrigeration equipment	1.56
Demineralization plant	3.42
Switchgear and transformers	3.11
Instruments	3.58
Engineering and design	28.86
U.S supervision and construction technicians	15.54
Other	51.21
Total	155.70

SECOND COMMUNICATION

The second communication notifies Congress of a proposed transaction to provide nuclear fuel enrichment services to Spain. Section 2(b)(3)(iii) of the act requires the Bank to notify the Congress of proposed loans or financial guarantees for nuclear-related exports at least 25 days of continuous session of the Congress prior to the date of final approval. Upon expiration of this period, the Bank may give final approval to the transaction unless the Congress dictates otherwise.

The Bank proposes to extend an additional loan of $8 million and to guarantee $9 million to Iberduero, S.A., a privately owned utility, for purchase of nuclear fuel enrichment services required for reloads one and two of Lemoniz I Nuclear Power Plant. Eximbank has financed U.S. participation in the construction and operation of the plant and for the initial core fuel load. The enrichment service will be made within the framework of the bilateral "Agreement on Atomic Energy: Cooperation for Civil Uses."

The total cost of the services will be $20 million, with the Eximbank loan representing 40 percent, the Eximbank guarantee, 45 percent, and a cash payment the remaining 15 percent. Disbursements under the Eximbank credit will be an interest at the rate of 8 percent per annum. A 0.5 percent commitment fee will be required on the undisbursed portion of the credit, a guarantee fee of 0.75 percent on the disbursed portion of the private loans guaranteed by Eximbank and a 0.125-percent guarantee commitment fee on the undisbursed portion of the private loan guaranteed by Eximbank will be charged, all fees payable semiannually.

The Eximbank credit and the private loan will be repaid in five semiannual installments on a parri passu basis.

I am inserting the letter from the Eximbank pertaining to this transaction, together with accompanying documents, at this point in the RECORD and I welcome any comments any of my colleagues may wish to offer concerning this proposed loan.

EXPORT-IMPORT BANK
OF THE UNITED STATES,
Washington, D.C., August 15, 1978.

Hon. STEPHEN L. NEAL,
Chairman, Subcommittee on International Trade, Investment and Monetary Policy, Committee on Banking, Finance, and Urban Affairs, U.S. House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: In accordance with Section 2(b)(3)(iii) of the Export-Import Bank Act of 1945, as amended, I have reported to the President of the Senate and the Speaker of the House of Representatives on an application currently pending consideration by the Bank. I am taking the liberty of providing you with a copy of this statement.

Sincerely,

JOHN L. MOORE, Jr.

EXPORT-IMPORT BANK
OF THE UNITED STATES,
Washington, D.C., August 15, 1978.

The SPEAKER OF THE HOUSE OF REPRESENTATIVES,
The Speaker's Room, U.S. Capitol, Washington, D.C.

DEAR MR. SPEAKER: Pursuant to Section 2(b)(3)(iii) of the Export-Import Act of 1945, as amended, Eximbank hereby submits a statement to the United States House of Representatives with respect to the following transaction involving the export of U.S. services to Spain:

A. DESCRIPTION OF TRANSACTION

1. Purpose

On January 20, 1972 Eximbank authorized a direct credit of $143,614,000 to Iberduero, S.A. to facilitate Iberduero's purchase of goods and services from the United States for export to Spain for the construction and initial operation of Lemonix I and II Nuclear Power Plants and the initial core fuel load located near Bilbao. On June 9, 1977 Eximbank also authorized a direct credit of $3,200,000 to Iberduero to facilitate financing the U.S. costs of fabrication services of nuclear fuel reloads for Iberduero's Lemoniz I Nuclear Power Plant (reloads one and two) and Lemoniz II Nuclear Power Plant (reload one). Iberduero has now requested and Eximbank is prepared to provide financial assistance of $17 million in the form of a credit of $8 million and a guarantee of private loans of $9 million for the purchase of nuclear fuel enrichment services required for reloads one and two of Lemoniz I Nuclear Power Plant.

Exports of the enrichment services will be made within the framework of the bilateral "Agreement on Atomic Energy: Cooperation for Civil Uses" between the United States and Spain, and the trilateral agreement among the U.S., Spain and the International Atomic Energy Agency, relating to application of IAEA Safeguards. Both of these Agreements became effective on June 28, 1974, following consideration by the Congress under the provisions of Section 123 of the Atomic Energy Act of 1954. Prior to export, licenses must be obtained from the Nuclear Regulatory Commission with respect to individual sales of the enrichment services.

The nuclear fuel enrichment will be provided by the Energy Research and Development Agency of the Department of Energy at ERDA's Oak Ridge, Tennessee, facility pur-

suant to a fixed commitment, long-term contract with DOE. Under the contract DOE is to provide enrichment services over the operating lifetime of the Lemoniz I Nuclear Power Plant. Since this nuclear power facility has suffered delay in completion, Iberduero would take delivery of the fuel reloads sometime before they are needed. However, it is to Iberduero's advantage to take the enrichment services in accordance with the schedule of annual enrichment services in its contract with DOE in order to avoid very substantial cancellation penalties. Furthermore Iberduero will avoid an interruption of power generation by taking delivery of the reload fuel when available.

2. Executive branch approval

In accordance with established procedures, Eximbank requested through the Department of State the views of the Executive Branch on the proposed transaction. State's Bureau of Oceans and International Environmental and Scientific Affairs advised that the Executive Branch has no objection to Eximbank's proceeding with this transaction.

3. Identity of the borrower

Iberduero, S.A. was created in 1944 as a result of a merger of two electric utility companies. Headquartered in Bilbao, it is the largest electric utility and one of the largest privately owned industrial enterprises in Spain. The utility accounts for more than 20 percent of Spain's electricity sales.

B. EXPLANATION OF EXIMBANK FINANCING

1. Reasons

The Eximbank credit of $8 million and guarantee of $9 million will facilitate the export of $20 million of U.S. goods and services. Eximbank perceives no adverse impact on the U.S. economy from the export of these goods and services. This transaction will have a favorable impact on employment for United States workers, as well as on the United States balance of trade. The material to be exported is not in short supply in the United States.

2. The financing plan

The total cost of the United States goods and services to be purchased by Iberduero is $20 million which will be financed as follows:

	Amount	Percent of U.S. Costs
Cash	$3,000,000	15
Eximbank credit	8,000,000	40
Private loans guaranteed by Eximbank	9,000,000	45
Total	20,000,000	100

(a) *Eximbank charges.*—Disbursements under the Eximbnak credit will bear interest at the rate of 8.0% per annum, payable semi-annually. A commitment fee of 0.5% on the undisbursed portion of the Eximbank credit, a guarantee fee of .75% on the disbursed portion of the private loans guaranteed by Eximbank and a .125% guarantee commitment fee on the undisbursed portion of the private loans guaranteed by Eximbank will be charged, all fees payable semiannually.

(b) *Repayment Terms.*—The Eximbank credit and the private loan, which total $17 million, will be repaid by Iberduero in five semiannual installments on a *pari passu* basis.

Sincerely,

JOHN L. MOORE, Jr.●

THE NAZI NETWORK

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from New York (Ms. HOLTZMAN) is recognized for 5 minutes.

● Ms. HOLTZMAN. Mr. Speaker, a recent article in the Washington Post confirms something many of us have long suspected—that there is a secret Nazi underground which protects and supports former Gestapo and SS officers in South America. Shockingly, at the end of July, many of these war criminals met openly in Brazil to celebrate fascist dictator Benito Mussolini's birthday.

While we may not be able to control Brazil's policy of affording sanctuary to war criminals, we can take steps to deny them a haven in the United States. I have introduced legislation (H.R. 12509) to close a loophole in our immigration law which has existed since 1956 and which has allowed war criminals to come to the United States freely as visitors or permanent residents.

My legislation would bar Nazi war criminals and any others guilty of "persecution because of race, religion, national origin, or political opinion" from entering the United States and would authorize their deportation. This legislation, cosponsored by every member of the Immigration Subcommittee, was reported out of the full Judiciary Committee by an overwhelming bipartisan majority. I hope my colleagues will support its adoption when it reaches the House floor.

Mr. Speaker, the presence of Nazi war criminals in America constitutes the unfinished business of World War II. We must act swiftly and aggressively to deny those who have committed atrocities—both during the Nazi holocaust and under more modern regimes—from finding a haven in this country. After all, one Brazil is enough.

I commend this important Washington Post article to my colleagues' attention.

The text follows:

THE NAZI NETWORK—A BIRTHDAY PARTY FOR HITLER: THE BOYS ARE STILL IN BRAZIL

(By Larry Rohter)

ITATIAIA, Brazil.—*Die Kamaradenwerk. Odessa. Der Spinner.* For years, reports of a secret Nazi underground that shelters and supports former Gestapo and SS officials now hiding in South America have been commonplace, fed by best-selling novels and movies such as "The Boys From Brazil," "Marathon Man" and "The Odessa File."

Hard evidence, of course, has been more difficult to come by. But information emerging after the capture in South America of prominent Nazis such as Adolph Eichmann (Argentina, 1960) and Franz Paul Stangl (Brazil, 1967) has led investigators such as Simon Weisenthal to conclude that such a network does exist—and that it harbors some 8,000 to 10,000 Nazi fugitives.

The last time Alfred Winkelmann and his "friends of the 20th of April" got together at the Hotel Tyll here, their "celebration" of Adolph Hitler's birthday triggered an investigation that led to the arrest of an alleged Nazi war criminal: Gustav Franz Wagner, "the human beast" accused of supervising the extermination of over a million people as second-in-command at the notorious Treblinka and Sobibor concentration camps.

When police arrived on April 22 they found they had stumbled on to an international congress of Nazi and neo-Nazi organizations bringing together five groups from four nations.

The participants were questioned, photographed and released, and their private stocks of Nazi literature and emblems seized. One month later, Wagner, who had been identified in Vienna by Nazi-hunter Simon Weisenthal—mistakenly, as it turned out—as one of the participants at the Itatiaia conference, was arrested in Sao Paulo after 28 years at liberty in Brazil.

MUSSOLINI'S BIRTHDAY

That was "not the first time Nazis have met in Brazil," said Benno Milnitzky, president of the Jewish Federation of Brazil, "they have met here before, and they will meet here again."

This weekend, some of the same "friends" were again reunited at the hotel on the outskirts of this quiet mountain resort town 110 miles northwest of Rio de Janeiro. The occasion: July 29, a birthday shared by Benito Mussolini and Adaloisa Winkelmann, wife of the owner of the hotel.

Throughout the morning, a beefy man accompanied by a German shepherd straining at its leash patroled the front of the Hotel Tyll. Shortly before noon, identifying himself only as "Mr. Winkelmann's son-in-law, Magno," he ordered reporters to leave.

At his side, Frederico Eisendecher, identified as one of the participants in the April conference, flicked a whip nervously against his thigh. Suddenly, Magno's conversation was interrupted, as Eisendecher struck out twice with the whip, leaving two bloody marks on a photographer's arm, and uttered a command that caused the dog to leap forward and attack the half-dozen reporters, who withdrew to the edge of the road.

Hours later, Eisendecher and Alfred Winkelmann emerged from the hotel, dressed in identical dark blue uniforms. "This is a private meeting," Winkelmann announced. "So I am sure that you will understand it when I ask you to leave."

A photographer took a picture, and Eisendecher again erupted: "Swine, filthy bastards," he hissed, striking out wildly and lunging at the photographer. Winkelmann turned on his heel and returned to the Hotel Tyll's dining room, where stylized swastikas served as wall decorations.

"We are not Nazis," said Magno in parting, "and even if we were, it wouldn't be a crime. This is a free country, thank God."

SHELTER GROUP

"The Kamaradenwerk is anything but fiction," says Henry Sobel, a Sao Paulo rabbi who is one of Nazi-hunter Weisenthal's Brazil informants. "It is the international umbrella group that shelters all the subgroups and keeps them in touch with each other.

"Winkelmann's is one of the subgroups that exists in Brazil, but it is not the only one," adds Sobel. "There are other groups, more sophisticated more organized and more protected, that operate in the south and report, like the Winkelmann group, to the Kamaradenwerk command."

The head of the network is said to be Dr. Josef Mengele, whose experiments on prisoners at Auschwitz earned him the nickname "the angel of death." A Paraguayan citizen since 1959, owner of extensive land holding at Puerto Stroessner near Paraguay's borders with Brazil and Argentina, Mengele was named in a recent Amnesty International report as "technical adviser" to a government program described as designed to exterminate Paraguayan Indians.

Two other alleged Kamaradenwerk leaders, Kurt Manfred Richard Roeder and Hans Werner Shutte, were among the 16 people detained at Italiaia in April. Roeder, who fled West Germany last year after being convicted of illegal Nazi activity, has since surfaced in Chile. Shutte, named in the German press as one of the key figures in a neo-Nazi group called "The German Reich Liberation Movement," is back in Germany.

"South America is a Nazi's paradise," Weisenthal once said, years ago. Nothing that has happened since has made him change his mind, at least in regard to Brazil. "Brazil is

a virtual nest of Nazis," Weisenthal told reporters after Wagner's arrest in Sao Paulo was announced. "They just, slip right into the populace and make themselves right at home."

GERMAN IMMIGRANTS

Nazi activity in Brazil dates from the 1930s, when German bund groups sprang up in the far south of the country—Rio Grande do Sul, Santa Catarina and Parana. All three states had been settled largely by German immigrants, who founded cities with names like Blumenau, Westphallen and Novo Hamburg. To this day, there are areas in the interior of Santa Catarina where German is still the dominant tongue.

The existence of this large German-speaking colony made Brazil fertile ground for the Abwehr, the Nazi intelligence agency. Dozens of Nazi spies—including Alfred Winkelmann, who had entered Brazil in 1938, ostensibly as a salesman of military equipment—were arrested and imprisoned when Brazil joined the Allies in 1942. But after the war, a new wave of immigrants flocked to German-speaking enclaves in the south, including some 4,000 SS and Gestapo officers, concentration camp guards and Nazi officials, according to one Brazilian account.

The official Brazilian government attitude toward the Nazi and neo-Nazi presence has been one of unconcern. The justice ministry has ruled that meetings of Nazis are not illegal; and Col. Ruben Ludwig, press secretary to Brazilian President Ernesto Geisel and, like his boss, a South Brazilian of German descent, recently dismissed the Itatiaia gathering as "nothing more than a get-together of nostalgic old men."

Given this position, Nazi supporters here make no secret of their sympathies: Jose Luiz Deckmann, for example, openly displays and sells jewelry with Nazi motifs—including swastikas—at his ship in Rio Grande do Sul. Residents of Santa Rosa, also in Rio Grande do Sul, awoke one morning early this month to find a Nazi flag flying from the flagpole in the main square. And in nearby Ijui, members of a group that claims to be linked to Winkelmann have daubed slogans such as "Free Wagner" and "The Reich Shall Rise Again" on walls of schools and synagogues.

"The Nazi spirit is merely sleeping in a good number of the inhabitants of this region," one former Wehrmacht soldier now living in Santa Catarina told a Brazilian newsmagazine last week. "All it needs to be awakened is one intelligent leader."

NEW IDENTITIES

On Thursday afternoon, June 1, Gustav Franz Wagner sat in a reception room at the Sao Paulo headquarters of DOPS, Brazil's feared political police, his enormous hands, calloused and nicotine-stained, stabbing the air as he explained for the umpteenth time, in broken, German-accented Portuguese, how he got from Treblinka and Sobibor to the interior of Brazil.

Dressed in the same baggy gray pants and sweat-stained work shirt he had been wearing two days earlier, when, fearing that Israeli agents were on his trail, he had turned himself in to Sao Paulo police, Wagner had been handed over to the press for questioning. It is a common enough procedure in Brazil, but Wagner, a shambling giant of a man, clearly objected.

The story he told, after his initial reluctance to talk gradually melted away into indifference, was full of contradictions and gaps. But it offered a rare and tantalizing glimpse into how the international Nazi underground may operate.

"When the war ended, I was in Italy," he said. "I went back to Austria, and one day Stangl and I met at a park in Graz. We talked for a while, and Stangl told me that he was going to leave Austria, leave Europe, for someplace quieter."

The conversation ended with the penniless Wagner being asked by his former commander to come along. "Everyone has a friend, a man they can rely on to carry out a task for them," Wagner explained. "For Stangl, I was always that man."

After several days of "waiting for things to be arranged," the two set out for Salzburg, Austria. From there, Wagner said, they crossed the Alps on foot, so as to avoid problems with border guards at the Italian-Austrian frontier, and made their way to Rome by train.

First stop in Rome was the Vatican. Having been told that Caritas International, a Roman Catholic relief organization, was making passports available to displaced persons and refugees, Stangl and Wagner intended to assume new identities and slip away to some remote corner of the world.

"We had eaten and we were standing in line waiting to fill out some forms when a friend of Stangl's approached us. He told us that the Syrians were looking for ex-German army officers to train their new army."

At the consulate of the newly independent Arab state, Wagner said, he and Stangl were given Red Cross passports and a pair of plane tickets. After a stopover in Cairo, they proceeded on to Damascus, where they spent the next year.

"But then there was a change of government and the new president decided he wanted to use French soldiers, not German ones, to train the army," Wagner continued, "so the Syrians offered us money and passage out of the country." After contacting "friends" in the German colony in Damascus, Stangl told Wagner that it had been arranged for them to go to South America.

According to documents released by the Brazilian government after Wagner's arrest, the director-general of security in Damascus issued a "safe conduct" passport to Wagner on Nov. 22, 1949. Two weeks later, Wagner obtained a visa from the Brazilian legation in Beirut, and on April 12, 1950, after a long sea voyage from Naples aboard the Conte Grande, Wagner, still in the company of Stangl, disembarked under his own name in Rio de Janeiro.

"I used to go see Stangl at his house in Sao Paulo all the time," says Wagner. "Once I was even stopped on his doorstep by the police and asked to show my identification. But Theresa Stangl came to the door and told them I was a friend, and that was that."

The visits ended in 1967, when Stangl, by then an executive at the Volkswagen Brazil headquarters in a Sao Paulo suburb, was identified by a Jewish concentration camp survivor who had come to the plant looking for a job. Extradited to West Germany and convicted in Dusseldorf of war crimes on the basis of testimony given by Stanislaw Szmajzner, a Polish-born Jew and naturalized Brazilian citizen, Stangl died in a West German prison in 1971.

"When they arrested Stangl," says Wagner, "I wanted to give myself up. But my wife said to me 'don't be foolish, Gustav. If they want you, they'll come and get you.' "

POSTER OF HITLER

The host and his guests were singing the "Horst Wessel Lied" when police and reporters arrived at the Hotel Tyll at 6 p.m. on the evening of April 22. Their eyes were caught immediately by a poster of Adolph Hitler.

The poster was seized, as were the invitations that had been issued by Winkelmann. "As we did last year," said the invitations, "we cordially request your presence at the meeting of the friends of the 20th of April . . . also known as 'the meeting of the friends who have left from the same point of departure.'

"We will have announcements and news about emblems and titles of other circles of friends," the German-language document continued. "They, like us, wish to be not at last from yesterday, but rather the first for tomorrow."

To this invitation from "friends who have embarked from the same station," had responded members of groups as far-flung as the British Movement for Reich and Nation and the Argentine militia. More than half of them had departed by the time the police arrived, having had two full days to "exchange ideas about larger circles and important questions" at the Hotel Tyll.

The invitation had promised films, but there were none to be found. However, the collection of books and magazines it spoke of were there in abundance, including "Quotations from the Fuehrer" and "The End of the Lie of the 6 million," So too were records, "Flags on High" and "Song of Germany" among them.

Scattered among the rooms the "friends" had occupied were swastika decals and stickers with Nazi slogans, "*Kauft Nicht Bei Juden*" said one: "Don't Buy From Jews." "We Are Back: The Day of Vengeance Is Come" said another.

But for those who wanted even more variety in their choice of Nazi paraphenalia, there was also a catalogue, in German, issued by a supply house that declared: "Donations on behalf of our common struggle will be gladly accepted." The address: Post Office Box 55A, Liverpool, W. Va. 25257 U.S.A.●

DAY OF SOVIET SHAME

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. BLANCHARD) is recognized for 5 minutes.

● Mr. BLANCHARD. Mr. Speaker, August 21, will mark the 10th anniversary of the Soviet occupation of Czechoslovakia.

We commemorate this anniversary with sadness because freedom-loving Czechs and Slovaks still suffer under the yoke of Soviet domination. Since August 21, 1968, when Soviet forces, in flagrant violation of several U.N. charters, invaded Czechoslovakia, the day of occupation has aptly been called the "Day of Soviet Shame." For it was a day when the Soviets quite shamelessly violated specific international agreements, including even their own United Nations resolution, number 2131, by directly interfering in the domestic affairs of an independent and sovereign nation.

Yet, the Czechoslovakian's quest for freedom has remained strong even in the face of Soviet persecutions and violations of human rights. They have rallied against Soviet oppression by formulating a document, Charter 77, which is a direct appeal to the Soviet Government to abide by the provisions contained in the Helsinki Act, the U.N. Covenants and the Czechoslovak Constitution. The Czechoslovak National Council of America has learned that countless signatures are being added to this document every week by courageous Czechoslovak citizens from all walks of life. They continue to sign this document even as other signers have been punished by having their children denied the right to higher education.

We in the free world can do no less than to try to capture the same strength and spirit of these brave Czechoslo-

vakians and speak out, as they do, against the unjust and illegal occupation of their homeland. We must decry the so-called "Brezhnev doctrine" as a meaningless and baseless attempt to justify actions which are void of any legal or moral justification.

Again this year, I join with the many Czech and Slovak Americans in observance of this "Day of Soviet Shame." I urge my colleagues to also joiin in calling for an end to the illegal Soviet occupation of Czechoslovakia, and for a beginning of freedom and self-determination for the people of Czechoslovakia and all other peoples of Eastern Europe.●

PRODUCTIVITY: A CASE OF GROSS NEGLECT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. LAFALCE) is recognized for 5 minutes.

● Mr. LAFALCE. Mr. Speaker, on Tuesday, August 15, 1978, I held hearings in my Small Business Subcommittee on Capital, Investment and Business Opportunity on the subject of productivity, our national record in this field, and how this affects the small businessman. What I heard from the witnesses was fully anticipated, but nonetheless distressing: Our Federal Government is ignoring for all practical purposes one of the most potent weapons in the war against inflation; namely, increased productivity.

Witnesses from the Council on Wage and Price Stability, the General Accounting Office, and the National Center on Productivity and Quality of Working Life all confirmed the horrible record which the United States has had in the field of productivity growth during the last few years. Preliminary data for this year, according to the Council on Wage and Price Stability, suggest a productivity disaster. Not only have we not improved our productivity performance, we appear to have backtracked on progress made in the past.

The implications of this are staggering. The rate of our productivity growth affects our ability to compete in foreign trade markets, to build a stable economy, to reduce inflation, and to improve our standard of living. Without improvements in our rate of productivity, the wage-price spiral in which we currently find ourselves will continue and even escalate. Productivity represents the "underpinnings of the economic health of our country" and "without a concerted effort" to improve productivity "* * * we're not going to get anywhere," according to George Kuper, executive director of the National Center for Productivity.

Productivity growth in the manufacturing sector of our economy has not slipped as much as it has in other areas. Even so, compared to the other industrialized nations, we are at the bottom of the list in our rate of productivity growth.

So, even taking our best effort, we are terrible.

It is worth noting that the nations at the top of the productivity growth scale have national productivity centers. Both Japan and West Germany have such centers, and spend far more encouraging the growth of productivity than we do. And their successes are obvious. I find it ironic that these centers were established at the direction of the United States to enable the nations to qualify for financial assistance under the Marshall plan following World War II. During the years since World War II, the United States has made only half-hearted efforts to make productivity a national priority, and now, as inflation spirals higher, this administration proposes to let the National Center on Productivity go out of existence, with its programs being shifted to existing Government agencies under the Office of Management and Budget's coordination and policy determination.

Now, I am as much a supporter of cutting needless Government bureaucracy as anyone. However, with a subject as important as productivity, it is essential that there be a single Government office to focus national attention on the issue and efforts to improve it. The GAO recognized this fact in its May 23, 1978, report on productivity in the United States and the performance of the national center. It stated that the best way for the Federal Government to assist the private sector in improving our record would be through a central office, adequately supported by the administration and fully funded.

The administration proposal, I fear, will cause such a diffusion of responsibility and resources, that we will not have any effective policy insofar as improved productivity is concerned. Such gross neglect for one of the major elements of the inflation problem and its solution is unconscionable.

The suggestion that responsibility for coordination and policy be given to OMB will not work. This is not a condemnation of OMB or its personnel. Rather, the problem lies with the nature of the other tasks assigned to OMB and its ability to place sufficient emphasis on productivity to have any noticeable effect. OMB cannot have operational responsibility for one program when it is responsible for all the programs of the Federal Government. Something will always come in its way, whether it is the civil service reform bill, or the health, education, and welfare appropriations bill, or the foreign aid authorizations bill. You name it, something is always going to be moving that thing called productivity—which does not have any immediate consequences, but has tremendous long-range consequences—to the back burner.

This is understandable, but it must not happen. Productivity is not a glamorous issue. The impact of low productivity is not immediately felt, and thus it is extremely difficult to generate concern over the low rate of productivity growth or enthusiasm for those efforts which would improve it. Nevertheless, it must be done. We will suffer the consequences for years to come if we do not now attend to our slumping productivity rates. It is my sincere hope that the administration will acknowledge the seriousness of our present position, and take the necessary actions to cause a turnaround in our productivity decline.●

RAISE POSTAL SUBSIDIES TO KEEP RATES DOWN?

(Mr. WOLFF asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WOLFF. Mr. Speaker, the August 11, 1978, issue of the Christian Science Monitor carried a rather interesting article related to the U.S. Postal Service. It was authored by my colleague, Congressman JAMES M. HANLEY of New York, who serves as chairman of the House Subcommittee on Postal Operations and Services. I believe it fair to say that all of us are interested in the plight of the U.S. Postal Service and therefore I commend its reading to my colleagues.

RAISE POSTAL SUBSIDIES TO KEEP RATES DOWN?

(By JAMES M. HANLEY)

If the Postal Service is to continue as a viable communications system it must receive additional public service funding. If it does not, it will no longer be able to offer universal nationwide service at affordable prices. The problem is both as simple and as potentially disastrous as that.

Unfortunately, the Postal Reorganization Act of 1970 mandated the Postal Service to "break even" financially by 1984. This concept was based on the premise that a restructured, quasi-governmental Postal Service would somehow be able to change the negative financal posture that the Post Office Department had operated under for over a hundred years. Very simply, Congress set an unrealistic and unattainable financial goal for the Postal Service.

The Postal Service is first and foremost a public service entity and it, therefore, offers many services that are financial liabilities. It maintains thousands of rural post offices that will never turn in a profit. It delivers a letter going across this vast nation for the same price that it charges for a letter going across the street.

It delivers mail six days a week and in most areas of the country it still does this door-to-door. These are not luxuries. These are services that we have come to expect and rightly so.

However, in the last few years, the Postal Service, in attempting to cut costs, has threatened to close rural post offices and severely cut the number of delivery days. In addtion to this, since 1970 the Postal Service has dramatically increased postage rates.

In the last Congress, we responded to this unholy duo of rising postal rates and declining service. Congress passed and the President signed Public Law 94-421 which gave the Postal Service a billion dollars to help cover past debts. It also clearly stated that Congress intended to get back into the postal policymaking business by declaring temporary moratoriums on service cuts, rate increases and post office closings. This was a much needed influx of funds. However, it must be acknowledged that this legislation was only an interim solution akin to the little Dutch boy who fruitlessly attempted to stop a flood with one hand.

The Postal Service at the end of fiscal year 1977 had a deficit of $687 million. The Postal Service's equity of $1.7 billion in 1971 plummeted to *minus* $587 million by the end of 1977. The bulk mail system, costing nearly $1 billion and originally estimated to earn a return investment in excess of 30 percent, is now expected to earn a return of merely 3 percent, and even this may prove to be overly optimistic. Postal productivity has slightly improved—fewer employees are handling more mail—but since postal costs have increased from $9.2 billion in 1971 to approximately $17 billion in 1978, dollar effi-

ciency—pieces of mail handled per dollar spent—has declined sharply.

We cannot afford to ignore this situation any longer. Those who say that the Postal Service should be given more time in order to see if it can break even are living in a dream world. The time has come to take the blinders off and face up to our responsibility to the Postal Service and the American people.

The House of Representatives did just that in April when it passed H.R. 7700, the Postal Service Act of 1978, by a vote of 384 to 11. It received this broad support because it approaches postal problems in a frank and direct manner—recognizing that we have to pay a price for good postal service. This bill abolishes the "break even" concept by continuing the current $920 million annual public-service appropriation through FY 1984 and authorizing additional public service funds provided they are detailed by function by the Postal Service by Feb. 1 of each year. It would also provide for a congressional veto of nationwide service changes and the presidential appointment of the postmaster general.

All of these changes will result in a Postal Service that will be more responsive to the needs of the American people.

The Postal Service is the only arm of the federal government that touches the lives of each American on a daily basis. Surely, it is about time for Congress and the administration to recognize that the survival of a viable postal system is essential in a democratic society and that additional public-service funding is a small price to pay.

RECOMMENDATIONS AND AGENDA FOR CITIZENS FOR JOBS

(Mr. DELLUMS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous mater.)

● Mr. DELLUMS. Mr. Speaker, as job development is of pressing concern to the Nation, I offer the following report outlining a thoughtful proposal from some of my constituents for deriving a comprehensive jobs plan. We must remember that long-term employment cannot be created in a vacuum; every job in our economic system depends on other aspects of our society such as the careful use of our resources, the goodwill of our people, and the consideration of human values. Thus, I urge my distinguished colleagues to consider carefully the "Recommendations and Agenda for Citizens for Jobs" as a grassroots response to our need for the development of jobs in harmony with our ecological and social needs.

RECOMMENDATIONS

Nine hours of exchanges of information, opinions, and ideas by 115 people produced a series of recommendations predicated on the unmet employment needs of residents of West Contra Costa County and their desire to involve the entire community in solving the problem.

But first, a special note of thanks to the panelists and resource people!

Special thanks goes to the panelists and resource people who contributed so generously of their ideas and information. The general feeling was that time was too short and the hope was expressed that these persons will come individually to meetings of Citizens for Jobs, one of the co-sponsors of the conference, so that their ideas and thinking may be explored in more detail. Citizens for Jobs reviewed and approved the recommendations which appear below and invites all of you who are interested to the Thursday, April 6 meeting at 7:30 p.m. at the Community Involvement Center. There will be no other way in addition to this invitation to reach you, so we hope you will make note of it and come!

For those of you unable to attend the Conference, there follows a list of the panelists and resource persons to whom we are all indebted:

David McFadden, Mid-Peninsula Conversion Project; Judy Ann Miller, Director, Contra Costa Manpower Office; Linda Wells, Advocates for Women; E. J. Minnifield, Unemployed Person (chosen at random at Unemployment Office—and we are delighted to report that Linda Wells contacted him about an employment opportunity two days later!); Darrell Reese, Contra Costa County Central Labor Council; Paul Hughey, Contra Costa County Development Association; Nicholas Bevilacqua, Assistant to Congressman George Miller; Kenneth Salter, Humanist, San Jose State University, attorney, and author; Moderator, Cleatter Saul, Member, League of Women Voters; Jan Mowry, Job Development Specialist; Crista Getz, New Ways to Work; Tony Di Francesco, San Francisco State University Faculty; Marsha Allen, Enchanted Forest Owner-Operator; Jeanne Eger, Editor & Publisher, Point Counter Point; Silas Darden, Counselor, West County Re-entry Program, Inc.; Moderator, Evelyn Johnson, Member, League of Women Voters; Steve Schmidt, Director, Marin Citizens for Energy Planning; Phil Brubaker, Chevron, U.S.A.; Chuck Papke, Director, E. C. ology; Brent Stuart, Ecumenical Peace Institute; Chuck Lewis, Regional Planner, A.B.A.G.; Moderator, Rebecca Proehl, El Cerrito Crime Prevention Committee; Libby Gunn, Ex-Offenders Skill Bank, Oakland; Robert Gilley, El Cerrito Personnel Agency; Sandré Swanson, Assistant to Congressman Ronald V. Dellums; Robert Campbell, Richmond City Councilman and Businessman; Pearl Fong, Employer Services Representative, Employment Development Department Richmond Office; Moderator, Barbara Vincent, Member, League of Women Voters; and Recorder-Reporter Hope Scott, Friends Committee on Legislation. Dr. Frederick Feied, Humanist and Author, University of California at Berkeley led the sum-up session.

The recommendations appear on the next page!

RECOMMENDATIONS AND AGENDA FOR CITIZENS FOR JOBS

1. A Viable Community as the Basis for Job Certain: Major efforts should be made to coordinate the activities of labor, business, political figures and the community in West Contra Costa County to improve the prospects for employment here. The impetus should come from the community rather than from the outside.

The general atmosphere and needs of the community should be explored to provide a better "climate" for employment. Since World War II several areas in West Contra Costa County have been "urban staging areas" where people come from other parts of the country in research of better opportunity and then move away once they are in a position to obtain a better life. Also, some 50% of the people employed in WCCC live elsewhere, especially those with better jobs. Kenneth Salter, in his remarks, noted that there has been little change in this pattern as well as the high unemployment rate among residents since he left his work in the employment field here in 1968. Directly relating to this daily inmigration and yearly outmigration is the need for all kinds of housing and community identification that would hold people in the area.

A pilot project for neighborhood renewal should be designed and funding sought. Environmental and cultural innovations should be its basis as these would attract small new businesses.

2. New Occupations and New Channels to Existing Occupations: The main emphasis should be placed on creating new occupations in industry, business, and service and on providing new channels by which people can enter already-existing occupations.

Suggestions for CETA: To this end, priorities should be established for innovative CETA-funded positions which lead to placement in new occupations and filling existing openings. This, instead of dead-end "slot" filling which leave people on the street at the end of the CETA job. Such new occupations should be "internships" leading to "Certificates of Employability". (See under NEW JOBS below.) People should consciously be given the experience necessary to fill existing entry-level occupations now in heavy demand, such as office clerical work, and those which will open up as a result of industry coming into the area, such as those connected with the Port of Richmond. In this way local people could compete for openings.

New Channels to Existing Jobs: Offering employers temporary services and volunteer assistance as a way of entering permanent occupations in the private and public sectors were methods a number of participants had found to be practical.

An inventory should be taken to find out what "job applicant clinics" already exist and if more are needed and how they relate to what employers really want, not just stated needs.

Attempts should be made to deal with the "hidden" job market which includes an estimated 75 percent-80 percent of the available jobs and uses the services of employment agencies to screen applicants by means of "teaser" ads.

The question of whether basic education skills are being taught as effectively as they could be should be examined with the idea of promoting one-to-one teaching if that is found necessary for people over 18.

The whole question of entry-level and promotion from within should be examined and the concept in practice of career ladders should be promoted as opposed to bringing in people from outside to fill the better jobs. In-service training by employers and community colleges should be encouraged.

New Jobs in Existing Fields: It should be determined which supplies and equipment industry located in this area subcontracts for and ask that advertising for these be done locally so that local suppliers could bid for these contracts in competition with those outside the area. This process could help develop local small business & industry and in so-doing could solve some community problems. Chambers of Commerce and the Council of Richmond Industries should be approached with this idea.

Transportation systems should be explored. A small business to supply a jitney service (Walnut Creek has one) for increased mobility & reduced isolation & access to jobs as well as creating jobs was proposed. Richmond as a center for the expansion and development of fast rail service would create many jobs in building tracks and facilities to support such a service.

New Jobs: A need was seen for a barter service for skills & services. This could be funded until it is well established. Hobbies and crafts & special skills can be turned into occupations as an alternative to working in a "slot" provided by others. People need to be shown how this can be done. New occupations abound in the fields of energy conservation (informing people how to make "technical fixes"), recycling, one-to-one peer tutoring, pre-sale housing refurbishing (aiding the real estate industry), convalescent nursing home aides, information & referral services, paralegal services, housing rehabilitation, foster parenting skills, neigh-

borhood teen leaders, classroom teaching aides. All these are possibilities for on-the-job CETA training of people who would be trained for jobs in private as well as public jobs.

Sharing Existing Jobs and Changing Material Values to Cultural Values: A way to create more time for family and hobbies is to work less at some sacrifice in pay. Included here would be opposing mandatory overtime, a 30-hour work week, two persons sharing the same job.

3. Inventory Existing Employment and Training Services: The needs of the community for jobs and training should be surveyed and a rating made of existing manpower services to determine if improvements should be made.

4. Legislation: Support should be given to legislative attempts to oppose mandatory overtime (SB1295), transfer of funds from the military to the civilian sector (Transfer Amendment), and conversion from military production to civilian production as a means of creating more jobs, reducing inflation, and using our resources toward solving environmental, health, housing, and other problems. S. 2279, the Defense Economic Adjustment Act is a comprehensive national program for insuring that military cuts do not come at the expense of defense workers. Industries of West Contra Costa County should be inventoried with these ideas in mind.

5. Meaningful Jobs: In addition to creating new jobs that will be meaningful to the community, the need was expressed to make jobs more personally satisfying to the individual instead of having a person's life defined by a job he/she must have in order to exist.

Summing it all up: A lot of priorities need to be re-arranged! Putting our own community in order would also serve our ecological needs.●

WE ARE WASTING CONGRESSIONAL TIME

Mr. DANIELSON. Mr. Speaker, many of the Members are gravely concerned about the fact that the Congress appears to be falling behind in its work. That is not to say that the Congress is not working hard. I doubt that any Congress has worked harder than the 95th Congress. That is not to say that the Congress does not put in a full day of work—long hours. I doubt that any Congress has put in more hours of work per day of session than the 95th Congress.

We all work hard. We all work long hours. We are all about as busy as we can be. Yet the list of bills which await, require, and should receive floor action grows longer each day. And many of these are major bills, important bills, essential legislation. They are bills to which we have dedicated countless days and hours of committee hearings and markup.

It seems as if, as in the old saying, "the hurrier we go the behinder we get."

Something has to be done to correct this situation and to prevent it from destroying our system of representative self-government. This is an absolute must.

The Republic cannot survive many more years in which legislation upon which our system depends is spawned in a stampede rather than a deliberative parliamentary discussion.

I know not, Mr. Speaker, what the solution—or its component parts—will be. But there must be a solution, and there is no better time to commence the discussion than now—in the waning days of the 95th Congress and before the organization of the new Congress. It is certain that some changes in the Rules of the House will have to be made in order to bring about more efficient procedures, to improve the functioning of the House, and to avoid the governmental disaster which will ultimatly befall us if we do not win out in this challenge.

To start at the beginning, Mr. Speaker, we must, I repeat, must, devise methods of saving our one unalterable resource, our most precious resource—time. Our legislative problem and all of its subproblems have one common denominator—time.

The reason many items of important legislation languish at committee desks, on committee files, before the Rules Committee, on the Speaker's table, awaiting scheduling, and pending in conference, is simply that there has not been enough time, there is not now enough time, to give them the hearings, the mark-up, the debate, the consideration and the attention which they require and deserve. And the prospects now are that the 95th Congress will adjourn, sine die, with many important bills remaining to be considered and which will die with that adjournment. Along with that, America and the American taxpayers, will suffer the loss of valuable legislative time and effort. And our work will not be finished.

I submit, Mr. Speaker, that we should now commence discussions and debate as to how we can best streamline our procedure and make more effective use of our congressional resources.

How do we solve the problem of time, Mr. Speaker? We cannot create more time, and we appear to be using all that we have. The solution to our problem must contain changes in our procedures which will plug the leaks of our resources of time, for time is our most precious, our priceless resource.

Many aspects of our procedures would lend themselves to possible changes which would enable us to save time and thereby improve our performance.

SAVING TIME IN DEBATE

Some of my colleagues have agreed with my suggestion that perhaps a substantial savings of time could be achieved in debate.

DEBATING THE RULE

For example, in debating the rule under which a bill comes to the floor, we usually consume a full hour. Usually this is pointless since the rule itself is usually noncontroversial, and it is often approved by a unanimous vote or, at least, by an overwhelming majority. It would seem that debate on the rule could well be strictly limited to the merits of the rule, and that we could thereby save much congressional time which in turn would save money for the taxpayers.

GENERAL DEBATE—SPEAK ONCE

Time could also be saved in general debate and in debate on amendments if Members were limited to speaking one time only on each parliamentary procedure and if the extensions of "additional minutes" were curtailed or eliminated.

RULES LIMITING DEBATE

The Rules Committee would be well advised to consider granting rules from time to time which would limit the amount of time for debate on some or all amendments to a bill. At present, debate often goes on for hour after hour when nothing significant remains to be said.

THE ROLE OF THE RULES COMMITTEE

Increasingly I hear comments from Members that we spend too much time taking up bills that do not merit congressional consideration, bills which do not deserve the priority of congressional attention, while more important bills languish. Perhaps the Rules Committee could exercise a closer scrutiny over the flow of bills and perhaps screen out, or defer action on those of lower priority.

SELF-DISCIPLINE BY MEMBERS

In final analysis, it is we Members of the House who consume the time of the Congress.

For real and substantial progress to be made will require that the Members use self restraint and not abuse or over-use their privileges on the floor and in committee.

Oftentimes I, and others, have been embarrassed to be in committee, hearing witnesses who may have travelled across the country at great expense and inconvenience to themselves, only to have interruption after interruption in order that Members can respond to a vote to approve yesterday's journal or to go into the Committee of the Whole House.

I submit that that procedure is demeaning to the entire Congress and an affront to the American people who come to Washington to testify. In addition, it results in an inexcusable waste of everyone's time and money.

RECORDED VOTES—ROLL CALLS

This brings me to one obvious opportunity to save congressional time and the taxpayers' money. And with the savings in time perhaps we could consider some of the bills which now may die without benefit of a vote in the House.

I speak of our compulsive voting by recorded vote.

The Members should take note of our rapid increase in numbers of rollcalls. This is how they have increased from 1970 until June 30, 1978.

TOTAL NUMBER OF ROLL CALLS (INCLUDING QUORUMS)

1970—449.
1971—472.
1972—462.
1973—726.
1974—727.
1975—828.
1976—864.
1977—782.
1978—517 (through June 30).

These figures become more significant when we consider that during the current session of the Congress, through June 30th, 1978, we have run up these statistics:

Time in session: 515 hours, 14 minutes.

Time for rollcalls: 172 hours, 20 minutes.

Rollcalls as percent of time in session: 33.4 percent.

WHY 20 MINUTES PER ROLLCALL?

In computing time I have allocated 20 minutes to each rollcall since we must consider both start-up and closing time as well as the mandatory 15 minutes provided in the Rules.

Some may ask, how about the shortened rollcalls on suspensions? To which I reply that they, too, take longer than their allocated time. And, also, in assigning the 20 minutes I have not included the time spent on noticed quorums, of which there were 62 through June 30, 1978, consuming a total of 684 minutes or 11 hours and 24 minutes.

The average time of the noticed quorums was 11.03 minutes. Ten of them were converted to regular quorums. That time must be assigned to rollcalls.

TYPES OF ROLLCALLS

I have made a tally of the types of rollcalls and the days of the week on which they were made. Mr. Speaker, I am sure you will find it of interest.

For example, we approved the previous day's journal 15 times, at a cost of 5 hours, through June 30, 1978.

And do not forget, a vote on the journal is statistically as important as the vote on the HEW appropriations.

So far as our constituents will know, so far as the press is concerned in the stories on congressional performance, a vote is a vote is a vote. And a Member who chafes at responding to the tyranny of running for the floor every time a frivolous rollcall is ordered, does so at his peril, for the public does not know why he committed the sin of missing that vote, his opponent uses the missed vote as a weapon against him, and rating organizations, meaning well, consider it as a demerit even though the Member may have done something far more useful while missing the frivolous vote.

TALLY OF ROLLCALLS IN HOUSE OF REPRESENTATIVES (BY DAY OF WEEK), JAN. 19 THROUGH JUNE 30, 1978

Type of rollcall [1]	Monday	Tuesday	Wednesday	Thursday	Friday	Total	Time consumed [2] Hours	Minutes
Agreeing to a conference			1			1		20
Agreeing to a conference report		5	2	2		9	3	
Agreeing to the amendment	9	23	46	41	11	130	43	20
Agreeing to the amendments	1		5	6		12	4	
Agreeing to the resolution	14	13	15	9	6	57	19	
Approving the Journal	1	2	6	5	1	15	5	
Concur in Senate amendment 37 with amendment		1				1		20
Concur in Senate amendment to House amendment			1			1		20
Dispense further call of House		1	1			2		40
Motion to close conference				1		1		20
Motion to instruct conferees				1		1		20
Motion to limit debate			1	1		2		40
Ordering a second	3	4	5			12	4	
Ordering the previous question			1			1		20
Passage	12	14	15	19	8	69	23	
Quorum	17	14	17	16	3	67	22	20
Reading Journal in full		1				1		20
Recede and concur in Senate amendment 43			1			1		20
Recommit with instructions	3			2	2	7	2	20
Refer veto to Post Office			1			1		20
Resolving in committee	1	5	12	11	4	33	11	
Strike enacting clause				1		1		20
Suspend rules and pass	45	31	9			85	28	20
Table motion to reconsider			1			1		20
Table reconsider Journal vote		1	1			2		40
Table reconsider rescIving				1		1		20
Table to confer in Senate amendment with amendment		1				1		20
Table to instruct conferees				1		1		20
Table to recede and concur in Senate amendment 43				1		1		20
Total	106	116	144	116	35	517	172	20

[1] Vote descriptions and abbreviations are as reported in Member's individual voting record compiled by the Clerk of the House

[2] Time consumed is determined by using the conservative estimated average time of 20 min. per rollcall. This does no. include the time spent on notice quorums but only that time consumed once an official rollcall has been ordered.

HOW MANY ROLLCALLS ON A GIVEN DAY?

Sometimes, Mr. Speaker, we spend an unbelievable amount of time voting on a single day. Can it be that the future of the Republic depends on a proliferation of rollcalls? Here are some outstanding examples:

Date:	No. of Rollcalls
6–28–78	15
5–23–78	12
3–14–78	11
5–22–78	11
5–31–78	11
6– 1–78	11
6–14–78	11
3– 8–78	9
3–16–78	9
5–15–78	9
5–17–78	9
5–24–78	9
3– 7–78	8
3–13–78	8
5– 3–78	8
6– 5–78	8

5–25–78	7
6–13–78	7
6–22–78	7

ROLLCALLS BY DESCRIPTION

I have mentioned before, Mr. Speaker, that a recorded vote on approving the journal, or on going into the Committee of the Whole House, is the same kind of statistic as the vote on the HEW appropriation. Here is the list of rollcall votes by description through June 30, 1978:

ROLLCALL VOTES (JAN. 19, 1978, THROUGH JUNE 30, 1978) LISTED ALPHABETICALLY—ACCORDING TO VOTE DESCRIPTION

Roll	Date	Type of vote	Requester	Bill	Yea	Nay	Present	Percent Yea	Percent Nay	Day
181	780322	Agreeing to a conference	Yates	H.R. 6782	332	63		84.0	16.0	Wednesday.
175	780321	Agreeing to conference report	Allen	H.R. 5383	391	6		99.0	1.0	Tuesday.
12	780124	do	Ashbrook	S. 1585	401	0		100.0		Do.
148	780314	do	Burton, P	H.R. 3813	317	60	1	84.0	16.0	Do.
91	780228	do	Eckhardt	H.R. 3816	146	255		36.0	64.0	Do.
62	780215	do	Erlenborn	H.R. 4544	264	113	1	70.0	30.0	Wednesday.
283	780504	do	Findley	H.R. 6782	212	182		54.0	46.0	Thursday.
54	780209	do	Ketchum	H.R. 3454	333	44		88.0	12.0	Do.
212	780411	do	Ryan	H.R. 9179	216	185	1	54.0	46.0	Tuesday.
214	780412	do	Volkmer	H.R. 6782	150	268	1	36.0	64.0	Wednesday.
457	780614	Agreeing to the amendment	Anderson (Illinois)	H.R. 12935	235	150		61.0	39.0	Do.
456	780614	do	do	H.R. 12935	133	249		35.0	65.0	Do.
458	780614	do	Armstrong	H.R. 12935	214	159		57.0	43.0	Do.
102	780303	do	Ashbrook	H. Res. 1012	321	13		96.0	4.0	Friday.
387	780531	do	do	H.R. 12598	237	135		64.0	36.0	Wednesday.

See note at end of table.

ROLLCALL VOTES (JAN. 19, 1978, THROUGH JUNE 30, 1978) LISTED ALPHABETICALLY—ACCORDING TO VOTE DESCRIPTION—Continued

Roll	Date	Type of vote	Requester	Bill	Yea	Nay	Present	Percent Yea	Percent Nay	Day

71	780222	Table to recede and concur in Senate amendment 43.	Lloyd (California)	H.R. 9375	172	244	1	41.0	59.0	Do.

Note: The percentage of yea-and-nay votes has been figured on the basis of the yea-and-nay votes only and does not include those voting "present."

ARE THEY REALLY NECESSARY? ALWAYS?

Why wouldn't it be enough to have a voice vote now and then? It would save a lot of time and the national interest would not be imperiled. And think of the savings in congressional time and taxpayers' money.

Through June 30, 1978, out of 517 rollcalls, 450 were on "issues" and there were 67 regular quorums. Of the 450 votes on issues, the question carried 338 with 178, or 52.7 percent of the 338, passing with a vote of 90 percent or more.

This is the list and consider the notes at the end of the table:

ROLLCALL VOTES (JAN. 19 THROUGH JUNE 30, 1978) LISTED IN ORDER OF THE PERCENTAGE OF YEA VOTES (THIS DOES NOT INCLUDE THE 67 QUORUM CALLS)

Roll	Date	Type of vote	Requester	Bill	Yea	Nay	Present	Percent Yea	Percent Nay	Day

251	780425	Agreeing to the resolution	Horton	H. Res. 1049	39	356		10.0	90.0	Tuesday.
223	780413	Motion to close conference	Moffett	H.R. 5289	6	371		2.0	98.0	Thursday.

Note: The percentage of yea-and-nay votes has been figured on the basis of the yea-and-nay votes only and does not include those voting "present."

Percent voting yea	Number of rollcalls	Total rollcalls	Aggregate percent of rollcalls	Percent voting yea	Number of rollcalls	Total rollcalls	Aggregate percent of rollcalls
100	42	42	9.3	94	13	157	34.9
99	42	84	18.7	93	7	164	36.4
98	15	99	22.0	92	8	172	38.2
97	14	113	15.1	91	4	176	39.1
96	20	133	29.6	90	2	178	39.6
95	11	144	32.0				

There were 450 recorded votes (yeas and nays) plus 67 regular quorum calls, making a total of 517 rollcalls from January 19, 1978, through June 30, 1978. Of those 450 recorded votes, the question carried on 338, and was defeated 112 times. The chart above shows that 178 recorded votes carried by a percentage of yea votes of 90 percent or more. In other words, 39.6 percent of all recorded votes carried by 90 percent or more, and, of those votes where the question carried, 178, or 52.7 percent, were passed by a vote of 90 percent or better. Those 178 rollcalls cost 59 hours, 20 minutes, which is 11.5 percent of the total time spent in session by the House in 1978 through June.

LIMITING ROLLCALLS WOULD BE CONTROVERSIAL

My study makes it apparent that some Members apparently consider rollcalls to be more important than do others.

Some Members have requested a large number of rollcalls while others have requested none at all. Some Members are referring to the rash of rollcalls as being a "form of tyranny." I have heard one Member describe them as "the largest permanent floating filibuster in parliamentary history." Others consider them the building blocks of democracy. Everyone should be consulted before we make any changes.

Be that as it may, it is interesting to note that some Members regard rollcalls as more necessary than others, as is shown from the following:

GENERAL LEAVE

Mr. RUDD. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks, and include extraneous material, on the subject of the special order today of the gentleman from Virginia (Mr. WAMPLER).

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Arizona?

There was no objection.

CONFERENCE REPORT ON H.R. 8149

Mr. ULLMAN submitted the following conference report and statement on the bill (H.R. 8149) to provide customs procedural reform, and for other purposes.

CONFERENCE REPORT (H. REPT. NO. 95-1517)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 8149) to provide customs procedural reform, and for other purposes, having met after full and free conference, have agreed to rec-

ommend and do recommend to their respective Houses as follows: That the House recede from its disagreement to the amendments of the Senate numbered 1, 2, 3, 4, 5, 6, 7, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 55, 57, 59, 60, 61, 62, 63, 64, 65, 66, 67, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 115, 116, 117, 118, 119, 120, 121, 122, 124, 125, 126, 127, 129, 131, 132, and 133 and agree to the same.

Amendment numbered 8: That the House recede from its disagreement to the amendment of the Senate numbered 8, and agree to the same with an amendment as follows: In lieu of the matter proposed to be stricken out by the Senate amendment, insert the following: (at the time required under paragraph (2)(B) of this subsection).

And the Senate agree to the same.

Amendment numbered 40: That the House recede from its disagreement to the amendment of the Senate numbered 40, and agree to the same with amendments as follows:

On page 5 of the Senate engrossed amendments, strike out lines 5, 6, and 7 and insert in lieu thereof the following:

"(b) SANCTIONS.—(1) For so long as any person, after being adjudged guilty of contempt for neglecting or refusing to obey a lawful summons issued under section 509 of this Act and for refusing to obey the order of the court, remains in contempt, the Secretary may—

On page 5 of the Senate engrossed amendments, strike out lines 14 through 19, inclusive, and insert in lieu thereof the following:

"(2) If any person remains in contempt for more than one year after the date on which the Secretary issues instructions under paragraph (1)(B) with respect to that person, the appropriate customs officers shall cause all merchandise held in customs custody pursuant to such instructions to be sold at public auction or otherwise disposed of under the customs laws.

And the Senate agree to the same.

Amendment numbered 54: That the House recede from its disagreement to the amendment of the Senate numbered 54, and agree to the same with amendments as follows:

On page 8, line 24, of the Senate engrossed amendments strike out "$250" and insert in lieu thereof the following: "$500".

On page 9, line 5, of the Senate engrossed amendments, after the period insert the following: "If such officer determines that there was no violation, he shall promptly issue a written statement of the determination to the person to whom the notice was sent.".

And the Senate agree to the same.

Amendment numbered 56: That the House recede from its disagreement to the amendment of the Senate numbered 56, and agree to the same with amendments as follow:

On page 9 of the Senate engrossed amendments, strike out lines 15 through 21 and insert in lieu thereof the following:

"(1) GENERAL RULE.—Without regard to whether the United States is or may be deprived of all or a portion of any lawful duty thereby, no person, by fraud, gross negligence, or negligence—

"(A) may enter, introduce, or attempt to enter or introduce any merchandise into the commerce of the United States by means of—

"(i) any document, written or oral statement, or act which is material and false, or

"(ii) any omission which is material, or

"(B) may aid or abet any other person to violate subparagraph (A)."

On page 11, line 21, of the Senate engrossed amendments, after the period insert the following: "If such officer determines that there was no violation, he shall promptly issue a written statement of the determination to the person to whom the notice was sent.".

On page 12, line 2, of the Senate engrossed amendments, after the period insert the following: "Such person shall have a reasonable opportunity under section 618 of this Act to make representations, both oral and written, seeking remission or mitigation of the monetary penalty. At the conclusion of any proceeding under such section 618, the appropriate customs officer shall provide to the person concerned a written statement which sets forth the final determination and the findings of fact and conclusions of law on which such determination is based.".

On page 12, lines 6, 11, and 22, of the Senate engrossed amendments strike out "dutiable" and insert in lieu thereof "domestic".

And the Senate agree to the same.

Amendment numbered 58: That the House recede from its disagreement to the amendment of the Senate numbered 58, and agree to the same with an amendment as follows:

On page 16, beginning with line 13, strike out through line 5 on page 17, and insert in lieu thereof the following:

(f)(1)(A) Except as provided in subparagraphs (B) and (C), subsections (a), (b) and (c) (other than new subsection (e) of section 592 of the Tariff Act of 1930 as added by subsection (a)) shall be effective with respect to proceedings commenced after the 89th day after the date of enactment of this Act.

(B) Except as provided in subparagraph (C), section 592 of the Tariff Act of 1930 (as such section existed on the day before the date of enactment of this Act) shall apply to any alleged intentional violation thereof involving television receivers that are the product of Japan and that were or are the subject of antidumping proceedings if the alleged intentional violation—

(i) occurred before the date of enactment of this Act, and

(ii) was the subject of an investigation by the Customs Service which was begun before the date of enactment of this Act.

(C) Except as provided in the next sentence, subsection (e) of section 592 of the Tariff Act of 1930 (as added by subsection (a)) shall be effective on the date of enactment of this Act. Notwithstanding any provision of law, in any proceeding in a United States district court commenced by the United States pursuant to section 604 of the Tariff Act of 1930 for the recovery of any monetary penalty claimed under section 592 of such Act for an alleged intentional violation described in subparagraph (B)—

(i) all issues, including the amount of the penalty, shall be tried de novo; and

(ii) the United States shall have the burden of proof to establish such violation by a preponderance of the evidence.

And the Senate agree to the same.

Amendment numbered 68: That the House recede from its disagreement to the amendment of the Senate numbered 68 and agree to the same with an amendment as follows: In lieu of the matter proposed to be stricken out by the Senate amendment insert the following:

SEC. 113. Section 641 of the Tariff Act of 1930 (19 U.S.C. 1641) is amended by adding at the end thereof the following new subsection:

"(e) Triennial Reports by Customhouse Brokers.—On February 1, 1979, and on February 1 of each third year thereafter, each person who is licensed as a customhouse broker under this section shall file with the Secretary a report as to—

"(1) whether such person is actively engaged in business as a customshouse broker; and

"(2) the name under, and the address at, which such business is being transacted.".

And the Senate agree to the same.

Amendment numbered 82: That the House recede from its disagreement to the Senate amendment numbered 82 and agree to the same with an amendment as follows:

On page 19 of the Senate engrossed amendments strike out the matter appearing after line 3 and insert in lieu thereof the following:

"	Other articles, including not more than 100 cigars, acquired abroad as an incident of the journey from which the person is returning if such person arrives from the Virgin Islands of the United States or from a contiguous country which maintains a free zone port, or arrives from any other country after having remained beyond the United States for a period of not less than 48 hours, for his personal or household use, but not imported for the account of any other person nor intended for sale, if declared in accordance with regulations of the Secretary of the Treasury and if such person has not claimed an exemption under item 813.30 or 813.31 within 30 days preceding his arrival, and does not claim an exemption under the other item on his arrival:		
813.30	Articles, accompanying a person, not over $300 in aggregate fair retail value in the country of acquisition, including (but only in the case of an individual who has attained the age of 21) not more than 1 quart of alcoholic beverages	Free	Free
813.31	Articles, whether or not accompanying a person, not over $600 in aggregate fair market value in the country of acquisition, including (but only in the case of an individual who has attained the age of 21) not more than 1 wine gallon of alcoholic beverages, not more than 1 quart of which shall have been acquired elsewhere than in American Samoa, Guam, or the Virgin Islands of the United States, if such person arrives directly or indirectly from such insular possessions not more than $300 of which shall have been acquired elsewhere than in such insular possessions (but this item does not permit the entry of articles not accompanying a person which were acquired elsewhere than in such insular possessions)	Free	Free ".

And the Senate agree to the same.

Amendment numbered 123: That the House recede from its disagreement to the amendment of the Senate numbered 123 and agree to the same with amendments as follow:

On page 26, line 4, of the Senate engrossed amendments, after "merchandise" insert the following: "bearing a counterfeit mark (within the meaning of section 45 of the Act of July 5, 1946 (commonly referred to as the Lanham Act, 60 Stat. 27; 15 U.S.C. 1127))."

On page 26, line 10, of the Senate engrossed amendments, after "forfeiture," insert the following: "obliterate the trademark where feasible and."

Beginning with line 18 on page 26 of the Senate engrossed amendments, strike out through line 2 on page 27 of such amendments and insert in lieu thereof the following:

"(3) more than 1 year after the date of forfeiture, by sale by appropriate customs officers at public auction under such regulations as the Secretary prescribes, except that before making any such sale the Secretary shall determine that no Federal, State, or local government agency or eleemosynary institution has established a need for such merchandise under paragraph (1) or (2), or

And the Senate agree to the same.

Amendment numbered 128: That the

House recede from its disagreement to the amendment of the Senate numbered 128 and agree to the same with an amendment as follows:

On page 27 of the Senate engrossed amendments, strike out lines 21 and 22 and insert in lieu thereof the following:

(1) entitled to the admission of his or her baggage and effects free of duty without entry; or

And the Senate agree to the same.

Amendment numbered 130: That the House recede from its disagreement to the amendment of the Senate numbered 130 and agree to the same with an amendment as follows:

On page 28, line 23, strike out beginning with "not" through "1979." on line 24 and insert in lieu thereof the following: "and to the Committee on Ways and Means of the House of Representatives not later than September 1, 1979."

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 8149) to provide customs procedural reform, and for other purposes, submit the following joint statement to the House and the Senate in explanation of the effect of the action agreed upon by the managers and recommended in the accompanying conference report:

The following Senate amendments made technical, clerical, clarifying, or conforming changes: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 14, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 41, 42, 44, 46, 47, 49, 50, 51, 52, 53, 55, 57, 59, 60, 61, 62, 63, 69, 70, 71, 72, 73, 74, 75, 76, 77, 79, 80, 81, 83, 84, 85, 86, 87, 88, 89, 90, 92, 93, 94, 95, 96, 97, 98, 99, 100, 102, 103, 104, 105, 107, 108, 109, 110, 111, 112, 113, 115, 116, 117, 118, 119, 120, 121, 122, 124, 125, 126, 128, 129, 131, and 132. With respect to these amendments, the House either recedes or recedes with amendments which are technical, clerical, clarifying or conforming in nature.

AMENDMENT NUMBERED 13

The House bill contains a provision relating to the new entry procedures which was intended as a guideline for the Secretary of the Treasury in prescribing appropriate regulations. The provision states that the Secretary shall, to the maximum extent practicable, provide for the protection of the revenue, the timely collection of import statistics, the facilitation of the commerce of the United States, and the equal treatment of all consignees of imported merchandise.

Senate amendment numbered 13 would require the Secretary of the Treasury to transmit immediately to the Bureau of the Census any corrections to the statistical information included in the import documents if inspection of the goods and information obtained at a later time reveals an error. Census would be required to make all necessary corrections. In addition, the Secretary would be required to insure the accuracy of statistics, particularly on classification and valuation of imports, collected under the new entry procedures.

The House receded from its disagreement with the Senate amendment and agreed to the same. The managers intend that the Census Bureau will make all corrections that are necessary to maintain the statistical validity of the import data. They do not expect trivial errors, not affecting the validity of the data, to be immediately corrected by Census.

AMENDMENT NUMBERED 15

The House bill would make the new entry procedures effective on the date of enactment of H.R. 8149.

Senate amendment numbered 15 would delay the effective date of the entry procedures until 60 days after the date of enactment of H.R. 8149. The delay was meant to give the Customs Service time to prescribe regulations implementing the new procedures.

The House receded from its disagreement with the Senate amendment and agreed to the same.

AMENDMENT NUMBERED 40

Section 107 of the House bill, dealing with judicial enforcement of administrative summons, stated that if a person fails to obey a court order to produce records or give testimony as ordered by the Customs Service under section 509 of the Tariff Act of 1930, he could be punished for contempt. In addition to contempt penalties, a person adjudged guilty of contempt could, at the discretion of the Secretary of the Treasury and for so long as he remains in contempt, be prohibited from importing merchandise into the customs territory of the United States or obtaining release from Customs of any of his merchandise of which it has custody. If he remains in contempt for 1 year, all of his goods the Customs custody would be sold at public auction or otherwise disposed of under the customs law.

Senate amendment numbered 40 restructured the House provision to state that "for so long as a person fails to comply with a summons with which he has been ordered by the court to comply," the same sanctions would apply.

The House receded from its disagreement with the Senate amendment and agreed to the same with an amendment which clarifies that an individual must be adjudged guilty of contempt by a court before the additional sanctions which may be imposed by the Secretary of the Treasury are operative, and that the sanctions would continue as long as the individual remains in contempt of court.

AMENDMENT NUMBERED 43

Sections 557 and 559 of the Tariff Act of 1930 permits goods to remain in a customs bonded warehouse at the owner's expense for up to 3 years without entry and the payment of duty. A 1951 Presidential Proclamation declaring a national emergency due to the Korean War permits Customs to extend the present 3-year period by an unlimited number of successive 1-year extensions. The Presidential Proclamation will be terminated September 14, 1978, by the National Emergencies Act.

Senate amendment numbered 43 would permit goods to remain in a custom bonded warehouse at the owner's expense for up to 5 years. The 5-year period could not be extended. Goods in a bonded warehouse on the date of entactment of the bill could remain in the warehouse for up to 5 years from the date of enactment.

The House bill contained no similar provision. The House receded from its disagreement with the Senate amendment and agreed to the same.

AMENDMENT NUMBERED 45

The House bill would amend section 584 of the Tariff Act of 1930 to extend liability for discrepancy in a ship's manifest to those persons directly or indirectly responsible for the discrepancy, including the importer or broker. The master or owner of the vessel would continue to be liable as under present law.

Senate amendment numbered 45 further amended section 584 to limit the maximum penalty to the lesser of $10,000 or the domestic value of the goods to which the error relates.

The House receded from its disagreement with the Senate amendment and agreed to the same.

AMENDMENT NUMBERED 48

Section 584 of the Tariff Act of 1930 makes the master or owner of a vessel liable for discrepancies in a ship's manifest. Liability does not extend to clerical errors. Senate amendment numbered 48 clarifies the meaning of the term "clerical error" for the purposes of section 584 to mean "a nonnegligent, inadvertent, or typographical mistake in the preparation, assembly, or submission of the manifest."

The House receded from its disagreement with the Senate amendment and agreed to the same. The managers intend that the term "clerical error" as used in this section would not include a fraudulent violation.

AMENDMENT NUMBERED 54

The House bill would amend section 584 of the Tariff Act of 1930 which relates to penalties for discrepancies in ship's manifests. Senate amendment numbered 54 would amend section 584 further to:

1. Require a prepenalty notice for any proposed penalty greater than $250; and

2. Require the Customs Service to consider representations made as a result of the notice before issuing a penalty claim.

The House receded from its disagreement with the Senate amendment, and agreed to the same with two amendments:

1. The prepenalty notice would be required only for any proposed penalty greater than $500; and

2. If the appropriate customs officer determines that there was no violation, he must promptly issue a written statement of the determination to the person to whom the notice was sent.

AMENDMENT NUMBERED 56

The House bill would completely revise section 592 of the Tariff Act of 1930, the most frequently invoked customs penalty, which penalizes any person who imports, attempts to import, or aids or procures the importation of merchandise into the United States "by means of any fraudulent or false invoice, declaration, affidavit, letter, paper, or by means of any false statement, written or verbal, or by means of any false or fraudulent practice or appliance whatsoever," unless that person has "reasonable cause to believe the truth of such statement." Violation of section 592 is penalized by forfeiture of the merchandise or a payment equal to the value of merchandise. The penalty applies to negligent as well as intentional violations and whether or not an underpayment of duties results from the violation.

Under the House revision, the persons covered and the nature of the offense are intended to remain the same as they are under present law. The procedural provisions adopted by the House are patterned after procedures in current Customs' regulations and guidelines.

If a customs officer has "reasonable cause to believe" there is a violation and determines that "further proceedings are warranted," then he would have to issue a written prepenalty notice which includes "all material facts" establishing the violation. The notice would not be required in noncommercial cases, i.e., violations by noncommercial travelers, or if the proposed penalty is less than $1,000. This provision would enact into law the prepenalty notice requirement now in the regulations with several changes: (1) The minimum penalty amount for which a prepenalty notice is required would be reduced from $25,000 to $1,000, and (2) the prepenalty notice would have to include "all material facts which establish the alleged violation" and the estimated amount of the duty underpayment. Presumably, the Service will continue to assess no penalty in small cases, i.e., less than $250 revenue loss.

After considering representations by the importer, the appropriate customs officer would determine whether a section 592 violation has occurred and notify the importer of his decision.

The penalty for violation of section 592 would be changed from an in rem penalty, forfeiture of the merchandise, to an in personam penalty, a monetary liability of the importer. However, seizure of the merchandise would be permitted if the Secretary of the Treasury has "reasonable cause to believe" the importer is insolvent, outside U.S. jurisdiction, or that seizure is "necessary" to protect the revenue or prevent the importation of restricted goods. The seized merchandise would, in general, be forfeited to the United States only if the monetary penalty is not paid.

Although nonnegligent clerical errors and mistakes of fact would continue to be violations of section 592 under the House provision, no penalty could be assessed because of those errors or mistakes.

The monetary penalty would be changed from a fixed amount, the domestic value of the goods, to an amount varying according to the culpability of the importer. The penalty for a fraudulent violation could not exceed the domestic value of the merchandise. The penalty for gross negligence could not exceed the lesser of the domestic value or four times the duty underpayment involved. If there is no underpayment, the penalty for gross negligence would be the lesser of domestic value or twice the duty underpayment. If there is no underpayment, the negligence penalty could not exceed 20 percent of dutiable value.

In voluntary disclosure cases involving fraud, the penalty could not exceed an amount equal to 100 percent of the duty underpayment or 10 percent of the dutiable value of the merchandise if there is no underpayment. If a nonfraudulent violation is voluntarily disclosed, the penalty could not exceed the amount of interest accruing on the underpayment.

If the customs officer issues a penalty claim and the importer petitions for mitigation under section 618, then the importer would have the opportunity to make written and oral representations to the Service. Notice of the final decision in a mitigation proceeding, including findings of fact and conclusions of law, would be required to be sent to the importer. This provision would enact into law existing practice with several changes: (1) The importer would have the right to make representations in a mitigation proceeding before any decision on mitigation is made, and (2) the Service would be required to supply the importer with a detailed explanation of the factual and legal basis for its mitigation decision.

If an importer refuses to pay a section 592 monetary penalty and is sued by the United States in a district court, all issues, including the appropriateness of the penalty amount, would be considered by the court. In a fraud case, the government would have to prove the section 592 violation by "clear and convincing" evidence.

In gross negligence and negligence cases, the Government would have to prove the elements of the violation or the act or omission constituting the violation, respectively. This means the Government would have to prove, by a preponderance of the evidence, that the importer acted in reckless disregard of his legal duties in a gross negligence case. In a negligence case, the Government would have to prove, by a preponderance of the evidence, that the importer did an act which violates section 592. Thereafter, the importer would have to prove, by a preponderance of the evidence, that he exercised that care which was reasonable under the circumstances.

This provision would change existing law by (1) permitting a court to make its own judgement about the appropriate remedy for a section 592 violation, and (2) changing the burden of proof in fraud cases and shifting the burden of production in a proceeding to collect a section 592 penalty to the United States.

A suit brought to enforce a section 592 penalty arising out of gross negligence or negligence would have to be brought within 5 years after the violation occurs. Under present law, suits may be brought within five years after the violation is discovered.

The House revision of section 592 would be effective with respect to proceedings commenced 90 days after the date of enactment, i.e., proceedings in which a prepenalty notice is issued 90 days or more after the date of enactment. Any section 592 case will be subject to judicial review as of the date of enactment.

Senate amendment numbered 56 reorganized the House amendment and clarified the substantive prohibition in subsection 592(a).

The House bill had two bases used in computing maximum penalties, i.e., domestic value, if there is a duty underpayment, and a percentage of dutiable value, if there is no duty underpayment. Domestic value is generally equivalent to retail value while dutiable value is generally equivalent to wholesale value. Senate amendment numbered 56 amended the House provision to require the use only of dutiable value in computing maximum penalties under section 592.

The House receded from its disagreement with Senate amendment and agreed to the same with amendments as follows—

First, the addition of culpability levels in the General Rule itself is made. The language thus reads: "No person may, *by fraud, gross negligence, or negligence,* enter, introduce, etc. . ."

Second, the language regarding "aiding or procuring" is recast in such a way that it relates to a material and false statement or act, and not merely the entry of merchandise. This is meant to prevent innocent parties who are somehow involved in the entry from being charged with a 592 violation.

Third, as part of the General Rule, there is added language found in the present law, as well as in the House version, to the effect that the 592 violations are punishable "whether or not the United States is or may be deprived of the lawful duties, or any portion thereof."

Fourth, the standards for determining the maximum penalties for violations of section 592 remain as provided in the House bill, *e.g.,* "domestic value" of the merchandise would be the standard for the maximum penalty for fraudulent violations.

Fifth, conferees added language requiring that an individual will be promptly notified in writing when Customs determines, after considering any representations made in response to the prepenalty notice, that there is in fact no violation.

Sixth, the conferees also added House language, deleted in the Senate, that an alleged violator shall have a reasonable opportunity, under the mitigation procedures, to make both oral and written representations seeking remission or mitigation of the monetary penalty. At the conclusion of any such proceeding, the appropriate Customs officer shall provide to the person concerned a written statement which sets forth the final determination and the findings of fact and conclusions of law on which such determination is based.

For 592 cases which are before the courts after the date of enactment but prior to the effectiveness of the revised section 592, the managers intend that, for the purpose of applying the judicial review provisions, the court will have full discretion to look at the merits of the case and make its own independent determination on the appropriate amount of the penalty and would not be bound by the old maximum penalty which was set out in the old 592. The court would not, of course, be authorized to assess a penalty *above* the maximum penalty allowable under old section 592.

AMENDMENT NUMBERED 58

The House bill revision of section 592 of the Tariff Act of 1930 would be effective with respect to proceedings which begin on or after the 90th day after the date of enactment of H.R. 8149. The only exception to this rule would make section 592(g), providing for de novo judicial review of all issues in a 592 case, effective on the date of enactment.

Senate amendment numbered 58 would apply section 592 as existed on the day before the date of enactment to all intentional acts or omissions committed before the date of enactment if the violation of section 592 was the subject of a Customs Service investigation before such date. The Senate amendment would apply the Senate revision of section 592 to all proceedings, except proceedings described in the preceding sentence, begun after the 89th day after the date of enactment. The only exception to both effective date rules in the Senate amendment would make de novo judicial review under section 592(e) effective on the date of enactment.

The House receded from its disagreement with the Senate amendment and agreed to the same with an amendment. The conference agreement would apply section 592 as it existed on the day before the date of enactment to any alleged intentional violation of such section 592 involving television receivers that are the product of Japan and that were or are the subject of antidumping proceedings if the alleged violation—

(1) occurred before the date of enactment of H.R. 8149, and

(2) was the subject of an investigation by the Customs Service which was begun before the date of enactment of H.R. 8149.

De novo judicial review would be available for all issues arising in section 592 cases covered by the preceding sentence when the Government commences a proceeding under section 604 of the Tariff Act of 1930 to collect a monetary penalty imposed under section 592. In such a proceeding, the United States would have the burden of proof to

establish such an intentional violation by a perponderence of evidence. The de novo review would include the amount of the penalty, which as in all cases to which new section 592(e) applies, could be reduced by the court or increased up to the maximum amount provided by law.

Except for intentional violations described in the preceding paragraph, the conference revision of section 592 would be effective for all proceedings begun after the 89th day after the date of enactment. The only exception to this rule would be section 592(e), providing for de novo review, which would be effective on the date of enactment.

The managers intend that, for purposes of the effective date rules, proceedings begin when the Customs Service issues a prepenalty notice, or, if none is, required, when Customs issues a penalty notice. The managers also intend that the entry or attempted entry of merchandise into the commerce of the United States by means of a document or statement reporting a price for such merchandise in excess of the price ultimately paid for such merchandise, after rebates, kickbacks, or other devices, for the purpose of avoiding assessment of antidumping duties be considered to be false within the meaning of section 592.

AMENDMENTS NUMBERED 64, 65, 66 AND 67

The House bill would add a new section 625 to the Tariff Act of 1930 requiring any ruling under the Tariff Act of 1930 with respect to "prospective customs transactions" to be published in the Customs Bulletin or otherwise be made available for public inspection. This provision would enact into law part of existing regulations.

Senate amendments numbered 64, 65, 66 and 67 would require all precedential decisions, including a ruling letter, internal advice memorandum, or protest review decision, to be published or otherwise made available to the public.

The House receded from its disagreement with the Senate amendments and agreed to the same.

AMENDMENT NUMBERED 68

The House bill would require brokers' licenses to be renewed every 3 years. Brokers would have to apply for renewal during the 90-day period before their current license expires. Outstanding licenses would not have to be renewed until 3 years after the date of enactment of H.R. 8149.

Senate amendment numbered 68 deleted the House provision.

The House receded from its disagreement to the Senate amendment with an amendment which would require each licensed customhouse broker to report to the Secretary of the Treasury on February 1, 1979, and on February 1 of each third year thereafter. The report would state whether the individual, partnership, or corporation reporting is actively engaged in business as a customhouse broker and the name under, and address at which such business is being transacted. In the case of a reporting partnership or corporation, the managers intend that the names and addresses of the licensed individuals who qualify the partnership or corporation for a license also be reported.

AMENDMENT NUMBERED 78

The House bill would amend section 5205 (a)(2)(C) of the Internal Revenue Code of 1954 to exempt from the Code's mandatory stamping requirement imported distilled spirits, the stamping of which may be required under customs laws, whether or not it is in fact stamped.

Senate amendment numbered 78 deleted the House provision.

The House receded from its disagreement with the Senate amendment and agreed to the same. The managers believe that if and when the Secretary of the Treasury determines that the Internal Revenue Code stamping requirement is not necessary for the collection and protection of the revenues, he can propose such a change to Congress for consideration.

AMENDMENT NUMBERED 82

The House bill would increase the amount of personal exemption accorded returning residents of the United States under TSUS item 813.31. The present exemption is $100 (or $200 in the case of persons arriving directly or indirectly from American Samoa, Guam, or the Virgin Islands); these amounts would be increased to $250 and $500, respectively. The House bill would continue the requirement under present law which permits duty-free entry under item 813.31 only with respect to articles accompanying the returning resident.

Senate amendment numbered 82 would increase the personal exemption for a returning U.S. resident under TSUS item 813.31 from $100 to $500. The amendment would increase the exemption from $200 to $1,000 for a U.S. resident returning directly or indirectly from American Samoa, Guam, or the Virgin Islands of the United States. Not more than $500 of the merchandise eligible for the $1,000 exemption could be acquired elsewhere than in those insular possessions.

The Senate amendment would also permit U.S. residents arriving directly or indirectly from American Samoa, Guam, or the Virgin Islands of the United States to apply the personal exemption to articles they purchase in the possessions but which do not accompany the arriving traveler through customs. That is to say, travelers would be allowed to apply the personal exemption to goods which they purchase in the possessions and then ship home. Customs would be required to publish regulations to carry out this provision.

The House receded from its disagreement with the Senate amendment and agreed to the same with an amendment which would increase the personal exemption from $100 to $300 (or $600 in the case of persons arriving directly or indirectly from the insular possessions). Not more than $300 of the merchandise eligible for the $600 exemption could be acquired elsewhere than in the possessions. Furthermore, the duty-free exemption would apply to articles not accompanying the traveler only if those articles are purchased in and shipped from the insular possessions.

AMENDMENT NUMBERED 91

The House bill would apply a flat 10-percent rate to all articles accompanying a returning resident which are intended for personal or household use, are not imported for another person and are not for resale, and are not worth more than $600 fair retail value, exclusive of duty-free articles. The flat rate of duty would be 5 percent for articles acquired in American Samoa, Guam, or the Virgin Islands of the United States. The flat rate would not apply to commercial entries or to articles not accompanying the person through customs. If the application of the flat rate of duty to particular merchandise results in increases in imports of that merchandise which adversely affect the economic interest of the United States, then the Secretary could exclude that merchandise from this provision.

Senate amendment numbered 91 would amend the House bill to apply the 5 percent rate (applicable to articles acquired in the insular possessions) to articles purchased by travelers while they are in the possessions even if the articles do not accompany the arriving traveler through customs, i.e., the traveler ships the goods home.

The House receded from its disagreement to the Senate amendment and agreed to the same. The managers intend the flat rate provisions to apply even if the fair retail value of eligible articles exceed $600. For example, if a traveler claims the benefit of item 869.00 or 869.10 and has eligible articles with a fair retail value of $700, then the appropriate flat rate would apply to $600 worth of the articles and rates otherwise applicable under the Tariff Schedules would apply to the excess $100 worth of articles.

AMENDMENT NUMBERED 101

The House bill would amend section 466 of the Tariff Act of 1930 to provide a monetary penalty up to the value of the vessel as an alternative to forfeiture of the vessel for the willful and knowing neglect or failure to report, make entry, and pay duties on repairs or equipment purchases made in a foreign country for a vessel of U.S. registry. It also would expand the acts penalized under section 466 to include the making or procuring of any false statement in respect to the purchases or repairs without reasonable cause to believe the truth of such statement.

Senate amendment numbered 101 leaves intact the House provision but would provide a prepenalty notice procedure to insure persons suspected of violating section 466 of an opportunity to discuss the circumstances of the alleged violation and the appropriateness of any possible penalty with Customs prior to the issuance of a penalty claim.

The House receded from its disagreement with the Senate amendment and agreed to the same.

AMENDMENT NUMBERED 106

The House bill would amend section 491 of the Tariff Act of 1930 to reduce from 1 year to 6 months the time in which merchandise must be retained in a general order warehouse before it is considered abandoned.

Senate amendment numbered 106 deleted the amendment in the House bill which would reduce from 1 year to 6 months the time in which the merchandise must be retained before it is considered abandoned.

The House receded from its disagreement to the Senate amendment and agreed to the same. While the Customs Service originally believed the present provision of 1 year was excessive in light of modern communications and the storage costs which Customs incurs, it reconsidered its position and believes the 1-year period provided by present law should be retained to conform with present commercial practices.

AMENDMENT NUMBERED 114

The House bill would add a new section 504 to the Tariff Act of 1930. Subsection (a) of the new section would provide that an entry is deemed liquidated if not actually liquidated within 1 year from: (1) the date of entry, (2) the date of final withdrawal of all the merchandise covered by a warehouse entry, or (3) the date of withdrawal from warehouse for consumption where duties may be deposited after the filing of an entry or withdrawal from warehouse. The merchandise would be deemed liquidated at the rate of duty, value, quantity, and amount of duties asserted by the importer, his consignee, or agent in the entry document and import documents filed with Customs under section 484 of the Tariff Act at the time of entry. Notice of liquidation by customs would not be required for entries deemed liquidated.

Senate amendment numbered 114 would require Customs to provide notice of liquidation in cases where an entry is deemed liquidated. The Senate recedes.

AMENDMENT NUMBERED 123

Section 42 of the Act of July 5, 1946, (15 U.S.C. 1124) prohibits the importation of merchandise which copies or simulates a registered trademark or which bears any mark or name calculated to induce belief that the merchandise is manufactured in the United States. Section 526 of the Tariff Act of 1930 (19 U.S.C. 1526) prohibits importation of goods bearing a trademark owned by a corporate or real citizen of the United States and registered in accordance with the

1946 Act, unless written consent of the trademark owner to the goods' importation has been given.

The House bill would amend section 526 to permit the entry of imported trademark merchandise accompanying persons arriving in the United States. The trademark goods would have to be for the arriving person's personal use and within limitations of type and quantity to be specified by the Secretary of the Treasury in regulations. It also would modify section 42 to except from the general trademark restrictions merchandise which falls within the exception under amended section 526.

Senate amendment numbered 123 would require the following with respect to imported goods which violate the provisions of section 42 relating to merchandise which copies or simulates a registered trademark:

(a) Notification of the trademark owner when such goods are seized;

(b) Forfeiture to the Government of all such goods seized unless the trademark owner provides written consent to some other disposition of the goods, e.g., reexportation, entry after obliteration of the counterfeit trademark, etc.;

(c) Delivery of forfeited goods to a Federal, State or local government agency which needs the goods for an official purpose or to a charitable institution;

(d) Sale of the goods at public auction if, after 1 year, Customs cannot deliver the goods to a government agency or charity; the counterfeit trademarks on goods put up for auction would have to be obliterated where feasible, i.e., when to do so would not destroy the goods or be disproportionately expensive vis-a-vis the value of the goods; and

(e) Destruction of goods which are unsafe or a hazard to health.

The House receded from its disagreement with the Senate amendment with amendments to clearly limit the Senate amendment to merchandise bearing a counterfeit mark as defined in section 45 of the Act of July 5, 1946 (the Lanham Act) as the amendment is intended solely to strengthen the remedies available to prevent the importation of merchandise bearing such a mark, and to require the obliteration of the counterfeit trademark where feasible in all cases before disposition of the merchandise by the Customs Service. The conferees intend that the Customs Service need do no more than publish a public notice of the availability of forfeited goods to State and local Government agencies and charitable institutions and allow a reasonable opportunity for response to the notice in order to meet its obligations to determine that these agencies or institutions have no need for such goods.

AMENDMENT NUMBERED 127

Section 2654, 4381, 4382, and 4383 of the Revised Statutes (49 U.S.C. 58, 46 U.S.C. 329, 330, and 333) impose specific dollar fees for certain enumerated services provided by customs officers to United States and foreign vessels. The House bill would repeal the statutes enumerated above and authorize the Secretary of the Treasury to set fees for furnishing the required services in an amount necessary to cover the cost of those services.

Senate amendment numbered 127 would clearly provide specific authority for the Secretary of the Treasury to set fees necessary to cover the costs of providing services similar to or the same as services furnished by customs officers under the sections repealed.

The House receded from its disagreement to the Senate amendment and agreed to the same.

AMENDMENT NUMBERED 130

Senate amendment numbered 130 would direct the Comptroller General of the United States, in cooperation with the Customs Service and Immigration and Naturalization Service, to study clearance procedures for individuals entering or reentering the United States. The Comptroller General must report his findings and recommendations to the Committee on Finance not later than February 1, 1979. There is no comparable provision in the House bill.

The House receded from its disagreement to the Senate amendment and agreed to the same with an amendment requiring the Comptroller General to make his report to the Committee on Ways and Means of the House, as well as to the Committee on Finance. The Conferees understand that the report will include a consideration of the necessity for officials of both the Customs Service and Immigration and Naturalization Service to process persons entering the United States, or whether the functions performed by these officials could be appropriately and adequately consolidated into one procedure. The report will be made by September 1, 1979.

AMENDMENT NUMBERED 133

The House bill would require, beginning in fiscal year 1980, an authorization of appropriations to the Department of the Treasury for the U.S. Customs Service. The authorization would be examined in the House and Senate by the Ways and Means Committee and Finance Committee, respectively. The House bill would authorize Customs Service appropriations of such sums as may be necessary for fiscal years 1980 and 1981, making appropriations for fiscal year 1982 the first year requiring separate authorization.

Senate amendment numbered 133 deleted that part of the House bill authorizing the appropriation of such sums as may be necessary for the Customs Service for fiscal years 1980 and 1981. This change would require a separate annual authorization beginning with fiscal year 1980.

The House receded from its disagreement with the Senate amendment and agreed to the same.

CONFERENCE REPORT ON H.R. 11401

Mr. BROWN of California submitted the following conference report and statement on the bill (H.R. 11401) to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and for other purposes.

CONFERENCE REPORT (H. REPT. No. 95–1509)

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 11401) to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows: That the House recede from its disagreement to the amendment of the Senate and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by the Senate amendment insert the following:

That there is hereby authorized to be appropriated to the National Aeronautics and Space Administration to become available October 1, 1978:

(a) For "Research and development", for the following programs:

(1) Space Shuttle, $1,443,300,000;

(2) Space flight operations, $315,900,000;

(3) Expendable launch vehicles, $74,000,000;

(4) Physics and astronomy, $285,500,000;

(5) Lunar and planetary exploration, $187,100,000;

(6) Life sciences, $42,600,000;

(7) Space applications, $280,300,000;

(8) Technology utilization, $12,100,000;

(9) Aeronautical research and technology, $275,100,000;

(10) Space research and technology, $111,300,000;

(11) Energy technology applications, $5,000,000; and

(12) Tracking and data acquisition, $305,400,000;

(b) For "Construction of facilities", including land acquisition, as follows:

(1) Modification of unitary plan wind tunnel, Ames Research Center, $5,390,000;

(2) Modification of 3.5-foot wind tunnel, Ames Research Center, $1,870,000;

(3) Modification of 12-foot pressure wind tunnel, Ames Research Center, $2,510,000;

(4) Modifications and additions for logistic and supply functions, Goddard Space Flight Center, $5,640,000.

(5) Modifications and addition to the space flight operations facility, Jet Propulsion Laboratory, $3,060,000;

(6) Modifications to various buildings for seismic protection, Jet Propulsion Laboratory, $1,570,000;

(7) Modifications for utility control system, Langley Research Center, $1,980,000;

(8) Rehabilitation of unitary plan wind tunnel, Langley Research Center, $4,520,000;

(9) Construction of research analysis center, Lewis Research Center, $6,140,000;

(10) Large aeronautical facility: construction of national transonic facility, Langley Research Center, $24,500,000;

(11) Large aeronautical facility: modification of 40- by 80-foot subsonic wind tunnel, Ames Research Center, $31,600,000;

(12) Space Shuttle facilities at various locations as follows:

(A) Modifications to launch complex 39, John F. Kennedy Space Center, $13,570,000;

(B) Modification of manufacturing and final assembly facilities for external tanks, Michoud Assembly Facility, $13,980,000;

(C) Modifications to solid rocket motor manufacturing and assembly facilities, Thiokol Plant, Wasatch, Utah, $1,920,000;

(D) Minor Shuttle-unique projects, various locations, $1,600,000;

(13) Rehabilitation and modification of facilities at various locations, not in excess of $500,000 per project, $15,300,000;

(14) Minor construction of new facilities and additions to existing facilities at various locations, not in excess of $250,000 per project, $4,200,000; and

(15) Facility planning and design not otherwise provided for, $10,650,000:

(c) For "Research and program management", $914,000,000, and such additional or supplemental amounts as may be necessary

for increases in salary, pay, retirement, or other employee benefits authorized by law.

(d) Notwithstanding the provisions of subsection 1(g), appropriations for "Research and development" may be used (1) for any items of a capital nature (other than acquisition of land) which may be required at locations other than installations of the Administration for the performance of research and development contracts, and (2) for grants to nonprofit institutions of higher education, or to nonprofit organizations whose primary purpose is the conduct of scientific research, for purchase or construction of additional research facilities; and title to such facilities shall be vested in the United States unless the Administrator determines that the national program of aeronautical and space activities will best be served by vesting title in any such grantee institution or organization. Each such grant shall be made under such conditions as the Administrator shall determine to be required to insure that the United States will receive therefrom benefit adequate to justify the making of that grant. None of the funds appropriated for "Research and development" pursuant to this Act may be used in accordance with this subsection for the construction of any major facility, the estimated cost of which, including collateral equipment, exceeds $250,000, unless the Administrator or his designee has notified the Speaker of the House of Representatives and the President of the Senate and the Committee on Science and Technology of the House of Representatives and the Committee on Commerce, Science, and Transportation of the Senate of the nature, location, and estimated cost of such facility.

(e) When so specified and to the extent provided in an appropriation act, (1) any amount appropriated for "Research and development" or for "Construction of facilities" may remain available without fiscal year limitation, and (2) maintenance and operation of facilities, and support services contracts may be entered into under the "Research and program management" appropriation for periods not in excess of 12 months beginning at any time during the fiscal year.

(f) Appropriations made pursuant to subsection 1(c) may be used, but not to exceed $25,000, for scientific consultations or extraordinary expenses upon the approval or authority of the Administrator and his determination shall be final and conclusive upon the accounting officers of the Government.

(g) Of the funds appropriated pursuant to subsections 1(a) and 1(c), not in excess of $25,000 for each project, including collateral equipment, may be used for construction of new facilities and additions to existing facilities, and not in excess of $50,000 for each project, including collateral equipment, may be used for rehabilitation or modification of facilities: *Provided*, That of the funds appropriated pursuant to subsection 1(a), not in excess of $250,000 for each project, including collateral equipment, may be used for any of the foregoing for unforeseen programmatic needs.

SEC. 2. Authorization is hereby granted whereby any of the amounts prescribed in paragraphs (1) through (14), inclusive, of subsection 1(b)—

(1) in the discretion of the Administrator or his designee, may be varied upward 10 percent, or

(2) following a report by the Administrator or his designee to the Committee on Science and Technology of the House of Representatives and the Committee on Commerce, Science, and Transportation of the Senate on the circumstances of such action, may be varied upward 25 percent,

to meet unusual cost variations, but the total cost of all work authorized under such paragraphs shall not exceed the total of the amounts specified in such paragraphs.

SEC. 3. Not to exceed one-half of 1 percent of the funds appropriated pursuant to subsection 1(a) hereof may be transferred to the "Construction of facilities" appropriation, and, when so transferred, together with $10,000,000 of the funds appropriated pursuant to subsection 1(b) hereof (other than funds appropriated pursuant to paragraph (15) of such subsection) shall be available for expenditure to construct, expand, or modify laboratories and other installations at any location (including locations specified in subsection 1(b)), if (1) the Administrator determines such action to be necessary because of changes in the national program of aeronautical and space activities or new scientific or engineering developments, and (2) he determines that deferral of such action until the enactment of the next authorization act would be inconsistent with the interest of the Nation in aeronautical and space activities. The funds so made available may be expended to acquire, construct, convert, rehabilitate, or install permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment. No portion of such sums may be obligated for expenditure or expended to construct, expand, or modify laboratories and other installations unless (A) a period of 30 days has passed after the Administrator or his designee has transmitted to the Speaker of the House of Representatives and to the President of the Senate and to the Committee on Science and Technology of the House of Representatives and to the Committee on Commerce, Science, and Transportation of the Senate a written report containing a full and complete statement concerning (1) the nature of such construction, expansion, or modification, (2) the cost thereof including the cost of any real estate action pertaining thereto, and (3) the reason why such construction, expansion, or modification is necessary in the national interest, or (B) each such committee before the expiration of such period has transmitted to the Administrator written notice to the effect that such committee has no objection to the proposed action.

SEC. 4. Notwithstanding any other provision of this Act—

(1) no amount appropriated pursuant to this Act may be used for any program deleted by the Congress from requests as originally made to either the House Committee on Science and Technology or the Senate Committee on Commerce, Science, and Transportation.

(2) no amount appropriated pursuant to this Act may be used for any program in excess of the amount actually authorized for that particular program by subsections 1(a) and 1(c), and

(3) no amount appropriated pursuant to this Act may be used for any program which has not been presented to or requested of either such committee,

unless (A) a period of 30 days has passed after the receipt by the Speaker of the House of Representatives and the President of the Senate and each such committee of notice given by the Administrator or his designee containing a full and complete statement of the action proposed to be taken and the facts and circumstances relied upon in support of such proposed action, or (B) each such committee before the expiration of such period has transmitted to the Administrator written notice to the effect that such committee has no objection to the proposed action.

SEC. 5. It is the sense of the Congress that it is in the national interest that consideration be given to geographical distribution of Federal research funds whenever feasible, and that the National Aeronautics and Space Administration should explore ways and means of distributing its research and development funds whenever feasible.

SEC. 6. Section 203 of the National Aeronautics and Space Act of 1958 (42 U.S.C. 2473) is amended—

(1) by inserting "(1)" after "(b)" in the subsection which was added by section 15(c) of Public Law 94-413; and

(2) by redesignating the subsection which was added by section 4 of Public Law 93-409 (and redesignated by section 15(c) of Public Law 94-413) as paragraph (2) of subsection (b).

SEC. 7. (a) Section 102 of the National Aeronautics and Space Act of 1958 (42 U.S.C. 2451) is amended (1) by redesignating subsection (f) as subsection (g) thereof; and (2) by inserting immediately after subsection (e) thereof the following new subsection.

"(f) The Congress declares that the general welfare of the United States requires that the unique competence of the National Aeronautics and Space Administration in science and engineering systems be directed to assisting in bioengineering research, development, and demonstration programs designed to alleviate and minimize the effects of disability.".

(b) The subsection of section 102 of such Act redesignated as subsection (g) by subsection (a) of this section is amended by striking out "and (e)" and inserting in lieu thereof "(e), and (f)".

SEC. 8. The Administrator of the National Aeronautics and Space Administration will report to the House Committee on Science and Technology and the Senate Committee on Commerce, Science, and Transportation no later than December 31, 1978, on the Administration policy regarding conflicts of interest, standards of conduct and financial disclosure and the implementation of that policy.

SEC. 9. This Act may be cited as the "National Aeronautics and Space Administration Authorization Act, 1979".

And the Senate agree to the same.

Managers on the Part of the Senate.

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 11401) to authorize appropriations to the National Aeronautics and Space Administration for fiscal year 1979 for Research and Development, Construction of Facilities and Research and Program Management, and for other purposes, submit the following joint statement to the House and the Senate in explanation of the effect of the action agreed upon by the managers and recommended in the accompanying conference report.

The NASA request for fiscal year 1979 totaled $4,371,600,000. The House authorized $4,415,300,000 and the Senate amendment authorized $4,388,600,000. The committee of conference agrees to a total authorization for fiscal year 1979 of $4,401,600,000 as follows:

SUMMARY, FISCAL YEAR 1979

Fiscal year 1979	Budget request	House action	Senate committee action	Committee conference
Research and development:				
Space Shuttle	$1,439,300,000	$1,443,300,000	$1,443,300,000	$1,443,300,000
Space flight operations	311,900,000	308,900,000	318,900,000	315,900,000
Expendable launch vehicles	76,500,000	71,500,000	76,500,000	74,000,000
Physics and astronomy	285,500,000	285,500,000	285,500,000	285,500,000
Lunar and planetary exploration	187,100,000	187,100,000	187,100,000	187,100,000
Life sciences	40,600,000	40,600,000	42,600,000	42,600,000
Space applications	274,300,000	288,300,000	274,300,000	280,300,000
Technology utilization	9,100,000	14,600,000	9,100,000	12,100,000
Aeronautical research and technology	264,100,000	292,300,000	264,100,000	275,100,000
Space research and technology	108,300,000	111,300,000	111,300,000	111,300,000
Energy technology applications	3,000,000	6,000,000	4,000,000	5,000,000
Tracking and data acquisition	305,400,000	304,400,000	305,400,000	305,400,000
Total	3,305,100,000	3,353,800,000	3,322,100,000	3,337,600,000
Construction of facilities	152,500,000	147,500,000	152,500,000	150,000,000
Research and program management	914,000,000	914,000,000	914,000,000	914,000,000
Grand total	4,371,600,000	4,415,300,000	4,388,600,000	4,401,600,000

The points in disagreement and the conference resolution of them are as follows:

1. NASA requested $311,900,000 for the space flight operations program.

The House authorized $308,900,000, a reduction of $3 million in the request resulting from a $10 million cut in the development, test and mission operations subprogram and the addition of $7 million to the advanced programs subprogram.

The Senate authorized $318,900,000, agreeing with the NASA request for the development, test and mission operations subprogram as necessary to support shuttle development and other space flight activity, and adding $7 million to the NASA request increasing the amount for advanced programs from $5 million to $12 million.

The conference substitute authorizes $315,900,000 for the space flight operations program.

The conferees are concerned that the subprogram categories within the space flight operations program are not sufficient to serve budgeting and costing policies as the space shuttle development effort declines and new projects, including shuttle operations, command a larger share of technical support resources provided under this program. Of particular concern is the need to assure that all appropriate costs are allocated to shuttle operations so that all users bear an equitable share of the cost of technical support. Accordingly, the conferees request that the budget categories in this program be reviewed and that changes be made so costs are related as precisely as possible to the program activities which they support. The fiscal year 1980 budget presentation should reflect this request.

2. The House authorized $71,500,000 for the expendable launch vehicles program, a reduction of $5 million in the NASA request, believing that the phaseout of these vehicles in favor of the shuttle presented opportunities for economies.

The Senate approved the NASA request of $76,500,000 noting the importance of adequate technical and other support to assure successful launch performance for expensive payloads.

The committee of conference authorizes $74 million for the expendable launch vehicles program.

3. NASA requested $40,600,000 for the life sciences program.

The House authorized the NASA request.

The Senate authorized $42,600,000, increasing the NASA request by $2 million for additional work on life science experiments for the spacelab program.

The conference substitute authorizes $42,600,000.

4. The House authorized $288,300,000 for the space applications program, an increase of $14 million in the NASA request of $274,300,000. Of the $14 million increase, the House allocated $10 million to augment earth resources applications transfer and demonstration activities, including support to State and private sector users, with the remaining $4 million to be used to initiate development of a stereosat remote sensing satellite system contingent upon industrial financial participation in the project.

The Senate authorized the NASA request, $274,300,000.

The conference substitute authorizes $280,300,000 for the space applications program.

The conferees request that NASA, utilizing not to exceed $1 million of the funds authorized for the space applications program, resume definition studies for a stereosat spacecraft system in preparation for initiation of the project in the fiscal year 1980 budget. The conferees agree that such a project initiation is to be contingent upon agreement with industry for substantial cost participation therein, and request NASA to continue its current efforts to achieve such an agreement as expeditiously as possible.

5. NASA requested $9,100,000 for the technology utilization program.

The House authorized $14,600,000, an increase of $5,500,000 of which $1,500,000 was to increase the scope and effectiveness of industrial applications centers, dissemination mechanisms and other aspects of the program, and of which $4 million was to be used to support the maintenance of aggressive programs in bioengineering applications in the areas of materials, human factors engineering and electronics to assist the handicapped and to alleviate the problems of the disabled.

The Senate authorized the NASA request noting that a collaborative study effort involving NASA and several other agencies is underway to examine and better understand the technology transfer process to determine how and where additional resources could be productively applied, and also noting that NASA has supported for several years a biomedical applications activity addressing problems of the handicapped as well as other medical problems and that $1,700,000 is authorized to continue such activities.

The conference substitute authorizes $12,100,000 for the technology utilization program.

The conferees agree that NASA should increase the scope of the industrial applications centers and maintain an aggressive program for transferring its technology to bioengineering applications. These applications should be directed to aiding the handicapped, utilizing NASA's unique competence and expertise in materials, human factors engineering, electronics and automated systems. The conferees agree further that NASA shall enhance its working relationships with the Department of Health, Education, and Welfare, the Veterans Administration, and other interested agencies of the Government to assure that the maximum benefit to the handicapped results from these activities.

6. NASA requested $264,100,000 for the aeronautical research and technology program.

The House authorized $292,300,000 for this program, an increase of $28,200,000. Of the increase, $26,700,000 was to be applied to restore an OMB reduction in work on composite primary aircraft structures, and $1,500,000 was to establish a subline item for aerial applications technology. Also the House added $12 million to accelerate the variable cycle engine and supersonic cruise aircraft research programs, offsetting the addition with an equivalent reduction from the near-term components of the engine components improvement and the energy efficient transport programs.

The Senate authorized $264,100,000, the NASA request, to permit time for further study of the problem of "free-floating" graphite fibers used in the fabrication of composite structures and to provide funds for the aircraft energy efficiency program at the level requested by NASA. The Senate also requested NASA to provide for continuation of its aerial applications technology activity after fiscal year 1979.

The conference substitute authorizes $275,100,000 for the aeronautical research and technology program.

The committee of conference agrees to support the NASA budget request, together with an increase of $11 million to be applied on a priority basis to variable cycle engine/supersonic cruise technology, aerial applications technology, and composite materials technology, for a total authorization of $275,100,000 for the aeronautical research and technology program.

The conferees also urge NASA to review the near-term vs. far-term balance of the aeronautical research and technology program with a view toward achieving a greater emphasis on far-term work.

7. The House increased the NASA request of $3 million for the energy technology applications program by $3 million for space-related technology advancement for the solar power satellite (SPS) concept.

The Senate authorized $4 million for this program, increasing the NASA request by $1 million to support additional activity to identify and verify potential contributions to national energy needs. The Senate noted that a joint Department of Energy/NASA SPS concept development and evaluation program is underway and that funding for this and related SPS activities is the responsibility of the Department of Energy.

The conference substitute authorizes $5 million for the energy technology applications program.

8. NASA requested $305,400,000 for the tracking and data acquisition program.

The House authorized $304,400,000, a decrease of $1 million from the request, the net result of a $5 million cut to assure full advantage is taken of cost reduction opportunities in network operations, and the addition of $4 million to initiate development of and equipment procurement for a new spacelab data processing center at the Goddard Space Flight Center.

The Senate authorized $305.400.000, the NASA request, believing that full funding of network operations is essential to mission success and that the spacelab data center, for which significant research and development and construction of facilities funds

are required, should be presented in the fiscal year 1980 budget.

The conference substitute authorizes $305-400,000 for the tracking and data acquisition program.

The conferees agree that NASA may utilize to the extent required up to $4 million of the funds authorized in the operations subprogram for the development and procurement of long leadtime items of equipment for a spacelab data processing center.

9. The House reduced the NASA request for the rehabilitation and modification of facilities line item by $5 million, reducing it from $17,800,000 to $12,800,000, indicating that several projects did not appear to be high priority for fiscal year 1979 authorization.

The Senate authorized $17,800,000, the NASA request, noting the importance of this line item to maintaining the $6.1 billion NASA plant investment, upgrading facilities to support new technologies and changing missions, and to attacking special problems such as energy conservation.

The committee of conference authorizes $15,300,000 for the rehabilitation and modification of facilities line item.

10. The House bill consolidated the two construction of facilities projects for large aeronautical facilities in subsection 1(b)(10), designating them as items (10)(A) and (10)(B), respectively.

The Senate amendment established each of these projects as an individual line item within the construction of facilities subsection noting they are major, individual, unrelated and separate undertakings, and believing they should be presented accordingly. The remaining line items in subsection 1(b) were renumbered to conform with this change.

The committee of conference adopts the Senate position.

11. The House bill, in section 7, included complementary amendments to sections 102 and 203 of the National Aeronautics and Space Act of 1958, as amended, directing NASA to carry out research, development, demonstrations, and related activities in bioengineering to assist handicapped individuals and lessen or alleviate the problems of disability.

The Senate did not include an equivalent section in its amendment noting that the conduct of such activities by NASA, to the extent desired and appropriate, is embodied in the Space Act as now constituted.

The conference substitute adopts a section 7 amending section 102 of the National Aeronautics and Space Act of 1958 (42 U.S.C. 2451), as amended, to declare that NASA competence in science and engineering should be used to assist in bioengineering research, development and demonstration programs to alleviate and minimize the effects of disability.

12. The House adopted, as section 8 of its bill, a provision requiring the Administrator of NASA to report, by December 31, 1978, to the respective authorizing committees of the House and the Senate on NASA policy regarding conflicts of interest, standards of conduct, and financial disclosure and the implementation of that policy.

The Senate amendment to the bill did not include a comparable provision.

The committee of conference adopts the House position including the House provision as section 8 of the conference substitute.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. RODINO (at the request of Mr. WRIGHT), for today, on account of illness in the family.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. MOORHEAD of Pennsylvania, for 15 minutes today, and to include extraneous matter.

(The following Members (at the request of Mr. RUDD), to revise and extend their remarks, and to include extraneous matter to:)

Mr. KEMP, for 10 minutes, today.
Mr. CONABLE, for 10 minutes, today.
Mr. MCDADE, for 5 minutes, today.
Mr. WAMPLER, for 15 minutes, today.
Mr. HAMMERSCHMIDT, for 5 minutes, today.
Mr. CLEVELAND, for 5 minutes, today.
Mr. CORCORAN of Illinois, for 5 minutes, today.
Mr. YOUNG of Florida, for 5 minutes, today.
Mrs. FENWICK, for 5 minutes, today.
Mr. GRASSLEY, for 30 minutes, today.
Mr. BOB WILSON, for 5 minutes, today.
Mr. GREEN, for 5 minutes, today.

(The following Members (at the request of Mr. AKAKA) to revise and extend their remarks and include extraneous material:)

Mr. MINISH, for 15 minutes, today.
Mr. MCFALL, for 10 minutes, today.
Mr. BRADEMAS, for 5 minutes, today.
Mrs. MEYNER, for 5 minutes, today.
Mr. ANNUNZIO, for 5 minutes, today.
Mr. GONZALEZ, for 5 minutes, today.
Mr. PEPPER, for 5 minutes, today.
Mr. AMBRO, for 5 minutes, today.
Mr. WIRTH, for 5 minutes, today.
Mr. ALEXANDER, for 5 minutes, today.
Mr. BROWN of California, for 5 minutes, today.
Mr. DE LA GARZA, for 5 minutes, today.
Mr. MEEDS, for 5 minutes, today.
Mr. NEAL, for 5 minutes, today.
Ms. HOLTZMAN, for 5 minutes, today.
Mr. BLANCHARD, for 5 minutes, today.
Mr. LAFALCE, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. GORE, in the permanent RECORD, on H.R. 13511, on August 10, 1978.

Mr. WEISS, to include statement in permanent RECORD as part of debate on H.R. 13551 on Thursday, August 10, 1978.

Mr. DINGELL, to revise and extend his remarks on S. 9, Outer Continental Shelf Lands Act Amendments of 1978, prior to vote on the conference report.

(The following Members (at the request of Mr. RUDD), and to include extraneous matter:)

Mr. PURSELL in two instances.
Mr. ANDERSON of Illinois in four instances.
Mr. BOB WILSON.
Mr. DERWINSKI in three instances.
Mr. COUGHLIN.
Mr. RHODES.

ENROLLED BILL SIGNED

Mr. THOMPSON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 8771. An act to amend title 5, United States Code, to authorize the Civil Service Commission to comply with the terms of a court decree, order, or property settlement in connection with the divorce, annulment, or legal separation of a Federal employee who is under the civil service retirement system, and for other purposes.

ADJOURNMENT

Mr. AKAKA. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to.

The SPEAKER pro tempore. Pursuant to the provisions of House Concurrent Resolution 696, 95th Congress, the House stands adjourned until 12 o'clock meridian, Wednesday, September 6, 1978.

Thereupon (at 5 o'clock and 57 minutes p.m.), pursuant to House Concurrent Resolution 696, the House adjourned until Wednesday, September 6, 1978, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

4836. A letter from the Acting Director, Defense Security Assistance Agency, transmitting a report on the impact on U.S. readiness of the Army's proposed sale of certain defense equipment and services to Saudi Arabia (transmittal No. 78-95), pursuant to section 813 of Public Law 94-106; to the Committee on Armed Services.

4837. A letter from the Secretary of the Interior, transmitting the annual report for calendar year 1977 on administration of the Federal Metal and Nonmetallic Mine Safety Act pursuant to section 20 of the act (Public Law 89-577); to the Committee on Education and Labor.

4838. A letter from the Deputy Under Secretary of State for Management, transmitting notice of a proposed change in a records system, pursuant to 5 U.S.C. 552a(o); to the Committee on Government Operations.

4839. A letter from the Acting Director, Defense Security Assistance Agency, transmitting notice of the Air Force's intention to offer to sell certain defense services to Saudi Arabia (transmittal No. 78-81), pursuant to section 36(b) of the Arms Export Control Act; to the Committee on International Relations.

4840. A letter from the Acting Director, Defense Security Assistance Agency, transmitting notice of the Army's intention to offer to sell certain defense equipment and services to Saudi Arabia (transmittal No. 78-95), pursuant to section 36(b) of the Arms Export Control Act; to the Committee on International Relations.

4841. A letter from the Secretary of Agriculture, transmitting notice of a delay in preparation of the report on the review of primitive areas in the National Forest System to determine appropriate areas for redesignation to class I where air quality related values are important attributes of the area, required by section 164(d) of the Clean Air Act, as amended; to the Committee on Interstate and Foreign Commerce.

4842. A letter from the Administrator, U.S. Environmental Protection Agency, transmitting the first annual report of the Task Force on Environmental Cancer and Heart and Lung Disease, pursuant to section 402 of Public Law 95-95; to the Committee on Interstate and Foreign Commerce.

4843. A letter from the Secretary of the Army, transmitting a final environmental impact statement and supplemental information on the Theodore Ship Channel, Mobile Harbor, Ala., pursuant to section 404(r) of the Federal Water Pollution Control Act, as amended (86 Stat. 884; 91 Stat. 1605); jointly, to the Committees on Public Works and Transportation, and Appropriations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. DIGGS: Committee on the District of Columbia. S. 3120. An act to enhance the flexibility of contractual authority of the Temporary Commission on Financial Oversight of the District of Columbia (Rept. No. 95-1504). Referred to the Committee of the Whole House on the State of the Union.

Mr. BOLLING: Committee on Rules. House Resolution 1323. Resolution providing for the consideration of H.R. 1. A bill to require candidates for Federal office. Members of the Congress, and officers and employees of the United States to file statements with the Comptroller General with respect to their income and financial transactions (Rept. No. 95-1505). Referred to the House Calendar.

Mr. BOLLING: Committee on Rules. House Resolution 1324. Resolution providing for the consideration of H.R. 12611. A bill to amend the Federal Aviation Act of 1958 to improve air service and provide flexibility in air fares Rept. No. 95-1506). Referred to the House Calendar.

Mr. LONG of Louisiana: Committee on Rules. House Resolution 1325. Resolution providing for the consideration of H.R. 13059. A bill authorizing the construction, repair, and preservation of certain public works on rivers and harbors for navigation, flood controls, and for other purposes (Rept. No. 95-1507). Referred to the House Calendar.

Mr. MURPHY of Illinois: Committee on Rules. House Resolution 1326. Resolution providing for the consideration of H.R. 11733. A bill to authorize appropriations for the construction of certain highways in accordance with title 23 of the United States Code, for highway safety, for mass transportation in urban and in rural areas, and for other purposes (Rept. No. 95-1508). Referred to the House Calendar.

Mr. TEAGUE: Committee of conference. Conference report on H.R. 11401 (Rept. No. 95-1509). Ordered to be printed.

Mr. UDALL. Committee on Interior and Insular Affairs. H.R. 9945. A bill to amend the act creating the Indian Claims Commission to repeal the provision limiting the activities of Commissioners during the 2 years following their terms of office; with amendment (Rept. No. 95-1510). Referred to the House Calendar.

Mr. JOHNSON of California. Committee on Public Works and Transportation. H.R. 13597. A bill to authorize the Architect of the Capitol to install solar collectors for furnishing a portion of the energy needs of the Rayburn House Office Building and House Office Building Annex No. 2, and for other purposes; with amendment (Rept. No. 95-1513). Refered to the Committee of the Whole House on the State of the Union.

Mr. UDALL: Committee on Interior and Insular Affairs. H.R. 13096. A bill to provide that members of the Sisseton-Wahpeton Sioux Tribe may request the Secretary of the Interior to acquire certain lands, and to provide that the tribe shall have a preference right to purchase certain lands held in trust by the United States for tribal members; with amendment (Rept. No. 95-1511). Referred to the Committee of the Whole House on the State of the Union.

Mr. TEAGUE: Committee on Science and Technology. H.R. 12559. A bill to establish a research and development effort resulting in the commercialization of native latex rubber; with amendment (Rept. No. 95-1512, Pt. I). Ordered to be printed.

Mr. JOHNSON of California: Committee on Public Works and Transportation. H.R. 13808. A bill to designate the "Omar Burleson Federal Building"; with amendment (Report No. 95-1514). Referred to the House Calendar.

Mr. JOHNSON of California: Committee on Public Works and Transportation. H.R. 13809. A bill to designate the "George H. Mahon Building"; with amendment (Rept. No. 95-1515). Referred to the House Calendar.

Mr. ULLMAN: Committee of conference. Conference report on H.R. 8149 (Rept. No. 95-1517). Ordered to be printed.

REPORTED BILLS SEQUENTIALLY REFERRED

Under clause 5 of rule X, bills and reports were delivered to the Clerk for printing, and bills referred as follows:

Mr. ULLMAN: Committee on Ways and Means. H.R. 13814. A bill to amend section 8 of Public Law 93-233 to permit California to continue cash payments to SSI recipients in lieu of food stamps; with amendment (Rept. No. 95-1516, pt. I). Referred to the Committee on Appropriations for a period not to exceed 15 legislative days with instructions to report back to the House as provided in section 401(b) of Public Law 93-344.

PUBLIC BILLS AND RESOLUTIONS

H. Res. 1328. Resolution calling upon the President to communicate to the Government of the Soviet Union the concern of the United States that Isaac Zlotver be granted permission to emigrate to Israel in order to be reunited with his family; to the Committee on International Relations.

By Mr. STEERS (for himself, Mr. GUYER, Mr. GILMAN, Ms. HOLTZMAN, Mr. HUGHES, Mr. HANNAFORD, Mr. HARKIN, Mr. KOSTMAYER, Mr. KREBS, Ms. KEYS, Mr. KEMP, Mr. LAGOMARSINO, Mr. LEHMAN, Mr. LENT, Mr. MOAKLEY, Mr. MITCHELL of Maryland, Mr. MCDONALD, Mr. MURPHY of Illinois, Mr. MAGUIRE, Ms. MIKULSKI, Mr. METCALF, Mr. MARKEY, Mr. OTTINGER, Mr. PATTISON of New York, and Mr. PEPPER):

H. Res. 1329. Resolution calling upon the President to communicate to the Government of the Soviet Union the concern of the United States that Isaac Zlotver be granted permission to emigrate to Israel in order to be reunited with his family; to the Committee on International Relations.

By Mr. STEERS (for himself, Mr. ROE, Mr. ROONEY, Mr. RODINO, Mr. ROSENTHAL, Mr. RICHMOND, Mr. RANGEL, Mr. SOLARZ, Mr. SIMON, Mr. SAWYER, Mr. SCHEUER, Mr. TRAXLER, Mr. TSONGAS, Mr. VENTO, Mr. WAXMAN, Mr. WALKER, Mr. WEISS, Mr. QUIE, Mr. NIX, and Mr. YATES):

H. Res. 1330. Resolution calling upon the President to communicate to the Government of the Soviet Union the concern of the United States that Isaac Zlotver be granted permission to emigrate to Israel in order to be reunited with his family; to the Committee on International Relations.

By Mr. WIRTH:

H. Res. 1331. Resolution expressing the sense of the House of Representatives with

respect to the need for a balanced budget and the steps which must be taken to achieve such a budget by 1981; jointly, to the Committees on Government Operations, and Ways and Means.

By Mr. ERTEL:

H. Res. 1332. Resolution to amend the Rules of the House of Representatives to provide that a motion to suspend the rules and pass a bill or resolution shall not be in order if it makes or authorizes appropriations which may be in excess of $100 million for any fiscal year; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII,

Mr. EDGAR introduced a bill (H.R. 13974) for the relief of Ekaterini Paradia, which was referred to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII,

529. The SPEAKER presented a petition of Beverly S. Lee, Honolulu, Hawaii, relative to redress of grievances, which was referred to the Committee on the Judiciary.

AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 1

By Mr. STRATTON:

(Amendment offered to the amendment in the nature of substitute.)

—In section 207(f) of title 18, United States Code, as proposed to be amended by section 241(a) of the amendment in the nature of a substitute, insert "with respect to the making of communications solely for the purpose of furnishing scientific or technological information under procedures acceptable to the department or agency concerned or" after "shall not apply"

—In section 207(c)(iii) of title 18, United States Code, as proposed to be amended by section 241(a) of the amendment in the nature of a substitute, strike out "0–6" and insert in lieu thereof "0–7".

H.R. 11280

By Mr. COLLINS of Texas:

—On page 137, line 12 after "(ii)" insert the following: "the Federal Bureau of Investigation,".

—On page 213, line 5: after "(B)" insert the following: "the Federal Bureau of Investigation,".

On page 258, line 7: strike out 10,920 and insert in lieu thereof "10,780".

On page 258, line 13: strike out "Management." and insert in lieu thereof the following: "Management, except that the Director of the Federal Bureau of Investigation, without regard to any other provision of this section, may place a total of 140 positions in the Federal Bureau of Investigation in GS–16, 17, and 18."

—On page 273, line 15: after "(B)" insert the following: "the Federal Bureau of Investigation,".

H.R. 12452

By Mr. MAGUIRE:

—Page 29, line 16, insert immediately after the period the following: "In the event of any such withholding, the Secretary may order the prime sponsor to conduct the program as specified in the applicable plan on the basis of funds other than funds under this Act and may enforce such order by appropriate civil action (if such withholding results from fraud and abuse as determined by the Office of the Secretary)."

EXTENSIONS OF REMARKS

CONSTITUTION BICENTENNIAL: TIME FOR REFLECTION, EVALUATION, AND CELEBRATION

HON. FREDERICK W. RICHMOND

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1978

● Mr. RICHMOND. Mr. Speaker, although 2 years have elapsed since the celebration of the Bicentennial of the Revolutionary War, Americans are still very much aware that the Bicentennial itself—the commemoration of 200 years in independence—has significance beyond 1976.

Just as Americans took the opportunity to reflect on the past during the 1976 Bicentennial celebration, we must now look to the future. The next important historical commemoration will be in 1987 when Americans celebrate the 200th birthday of the U.S. Constitution.

Our Constitution remains the most durable written charter of government conceived in modern history. It has demonstrated its ability to adapt to many changing social, economic, and technological institutions in America; it has, in effect, given us a basis upon which we may continually build.

Mr. Speaker, today I am introducing a bill that would provide Americans with a means of evaluating the longevity of our Constitution in terms of its impact on the past and its potential for the future. My bill would establish the American Constitution Bicentennial Commission to serve as the national coordinator of activities and observances associated with this historic event.

The Commission would work closely with State and local governments in coordinating major public observances, as well as seek to develop educational programs on the U.S. Constitution. Without such Federal coordination, State, county, and city governments can be expected at best to develop an awkward patchwork or unrelated and uncoordinated activities and observances. I believe the Commission would provide a much-needed mechanism for States and localities to plan and implement meaningful community projects.

Mr. Speaker, as we in Congress look toward the 1980's and the new Bicentennial commemoration, it is imperative that we provide future Congresses with the tools they will need to effectively serve the American people. I believe this legislation is an important step in our long-term celebration of the Bicentennial of the United States.

I urge my colleagues to examine the following section-by-section analysis of the American Constitution Bicentennial Commission Act and rise in support of this important legislation.

The analysis follows:

SECTION-BY-SECTION ANALYSIS

THE AMERICAN CONSTITUTION BICENTENNIAL COMMISSION ACT

Section 1. Title: "The American Constitution Bicentennial Commission Act."

Section 2. Establishes the American Constitution Bicentennial Commission.

Section 3. Establishes Commission duties, including the planning of educational activities and observances to commemorate the Bicentennial of the U.S. Constitution; efforts would be coordinated with state/local governments.

Section 4. Requires the appointment of 19 members to the Commission: Two U.S. Senators, two members of the House; the U.S. Chief Justice, the U.S. Attorney General, the Secretary of the Interior, the Librarian of Congress, and the U.S. Archivist, or their delegates; and 10 specially qualified persons appointed by the President.

Section 5. Sets pay levels for the Commission Director and such staff as the Commission Chairman deems necessary.

Section 6. Authorizes the Commission to conduct hearings and utilize the services and information resources of Federal agencies to carry out its duties as established in the Act.

Section 7. Requires the Commission to file an annual report containing a detailed survey of progress during the preceding year and recommendations for appropriate legislative and/or administrative action.

Section 8. Terminates the Commission on January 31, 1990.

Section 9. Authorizes appropriations of $250,000 per year for fiscal years 1980, 1981 and 1982.

Section 10. Defines terms referred to in the Act.●

RADIO READING SERVICES OF GREATER CINCINNATI

HON. THOMAS A. LUKEN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1978

● Mr. LUKEN. Mr. Speaker, I would like to take this opportunity to recognize and bring to the attention of my colleagues the upcoming initiation of the

Radio Reading Services of Greater Cincinnati. The program is designed to significantly increase the independence of those constituents in my district who suffer with physical conditions which render them "reading-handicapped." I am sure that no one who has the full use of their sense of sight can appreciate the isolation and frustration which results from the loss of reading capability. Radio Reading will open a new world of information and understanding to these people through the use of the broadcast media.

I fervently hope that Greater Cincinnati's support of this service will encourage other communities to join in this exemplary effort to help handicapped people help themselves in closing their communication gap.

On behalf of all Americans, especially the reading handicapped, I want to thank the many people who have donated time, money, and other resources to make this program work, and Dr. Elmer E. Fischer, who guided the Radio Reading Services of Greater Cincinnati from a desirable dream to a working reality.●

VOTES ON EQUAL RIGHTS EXTENSION

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1978

● Mr. PICKLE. Mr. Speaker, I support the equal rights amendment. I supported it when it passed the House in 1971; I support it today; I will support an equal rights amendment again in the Congress if necessary.

In votes this week, I did not support the legislation to extend the time for ratification of the ERA. Nor did I support the effort to allow States to rescind their previous ratification of the ERA.

I would like to set out why I felt this the proper position to take.

I think every Member here, when it comes to the procedures regarding the U.S. Constitution, feels that procedures and precedents must take priority over any political question or any question of the merits of a particular issue.

The votes yesterday were not votes on the ERA. A vote for extension was not a vote for the ERA, and a vote against extension was not a vote against the ERA. To argue, as some extension supporters did, that one's vote on extension "sends a message" about our position on the ERA while also saying that a two-thirds vote was not required because the extension is a matter of detail, not of substance, is a contradiction. The votes on extension are matters of detail. They are votes on matters of procedure. And as such, we must consider those procedures as they affect the Constitution for all time.

A NEW ISSUE

The time extension proposal breaks new ground in terms of constitutional procedure. The Congress first set a time limit for ratification in the 18th amendment. This procedure was upheld by the Supreme Court in *Dillon* v. *Gloss* 256 U.S. 368 (1921). Thus the power of the Congress to determine a reasonable period for ratification at the beginning of the process was established and tested.

In a subsequent decision, *Coleman* v. *Miller* 307 U.S. 433 (1939), the Supreme Court refused to decide whether or not the proposed child labor amendment was still available for ratification after it had been before the States for 13 years. The Court held that issue must be settled in the Congress. Thus, precedent was established for the Congress to determine what constitutes a reasonable time for ratification at the end of the process.

But this is the first time the question has been proposed regarding the role of the Congress in the middle of an ongoing ratification process.

I do not attempt to claim that the Court would rule the Congress does not have the power to intervene regarding matters of procedure during a ratification process. No one can say for certain how the Court will rule. Moreover, the precedents established do not preclude a ruling affirming congressional authority in this area.

But I cannot cast my vote solely on suppositions regarding how the Court might rule. Each member also reviews the issue in light of his or her own best judgment about its advisability as a precedent for the Constiution.

Article V, under the mode of ratification chosen for the ERA, outlines a sequential procedure: The Congress proposes an amendment by a two-thirds vote. Three-fourths of the State legislatures ratify the amendment. The Congress declares the amendment a bonafide part of the Constitution.

For the Congress to interject itself into the ratification debate while the amendment is before the States violates the spirit—and perhaps the constitutional requirements—of the sequential procedure.

It also means Congress could, by this precedent, interject itself into future debates. If Congress can extend the time, it can curtail it. We could find ourselves discussing an amendment and needing only one or two more States to ratify—and Congress could step in and say, "Sorry, time's up."

Moreover, if we do not abide by the action of the Congress which passed the ERA, no future Congress would be bound by our action on the extension. Thirty-eight ratifications could be secured only to have some future Congress disallow all ratifications after the original deadline.

It is conceivable for an amendment to pass the Congress which would be repugnant to the citizens of some States, and supporters could seek extension after extension to keep pressure building when "fair play" would indicate the supporters should come back for a new amendment passed by two-thirds of a new Congress. I have to ask what the situation would be today if this were an amendment on school busing, or prayer in schools, or abortion, or any number of other amendments which have been proposed to the Congress.

The framers of our Constitution sought a procedure for amendment which would be difficult but not impossible and which would be relatively free from maneuver and extraneous pressure. The President is precluded from entering into the debate in the Congress. The National Government should not enter into the debate of the States.

RESCISSION ALSO IMPROPER

For many of the same reasons, I did not support the effort to allow States to rescind their prior action.

If extension is an improper meddling with the debate before the States, so is a ruling on rescission at this time.

A ruling on rescission now would not be binding on the future Congress which had to determine if 38 States had indeed ratified the ERA.

Moreover, there are other considerations which reinforce the argument against approval of rescissions at any time, much less in the middle of the States' deliberation of the amendment. First, the language of article V mentions only affirmative action by the States. Second, James Madison wrote in a letter to Alexander Hamilton ratifications must be in toto and forever. Finally, Congress has ignored former attempts at rescission, and Court comments support Congress' position.

Two other votes occurred during debate on the ERA extension, both aimed at requiring the legislation to pass by a two-thirds vote. I voted not to require a two-thirds vote. The time limit is basically a matter of detail, not of substance. Second, I think the extension is improper procedure regardless of the vote. Even a unanimous vote could not erase the confusion and constitutional quagmires raised by the extension.

In conclusion, there are some who have argued that they would like to "take their chances" with the future problems of constitutional procedure which could occur as a result of the extension. I will have to take my chances that these people will understand I cannot to do that. I am sworn not to take chances with the Constitution, and I feel I should adhere to that commitment above all others as best I can.●

NEIGHBORHOOD FISCAL EMPOWERMENT EXPERIMENT

HON. JOEL PRITCHARD

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1978

● Mr. PRITCHARD. Mr. Speaker, yesterday, Congressman BLANCHARD and I introduced H.R. 13894, the neighborhood fiscal empowerment experiment, which seeks to develop a new concept of neighborhood self-help and empowerment that will ultimately enable the residents of our Nation's neighborhoods to regain partial control over their own destinies.

Up to now, programs relating to Federal involvement in neighborhood improvements have followed a familiar pattern. The Federal Government taxes A, the taxpayer; with the approval of B, the city government, it redistributes the

money to C, a neighborhood organization, for the benefit of D, the neighborhood residents.

If we have learned anything from 14 years of experience, it is that this mechanism is simply not viable as a means of supporting long-term neighborhood improvements. It brings with it three major problems which appear unavoidable.

The first problem is that of legitimacy. Does the recipient organization truly represent the wishes and enlist the support of the great majority of residents of the neighborhood? Who decides? HUD? City hall? The legitimacy question is often resolved by a political process built around winning the favor of the sponsoring Federal agency and city hall. Urban Members of Congress are often drawn into this question if the program expands.

The second problem is that of accountability. Whenever public funds are disbursed, the receiving organization must necessarily be held strictly accountable for the proper use of the funds. Programs usually come with considerable rules, regulations, inspection, and audits. Compliance puts a very substantial burden on the neighborhod organization. History teaches us that regulation makers and auditors will use every possible technique to prevent anything from "going wrong" at the local level. They want to forestall scandal, bad publicity, and the loss of public and congressional support for their program. The recipient organization must therefore be ever mindful of its relations with the grantor; particularly if it has any thought of securing future funding. This tends to confine the activities of the grantee and orient its policies toward satisfying those who provide the funding. It can lead to debilitating bureaucratic and political intrigue.

The third problem is cooptation. A major strength of neighborhood organizations is their responsiveness to their own residents, and their willingness to represent the interests of those residents against outside institutions. Often neighborhood organizations cannot stand up for neighborhood interests without jeopardizing their existence, which is tied to the continuing goodwill and support of city hall and Washington.

So long as we employ a Federal direct funding mechanism with local government concurrence, these three problems are unavoidable. However, H.R. 13894 is an alternative mechanism which avoids these problems, and which is particularly suited to the encouragement of broadly based neighborhood self-help programs under neighborhood direction and control. It would authorize a pilot program, under the direction of the Assistant Secretary of HUD for Neighborhoods, Voluntary Associations, and Consumer Protection, to provide Congress with practical field experience.

This alternative approach calls for the Federal Government to give the resources back to the people of the neighborhood and let them allocate those resources to those organizations which they believe are doing the best job of responding to local neighborhood needs.

This bill provides for a wholly new mechanism, never before employed in a Federal program. It solves the legitimacy problem because the neighborhood people themselves would decide, by secret ballot, which organizations are legitimate. It solves the accountability problem because the organizations involved would no longer receive grants from city hall or Washington. It solves the cooptation problem because funding would come from as many dispersed sources as there are neighborhood residents contributing to the program.

But the strength of this approach is not merely in that it avoids the problems of the direct grant approach. By its very nature it encourages the spirit of self-help and citizen participation more than any other approach.

The leaders of the neighborhood organizations, under this approach, must appeal not to city hall or Washington for support, but to their own neighbors, who, thanks to this program, have fiscal power in their own hands. This guarantees that participating organizations will redirect their efforts toward the consumers of their "product." not toward the suppliers of the raw materials. It necessarily will involve large numbers of neighborhood residents, who will be making a real investment in a self-help effort of their own choice.

To continue to receive funding in subsequent years, the neighborhood organization must continue to satisfy residents. The painful decision to defund a grantee—in which many a Member of Congress has become involved—will be transferred to the thousands of individual citizens who are in a far better position than any city or Federal bureaucrat to decide whether their money is being used to their benefit.

H.R. 13894 will give citizen initiative the maximum chance to work because it will put fiscal power at the disposal of individual citizens to allocate in their own best interests.

Mr. Speaker, I urge my colleagues in the House of Representatives to give careful consideration to this proposed legislation.●

BALANCE(S) OF POWER, BOOK IV (C)(i), SOVIET STRATEGIC DOCTRINE

HON. JOHN B. BRECKINRIDGE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1978

● Mr. BRECKINRIDGE. Mr. Speaker, in the CONGRESSIONAL RECORD of July 10, 1978, page 20017, I outlined book IV of the Balance(s) of Power series regarding the intentions of the Soviet state in world affairs, and more specifically with regard to warfare and strategic doctrine.

The following article, by Prof. Richard Pipes of Harvard University, is one of the most comprehensive and important analysis of Soviet political and military thought to appear in the English language since the cold war.

The idea of nuclear war is so alien to western mentality, including basic U.S. deterrence strategy, that the burden of Pipes' article, "Why the Soviet Union Thinks It Could Fight and Win a Nuclear War," when published in "Commentary" (July 1977)—sent shock waves across both sides of the Atlantic. But with a cold and scientific rigor and with access to unlimited resources, Pipes proved beyond any plausible doubt that the Soviet leadership does, indeed, think in rational and traditional ways about a subject that most westerners would rather forget.

Polish by birth, and fluent in Russian, Pipes had access to thousands of Russian language publications on nuclear warfare. His conclusions may affront the liberal mind, and repulse the arms control doctrinaire; nonetheless, one cannot dismiss this powerful article. It points with clarity and cold logic to the profound differences in thought and intentions extent between Soviet and American leadership with regard to the conduct of modern warfare.

In addressing what is perhaps the crucial issue of our age, we ignore Pipes' main point at our peril. The first half of Professor Pipes' article follows:

WHY THE SOVIET UNION THINKS IT COULD FIGHT AND WIN A NUCLEAR WAR

(By Richard Pipes)

In a recent interview with the New Republic, Paul Warnke, the newly appointed head of the Arms Control and Disarmament Agency, responded as follows to the question of how the United States ought to react to indications that the Soviet leadership thinks it possible to fight and win a nuclear war. "In my view," he replied, "this kind of thinking is on a level of abstraction which is unrealistic. It seems to me that instead of talking in those terms, which would indulge what I regard as the primitive aspects of Soviet nuclear doctrine, we ought to be trying to educate them into the real world of strategic nuclear weapons, which is that nobody could possibly win." [1]

Even after allowance has been made for Mr. Warnke's notoriously careless syntax, puzzling questions remain. On what grounds does he, a Washington lawyer, presume to "educate" the Soviet general staff composed of professional soldiers who thirty years ago defeated the Wehrmacht—and, of all things, about the "real world of strategic nuclear weapons" of which they happen to possess a considerably larger arsenal than we? Why does he consider them children who ought not to be "indulged"? And why does he chastise for what he regards as a "primitive" and unrealistic strategic doctrine not those who hold it, namely the Soviet military, but Americans who worry about their holding it?

Be all that as it may, even if Mr. Warnke refuses to take Soviet strategic doctrine seriously, it behooves us to take Mr. Warnke's views of Soviet doctrine seriously. He not only will head our SALT II team; his thinking as articulated in the above statement and on other occasions reflects all the conventional wisdom of the school of strategic theory dominant in the United States, one of whose leading characteristics is scorn for Soviet views on nuclear warfare.

American and Soviet nuclear doctrines, it needs stating at the outset, are starkly at odds. The prevalent U.S. doctrine holds that an all-out war between countries in possession of sizable nuclear arsenals would be so destructive as to leave no winner; thus resort to arms has ceased to represent a rational

---

Footnotes at end of article.

policy option for the leaders of such countries vis-a-vis one another.

The classic dictum of Clausewitz, that war is politics pursued by other means, is widely believed in the United States to have lost its validity after Hiroshima and Nagasaki. Soviet doctrine, by contrast, emphatically asserts that while an all-out nuclear war would indeed prove extremely destructive to both parties, its outcome would not be mutual suicide: the country better prepared for it and in possession of a superior strategy could win and emerge a viable society.

"There is profound erroneousness and harm in the disorienting claims of bourgeois ideologies that there will be no victor in a thermonuclear world war," thunders an authoritative Soviet publication.[2] The theme is mandatory in the current Soviet military literature. Clausewitz, buried in the United States, seems to be alive and prospering in the Soviet Union.

The predisposition of the American strategic community is to shrug off this fundamental doctrinal discrepancy. American doctrine has been and continues to be formulated and implemented by and large without reference to its Soviet counterpart. It is assumed here that there exists one and only one "rational" strategy appropriate to the age of thermonuclear weapons, and that this strategy rests on the principle of "mutual deterrence" developed in the United States some two decades ago.

Evidence that the Russians do not share this doctrine which, as its name indicates, postulates reciprocal attitudes, is usually dismissed with the explanation that they are clearly lagging behind us: given time and patient "education," they will surely come around.

It is my contention that this attitude rests on a combination of arrogance and ignorance; that it is dangerous; and that it is high time to start paying heed to Soviet strategic doctrine, lest we end up deterring no one but ourselves. There is ample evidence that the Soviet military say what they mean, and usually mean what they say.

When the recently deceased Soviet Minister of Defense, Marshal Grechko, assures us: "We have never concealed, and do not conceal, the fundamental, principal tenets of our military doctrine,"[3] he deserves a hearing. This is especially true in view of the fact that Soviet military deployments over the past twenty years make far better sense in the light of Soviet doctrine, "primitive" and "unrealistic" as the latter may appear, than when reflected in the mirror of our own doctrinal assumptions.

Mistrust of the military professional, combined with a pervasive conviction, typical of commercial societies, that human conflicts are at bottom caused by misunderstanding and ought to be resolved by negotiations rather than force, has worked against serious attention to military strategy by the United States. We have no general staff; we grant no higher degrees in "military science"; and, except for Admiral Mahan, we have produced no strategist of international repute.

America has tended to rely on its insularity to protect it from aggressors, and on its unique industrial capacity to help crush its enemies once war was under way. The United States is accustomed to waging wars of its own choosing and on its own terms. It lacks an ingrained strategic tradition. In the words of one historian, Americans tend to view both military strategy and the armed forces as something to be "employed intermittently to destroy occasional and intermittent threats posed by hostile powers."[4]

This approach to warfare has had a number of consequences. The United States wants to win its wars quickly and with the smallest losses in American lives. It is disinclined, therefore, to act on protracted and indirect strategies, or to engage in limited wars and wars of attrition. Once it resorts to arms, it prefers to mobilize the great might of its industrial plant to produce vast quantities of the means of destruction with which in the shortest possible time to undermine the enemy's will and ability to continue the struggle.

Extreme reliance on technological superiority, characteristic of U.S. warfare, is the obverse side of America's extreme sensitivity to its own casualties; so is indifference to the casualties inflicted on the enemy. The strategic bombing campaigns waged by the U.S. Air Force and the RAF against Germany and Japan in World War II excellently implemented this general attitude. Paradoxically, America's dread of war and casualties pushes it to adopt some of the most brutal forms of warfare, involving the indiscriminate destruction of the enemy's homeland with massive civilian deaths.

These facts must be borne in mind to understand the way the United States reacted to the advent of the nuclear bomb. The traditional military service—the army and the navy—whose future seemed threatened by the invention of a weapon widely believed to have revolutionized warfare and rendered conventional forces obsolete, resisted extreme claims made on behalf of the bomb. But they were unable to hold out for very long.

An alliance of politicians and scientists, backed by the Air Force, soon overwhelmed them. "Victory through Air Power," a slogan eminently suited to the American way of war, carried all before it once bombs could be devised whose explosive power was measured in kilotons and megatons.

The U.S. Army tried to argue after Hiroshima and Nagasaki that the new weapons represented no fundamental breakthrough. No revolution in warfare had occurred, its spokesmen claimed: atomic bombs were merely a more efficient species of the aerial bombs used in World War II, and in themselves no more able to ensure victory than the earlier bombs had been.

As evidence, they could point to the comprehensive U.S. Strategic Bombing Surveys carried out after the war to assess the effects of the bombing campaigns. These had demonstrated that saturation raids against German and Japanese cities had neither broken the enemy's morale nor paralyzed his armaments industry; indeed, German productivity kept on rising in the face of intensified Allied bombing, attaining its peak in the fall of 1944, on the eve of capitulation.

And when it came to horror, atomic bombs had nothing over conventional ones: as against the 72,000 casualties caused by the atomic bomb in Hiroshima, conventional raids carried out againts Tokyo and Dresden in 1945 had caused 84,000 and 135,000 fatalities, respectively.

Furthermore, those who sought to minimize the impact of the new weapon argued, atomic weapons in no sense obviated the need for sizable land and sea forces. For example, General Ridgway, as Chief of Staff in the early 1950's, maintained that war waged with tactical nuclear weapons would demand larger rather than smaller field armies since these weapons were more complicated, since they would produce greater casualties, and since the dispersal of troops required by nuclear tactics called for increasing the depth of the combat zone.[5]

As we shall note below, similar arguments disputing the revolutionary character of the nuclear weapon surfaced in the Soviet Union, and there promptly came to dominate strategic theory. In the United States, they were just as promptly silenced by a coalition of groups each of which it suited, for its own reasons, to depict the atomic bomb as the "absolute weapon" that had, in large measure, rendered traditional military establishments redundant and traditional strategic thinking obsolete.

Once World War II was over, the United States was most eager to demobilize its armed forces. Between June 1945 and June 1946, the U.S. Army reduced its strength from 8.3 to 1.9 million men; comparable manpower cuts were achieved in the navy and air force.

Little more than a year after Germany's surrender, the military forces of the United States, which at their peak had stood at 12.3 million men, were cut down to 3 million; two years later they declined below 2 million. The demobilization proceeded at a pace (if not in a manner) reminiscent of the dissolution of the Russian army in the revolutionary year of 1917. Nothing could have stopped this mass of humanity streaming homeward. To most Americans peacetime conditions meant reversion to a skeletal armed force.

Yet, at the same time, growing strains in the wartime alliance with the Soviet Union, and mounting evidence that Stalin was determined to exploit the chaotic conditions brought about by the collapse of the Axis powers to expand his domain, called for an effective military force able to deter the Soviets. The United States could not fulfill its role as leader of the Western coalition without an ability to project its military power globally.

In this situation, the nuclear weapon seemed to offer an ideal solution: the atomic bomb could hardly have come at a better time from the point of view of U.S. international commitments. Here was a device so frighteningly destructive, it was believed, that the mere threat of its employment would serve to dissuade would-be aggressors from carrying out their designs.

Once the Air Force received the B–36, the world's first intercontinental bomber, the United States acquired the ability to threaten the Soviet Union with devastating punishment without, at the same time, being compelled to maintain a large and costly standing army.

Reliance on the nuclear deterrent became more imperative than ever after the conclusion of the Korean war, in the course of which U.S. defense expenditures had been sharply driven up. President Eisenhower had committed himself to a policy of fiscal restraint.

He wanted to cut the defense budget appreciably, and yet he had to do so without jeopardizing either America's territorial security or its worldwide commitments. In an effort to reconcile these contradictory desires, the President and his Secretary of State, John Foster Dulles, enunciated in the winter of 1953–54 a strategic doctrine which to an unprecedented degree based the country's security a single weapon, the nuclear deterrent.

In an address to the United Nations in December 1953, Eisenhower argued that since there was no defense against nuclear weapons (i.e., thermonuclear or hydrogen bombs, which both countries were then beginning to produce), war between the two "atomic colossi" would leave no victors and probably cause the demise of civilization.

A months later, Dulles enunciated what came to be known as the doctrine of "massive retaliation." The United States, he declared, had decided "to depend primarily upon a great capacity to retaliate, instantly, by means and at places of our choosing." Throughout his address, Dulles emphasized the fiscal benefits of such a strategy, "more basic security at less cost."

The Eisenhower-Dulles formula represented a neat compromise between America's desires to reduce the defense budget and simultaneously to retain the capacity to respond to Soviet threats. The driving force was not, however, military but budgetary: behind "massive retaliation" (as well as its

Footnotes at end of article.

offspring, "mutual deterrence") lay fiscal imperatives. In the nuclear deterrent, the United States found a perfect resolution of the conflicting demands of domestic and foreign responsibilities. For this reason alone its adoption was a foregone conclusion: the alternatives were either a vast standing army or forfeiture of status as a leading world power.

The Air Force enthusiastically backed the doctrine of massive retaliation. As custodian of the atomic bomb, it had a vested interest in a defense posture of which that weapon was the linchpin. And since in the first postwar decade the intercontinental bomber was the only available vehicle for delivering the bomb against an enemy like the Soviet Union, the Air Force could claim a goodly share of the defense budget built around the retaliation idea.

Although the Soviet Union exploded a fission bomb in 1949 and announced the acquisition of a fusion (or hydrogen) bomb four years later, the United States still continued for a while longer to enjoy an effective monopoly on nuclear retaliation, since the Soviet Union lacked the means of delivering quantities of such bombs against U.S. territory.

That situation changed dramatically in 1957 when the Soviets launched the Sputnik. This event, which their propaganda hailed as a great contribution to the advancement of science (and ours as proof of the American educational system!), represented in fact a significant military demonstration, namely, the ability of the Russians to deliver nuclear warheads against the United States homeland, until then immune from direct enemy threats.

At this point massive retaliation ceased to make much sense and before long yielded to the doctrine of "mutual deterrence." The new doctrine postulated that inasmuch as both the Soviet Union and the United States possessed (or would soon possess) the means of destroying each other, neither country could rationally contemplate resort to war. The nuclear stockpiles of each were an effective deterrent which ensured that they would not be tempted to launch an attack.

This docrtine was worked out in great and sophisticated detail by a bevy of civilian experts employed by various government and private organizations. These physicists, chemists, mathematicians, economists, and political scientists came to the support of the government's fiscally-driven imperatives with scientific demonstrations in favor of the nuclear deterrent.

Current U.S. strategic theory was thus born of a marriage between the scientist and the accountant. The professional soldier was jilted.

A large part of the U.S. scientific community had been convinced as soon as the first atomic bomb was exploded that the nuclear weapon, which that community had conceived and helped to develop, had accomplished a complete revolution in warfare. This conclusion was reached without much reference to the analysis of the effects of atomic weapons carried out by the military, and indeed without consideration of the traditional principles of warfare.

It represented, rather, an act of faith on the part of an intellectual community which held strong pacifist convictions and felt deep guilt at having participated in the creation of a weapon of such destructive power.

As early as 1946, in an influential book sponsored by the Yale Institute of International Affairs, under the title The Absolute Weapon, a group of civilian strategic theorists enunciated the principles of the mutual-deterrence theory which subsequently became the official U.S. strategic doctrine. The principal points made in this work may be summarized as follows:

. 1. Nuclear weapons are "absolute weapons" in the sense that they can cause unacceptable destruction, but also and above all because there exists against them no possible defense. When the aggressor is certain to suffer the same punishment as his victim, aggression ceases to make sense.

Hence war is no longer a rational policy option, as it had been throughout human history. In the words of Bernard Brodie, the book's editor: "Thus far the chief purpose of our military establishment had been to win wars. From now on its chief purpose must be to avert them. It can have almost no other useful purpose" (p. 76).

2. Given the fact that the adjective absolute means, by definition, incapable of being exceeded or surpassed, in the nuclear age military superiority has become meaningless. As another contributor to the book, William T. R. Fox, expressed it: "When dealing with the absolute weapon, arguments based on relative advantage lose their point" (p. 181).

From which it follows that the objective of modern defense policy should be not superiority in weapons, traditionally sought by the military, but "sufficiency"; just enough nuclear weapons to be able to threaten a potential aggressor with unacceptable retaliation—in other words, an "adequate" deterrent, no more, no less.

3. Nuclear deterrence can become effective only if it restrains mutually—i.e., if the United States and the Soviet Union each can deter the other from aggression. An American monopoly on nuclear weapons would be inherently destabilizing, both because it could encourage the United States to launch a nuclear attack, and, at the same time, by making the Russians feel insecure, cause them to act aggressively.

"Neither we nor the Russians can expect to feel even reasonably safe unless an atomic attack by one were certain to unleash a devastating atomic counterattack by the other," Arnold Wolfers maintained (p. 135). In other words, to feel secure the United States actually required the Soviet Union to have the capacity to destroy it.

Barely one year after Hiroshima and three years before the Soviets were to acquire a nuclear bomb, The Absolute Weapon articulated the philosophical premises underlying the mutual-deterrence doctrine which today dominates U.S. strategic thinking. Modern strategy, in the opinion of its contributors, involved preventing wars rather than winning them, securing sufficiency in decisive weapons rather than superiority, and even ensuring the potential enemy's ability to strike back.

Needless to elaborate, these principles ran contrary to all the tenets of traditional military theory, which had always called for superiority in forces and viewed the objective of war to be victory. But then, if one had decided that the new weapons marked a qualitative break with all the weapons ever used in combat, one could reasonably argue that past military experience, and the theory based on it, had lost relevance. Implicit in these assumptions was the belief that Clausewitz and his celebrated formula proclaiming war an extension of politics were dead.

Henry Kissinger, who can always be counted upon to utter commonplaces in the tone of prophetic revelation, announced Clausewitz's obituary nearly twenty years after The Absolute Weapon had made the point, in these words: "The traditional mode of military analysis which saw in war a continuation of politics but with its own appropriate means is no longer applicable."[6]

American civilian strategists holding such views gained the dominant voice in the formulation of U.S. strategic doctrine with the arrival in Washington in 1961 of Robert S. McNamara as President Kennedy's Secretary of Defense. A prominent business executive specializing in finance and accounting, McNamara applied to the perennial problem of American strategy—how to maintain a credible global military posture without a large and costly military establishment—the methods of cost analysis.

These had first been applied by the British during World War II under the name "operations research" and subsequently came to be adopted here as "systems analysis." Weapons' procurement was to be tested and decided by the same methods used to evaluate returns on investment in ordinary business enterprises. Mutual deterrence was taken for granted: the question of strategic posture reduced itself to the issue of which weapons systems would provide the United States with effective deterrence at the least expense.

Under McNamara the procurement of weapons, decided on the basis of cost effectiveness, came in effect to direct strategy, rather than the other way around, as had been the case through most of military history. It is at this point that applied science in partnership with budgetary accountancy—a partnership which had developed U.S. strategic theory—also took charge of U.S. defense policy.

As worked out in the 1960's, and still in effect today, American nuclear theory rests on these propositions: All-out nuclear war is not a rational policy option, since no winner could possibly emerge from such a war. Should the Soviet Union nevertheless launch a surprise attack on the United States, the latter would emerge with enough of a deterrent to devastate the Soviet Union in a second strike.

Since such a retaliatory attack would cost the Soviet Union millions of casualties and the destruction of all its major cities, a Soviet first strike is most unlikely. Meaningful defenses against a nuclear attack are technically impossible and psychologically counterproductive; nuclear superiority is meaningless.

In accord with these assumptions, the United States in the mid-1960's unilaterally froze its force of ICBM's at 1,054 and dismantled nearly all its defenses against enemy bombers. Civil-defense was all but abandoned, as was in time the attempt to create an ABM system which held out the possibility of protecting American missile sites against a surprise enemy attack.

The Russians were watched benignly as they moved toward parity with the United States in the number of intercontinental launchers, and then proceeded to attain numerical superiority. The expectation was that as soon as the Russians felt themselves equal to the United States in terms of effective deterrence, they would stop further deployments.

The frenetic pace of the Soviet nuclear build-up was explained first on the ground that the Russians had a lot of catching up to do, then that they had to consider the Chinese threat, and finally on the grounds that they are inherently a very insecure people and should be allowed an edge in deterrent capability.

Whether mutual deterrence deserves the name of a strategy at all is a real question. As one student of the subject puts it:

"Although commonly called a 'strategy,' 'assured destruction' was by itself an antithesis of strategy. Unlike any strategy that ever preceded it throughout the history of armed conflict, it ceased to be useful precisely where military strategy is supposed to come into effect: at the edge of war. It posited that the principal mission of the U.S. military under conditions of ongoing nuclear operations against [the continental United States] was to shut its eyes, grit its teeth, and reflexively unleash an indiscriminate and simultaneous reprisal against all Soviet aim points on a preestablished target list.

"Rather than deal in a considered way with the particular attack on hand so as to

---

Footnotes at end of article.

minimize further damage to the United States and maximize the possibility of an early settlement on reasonably acceptable terms, it had the simple goal of inflicting punishment for the Soviet transgression. Not only did this reflect an implicit repudiation of political responsibility, it also risked provoking just the sort of counterreprisal against the United States that a rational wartime strategy should attempt to prevent." [7]

I cite this passage merely to indicate that the basic postulates of U.S. nuclear strategy are not as self-evident and irrefutable as its proponents seem to believe; and that, therefore, their rejection by the Soviet military is not, in and of itself, proof that Soviet thinking is "primitive" and devoid of a sense of realism.

The principal differences between American and Soviet strategies are traceable to different conceptions of the role of conflict and its inevitable concomitant, violence, in human relations; and secondly, to different functions which the military establishment performs in the two societies.

In the United States, the consensus of the educated and affluent holds all recourse to force to be the result of an inability or an unwillingness to apply rational analysis and patient negotiation to disagreements: the use of force is *prima facie* evidence of failure. Some segments of this class not only refuse to acknowledge the existence of violence as a fact of life, they have even come to regard fear—the organism's biological reaction to the threat of violence—as inadmissible. "The notion of being threatened has acquired an almost class connotation," Daniel P. Moynihan notes in connection with the refusal of America's "sophisticated" elite to accept the reality of a Soviet threat. "If you're not very educated, you're easily frightened. And not being ever frightened can be a formula for self-destruction." [8]

Now this entire middle-class, commercial, essentially Protestant ethos is absent from Soviet culture, whose roots feed on another kind of soil, and which has had for centuries to weather rougher political climes. The Communist revolution of 1917, by removing from positions of influence what there was of a Russian bourgeoisie (a class Lenin was prone to define as much by cultural as by socio-economic criteria), in effect installed in power the *muzhik*, the Russian peasant.

And the muzhik had been taught by long historical experience that cunning and coercion alone ensured survival: one employed cunning when weak, and cunning coupled with coercion when strong. Not to use force when one had it indicated some inner weakness. Marxism, with its stress on class war as a natural condition of mankind so long as the means of production were privately owner, has merely served to reinforce these ingrained convictions. The result is an extreme Social-Darwinist outlook on life which today permeates the Russian elite as well as the Russian masses, and which only the democratic intelligentsia and the religious dissenters oppose to any significant extent.

The Soviet ruling elite regards conflict and violence as natural regulators of all human affairs: wars between nations, in its view, represent only a variant of wars between classes, recourse to the one or the other being dependent on circumstances. A conflictless world will come into being only when the socialist (i.e., Communist) mode of production spreads across the face of the earth.

The Soviet view of armed conflict can be illustrated with another citation from the writings of the late Marshal Grechko, one of the most influential Soviet military figures of the post-World War II era. In his principal treatise, Grechko refers to the classification of wars formulated in 1972 by his U.S. counterpart, Melvin Laird. Laird divided wars according to engineering criteria—in terms of weapons employed and the scope of the theater of operations—to come up with four principal types of wars: strategic-nuclear, theater-nuclear, theater-conventional, and local-conventional. Dismissing this classification as inadequate, Grechko applies quite different standards to come up with his own typology:

"Proceeding from the fundamental contradictions of the contemporary era, one can distinguish, according to sociopolitical criteria, the following types of wars: (1) wars between states (coalitions) of two contrary social systems—capitalist and socialist; (2) civil wars between the proletariat and the bourgeoisie, or between the popular masses and the forces of the extreme reaction supported by the imperialists of other countries; (3) wars between imperialist states and the peoples of colonial and dependent states fighting for their freedom and independence; and (4) wars among capitalist states." [9]

This passage contains many interesting implications. For instance, it makes no allowance for war between two Communist countries, like the Soviet Union and China, though such a war seems greatly to preoccupy the Soviet leadership. Nor does it provide for war pitting a coalition of capitalist and Communist states against another capitalist state, such as actually occurred during World War II when the United States and the Soviet Union joined forces against Germany.

But for our purposes, the most noteworthy aspect of Grechko's system of classification is the notion that social and national conflicts within the capitalist camp (that is, in all countries not under Communist control) are nothing more than a particular mode of class conflict of which all-out nuclear war between the superpowers is a conceivable variant.

In terms of this typology, an industrial strike in the United States, the explosion of a terrorist bomb in Belfast or Jerusalem, the massacre by Rhodesian guerrillas of a black village or a white farmstead, differ from nuclear war between the Soviet Union and the United States only in degree, not in kind.

All such conflicts are calibrations on the extensive scale by which to measure the historic conflict which pits Communism against capitalism and imperialism. Such conflicts are inherent in the stage of human development which precedes the final abolition of classes.

Middle-class American intellectuals simply cannot assimilate this mentality, so alien is it to their experience and view of human nature. Confronted with the evidence that the most influential elements in the Soviet Union do indeed hold such views, they prefer to dismiss the evidence as empty rhetoric, and to regard with deep suspicion the motives of anyone who insists on taking it seriously.

Like some ancient Oriental despots, they vent their wrath on the bearers of bad news. How ironic that the very people who have failed so dismally to persuade American television networks to eliminate violence from their programs, nevertheless feel confident that they can talk the Soviet leadership into eliminating violence from its political arsenal!

Solzhenitsyn grasped the issue more profoundly as well as more realistically when he defined the antithesis of war not as the absence of armed conflict between nations—i.e., "peace" in the conventional meaning of the term—but as the absence of all violence, internal as well as external. His comprehensive definition, drawn from his Soviet experience, obversely matches the comprehensive Soviet definition of warfare. . . .

A TRIBUTE TO PAUL G. ROGERS

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1978

● Mr. BRADEMAS. Mr. Speaker, when the 95th Congress concludes its business this year, it will mark the end of 24 years of distinguished service by the Congressman from the 11th District of Florida, PAUL ROGERS. Those of us who have served with PAUL ROGERS have indeed been most fortunate. We have all benefited from his wisdom, decency, and statesmanship. We cannot help being saddened by his announcement that he will not seek another term even as we wish him every success and happiness in whatever future endeavors he pursues.

PAUL ROGERS will be deeply missed by his colleagues in the House for we are all familiar with his exceptionally intelligent, dedicated, and fair leadership as chairman of the Subcommittee on Health and Environment.

Mr. Speaker, I would like to share with the Members an editorial from the July 24, 1978, issue of Medical World News which speaks to the high esteem in which PAUL ROGERS is held across the country.

The editorial follows:

A LEGISLATOR WHO'LL BE MISSED

Paul G. Rogers is leaving the House of Representatives after 24 years. During the past eight years, as chairman of the Subcommittee on Health and Environment, he has been a dominant figure in health affairs. No matter who replaces him in that post, Rogers will be sorely missed.

Most of all, MWN will miss his hearings. They were marked by careful preparation and reasoned tone. Though we did not always agree with him, as reporters we were confident his hearings would be worth covering.

As such they were frequently different from other similar gatherings on a number of counts.

First, Rogers himself usually arrived well prepared, with at least a basic grasp of the subject at hand. Second, the hearings were just that—forums in which information needed to make decisions could be developed. Rarely, if ever, was a Rogers hearing choreographed to support a narrow, predetermined point of view. And almost as rarely were the hearings laid on with an eye toward publicity rather than the information to be generated.

This is not to suggest that the 57-year-old Floridian was not a politician of considerable finesse. A moderate Democrat from a solidly Republican area, he was returned to office two years ago with a plurality of 91%, the largest given any Congressman in the 1976 elections. His political acumen was also demonstrated repeatedly within his committee. Take, for example the little-known but critical point in the development of a bill called "markup". It is here that, after all the staff work and hearings, bills often come to disaster as the individual views and votes of committee members are brought into play. Under Paul Rogers, the markup process was nearly always democratic and smooth.

In large part this was due to his ability to achieve compromise. This talent paved the way for passage of such landmark laws as the 1970 Clean Air Act, the 1971 National Cancer Act, the 1970 National Health Service Corps Act, and the 1976 Medical Devices Amendments. Indeed, in the early 1970s his subcommittee turned out so many bills on such subjects as health manpower, community mental health centers, regional medical programs, communicable disease control, drug abuse, and the creation of a new aging institute at NIH that is was called the "Disease of the Month Club".

It was during this time that Rogers, always impeccably dressed and with Southern-accented courtesy, established himself as an implacable examiner. Evasive witnesses soon discovered that he already knew the answers to many of the questions he asked. In addition, documents were usually available to help "refresh" memories. Where there were conflicts in statements, the reasons were fully explored. You did not have to agree with Paul Rogers, but it was always best to answer as candidly and completely as possible.

On the whole, Rogers should be judged a friend of the private sector. There are rumors he will remain on the Washington health scene in some private or appointive capacity. We hope so, because his kind of knowledge and style are rare indeed.●

THE HONORABLE RICHARD GARDNER—U.S. AMBASSADOR TO ITALY

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1978

● Mr. ZABLOCKI. Mr. Speaker, on June 6 of this year, I was privileged to chair a Capitol Hill breakfast meeting as part of a regular series of such meetings under the sponsorship of the Georgtown University Center for Strategic and International Studies.

The guest speaker on that particular occasion was the Honorable Richard Gardner, U.S. Ambassador to Italy, who commented at some length about political and economic trends in his country of assignment, as well as U.S. foreign policy concerns. The meeting was well attended and afforded Members of Congress the opportunity to question the Ambassador on a broad range of topics, including U.S. attitudes toward Euro-Communism in general and the role of the Italian Community Party (PCI), in particular. Judging from the comments I have received from a number of my colleagues who participated in the event, it was a useful exchange in all respects.

Subsequently, this meeting was referred to in various accounts appearing in the Italian press. Predictably, coverage of the event was mixed, including, in some instances, a mixture of fact and fantasy. One article in particular left the impression that Ambassador Gardner is on the verge of being transferred after only 15 months at his present post—essentially because of widespread congressional criticism of his role and policies.

Nothing, Mr. Speaker, could be further from the truth. While there are—and always will be—differences of opinion within this body on the best course for the United States to pursue in its dealings with the Italian Government, I have seen no indication of a ground swell of opposition to the Ambassador's performance in a difficult, challenging, and sensitive assignment. On the contrary, I believe he enjoys bipartisan admiration and respect.

Just to set the record straight on behalf of this Member, let me register my own confidence in Ambassador Gardner and my personal appreciation for the job he is doing as our Ambassador to Italy.

Mr. Gardner has outstanding credentials, having brought to his position an extraordinary background in government and academia. He is a member of the Trilateral Commission and was for many years a distinguished professor of international law at Columbia University. He has also served with distinction in the Department of State, is fluent in Italian, and has followed Italian affairs closely for many years.

In short, it appears clear to me that we are indeed fortunate to have, as our Ambassador to Italy, a man who enjoys the respect of his friends and colleagues in the universities, the Congress, the executive branch, and the broader community of those concerned with American foreign policy.●

THE 103D ARMORED DIVISION

HON. JOHN P. MURTHA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1978

● Mr. MURTHA. Mr. Speaker, it has come to my attention that the 103d Armored Division based in Johnstown has won the 1978 award as the National Guard's outstanding armored battalion. This is particularly significant because this is the fourth year in a row that the division has won the award. To the best of our knowledge, no division in the Nation has ever won this award four times in a row.

Col. Joseph Latch will accept the award in St. Louis later this year. In Congress we have debated the role of the National Guard, and this unit certainly exemplifies how the National Guard should be performing.

I extend my congratulations to the excellent effort by this unit.●

SENATE—*Friday, August 18, 1978*

(Legislative day of Wednesday, August 16, 1978)

The Senate met at 9 a.m., on the expiration of the recess, and was called to order by Hon. DONALD W. RIEGLE, JR., a Senator from the State of Michigan.

PRAYER

The Reverend Dr. Robert B. Harriman, director, the Presbyterian Council for Chaplains and Military Personnel, Washington, D.C., offered the following prayer:

Let us pray. Almighty God, we thank Thee for this Nation, born in freedom and maturing in union. The bounty of the Earth and the wealth of human talents have made us a nation of power among the nations of the world. Thou dost hold us responsible for the proper use of all we receive, and demand faithful stewardship of the resources of land and people. May power neither make us insensitive to the cries of the weak nor tempted to turn aside from their needs. May we who enjoy many privileges be aware of those for whom privileges are few. May we, who are aware of God-given rights, be alert to any denial of those rights to others. Thou hast made us strong so that we may lift the fallen; Thou has given us privileges so that we may share generously with others; Thou has shown us our rights so that we may guarantee them for all Thy people. With an appreciation of those who have led this Nation in the past, and prayers for all who lead this Nation now, we ask Thy continued guidance and blessing through all the days ahead. In the Master's name we pray. Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The second assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., August 18, 1978.

To the Senate:

Under the provisions of rule I, section 3, of the Standing Rules of the Senate, I hereby appoint the Honorable DONALD W. RIEGLE, JR., a Senator from the State of Michigan, to perform the duties of the Chair.

JAMES O. EASTLAND,
President pro tempore.

Mr. RIEGLE thereupon assumed the chair as Acting President pro tempore.

RECOGNITION OF LEADERSHIP

The ACTING PRESIDENT pro tempore. Under the previous order, the majority leader is recognized.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings be approved to date.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I do not believe I have any requests for time on my side.

RECOGNITION OF LEADERSHIP

Mr. SCHMITT addressed the Chair.

The ACTING PRESIDENT pro tempore. The Senator from New Mexico.

AMERICAN BALLOONISTS LAND IN FRANCE

Mr. SCHMITT. Mr. President, the world is once again thrilled by the actions of American adventurers. In this case, three New Mexicans have completed their flight in a balloon across the Atlantic to the cheers, once again, of Frenchmen.

It is one of the most exciting periods in New Mexico's history. I think once again it is an exciting period for not only Americans but also the rest of the world.

Ben Abruzzo, Maxie Anderson, and Larry Newman have bound the two continents together again by a human endeavor much more than a technological endeavor.

So, with Charles Lindbergh and many other American explorers and adventurers, they have written their story in history.

Mr. President, I ask unanimous consent that today's article describing that adventure that appeared in the Washington Post be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICAN BALLOON LANDS IN FRANCE

(By Milton R. Benjamin)

Three American daredevils who crossed the Atlantic in a giant silver balloon landed in a wheat field outside Paris yesterday and were mobbed by Frenchmen in a scene reminiscent of the welcome for Charles Lindbergh a half-century ago.

The 11-story-high Double Eagle II, flying both the Stars and Stripes and the French tricolor, touched down just before dusk near the hamlet of Miserey, 50 miles west of Paris, ending a six-day, 3,200-mile odyssey which had begun in Presque Isle, Maine.

As light planes buzzed overhead dipping their wings in salute, Frenchmen who had been trailing the balloon along country roads drove wildly across fields to embrace the first balloonists to successfully cross the Atlantic.

"I cannot believe this welcome," exclaimed a bearded Ben Abruzzo, 48, as he jumped from the red and yellow gondola along with coadventurers Maxie Anderson, 44, and 31-year-old Larry Newman.

After quickly securing their balloon in a stiff evening breeze, the three men uncorked a bottle of champagne they had brought with them and doused each other as the rapidly growing crowd cheered wildly.

Half an hour after touchdown, the celebration was still growing. Gendarmes all but abandoned their efforts to hold back the thousands who had converged on the site, and the balloon's gondola was ripped apart for souvenirs.

"Lindbergh was a much bigger thing, of course, but this is really something, too," exulted Emile Lasne, 73, who remembered the landing of Charles Lindbergh at Le Bourget airport in 1927 following the first nonstop Atlantic crossing by air.

The three balloonists, all from Albuquerque, N.M., had hoped to follow in "Lucky Lindy's" footsteps and end their flight at Le Bourget, but a wind shift yesterday forced them to abandon that goal.

It hardly seemed to matter.

"This is fantastic," shouted a woman holding her baby high for a glimpse of the balloonists.

"This is fabulous, fabulous," echoed Gregoire Mussayan, a motorist who joined the celebration. "This is a victory for the American people."

At the height of the celebration Newman's father, Herb, who had been trailing the balloon, arrived to greet his son.

"I did it, dad. I did it," shouted Newman, burying his head in his father's shoulder and weeping.

Before a helicopter arrived to take the three adventurers to Paris, the village doctor gave them a rapid checkup. He found them tired, but otherwise in good health.

The three balloonists also donned fresh T-shirts before boarding the helicopter that proudly proclaimed, "First Transatlantic Crossing by Balloon."

In Paris, another hero's welcome—and a reunion with their wives—awaited the trio. Earlier in the day, as the Double Eagle II drifted across southern England, the three wives had flown close enough to the balloon in a private plane to blow kisses at their husbands.

In Paris, Youth and Sports Minister Jean-Pierre Soisson termed the achievement "a new bridge between America and France," and announced that he had awarded the balloonists his ministry's gold medal.

The French government also planned a champagne welcome to Paris for the Americans, although the balloonists—who dined during their six-day flight on hot dogs and canned sardines—radioed ahead that they were looking forward to a meal of french fries and hamburgers.

Air France also suggested that the three balloonists avail themselves of somewhat faster transportation on their return across the Atlantic to the United States, offering them free passage aboard the supersonic Concorde.

President Carter congratulated the three by telegram and invited them to the White House.

"Your daring voyage through the silent sky is a welcome reminder that individual acts of bravery and skill still capture our collective imagination," Carter said.

In downtown Paris, crowds of Frenchmen gathered on the Rue du Faubourg St. Honore outside the U.S. Embassy residence where the balloonists and their wives were put up for the night.

The youngest of the three, Newman, and his wife Sandra won the right to spend the night in the Lindbergh bed, where Lucky Lindy slept following his epic flight.

Anderson, a veteran pilot and industrial engineer who along with Abruzzo had attempted the same voyage a year ago aboard the Double Eagle I, said the balloonists ran into trouble only four times on their flight.

The most serious problem, he said, was "when we iced up badly about halfway across the Atlantic. It cost us a lot of ballast and height."

But recalling his previous transatlantic effort, he added: "Last year we went down off Iceland. We're kind of glad to be here in France this time."

Abruzzo, who is in real estate and other business, is also a veteran balloonist and pilot. Newman, a newcomer to ballooning, manufactures hang gliders and had hoped to arrive on the European continent on a hang glider that had been attached to the gondola of the Double Eagle II. Ballast problems, however, forced the balloonists to jettison the glider over the Atlantic.

The three men actually achieved the century-old dream of crossing the Atlantic by balloon Wednesday night, when the Double Eagle II crossed the coast of Ireland 121 hours and 18 minutes after liftoff.

Propelled by brisk winds, they pressed on across Wales and southwest England, over the English channel, and crossed the French coastline near Le Havre.

"We intended to go to Le Bourget airport because Lindbergh landed there," Abruzzo said. But as the balloon soared across the hedgerows of Normandy toward Paris, the wind began to shift.

"The direction of the balloon was changed," Abruzzo said, so the three men decided to land.

When they finally set the Double Eagle II gently down in the wheat field, they had been in the air 137 hours and 18 minutes and had traveled an estimated 3,233 miles—both records.

Despite their disappointment at not making it to Le Bourget, the balloonists were clearly delighted to have succeeded in reaching France.

"I guess Ireland would have done it," Anderson said.

"But the reason we wanted to come to France was Charles Lindbergh," he added. "He's an inspiration to many generations of Frenchmen and Americans."

ADVENTURERS' HOME TOWN TAKES BALLOON FEAT IN STRIDE

ALBUQUERQUE, N.M.—The people of this town are used to hearing about their adventurous citizens rising higher, flying straighter and going farther than most in balloons.

Ben Abuzzo, 48, Maxie Anderson, 44, and Larry Newman, 31, added the biggest prize to the local collection when their helium-filled Double Eagle II reached the coast of Ireland Wednesday, making them the first men to cross the Atlantic by balloon.

"I think it's tremendous," said Paul Woessner, an Albuquerque resident who won the world hot-air balloon championship in England. "If any body had to do it, I'm glad it was someone from Albuquerque."

THE UPCOMING SUMMIT CONFERENCE

Mr. SCHMITT. Mr. President, I think all of the Members of the minority would join me in wishing the President, Mr. Begin and Mr. Sadat success in their upcoming summit conference.

It is extremely important to our three countries, as well as to the peace of the world, that this conference is marked by success.

The measure of that success is unknown at this time. Certainly, we hope some of the major differences we know about that divide the peoples in the Middle East will be resolved. But, it may also be possible to set out ahead of those differences, to agree to disagree for some period of time more and find a means by which all the peoples of that region can work together for their future economic advancement. The ties of economy, of need, of resources, of ingenuity and imagination that could be forged by the great peoples of the Middle East, certainly, would make a worthwhile aim of that conference.

Let us hope that they, in fact, are forged and that some steps toward permanent peace in that region can be reached.

ORDER OF BUSINESS

Mr. SCHMITT. Mr. President, I ask unanimous consent that the special orders for Mr. TOWER and Mr. MCCLURE be transferred to Mr. HAYAKAWA this morning.

The ACTING PRESIDENT pro tempore. Is there objection?

Without objection, it is so ordered.

Mr. SCHMITT. Mr. President, I yield the remainder of my time to the distinguished Senator from Wyoming.

Mr. HANSEN. Mr. President, I ask unanimous consent that Danny Boggs, of the Energy and Natural Resources Committee, be granted privilege of the floor during the day throughout the debate and any votes on any measures which may come up.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. HANSEN. I thank my colleague.

SPECIAL ORDER

Mr. SCHMITT. Mr. President, I have no further need for the leadership time.

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from California (Mr. HAYAKAWA) is recognized for not to exceed 45 minutes.

The Senator from California.

VOTING RIGHTS FOR THE DISTRICT OF COLUMBIA

Mr. HAYAKAWA. Mr. President, I wish to address myself to the question of voting rights for Washington, D.C.

I remark, first of all, that Washington, D.C. is a kind of incredible dream city, a kind of fairyland, a unique place in this country. There is no seaport. There is no industry. There is no agriculture.

We have no automobile factories like Detroit, no golden fields of corn like Iowa or Indiana, no dairy farms like Wisconsin, no shipping like New Orleans, Baltimore, Seattle, or Galveston, no clothing industry like New York, no movie studios or wineries or orchards like California, no wheat fields like the Dakotas, no pineapples and sugar cane like the glorious islands of Hawaii, no mineral resources like Alaska, no lumber resources like those of Alaska and the State of Washington.

There is just no wealth-creating business here in Washington, but only one great money-spending entity, the Federal Government.

The majority of those working in the District of Columbia work for the Federal Government, or the closely related service industries whose workers service those who work for the Government.

Add to that, all the lobbying groups, the law firms who are here because the Federal Government is here, and one begins to understand what is meant by the term "Federal City."

This city makes laws and regulations. In the course of history, some of those laws and regulations have helped to produce wealth, like the Homestead Act, or the Morrell Act that created the land grant colleges.

It is in the business, largely, of making laws and regulations to prevent the formation of wealth, like OSHA and FDA and the Department of Energy.

The people in the States of the Union work to create wealth, a large amount of which they send in the form of taxes to Washington, D.C., for us to spend. Our major economic concern, then, is not how much wheat we can grow, or chickens we can hatch, or shoes, tractors or dresses we can manufacture, but rather how much money we can get the wealth-creators of the 50 States to send us. We live and work here only on the strength of other people's taxes.

Washington creates no wealth, but we wallow in wealth. If there were to be voting Representatives from the District of Columbia in Congress, they would then be in the position of representing the interests of the Federal Government to the Federal Government. This situation could easily provide an opportunity for the abuse of power, or at the very least, severe conflict of interest.

To further illustrate my point, I would like to read, for the benefit of my colleagues, an article by Tom Bethell, recently published in Harper's magazine, entitled, "The Wealth of Washington."

Talking about wealth in general, Mr. Bethell says that we have had two basic theories about wealth and its distribution:

> The first system is sometimes described as "trickle-down" economics. According to this system, people were allowed to accumulate as much money as they were able, on the theory that they would spend it, allowing the benefits therefrom to "trickle down" to others who had not been able to accumulate so much.
>
> * * * * *
>
> Unfortunately, trickle-down economics got a bad name in the end.
>
> * * * * *
>
> Along came the new system, based instead on fairness. There would be an unfortunate but necessary "trade-off" between efficiency and equality. Under the new system, people would still be allowed to make money, but after they had made a certain amount their earnings would be transferred to others who had made less. This money would be transferred as though it were water in a bucket. Then a very important discovery was made. In the process of traveling from the rich to the poor, the bucket leaked. Thus the "leaky bucket" economic system eventually came to replace the "trickle-down" system.
>
> * * * * *
>
> Here is an excellent description of leaky-bucket economics by Arthur Okun, an economist with the Brookings Institution and formerly chairman of President Johnson's Council of Economic Advisers. Okun postulates a program that takes away $4,000 from each of several affluent families and gives the money to another group, four times larger, of poor families. This transfer should, as Okun says, "finance a $1,000 grant for the average low-income family."
>
> "However," he continues, "the program has an unsolved technological problem: the money must be carried from the rich to the poor in a leaky bucket. Some of it will simply disappear in transit, so the poor will not receive all the money that is taken from the rich. The average poor family will get less than $1,000, while the average rich family gives up $4,000."
>
> * * * * *
>
> Washington is right underneath the leaky bucket, and, I am tempted to add, the mansions are not being built in Newport anymore; they are being built in Washington. Not for individuals, of course—heavens no. There are no multimillionaires in the new scheme. That's precisely the beauty of it. Greed has been ostensibly eliminated from the picture and replaced by good works. This is what makes it so hard to point an accusatory finger at anyone. No, the new structures, on a much larger (although not grander) scale than the Newport mansions, are called "agencies" and "departments," and to be fair about it they employ far more people than The Breakers ever did. What's more, today's government employees evidently have a lot of money to spend.
>
> The lavish spending now going on in Washington might have warmed the heart of old Commodore Vanderbilt himself. The expensive restaurants ($70 or more a couple) are becoming harder and harder to get into. The nightly display of evening dress at the Kennedy Center keeps plenty of couturiers happy. Soaring property values have enabled plenty of residents (New Dealers, et cetera) to refinance their houses and spend $10,000 more landscaping their gardens. But this is all effect. Money will be spent, and it doesn't mind who spends it. Let us look at the cause.
>
> The wealth of Washington derives primarily from federal pay, which is high and keeps getting higher all the time. Federal pay is a complex subject, but worth trying to simplify. Since 1970 federal pay has been based on the idea of "comparability," meaning that federal workers are supposed to be paid the same as those doing comparable jobs in the private sector. To compute private-sector pay, the Bureau of Labor Statistics does a survey between January and April every year.

But somehow the pay is not comparable. The pay in Washington is enormously better than it is elsewhere. It is so attractive to come to Washington that, as Bethell says:

> It is a remarkable fact that in 1977 the equivalent of the entire population of Texas inquired about the possibility of a job with the Federal Government. And, as Mike Causey noted in his "Federal Diary" column in the Washington Post, these statistics "represent only people who got through." Nobody knows how many job hunters have been frustrated by long lines or seemingly forever busy telephone numbers, and have given up. They aren't counted in the statistics.
>
> "Production workers" (lowly blast-furnace types) are paid less than government work-

ers. People who work on docks, farms, aid oil wells are simply not "comparable" to the people in Washington, who work on paper.

Bethell notes:

. . . there are many people in Washington who earn more than government workers; the burgeoning class of lawyers inevitably comes to mind (according to *Time* there are 20,000 of them in Washington, and all of them must surely get down on their knees every night to say a prayer of thanks to the Patron Saint of Lawyers, Ralph Nader); and then, of course, there are the lobbyists and the psychiatrists—there are more of the latter per square inch than anywhere else in the world, thanks to government health insurance plans that seem to have been designed on the assumption that people will very likely go crazy working for the government.

There are also the consultants—the "beltway bandits," as they are sometimes called. These are the people who do government work for a fee. A large fraction of government work is contracted out these days, a fact that is always worth bearing in mind, because this is one of the main ways in which the true extent of government employment is disguised. (Defenders of the federal bureaucracy frequently also use the following argument: It is not the federal government that has grown, it is the state and local governments. That is true, but misleading. The growth of state and local governments has has been very largely mandated by federal regulation and augmented by revenue sharing and "matching" spending arrangements.)

So, I say, the wealth of Washington is enormous. Washington creates no wealth but wallows in wealth.

Mr. President, I ask unanimous consent that Mr. Bethell's article from Harper's magazine be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WEALTH OF WASHINGTON

(By Tom Bethell)

(Above this race of men stands an immense and tutelary power, which takes upon itself alone to secure their gratifications and to watch over their fate. That power is absolute, minute, regular, provident and mild. It would be like the authority of a parent if, like that authority, its object was to prepare men for manhood; but it seeks, on the contrary, to keep them in perpetual childhood: it is well content that the people should rejoice, provided they think of nothing but rejoicing. . . . It covers the surface of society with a network of small complicated rules, minute and uniform, through which the most original minds and the most energetic characters cannot penetrate, to rise above the crowd. . . . Such a power does not destroy, but it prevents existence; it does not tyrannize, but it compresses, enervates, extinguishes, and stupefies a people, till each nation is reduced to nothing better than a flock of timid and industrial animals of which the government is the shepherd.—ALEXIS DE TOCQUEVILLE.

Economics is one of those subjects that become more interesing with the passage of time. In this respect it is unlike, say, metaphysics. Well do I remember my first day at university and my tutor handing me a copy of Paul Samuelson's *Economics*, with the request that I write an essay entitled "What Is Money?" Having no confidence that I could solve the mystery by the following week, I handed the volume back and inquired if there were, by any chance, alternative courses in Hegel or Kant.

Years later I moved to Washington, and by then I had become a more diligent student of money. Washington, as a city, has only furthered this financial education, because it is so rich. Among the largest cities in the country, it is the only one that can really be said to be booming. There is hardly a vacant lot without a new office building about to rise on it, or a deep pit being excavated within it, wherein hard-hatted architects gaze at blueprints, fluttering in the breeze, and plan for the future. Once built, the new office buildings (shaped like well-regimented ice cubes, obedient to stringent height regulations), fill up with dramatic speed—often with burgeoning regulatory agencies overflowing from their original premises, and simultaneously (on adjacent floors) with the lobbyists and lawyers who are hired to grapple with the new regulations. Sometimes the new government quarters are on a lavish scale, the new Senate Office Building being an example. Sen. William Proxmire has observed that it "would make a Persian prince green with envy." Originally scheduled to cost $49 million in 1972, its cost has now risen to $123 million, and it will be completed (perhaps) in 1981. It includes a "physical fitness center" (convertible basketball/tennis court), and a Senators-only dining room with a rooftop view of Washington.

The prospect is good for Washington. All the indicators are up. Government salaries are up; employment is up; rented office space is up; and real estate values are up, up, and up. Property is the most engrossing topic of conversation at those famous Georgetown dinner parties, people blushing slightly about what a killing they have made, but then always reassuring themselves that "it's only on paper"—a caveat that is perhaps truer than they realize. The dollar is down in the foreign-exchange market, which means that the Germans, the Japanese, even the British have little confidence in it. They are not alone. People in the nation's capital have little confidence in it, too, which is surely not a good sign, because the manufacture of dollars is one of the main industries in Washington. Some (Milton Friedman, for example) would say that it is the only industry, but then it is well known that he is cynical about government. However, I am getting ahead of my story.

First, some statistics. Washington has now become the richest metropolitan area in the United States, according to figures compiled by Marketing Economics Institute, Ltd. (see table 1). Advertising Age, the journal that published these figures in a special section entitled "Profiles of Top 100 Markets in U.S.," noted without a trace of irony:

Washington took the change of administrations in stride. Government, the area's largest employer, experienced few significant changes during the year. A few hundred upper-crust policy makers' jobs changed hands, but many of the newcomers were old Washington hands, and the transition hardly made a ripple in the housing market.

In fact, the transition improved the housing market, because most of the newcomers arrived from Georgia, and, in the Washington way, a good many of the outgoing Republicans stayed on to reap the benefits of having worked for the government. Thus more people were looking for the same number of houses. Real estate agents in and around Washington were definitely pulling for Carter on the night of November 3, 1976. In 1980 they will be on the Republican side.

Here are some more figures. Two Washington suburban counties lead the list of the "50 Richest Counties" as measured by the 1970 Census (see table 2). By mid-decade, these counties were still doing very well in the rankings (see table 3), despite some fierce competition from Alaska, where, in addition to the Alaska pipeline then under construction, there were also high levels of federal spending.

I could provide more figures for the Washington area, but they would be superfluous. Suffice it to say that 25 percent of the area's employees are on the federal payroll. These people have managed, over the years, to evolve a system whereby they pay themselves well. As a result, Time magazine recently noted, Washington has become a "privileged ghetto, home of a pampered class all but immune to the disheartening tantrums of the economic weather." During the 1974 recession, unemployment in the capital was 30 percent below the national average.

The laws of supply and demand not only do not apply to Washington, they are turned inside out. Problems elsewhere in the country merely contribute to the wealth of Washington. The fuel crisis takes the shape of a new Department of Energy, where 19,000 bureaucrats under Dr. James Schlesinger's command will have $10 billion to play with—roughly equal to the total profits of all the oil companies. Figures such as these are enough to make one wonder if the energy crisis can't be traced to some action originally taken in Washington; the recent history of price controls does nothing to allay this suspicion.

When considering the economic success of Washington, an innocent might conclude that this is indeed surprising, bearing in mind that those who come here to work in the government are mostly compassionate, public-spirited people—admirers of Franklin D. Roosevelt and his wife. So one surmises that it must be just an accident that they ended up doing so well. These were people who wanted to do good; who saw poverty and wanted to stamp it out; saw discrimination and determined to end it; saw slums and dreamed of humane dwelling spaces (solid 1890s structures built practically with slave labor, now rehabbed to perfection, filled with greenery and occupied by urban planning consultants). They saw all this opportunity for doing good, and yet, somehow, a good many of them ended up sipping French wines in the quiet of their pocket-sized Georgetown backyards, discussing real estate investments before retiring early to bed because they had next day an urgent "report" to write on the sad state of the economy.

LESSONS IN ECONOMICS

How did this come to pass? To look, very briefly, at the broad canvas, one can see that in the course of this century one economic system has slowly but surely replaced another. Both are conveniently described by aquatic metaphors. The first system is sometimes described as "trickle-down" economics. According to this system, people were allowed to accumulate as much money as they were able, on the theory that they would spend it, allowing the benefits therefrom to "trickle down" to others who had not been able to accumulate so much. By way of an example, although it is an extreme one, Mrs. Cornelius Vanderbilt put trickledown economics to work when she employed thirty-three servants and sixteen footmen dressed in wigs and maroon silk breeches at "The Breakers," her summer "cottage" in Newport.

Unfortunately, trickle-down economics got a bad name in the end. Its heyday, as Milton Friedman has remarked, "was a period of the greatest progress in the well-being of the ordinary man that the world has ever seen," but still there was something about it that people didn't like. As a result, Friedman

added, "it became enshrined in myth as the period when robber barons were grinding the poor people under their heels out of sheer malice."

The system worked as well as it did because lots of people worked hard so that they could build factories and end up with sixteen footmen in silk breeches, too. There was great economic growth, therefore, but there was also a flaw: the resulting wealth didn't trickle down to everyone, and thus it was "unfair." The system was efficient, it was conceded, but efficiency wasn't everything.

Along came the new system, based instead on fairness. There would be an unfortunate but necessary "trade-off" between efficiency and equality. Under the new system, people would still be allowed to make money, but after they had made a certain amount their earnings would be transferred to others who had made less. This money would be transferred as though it were water in a bucket. Then a very important discovery was made. In the process of traveling from the rich to the poor, the bucket leaked. Thus the "leaky bucket" economic system eventually came to replace the "trickle-down" system.

Here is an excellent description of leaky-bucket economics by Arthur Okun, an economist with the Brookings Institution and formerly chairman of President Johnson's Council of Economic Advisers. Okun postulates a program that takes away $4,000 from each of several affluent families and gives the money to another group, four times larger, of poor families. This transfer should, as Okun says, "finance a $1,000 grant for the average low-income family."

"However," he continues, "the program has an unsolved technological problem: the money must be carried from the rich to the poor in a leaky bucket. Some of it will simply disappear in transit, so the poor will not receive all the money that is taken from the rich. The average poor family will get less than $1,000, while the average rich family gives up $4,000."

That is a most instructive and lucid analysis, and it continues in that vein with a discussion of how much leaking is acceptable (10 to 20 percent for Okun, a respectable centrist; unlike John Rawls of Harvard, who wouldn't object to 99 percent leakage, or Friedman, who wouldn't want any). Nevertheless, there is one point in the foregoing that I must disagree with, much as I hate to argue with so experienced an economist: the money that leaks out of the bucket doesn't "disappear"—it waters Washington and transforms the arid regions of federal bureaucracy into a land of milk and honey.

Washington is right underneath the leaky bucket, and, I am tempted to add, the mansions are not being built in Newport anymore; they are being built in Washington. Not for individuals, of course—heavens no. There are no multimillionaires in the new scheme. That's precisely the beauty of it. Greed has been ostensibly eliminated from the picture and replaced by good works. This is what makes it so hard to point an accusatory finger at anyone. No, the new structures, on a much larger (although not grander) scale than the Newport mansions, are called "agencies" and "departments," and to be fair about it they employ far more people than The Breakers ever did. What's more, today's government employees evidently have a lot of money to spend.

The lavish spending now going on in Washington might have warmed the heart of old Commodore Vanderbilt himself. The expensive restaurants ($70 or more a couple) are becoming harder and harder to get into. The nightly display of evening dress at the Kennedy Center keeps plenty of couturiers happy. Soaring property values have enabled plenty of residents (New Dealers, et cetera) to refinance their houses and spend $10,000 more landscaping their gardens. But this is all effect. Money will be spent, and it doesn't mind who spends it. Let us look at the cause.

The wealth of Washington derives primarily from federal pay, which is high and keeps getting higher all the time. Federal pay is a complex subject, but worth trying to simplify. Since 1970 federal pay has been based on the idea of "comparability," meaning that federal workers are supposed to be paid the same as those doing comparable jobs in the private sector. To compute private-sector pay, the Bureau of Labor Statistics does a survey between January and April every year.

The Bureau of Labor Statistics reports its findings to the President's "Pay Agent," a triumvirate consisting of the Chairman of the Civil Service Commission, the Secretary of Labor, and the Director of the Office of Management and Budget. Another group, called the Federal Employees Pay Council, also has a say in the matter. The council consists of representatives of the largest federal employee unions, of which the most important is the American Federation of Government Employees, which represents 750,000 federal employees. Then there is a third group, called the Advisory Committee on Federal Pay, consisting of people from the private sector who represent the interest of taxpayers.

The President listens to all three groups, who may disagree with one another. The Pay Agent, for example, might recommend that the pay raise suggested by the BLS survey be held down to a smaller percentage—i.e., that the pay increase be "capped." There is every indication that this will happen this year. The BLS survey for 1978 has led federal employees to expect a raise of about 6.5 percent. But Carter's Pay Agent want to hold it to 5 percent. When they heard about this threat, the Federal Employees Pay Council vowed to attend the next meeting with the Pay Agent wearing coal miners' helmets. This was meant to remind the White House that the recent coal strike was settled only after the miners got a wage increase of about 31 percent spread over three years. Federal employees, incidentally, are by law not allowed to strike. Postal workers, however, did strike in March, 1970, and as a result they got the collective-bargaining rights and the pay raise they were looking for. Unfortunately for many federal employees, however, there is often no identifiable service that they can threaten to withdraw from the public, and so the likelihood of "wildcat" strikes from them is minimal.

In other years the President may accept the "comparability" figure, and if he does, then that percentage pay raise goes into effect in October, unless the Congress does something to stop it. Notice that Congress is thus put into the convenient position of "approving" government pay raises without having to vote on the issue or take any public action at all. It is automatic as long as the President accepts the BLS survey figure and the Congress does not act.

In Jimmy Carter's first year on the job, when pay-comparability time came around in October, 1977, and the recommendation was that federal workers all get a 7.05 percent raise, Carter signed on the dotted line immediately, unlike his two predecessors in the White House, who usually put up a fight. Carter evidently had no desire to get into a fight with the bureaucracy. Who knows, maybe he had visions of Watergate, and of the time that President Nixon's income tax returns popped up on the front page of a daily newspaper. The clandestine coupling between bureaucracy and press, which the First Amendment is said to protect, acts powerfully to ensure that all the President's men stay in the bureaucracy's good graces. If the President decides to be stubborn about holding down the pay increase this year . . . who knows what stories we may soon be reading in the Washington press.

The gentleman explaining the intricacies of federal pay to me was Ed Preston, an assistant director of the OMB and plainly a veteran of bureaucratic wars. Having listened to him, I pointed out that the problem with "comparability" was all the evidence that government workers earn more than those in the private sector. I cited some figures put out by the Advisory Commission on Intergovernmental Relations that especially indicated this. Preston's reply suggested that if the government were an army it would be deficient in privates and corporals. More and more, the jobs government workers do are being defined in such a way that they correspond to upper-level jobs in the private sector. Here is what Prestion said:

"The federal government has shifted to an increasingly professional, technical, and scientific work force. Twenty or thirty years ago we had essentially a government of clerks. But now, with moonshots, the space program, and so on, all that has changed."

Notice how this explanation makes a mockery of those miners' helmets. Anyway, I called Dr. John Shannon at the Commission on Intergovernmental Relations, the little-known commission that had innocently contrasted civilian and government pay. I told Shannon that I had found his figures very revealing. "We got a real nasty letter from the head of the Civil Service Commission about that," he said. "They claim that the government is now made up mostly of atomic physicists and people like that."

It is, in fact, an extremely difficult matter to ascertain whether the correct functioning of government now really does demand the skills of highly qualified scientists and managers, or whether job descriptions have merely been inflated to give this impression: no doubt partly both. I spent an afternoon phoning the Civil Service Commission, being routed from one office to the next, but made little headway.

There is not even a simple answer to the question: What kind of work does, say a GS-5 do? (See table 5.) In response to this question, Eugene Dahlman, assistant chief of the Standards Division, told me: "It varies from occupation to occupation. You can have a grade 5 engineer or a grade 5 secretary. The grade 5 engineer would be just out of school, of course."

This was peculiar, surely, because a grade 5 engineer is paid the same as a grade 5 secretary, on a scale of pay assumed to be "comparable" to that for work done in the private sector, and yet clearly engineering work is in no way comparable to secretarial work. How, then, can they be lumped together and be called comparable to anything?

Robert W. Hartman, an economist with the Brookings Institution, has pointed out that it is precisely this lumping together of various private-sector jobs into one pay rate that results in federal pay nosing ahead as it does. In March, 1977, a GS–5 clerical worker was paid $10,677 annually, Hartman writes. At that time BLS investigators returned from their travels and reported their findings: The salary for comparable jobs in the private sector was $10,100.

TABLE 3.—*Richest counties [over 50,000 pop.] median household effective buying income*

	1975	1976
1. Fairfax, Va	$22,321	$24,050
2. Du Page, Ill	21,814	23,486
3. Anchorage, Alaska	21,091	24,716

5. Montgomery, Md	20,674	22,012

Source: Sales & Marketing Management.

Hartman comments as follows: "This finding—which a hard-nosed type might regard as an excuse for a pay reduction—was transformed into a pay raise under what is called the government comparability method." How was this achieved? "At GS–5, the private-sector secretarial wage was combined with technical jobs paying $11,770, administrative posts at $12,346, and professional slots at $13,439 to reach an average survey salary for GS–5 of $10,736."

This means, of course, that a GS–5 employee doing "technical" work (the recent engineering graduate, no doubt) would be slightly underpaid at this grade, but then he will soon be promoted to GS–7 (even-numbered grades are skipped by many employees at this level). Salary inflation in the government has been partly caused by grade inflation.

There are numerous other criticisms of the pay-comparability procedure. One is that in doing its survey, the BLS focuses on companies with 100 employees or more—the higher-paying companies. (According to the Chamber of Commerce, as many as 90 percent of U.S. businesses have fewer than fifty employees.) This criticism is conceded, but again with more than a trace of institutional arrogance.

"It is not feasible to find 'job-matches' in the smaller firms," Preston told me. "The federal government is so big that its functions are divided up into many parts. In a smaller firm one person may do everything. In the federal government one person may just write checks, another may just type; another may be a job analyst, or a specialist in various kinds of personnel problems."

Nevertheless, Preston said, OMB would be willing to include smaller firms in the BLS survey," but the federal employee unions have opposed us bitterly on this."

I phoned Dr. Shannon of the Intergovernmental Relations Commission once again the next day. He told me about a new book that had just been published by Princeton University's industrial relations section, and he seemed pretty excited about it. Apparently it was a hot underground item in the bureaucracy, with one or two copies circulating, as it were, in *samizdat*. Shannon said he wasn't even sure he could show me a copy, but he gave me the name of a friendly budget examiner, who agreed to see me, after he had extracted from me a vow of silence as to his identity.

He was seated rather nervously at his desk, and as he spoke he seemed to be looking nervously over my shoulder, worried that at any moment Alan K. Campbell, the chairman of the Civil Service Commission, might walk into the room and catch him in the act of betrayal.

He pulled a dog-eared paperback out of his desk drawer. It was bristling with paper clips. He slid it cautiously over in my direction. It was called Equal Pay in the Public Sector: Fact or Fantasy, by Sharon P. Smith.

Evidently she had taken a different approach, measuring not comparable jobs but comparable people, as defined by such factors as age, education, sex, location, and race. Her finding: "The federal wage advantage was estimated to be at least 13 percent and possibly as much as 20 percent in 1975."

The budget examiner took the book back and handed me something else. He seemed to be operating on the theory that he would be safe as long as he didn't say anything. He tapped his forefinger at a table in the middle of a page. "Take a look at that," he said, pointing to some figures indicating the rate at which people quit their jobs ("quit rates"—see table 4).

"Since 1970, when they got collective bargaining, the Postal Service's pay has skyrocketed," my man said, warming up a bit. "The government can't go broke, and so that element of discipline has been removed from collective bargaining with the government. The unions know that." This was obviously an important point, and I decided to explore it later on.

"Another thing," the budget man went on. "Check with Civil Service and find out about the queues of people trying to get into government these days. Just tremendous numbers of them." Using a paper clip as a thumb index, he turned to a page of Smith's book and silently pointed again:

If the comparability process suggests that wages should be increased for a particular group of government workers and yet there are already long queues of individuals awaiting such jobs, the increase is unnecessary to attract the reqired manpower.

I later called the Civil Service Commission, and the information it provided suggests that government pay increases could very easily be halted completely for a number of years. (Carter might also consider that such a public-sector pay freeze would undoubtedly do wonders for inflation. The pressure that would be generated within the federal bureaucracy to cut back on federal spending as a way of bringing inflation under control would be something wonderful to see. Alas, it is a pipe dream.)

It is a remarkable fact that in 1977 the equivalent of the entire population of Texas inquired about the possibility of a job with the federal government (see table 6). And, as Mike Causey noted in his "Federal Diary" column in the Washington Post, these statistics "represent only people who got through. Nobody knows how many job hunters have been frustrated by long lines or seemingly forever busy telephone numbers, and have given up. They aren't counted in the statistics."

Before concluding my interview with the budget examiner, I asked him what he had thought of a recent newspaper column by Nicholas Von Hoffman entitled "Inflationary Trend of the Federal Payroll."

He threw caution to the winds and slapped his thigh. Then he lit up a pipe. "He was right but he didn't know it," he said, cackling away between puffs. Apparently there had been quite a bit of discussion about this column. Von Hoffman had made what was technically a mistake, saying that federal workers get raises "to offset the inflationary degradation of the dollar." In fact, of course, federal pay is not tied to the Consumer Price Index. But, bearing in mind the criticisms of comparability raised by Sharon Smith and Robert W. Hartman, the indications are that federal pay is soaring ahead of inflation.

Nevertheless, a letter of sharp reprimand from Alan Campbell of the Civil Service Commission was soon published in the Washington Post. His comments are highly instructive:

The reason income levels are higher in Washington (and they undeniably are) is not that government workers are concentrated here. In fact, only 12 percent of the federal workers are located in the Washington area. The reason is that Washington lacks basic industry. It has no docks, farms, oil wells, assembly plants, factories, canneries, blast furnaces, and the like. Hence it cannot be home to millions of American production workers who operate our massive industrial society, and whose relatively lower pay pulls the overall average salary down in other cities.

In other words, those "production workers" (lowly blast-furnace types) are paid less than government workers. People who work on docks, farms, and oil wells are simply not "comparable" to the people in Wahington, who work on paper.

Campbell made a mistake himself in his letter. He noted that, whereas "the average household income in this area may indeed be $27,702," the average federal employee earned "only $18,862 last year, and federal employees constitute less than 25 percent of the local work force. Obviously some other large and affluent groups in the area's economy are pushing the average up."

This neglects to take into account Washington's numerous working couples. Examples that come to mind are Mary King, deputy director of ACTION, and her husband, Peter Bourne, a psychiatrist lurking in Carter's entourage; and Secretary of HUD Patricia R. Harris and her husband, William Beasley Harris, an administrative law judge. Couples such as these have combined incomes approaching $100,000, in some cases, which helps to explain why household income is as high as it is.

Campbell's statement also presumes that the nationwide average government employee grade level is the same as the Washington average. Needless to say, it is not. Most of the chiefs are in Washington, most of the Indians are in the provinces. The average Washington metropolitan area government salary was $20,740 in 1977.

Nevertheless, Campbell is of course right when he says that there are many people in Washington who earn more than government workers; the buregoning class of lawyers inevitably comes to mind (according to *Time* there are 20,000 of them in Washington, and all of them must surely get down on their knees every night to say a prayer of thanks to the Patron Saint of Lawyers, Ralph Nader); and then, of course, there are the lobbyists and the psychiatrists—there are more of the latter per square inch than anywhere else in the world, thanks to government health insurance plans that seem to have been designed on the assumption that people will very likely go crazy working for the government.

There are also the consultants—the "beltway bandits," as they are sometimes called. These are the people who do government work for a fee. A large fraction of government work is contracted out these days, a fact that is always worth bearing in mind, because this is one of the main ways in which the true extent of government employment is disguised. (Defenders of the federal bureaucracy frequently also use the following argument: It is not the federal government that has grown, it is the state and local governments. This is true, but misleading. The growth of state and local governments has been very largely mandated by federal regulation and augmented by revenue sharing and "matching" spending arrangements.)

Lester A. Fettig turned out to be the man to see about contracted-out government. His office of Federal Procurement Policy in the New Executive Office Building overlooks the White House, with the Washington Monument and National Airport in the distance. Fettig (executive level 4: $50,000 a year; see table 7) said that the government was now contracting out more than $80 billion worth of work annually—about one-sixth of the budget. This expenditure is administered by about 80,000 full-time employees. In their book The Shadow Government, Daniel Guttman and Barry Willner point out that "the government has little precise information on many characteristics of the shadow bureaucracy." But in the upper echelons of those working "off the organizational chart," salaries range well over $100,000.

Fettig told me that "60 percent of the money goes out on 'sole source.'" No competition, in other words. "We've become the modern contract state," he said enigmatically. As far as I could gather, his argument was that about $30 billion of this could very

well be done by the full-time government, while $30 billion of current full-time government work could in turn be contracted out. This would "reorganize" things without getting anyone too upset, which seems to be a Carter priority.

Fettig explained—and in the course of a couple of weeks talking to people in the Carter Administration I must have heard this ten tmes—that Presidents Nixon and Ford tried to reorganize things, too, but they didn't do it right. They didn't go through channels. They tried here and there to cut the Gordian knot: razor blades were quietly applied to red tape. Mistakenly imagining that when he became President it would be easy to get things done, Nixon was finally reduced to slamming his fist down on the desk and saying to Chuck Colson, "I want it now!"

Carter's people in the White House and at the OMB know very well what happened after that, and so they are proceeding carefully, cautiously . . . procedurally . . . as gingerly as a jackass eating briars. They are going to go through channels just as it says in the government manuals. Fettig further explained how brutally the Ford Administration went about contracting out government. "If they found they could save $1 million by contracting out garbage collection, they would order it done," he said. "Let's say four jobs would be lost in the public sector. Then the employee unions would get upset and call the Congressman who represented these people . . ."

TABLE 5.—DISTRIBUTION OF FULL-TIME FEDERAL CIVILIAN EMPOYEES, AS OF MARCH 1976 WITH EXAMPLES OF WORK DONE

Grade	Number	Work done
GS–1	2,256	Messenger.
GS–2	25,256	File clerk.
GS–3	99,330	Typist.
GS–4	174,146	Senior-stenographer.
GS–5	182,211	Engineering technician.
GS–6	85,741	Secretary.
GS–7	127,553	Computer operator.
GS–8	27,790	Do.
GS–9	139,334	Buyer.
GS–10	22,090	("Not used very much").
GS–11	146,954	Job analyst.
GS–12	139,692	Attorney.
GS–13	107,310	Chief accountant.
GS–14	49,379	Personnel director.
GS–15	24,532	Do.
GS–16	3,309	Supergrades—supervisors, directors of
GS–17	990	bureaus ("no comparable jobs in
GS–18	348	private sector").

TABLE 7.—EXECUTIVE LEVEL

	Current salaries	Distribution	Examples of who they are
I	$66,000	13	Cabinet members.
II	57,500	49	Deputy secretaries, heads of large agencies.
III	52,500	91	Undersecretaries, heads of smaller agencies.
IV	50,000	357	Assistant secretaries and commission members.
V	47,500	232	Unit administrators within large departments.

Source: Civil Service Commission.

"But presumably four people in the private sector would get the jobs instead," I said.

"Yeah, but the Congressman doesn't know those other four will vote for him. But if he saves the jobs of the people who already work for the government, they will vote for him. There's a high discount rate."

That evening I bought a copy of the Washington Star as I went home. The following front-page story caught my eye:

POLITICS MAY PROTECT U.S. PAY RAISE

Fear of getting branded as "anti-labor" may deter the Carter Administration from trimming federal-pay raises to fight inflation, according to high-ranking officials.

That was odd, I thought. Now the nuclear physicists were forgotten and the coal miners' helmets were back in place. On the one hand, at pay-comparability time, the government is composed of scientists and top managers to explain why the pay is so high, but at pay-cut time the work force is abruptly transmuted back into "labor." I was beginning to think that Jimmy Carter had a very slim chance of reorganizing this government.

The next day I had a drink with a friend of mine at one of those subterranean Washington bars that somehow contrive to be full of people already well into their second cocktail at five minutes past five. My friend landed a good job with the Carter Administration a little more than a year ago. He ordered a Bass ale and began: "A fourfold increase in salary does wonders, I'll admit." He told me that his job is to manipulate the press so that his boss, a Cabinet member, comes out looking good. It turns out to be easier to do this than he thought it would be. The daily press is the easiest, he said. "If someone writes something I don't like, then I don't return his phone call for a week. They're always on deadline, so they need me." He then began to talk about the fringe benefits of government.

"The per diem travel allowance is generous," he admitted. "Seventy-five dollars a day in Paris. Forty to fifty dollars a day in the U.S. I bet not many people lose money on that. Then there's parking. It costs us $5 a month, although normal Washington rates are $4 a day. All the top people get parking spaces—in other words, just the people who could afford to pay the going rate. Then there are the federal credit unions. I can get 7 percent on a savings account, and if I want to get a loan to buy a car, I pay 8 percent on the loan."

He thought for a moment and lit a cigarette. "We get no expenses for lunch," he said. "That's one of the drawbacks. Why do you think there has been all this fuss about the three-martini lunch? It's one of the few fringes enjoyed by the private sector but not by us. And according to the new conflict-of-interest laws I am not allowed to be taken out to lunch by someone who does business with the department. Luckily, the New York Times has no business dealings with us."

He ordered another beer. "Oh," he said. "Many hotels have government rates. Everyone tries to get into the Essex House in New York because it gives government rates—about $35 for a double. It's very hard to get in at weekends."

I asked him why hotels had lower rates for government employees. (Essex House's standard rate is $70–$90 for a double.)

"It's a tradition in the hotel going back to World War II," he said. "Government per diem used to be very low then. But to justify higher per diems today, I notice, the employee unions talk about the high cost of staying in hotels."

"Anything else you can think of?"

"Sabbaticals," he said. "I know it sounds crazy. But the government is more and more filling up with professors and more and more seems to resemble a university. I have a friend at the Law Enforcement Assistance Administration who applied for and was granted a sabbatical to work on a dissertation."

My friend turned next to the complex subject of pensions and retirement benefits. "Basically," he said, "we pay 7 percent of our gross income instead of paying into Social Security." (Which is 6.05 percent at present and will rise to 7.05 percent by 1985. But then most private-sector employees also contribute to pension plans in addition to paying social security.) A recent change in the law raised the retirement age in the private sector from 65 to 70, but federal employees were exempted from any compulsory retirement due to age. This raises the specter of ending up with a government of octogenarians, or would if there were not several inducements built into the pension structure to encourage relatively early retirement. (Pensions, unlike salaries, do get an annual cost-of-living adjustment.)

"Oh, the biggie—I nearly forgot it," my friend continued. "The WATS line. There's no excuse for anyone above about GS–11 level having a long-distance phone bill, because you can call from the office. All you have to do is dial 8. . . . It's a wonderful freebie. I'm involved with a girl in Boston right now and my phone calls would normally be costing me about $500 a month. It's better to call early in the day, I've found, because after 4:00 p.m. everybody suddenly realizes the day has gone by and they haven't called their mother yet. Nobody minds. It's not anybody's money. . . ."

With that appropriate "bottom line" it seemed time to go. As we were getting into his car my friend told me: "I'm seeing a psychiatrist at the moment because I don't know when I'll be able to afford it again."

"How does the health plan work?" I asked.

"First of all, every government employee has a choice of about ten health plans to choose from," he said. "So you can figure out the one that best works in your favor. I'm on Blue Cross High Option, for which I pay $9.50 every two weeks, plus 20 percent of the shrink's fee, plus $100 deductible."

He dropped me at my door and said he was going on to a function somewhere. "If you get on the White House invite circuit you never have to pay for dinner all the time you're in Washington. Ciao."

One fringe benefit he didn't mention was the near impossibility of getting fired, although this did not apply to him and the approximately 2,000 others whose jobs are classified as "Schedule C," meaning that they are political appointees. But for the vast majority there are now so many grievance procedures and courts of higher appeal that the story is told of the supervisor who, in trying to fire an insolent and indolent underling, spent so much time filling out forms and meeting with adjudicators over a period of eighteen months that he ended up himself receiving an unfavorable performance rating for neglecting his regular work.

According to an authoritative article by Leonard Reed, "Firing a Federal Employee: The Impossible Dream, published last year in the Washington Monthly, federal employees are fired at a rate such that, if carried over into the private sector, "a small business employing ten people would fire one person for inefficiency every 70 years."

By the time I went to see Carter's top reorganization man, Richard A. Pettigrew, and his assistant, Chris Matthews, I was beginning to appreciate the magnitude of the problem facing them. It was paradoxical that this should be so, however, because there could be no doubt that Carter and his reorganization team had the support of a large majority of Americans—perhaps as many as 80 percent of the voters. Certainly they had the conservatives behind them, and an increasing number of disaffected liberals. This, was, after all, the issue above all others that had propelled Carter-the-Outsider into office.

Who, then, was against him on the issue? The answer can best be described as a "federal triangle." The term "federal triangle" in Washington refers to nine square blocks of government buildings lying between Pennsylvania Avenue and Constitution Avenue,

but there is also a conceptual federal triangle, and it is important to understand, because the wealth of Washington essentially derives from it. Its three vertices are: Congress, the Executive departments and agencies, and the federal employee unions.

In the first place, federal employees in the various Executive departments band together into unions. Skillfully appropriating the terminology of trade unionism, they dub themselves "labor" at this moment, thus again revealing the chameleon-like nature of the beast we are dealing with. These employee unions then "bargain" on such matters as fringe benefits, hours of work, grievance procedures. Just a minute, you may be wondering. With whom do they bargain? I wondered this myself and phone the American Federation of Government Employees, by far the largest federal employee union, and I was routed to a Mr. Dick Calistri. I asked him how this "bargaining" worked.

"Well," he said, "we sit down and we have a give-and-take. Maybe we're bargaining on working conditions. . . ."

"Who's on the other side of the bargaining table?" I asked.

"Management!" Calistri said, in a tone indicating he was surprised that I could ask so stupid a question.

What is this "management"? Everyone involved is on the federal payroll, after all. The bifurcation of government into labor and management is surely a sleight of hand intended to conjure up a vision of dark satanic mills, robber barons, and child labor.

I asked Calistri who actually represented "management" at the bargaining table. Maybe it was the political appointees. As these people really do come and go from government, that would at least set them apart from the permanent civil service labor force.

"They're not necessarily political appointees," Calistri said. "They may be high-level civil service people."

That was what I had been afraid of. In other words, the difference between labor and management in government is one of degree (seniority), not kind. It was all beginning to look more and more like a shell game to me. No wonder government ends up winning no matter what.

The next "side" of the triangle is particularly important: the lobbying of Congress. As Calistri told me: "That's our bag, really."

The question in my mind was, How important is the federal employee vote to the average Congressman? Ten percent of his constituency (approximately) may be on the federal payroll—which means that 90 percent is not. Therefore he shouldn't have to worry too much about the federal vote, should he?

"Yes, he should, and will," Chris Matthews told me in the Old Executive Office Building, next to the White House. Before coming to work for the Carter Administration, Matthews who is young and commendably enthusiastic about the daunting topic of government reorganization (second only to "budget" in its lack of reader appeal, he feels), worked for three years on Capitol Hill, and so is familiar with Congressional sentiment on the subject.

"Federal employees are a vocal, high-intensity group," he said. "Government change affects them directly. They know exactly who to call on the Hill, and their voice is heard in the media if they decide to make a fuss."

At that point his boss, Richard Pettigrew, stuck his head in the door to ask about the progress of a memo. Pettigrew was Speaker of the Florida House of Representatives and helped organize Carter's Florida primary. Now he has been "rewarded" with this Sisyphean task. Matthews told him what we were discussing.

"All it takes is a well-organized group of voters who are all going to vote the same way on one issue—their own self-interest—and the Congressman will respond," Pettigrew said. "Especially when they are as well-organized a network as federal workers."

After Pettigrew left, Matthews said: "You've also got to bear in mind that all the relevant legislation goes through the House Civil Service and Post Office Committee, and the Congressmen with high percentages of federal employees in their districts—such as Herb Harris of Virginia and Gladys Spellman of Maryland—always gravitate to that committee. And they shape that legislation. Same with the comparable committee in the Senate, which is where I worked for three years. All of those Senators had close ties to the federal employee unions." Once it emerges from these committees, such legislation is only amended on the floor in the most minor ways, if it is amended at all.

And this brings us to the third side of the triangle. Because they want to be reelected, Congressmen are generally on the lookout for ways in which to increase government programs. This is because enlarged federal programs enlarge the number of constituents that a Congressman can "service," thus adding the number of voters who will be suitably grateful on election day. The result is a power ratchet effect, with federal programs and expenditures getting larger, but almost never smaller. To make matters worse, Congressmen who routinely oppose this trend on fiscal grounds have been very successfully packaged by opinion makers, and albeled Neanderthat; Heartless. Their concern about abstractions like the soaring national debt has made it easy to dismiss them as "uncompassionate."

Congressmen are therefore ever on the alert for ways in which to expand government beneficence, and the precise ways in which they do this involve, as one might guess, expanding the definition of people who are alleged to be "deprived" by handicaps, minority status, shortage of money, or by broadening the boundaries of poverty, and so on. Public service job creation, such as the Comprehensive Employment and Training Act, is an example. The upshot is that as government programs expand, the Executive departments' budgets increase, and so do the number of federal employees needed to administer them. This increases the number of people putting pressure on Congress to increase their pay and benefits. And so on.

A cyberneticist will notice that the "triangle of forces" in this model is unstable. Each step tends to reinforce the next. There is no "negative feedback," and as is well known, such unstable systems have a short life-span before they collapse. An outsider observing our political system might well conclude, therefore, that its fundamental defect is that each Congressman separately has a desire to be reelected that is more compelling than his concern for fiscal stability. Each one therefore tries to get more than his share of the fiscal cake to spread around his constituency, and in fact all, or almost all, succeed in doing so. The "cake" is then artificially enlarged—or perhaps "inflated" would be a better word—with the overtime use of what is perhaps the government's prize possession, a printing press housed within the Bureau of Engraving and Printing. This press comes to the Congressmen's rescue by turning out what Milton Friedman has uncharitably described as "green pieces of paper."

One check to this unstable system, of course, is vested in the Presidential veto, requiring that legislative measures pass by a two-thirds majority, but President Carter scorned this so much in his campaign that to use it with any frequency would require one more *volte-face* on his part.

The currency thus inflated, it is not surprising that such well-known lawmakers as Senators Edward Brooke and George McGovern, big spenders both, should have invested so much of their own money in real estate, nor is it surprising that so many Congressional wives in Washington are getting into the real estate agent business (mentioned in a recent issue of *Dossier*, Washington's society magazine: Lee Hart, Antoinette Hatfield, Shirley Bellmon, Pat Derwinski). No doubt they have plenty of opportunity to observe the reason for the declining confidence in the dollar, which results in a rising confidence in land.

PAPER CITY

These unwelcome developments have come about little by little—so slowly that hardly any audible objection has been heard. *The Washington Post* will roar its thunder at *transient* Washington—the Presidents and their entourages who come and go at regular intervals—but on the subject of permanent Washington, the entrenched civil servants and their increasingly lavish emoluments, the *Post* has preserved a dignified editorial silence. One appreciates that they do not wish to offend the main body of their readers. Nor, indeed, would the many *Post* reporters who rely on the bureaucracy for their stories want to offend their sources. Perhaps this is why the *Post*'s front page so often seems to end up looking like a hearty endorsement of greater government in the guise of news. (Headlines from just one recent issue: "AN UNEQUAL SOCIETY: Brutality, Bias Afflict Hispanics" and "CUTBACK THREATENS TO DISRUPT FAMILIES: A Squeeze on Federal Day Care Centers.")

Although the redistributors end up doing so well, the benign intent of redistribution masks its shortcomings; the redistributor carries the bucket of wealth, which slops all over his turf en route to the poor. Too bad. He didn't mean it to happen. (Daniel P. Moynihan's book, *The Politics of a Guaranteed Income*, does admittedly raise some doubt on this score. The attempt to construct a nonleaking bucket, in the shape of a "Family Assistance Plan," a Republican-inspired minimum-income proposal, was opposed by the social-worker professionals. "The first hostile reaction to FAP came from the poverty program," Moynihan writes.) So there is no scandal, no "story" as far as the journalist is concerned. Redistributors are said to be motivated by fairness; trickle-down capitalists were motivated by greed. In this way, then, Washington's new class of newly rich, with the town houses in Northwest and weekend dachas on the Maryland shore or in the Virginia Piedmont, enjoy an overwhelming rhetorical advantage over their capitalist predecessors. It's nobody's fault . . . nobody is to blame, nobody is responsible . . . everyone meant well, everyone was compassionate, it's the system's fault . . . and besides, *it isn't anybody's money.*

For a final opinion about the wealth of Washington, I drove out to Rockville in Montgomery County, Maryland, where I had a lunch appointment with James P. Gleason, the Montgomery County Executive—a position comparable to that of mayor. I drove out Wisconsin Avenue, past the white marble Mazza Galleria housing Neiman-Marcus and satellite boutiques (it opened in November and is now almost fully rented), past Lord & Taylor, Saks Fifth Avenue, out further beyond the beltway and past the White Flint Mall, which also opened last year and has as its principal attraction Washington's *second* Bloomingdale's, and a few minutes later arrived at the County Office Building in Rockville.

Gleason's special assistant, Charles Maier, drove me to a nearby restaurant where we were due to meet Gleason. On the way Maier pointed out the Montgomery County jail, a contemporary structure.

"The inmates have color TV and air conditioning," he said. "Basketball. A little track.

We had a breakout the other day. They were watching a rock 'n' roll show on TV called 'Soul Train.' Had it turned up real loud, and they were all singing along with it. Meanwhile some other guys banged a hole in a wall with their weight-lifting equipment. Then they jumped out. We caught one of the guys who escaped because he hid out in a police car. The other one is still at large." He drove into the restaurant parking lot. "Now they want a new gym built," Maier said as we went inside.

Gleason, sitting alone, vaguely senatorial looking, seemed to be weary of government and its works. At the end of this year he retires, having been County Executive for eight years. He started on his career working as an assistant to Senators Richard Nixon and William Knowland of California. He told me that he has been under fire recently from the Equal Employment Opportunity Commission because Montgomery County, whose population is 7 percent black, has a police force only 4 percent black. Even though the department has been actively recruiting blacks on campus, they have been sued because of this statistical discrepancy.

We ate some food and he changed the subject. "One-third of all money going into government is being redistributed today," he said. "In 1970 it was 21 percent. And boy, that is a change. One out of five people in the U.S. is now working for government. And government is getting so big that it is getting harder and harder for it to do anything effective. The tragedy of our times is that no one is really thinking about what is going on. That's the sin of it. . . ." He thought ahead to his retirement, when he hoped to do some writing, and then back to the time when he worked for Senator Knowland. After Knowland had retired he came back to Washington once and Gleason met him. "Remember," Knowland warned, "don't stay around here too long. It's not the real world. . . ."

This is the oldest and most tired of Washington clichés—not the real world—but there is surely an important element of truth to it. Bloomingdale's, Mazza Galleria, Saks, the Palm Restaurant, Sans Souci, all the private-sector enterprise that feeds on the huge volume of tax dollars pouring into Washington is real enough, but what contribution to productive endeavor do the government toilers themselves really make?

Contemplating bureaucracy, C. Northcote Parkinson enunciated his famous law, that work expands to fill the time available for its completion, with its important corollary, that "an official wants to multiply subordinates, not rivals."

All perfectly true, but it seems to me that government activity today is increasingly dominated by one of the most ominous trends of our time (and is no doubt responsible for it in large measure): A person in our society will be paid more money, and be more highly esteemed, if instead of solving a problem materially he solves it on paper.

Don't work for an oil company—you might get your hands dirty. Work for the Department of Energy and ponder energy "policy." This is much more prestigious. You are a nurse? The pay is low and you change bedpans. Better try and get on a health "task force" and write a memo on "health care delivery systems." You want to paint a picture? Hard work. Better go to work for the National Endowment and talk about creative partnerships at a meeting. Your salary is assured.

At some point in the complex Washington scheme, the problems jump across from real life onto a piece of paper. At that point they become much more pliable, remunerative, and status-laden (see table 8). And that is the sense in which Washington is not the real world. It is Paper City, where paper problems are confronted, ultimately being provided with paper solutions. The more of these problems it can lay its hands on, the richer the city gets—rich with paper money, that is.

TABLE 8.—NEW FEDERAL PAY SCHEDULE

Years in service	1	2	3	4	5	6	7	8	9	10

[1] The rate of basic pay for employees at these rates would be limited by section 5308 of title 5 of the United States Code to the rate for level V of the Executive Schedule which, pursuant to Public Law 95-66, would remain $47.500.

Mr. HAYAKAWA. Mr. President, the major argument in favor of House Joint Resolution 554 is the sentiment that it is "unfair" that the people of the District have no voting representation in the House and Senate. Given the special circumstances of the people in the District, I would think it would be unfair if they did.

This is especially true when considering representation in the Senate. While the House represents the people, the Senate is set up to represent the States. This is why a State with a relatively small population, such as Alaska or Rhode Island, has the same number of Senators as California or New York, with more than 20 million people in each. The Senate represents the States.

Our Federal Government is made up of independent States which come together to form a union. The District is a non-State entity, and it is not independent. Under the Constitution, Congress has the power to exercise exclusive legislation in all cases over the District. Therefore, all of the traditional State's duties—taxing, spending, creating and executing law, punishing crime and administering justice—that are carried out by the District City Council are subject to congressional approval. So the District is not an autonomous body, as the States are autonomous, and therefore not qualified to participate as a State in the workings of the Federal Government.

Section 1 of the proposed amendment provides that for the purposes of the Presidential elections, the District will be treated as though it were a State. This presents a problem, as the State legislatures are constitutionally granted the power of appointing the manner in which the delegates to the electoral college are chosen.

If this amendment were passed, Congress would be granted the power to establish the selection process for the electors from the District. This gives Congress a special say in Presidential elections, which until this time was a power reserved exclusively to the States. Likewise, the ratification of constitutional amendments is done by the State legislatures. Since the District is not a State and does not have a State legislature, it would again be up to Congress to decide whether or not the city council could function as a legislature for the purpose of ratifying constitutional amendments. It is left to the Congress to decide how to fit the District of Columbia into the constitutional provision that states that the ratification of constitutional amendments is a right reserved for the State legislatures.

Even if Congress decides that the city council should have the powers of State legislature, it cannot be forgotten that Congress always has absolute veto power over any action taken by the council. And since the budget of the District is controlled legislatively by Congress, Congress would be appropriating funds necessary to hold the elections of its own Members. Congress, in many instances, would have a dangerous ability to double its power in the District of Columbia, and the District could become a special wing of power for Congress, as the State legislatures are protected from becoming under the Constitution.

At this time, I call to the attention of my colleagues the text of a radio commentary by Ronald Reagan entitled "District of Columbia." I shall read it now for the benefit of my colleagues:

Thirteen colonies have become 50 sovereign states each with its own capital, its own government, with powers firmly fixed by the Constitution. And these states are joined together in a federation.

Which colony or which of the 50 states should be the locale of the national capital? The founding fathers solved that problem with great common sense. Wanting to make sure we preserved the system of sovereign

states, an idea unique in the world, they created a district separate and apart from the states to serve as the site for the nation's capital. That very simply is the "D.C."—District of Columbia.

By doing this the issue of conflict of interest was neatly solved, the federal government cannot in any way be charged with favoring one state over the others. Federal employees living in the national capital cannot have an undue influence on the congress with regard to their own interests because they don't vote for representatives in Congress. It is all spelled out in Article One, Section Eight of the Constitution that the seat of government would be exempt from the political process so that federal government would remain the servant of the people and not become their master.

Over the years, as the national government has taken on more and more tasks and thus assumed greater and greater power, Washington has become the fastest growing city in America probably because it created the fastest growing industry—government. The citizens of the District elect officials of city government and also vote for President and Vice President.

The district receives an annual grant from the federal government—no strings attached—which makes up 38% of its budget. Federal aid amounts to more than $1000 per capita per year. No state receives that level of handout from Washington. Incidentally, Washington is the richest metropolitan area in the United States. Problems in the rest of the country mean more prosperity for Washington, where the government will happily try to solve anything. Per household income averages $10,000 higher than in New York City, possibly because 38 percent of those working in the district are employed by the federal government and another 25 percent work in related service industries.

But now comes Senator Edward Kennedy of Massachusetts who says the citizens of the District of Columbia are victims of taxation without representation and that possibly they also suffer racial discrimination. His answer is to make the District our 51st state. Properly lobbied, his bill soared through the House 189 to 127 and moved to the Senate for hearings.

If this were implemented, the District of Columbia would have two United States Senators and one or two representatives in the House. Their constituency would be for the most part government employees and there is no way that the 51st state's representatives would free themselves from a built-in conflict of interest. They would undoubtedly vote for higher taxes and expansion of the government payroll, claiming that was in the best interest of their constituency.

In light of the many weaknesses of this proposal, I am, quite frankly, surprised at the rapidity with which this proposed amendment was accepted by the House. It seems that many feel that it is "unfair" that the District has no voting representation in the House and Senate. But I think that I have demonstrated how substantially more "unfair" it would be if they did, given the special circumstances of the people in the District, and their unusual relationship with Congress. House Joint Resolution 554 would result in the granting of special privileges to both Congress and the District, to the disadvantages of the States.

A gentleman stopped me in the corridor the other day to say that Washington, D.C., has a population of 700,000 which is larger than the population of seven States of the Union and therefore it should be treated as a State.

If we are going to argue by numbers and if every entity of 700,000 population is entitled to be a State, then with California having 22 million population we are easily entitled to at least the equivalent of 31 States of such size, in which case we should be entitled to 62 Senators.

And one could say the same kind of thing for New York, Chicago, Philadelphia, or many other places which have far more than 700,000 population.

Lastly, some say that this issue, whether or not you are for voting rights for the District of Columbia, is a racial one, because the majority of the members of the District are black, liberal, and Democratic.

Mr. President, the fact the majority of the members of the District are black does not worry me. For 7 years in my life I was employed by a black firm. The fact they may be liberal does not worry me, either. I have been associated with liberals all my life and have been notoriously a liberal at certain times in my life. And as for Democrats, I am even married to one, so I am not afraid of them.

This sentiment that there is a racial issue involved in the recognition of the District of Columbia as a State for voting rights for the District of Columbia is so far from the mark as to be laughable, and the argument itself is a racist one. This racial argument is a poor coverup for the important constitutional principles involved in this debate. No matter what race happens to be in the majority in Washington, D.C., the arguments I have marshaled against the recognition of voting rights for the District of Columbia would still be perfectly sound. This racial argument may soon be proved wrong, given the changing demographics of the District.

So, Mr. President, unconstitutional as I believe this proposed amendment for voting rights for the District of Columbia to be, I will predict it will not be ratified by 38 States in 7 years. The other States simply will not accept this. This I confidently predict.

I urge my colleagues in the Senate to look beyond the political advantages for the moment and examine the disturbing implications and constitutional questions presented by this amendment.

I thank the Chair.

The ACTING PRESIDENT pro tempore. The Chair would advise the Senator from California he used less than the 45 minutes that were available to him.

SPECIAL ORDER

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from Arkansas (Mr. HODGES) was to be recognized for a period not to exceed 5 minutes. I know he is close by and, possibly, it might be in order, if the Senator from California were so inclined, to suggest the absence of a quorum and then, perhaps, we could locate Mr. HODGES.

Mr. HAYAKAWA. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

READING OF CONFERENCE REPORTS DURING REMAINDER OF SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that during the remainder of this session the reading of conference reports may be suspended by nondebatable motion.

The ACTING PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Chair shall not entertain any unanimous-consent requests during the remainder of this session to suspend this order.

The ACTING PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

(Later the following occurred:)

Mr. ROBERT C. BYRD. Mr President, earlier today I asked unanimous consent that reading of conference reports could be dispensed with by nondebatable motion. I also obtained consent that the Chair not be allowed to entertain a request to change that order.

I have found some correspondence now which by some very broad interpretation might be taken to mean that a request has been made of me not to enter any kind of unanimous-consent order whatsoever that would deal directly or indirectly with certain specific legislation. As it was written, I do not really interpret the correspondence as binding because I consider the language vague. Moreover, I made no commitment in response.

But in any event, I ask unanimous consent that the Chair may now entertain a request to vitiate the order entered earlier.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order be vitiated.

The PRESIDING OFFICER. Without objection, it is so ordered.

(Conclusion of earlier proceedings.)

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that while the Senate is awaiting the arrival of Mr. HODGES there be a brief period for the transaction of routine morning business

not to extend beyond 15 minutes, with statements limited therein to 5 minutes.

The ACTING PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

THE ELECTED OFFICIAL'S OBLIGATION TO THE VOTER AND TO HIMSELF

Mr. HODGES. Mr. President, Arkansas is a small State in population. In the last 50 years, however, we have sent some exceptional men and women to Congress.

I say women, which may raise some eyebrows, because one of the Senators in the 1930's from Arkansas was a woman, Mrs. Hattie Caraway, who was first appointed and then elected to the U.S. Senate.

As we begin to reflect, we can see some great names in the history of the Senate who have served from Arkansas in the last 50 years. Coming to mind immediately, of course, is my predecessor, Senator John L. McClellan, who was chairman of the Government Operations Committee and chairman of the Appropriations Committee.

Senator Fulbright served recently as chairman of the Committee on Foreign Relations, and served with great distinction.

In addition to that, of course, we have had Wilbur Mills, who served as chairman of the Committee on Ways and Means, and I think history will look back upon him as one of the most brilliant men ever to serve in Congress. He knows more about the tax code than all of the rest of Congress put together.

But one of the most distinguished Arkansans who has ever served is a man named Brooks Hays, who was defeated for his ninth term in Congress in 1958. He was defeated by a write-in candidate who principally defeated Brooks Hays because of Congressman Hays' stand on the Central High integration issue.

It was a great loss to Arkansas and a great loss to this country.

Brooks Hays is not only a courageous man, but a very articulate one. This past Sunday, he wrote an editorial published in the Arkansas Gazette, the title of which is "The Elected Official's Obligation to the Voter and to Himself," in which he explores what I think has a very difficult and thorny problem for everyone who has ever served in elective office. That is the relationship between one's own conscience and the views of one's constituents when they come in conflict.

I ask unanimous consent that the entire editorial be printed in the RECORD

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

[From the Arkansas Gazette, Aug. 13, 1978]

THE ELECTED OFFICIAL'S OBLIGATION TO THE VOTER AND TO HIMSELF

(By Brooks Hays)

I appreciated the *Gazette* account of an awakened interest this year among some Arkansas candidates and voters in the extent of an elected official's obligation to follow the sentiments of his constituency. More simply put, should he act in accordance with their views, or, in case of conflict, should he use his own judgment in voting upon public questions?

My own opinion is that his judgment should prevail, particularly if the issue is a basic one in which grave principles are involved. This is consistent with the concepts upon which our representative form of government was established; in fact, it is an essential part of our system. Representatives are sent to Little Rock and to Washington to act in the people's interest, and they serve that interest by having access to facts not available to the constituency and by exercising independent judgments. They are chosen because a majority believes them capable of getting and interpreting facts, and also has confidence in their intelligence and integrity. Polls can never take the place of legislative debates and conscientious judgments by the representatives.

At the same time, what people think about public questions, and how communications between them and their representatives are maintained are vital parts of the process.

Only an ignoble person would be contemptuous of the views of his constituents, and it would be a strange representative who enjoyed casting an unpopular vote. Secretary of State Dean Acheson once said to me (referring to a State Department policy), "I don't care whether it's popular or not."

I quickly answerd, "Well, Mr. Secretary, I do! I have to stand between you and the people. My job is, to first, study your policy, and if convinced of its soundness to defend and popularize it."

I was not always able to do that, and I was not always convinced of the correctness of Department policies myself, but I found that Department officials respected my point of view, even when not in accord with theirs.

Edmund Burke, the great British statesman and friend of America in our early struggles for independence, gave members of legislative bodies a fine standard. To the voters of Bristol he said, "Your representative owes you, not his industry only but his judgment, and he betrays instead of serving you if he sacrifices it to your opinion."

He was defeated in the next election, but his classic statement has been a guideline and inspiration for countless legislators of succeeding generations.

I think of two spokesmen for the opposite point of view, both cynical advocates of the so-called "practical" philosophy. Robespierre, during the French revolution, said, 'The crowd is in the street. I must find which way they are going, for I am their leader."

The other was a candidate in Louisiana for a parish office. He wound up his speech to the voters by saying in an aggressive manner, 'Now, mah friends, them's mah sentiments, and if you don't like 'em . . ." Then shifting to a soft voice and winsome style, he finished, "I'll change 'em."

While I adhere to the idea that a representative of the people must always be prepared to sacrifice popularity, and even his office, for his principles, I believe that by good communications and friendly explanations of a controversial position he can often retain the people's goodwill.

I can cite some situations in which I resisted (for good reasons, I thought) appeals by home folks, often including close friends, to take a certain course, and, except in one case, escaped political penalties.

While a member of the House, I voted to sustain President Truman's veto of a bill increasing the allowance for nonservice-connected disabilities of war veterans. The veterans constituted a strong influence, and consequently, political risks were involved. When I returned to Little Rock at the end of that session, one of my first visitors was a leader of a veterans' organization. He quickly put me at ease.

"I didn't come to scold you," he said. "I think you were wrong, but you did what you thought was right, and I haven't forgotten that you were one of the authors of the GI Bill of Rights, and you put through a bill providing that government-owned farm lands be sold on generous terms in family-size tracts to veterans with farm backgrounds."

Here was a good example for those who tend to determine their support on a "one-issue basis."

Another example of the efficacy of good communications was a visit to my district office by a delegation of rental property owners to protest my support of rent ceilings during the war emergency. Unlike my veteran friend, some of the group were hostile, but their mood changed as I explained, after hearing their grievance, that I was determined to help control inflation, an obligation the government owed the tenants, particularly to the families of servicemen stationed at Camp Robinson. Moreover, I was able to convince many of them that they had a stake in that policy. They helped their own cause with me, however, and I promised them to follow developments very closely. I did recommend to OPA later on, perhaps earlier than I might have otherwise, that controls be lifted, advising their organization that this could be done without feeding inflation.

One of my severest tests was a result of the cotton industry's drive for an increase in textile prices, calculated to increase the price of cotton. I joined the opposition to that effort and was in disfavor with the cotton farmers for awhile. But we succeeded in holding the line and it was an important victory in the struggle to control inflation during the war. The farmers of my district were either convinced that I was right on economic grounds or were willing to forgive me. My point is that one should not assume that political leadership always requires yielding to pressures.

My absorption in politics has covered a period of 56 years, beginning with my service as secretary of the state Democratic convention in 1922. My defeat for a ninth term in the Congress in 1958 did not terminate my political activity—it merely changed the scenery, providing exciting experiences in TVA, the White House and, since 1964, in classroom duties, producing contacts with college students who are interested in public affairs. I have not been a text-book instructor, but rather a counselor, sharing and interpreting my own experiences, trying to be helpful to those who want to hold elective office. I have upheld the philosophy set forth in these comments, a philosophy termed "impractical" by some, but in my view, a balancing of idealism and progmatism. In urging these eager young people to renounce the Robespierre approach, I have encouraged them to follow Edmund Burke and to preserve a patient reliance upon the people's ultimately siding with the right.

I have suggested that in opposing some popular positions, they avoid militant expressions, and that they be discreet and soft spoken as well as candid.

This has sometimes drawn the charge of "fence straddling." I had to face that criticism in the Little Rock school crisis, but even in that emotion-charged situation I was able, while losing the election, to convince a great number of people that I was acting in the best interests of the city and of the nation. I believe that ultimately, a majority came to that conclusion.

One friend stopped me on the street to say, "Why don't you come out strongly and say you are an integrationist?" My answer was that when one is on an unpopular side, he is entitled to be softspoken and appealing. I told this friend that I was like President Taft, who was asked why fat men are so agreeable and pleasant. He said, "We have to be—we can't run fast."

It was not long after these events that I sensed a changed attitude toward those of us who defended the use of federal authority to enforce court orders and prevent violence. This change became more pronounced as the years rolled by.

Considering the magnitude of the problems which confronted the city in 1957 and 1958 it is amazing how much and how quickly the Little Rock image has changed, and I base this on conversations with people in every part of the United States and abroad.

Many who are not moved, as I naturally am, by sentimental feelings about Little Rock speak in highest praise of the progress made by the city that was once a symbol of strife. In spite of the fact that the campaign against me in 1958 was of the sudden-death type I was conditioned for it. The tensions that had developed over a four-year period following the Supreme Court's desegregation decision in 1954 were responsible for that. The November blitz came at the peak of resentments over desegregation, and I was aware of the mood of our people. I could even smile over the comment of a lady living a few blocks from us who said the day after the 1958 election, "My goodness, if I had known Brooks was in any trouble I wouldn't have voted against him." My defeat did not mar my relations with the people of Little Rock and of Arkansas, and I am deeply grateful for all their kindnesses to me and my family.

Mr. HODGES. I would commend this article to everyone in the U.S. Senate, because I think it contains great wisdom and words of use and benefit to all of us as we seek to determine what our decision ultimately ought to be on any particular issue.

Mr. President, I yield the floor.

AMERICANS HAVE A RESPONSIBILITY TO RATIFY THE GENOCIDE CONVENTION

Mr. PROXMIRE. Mr. President, as Americans we enjoy the fullest measure of human rights. Defined and protected by the Constitution and our common law tradition, we are free to pursue life in whatever way we choose.

Can Americans speak freely? Can we openly criticize the Government? Yes, we can. Criticism and protest are both important parts of our American tradition, and crucial components of our contemporary political process.

Can Americans live where they choose to? Can they work at the jobs that they are best qualified to hold? Again, the answer is yes. Discrimination on the basis of race, sex, religion, national origin, or ethnicity is prohibited by law.

Can Americans worship God according to their personal beliefs? We most certainly can. Freedom of religion was one of the founding precepts of this country.

Americans enjoy every reasonable freedom. We are free to assert our rights as long as they do not violate the rights of others. But with every freedom there is an inherent responsibility. A crucial part of every right is the responsibility to protect that right not only for oneself but for others.

To merit freedom a nation must continuously strive for it. In our own country, the struggle for human rights has been enormously successful. Today, Americans are concerned with practical implementation rather than formal legislation.

But how about the rest of the world? Does our responsibility to freedom end at our borders? Do we not have the responsibility to to carry the struggle for human rights to other nations?

Indeed we do. The United States has been a continuous advocate of universal human rights. Human rights has become the cornerstone of our foreign policy, and we have had many notable successes. But, Mr. President, this Senate has abdicated its responsibility on one particular human rights issue. We have not acted to protect the right to live. We have not ratified the United Nations Genocide Convention.

Mr. President, we must accept the responsibility of our freedom. We can begin with the most fundamental of human rights—the right to live. We can begin with the Genocide Convention.

Mr. President, I yield the floor.

The ACTING PRESIDENT pro tempore. Is there further morning business?

CONSIDERATION OF CERTAIN MEASURES ON THE CALENDAR

Mr. ROBERT C. BYRD. Mr. President, there are three measures that have been cleared on the other side of the aisle, Calendar Order Nos. 1009, 1010, and 1035. I ask unanimous consent that the Senate proceed to the consideration of those three calendar orders.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The clerk will state the first measure.

BUDGET ACT WAIVERS

The resolution (S. Res. 510) waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 3279, was considered and agreed to, as follows:

S. RES. 510

Resolved, That pursuant to section 402(c) of the Congressional Budget Act of 1974, the provisions of section 402(a) of such Act are waived with respect to the consideration of S. 3279. Such waiver is necessary to allow for the authorization of funds from the trust fund established by the Airport and Airway Development Act of 1970 for airport planning and programs to achieve noise abatement and for airport construction and development. Funds authorized by the Airport and Airway Development Act are insufficient to carry out these programs and additional authorization is required.

Compliance with section 402(a) was not possible by May 15, 1978, because the Committee on Commerce, Science, and Transportation contemplated only one major piece of aviation legislation during the Ninety-fifth Congress, that is, the Air Transportation Regulatory Reform Act of 1978, which passed the Senate on April 19, 1978. It is now clear that the House of Representatives wants these additional spending programs. Therefore, the committee must proceed to accommodate these programs. The effect of defeating consideration of this authorization may result in the failure to enact regulatory reform legislation during this Congress. The committee does not anticipate that consideration of this authorization will delay the appropriations process.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. STAFFORD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–1088), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE RESOLUTION

Section 402(a) of the Congressional Budget Act of 1974 provides that it shall not be in order in either the House or the Senate to consider any bill or resolution which directly or indirectly authorizes the enactment of new budget authority for a fiscal year unless that bill or resolution is reported in the House or Senate, as the case may be, on or before May 15 preceding the beginning of such fiscal year. Because S. 3279 authorizes the enactment of new budget authority which would be available in fiscal year 1979, and the bill was reported after May 15, 1978, a resolution waiving section 402(a) with regard to S. 3279 must be adopted before the Senate may consider the bill. In reporting favorably on Senate Resolution 510, the Budget Committee is recommending that the Senate proceed to consideration of S. 3279, but is not otherwise prejudging the merits of the bill.

The resolution (S. Res. 527) waiving section 303(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 3279, was considered and agreed to, as follows:

Resolved, That pursuant to section 303(c) of the Congressional Budget Act of 1974, the provisions of section 303(a) of such Act are waived with respect to the consideration of S. 3279, a bill to provide assistance to aircraft operators to aid them in complying with Federal aircraft noise standards, to amend the Airport and Airway Development Act of 1970 to provide assistance to airport operators and aircraft operators to aid them in complying with noise standards, and for other purposes.

Such waiver is necessary to permit consideration of new spending authority (as detailed below) to become effective in a fiscal year for which the first concurrent resolution on the budget has not been agreed to. Specifically, the new spending authority for which this waiver is needed arises from the authorization of additional funds from the Airport and Airway Trust Fund, as contained in titles I and II of S. 3279, for a future fiscal year not yet considered by the Budget Committee. The total amount of the additional funding for fiscal year 1980 is $295,000,000.

Compliance under section 303(a) of the Budget Act was not possible because of the multiyear nature of airport development projects under the Airport and Airway Development Act. These projects are for airport development and construction that may take several years to complete and call for assurance that Federal funding will be committed to that project in order to permit the airport operator to sell municipal bonds to raise the local authority's share of the project costs. This need for future commitment for planning purposes has been recognized by the Congress since the creation of the trust fund in 1970.

The entitlements contained in S. 3279 represent both renewals and extensions of existing spending programs under the Airport and Airway Development Act. The need for action on future year spending is clearly demonstrated by the increased appropriations for these programs contained in the Department of Transportation appropria-

tions legislation for fiscal year 1979, which appropriated funds in excess of those authorized in the ADAP program for that fiscal year.

Because Congress anticipated possible modification and review of the ADAP program, the legal basis for expenditures of trust fund moneys for discretionary programs expires at the end of fiscal year 1979, leaving no authority to spend discretionary funds in 1980. Yet the need for continued and increased discretionary funding for 1980 has been clearly demonstrated and is documented by a backlog of over $900,000,000 in accumulated requests for ADAP funds of which over $600,000,000 have been identified by the Federal Aviation Administration as high priority programs. Without the renewed and increased discretionary level for 1980, many airport safety programs will not be funded. The Airport and Airway Trust Fund, from which these needed projects are in major part sponsored, is currently running a surplus of nearly $2,000,000,000 which will not be significantly reduced by either the additional spending programs and authority contained in S. 3279 or by the proposed reductions in the ticket and freight weighbill taxes contemplated by S. 3279.

The comparable legislation pending before the House of Representatives contains substantially similar spending programs for fiscal year 1980 as are contained in the Senate bill, S. 3279. Yet the funding levels are higher than those contained in the Senate measure. The possibility therefore exists that the conference committee agreement will contain slightly higher figures than those contained in S. 3279. While this possibility exists, it should be noted that the Senate version incorporates a somewhat different approach than the House bill to solve the current funding crisis, which if accepted by the conference committee, will either reduce or eliminate the increases that might otherwise be expected in reaching a compromise on the two pieces of legislation.

Finally, as the Airport and Airway Development Act was created in 1970 and reviewed in 1976, it expires at the close of fiscal year 1980. The levels of authorization written in 1976 to run through 1980 could not have anticipated the dramatic growth in air traffic which has not only increased the pressures on airport development and construction but also created a significant surplus in the trust fund.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. STAFFORD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–1089), explaining the purpose of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE RESOLUTION

Section 303(a) of the Congressional Budget Act of 1974 provides that it shall not be in order in either the House or the Senate to consider any bill or resolution or any amendment thereto providing new budget authority, new spending authority, or changes in revenues or public debt for a fiscal year until the first concurrent resolution on the budget for such fiscal year has been adopted. Since S. 3279 would provide direct spending authorizations for fiscal year 1980, a year for which the Congress has not enacted a First Budget Resolution, a waiver of section 303(a) of the Budget Act is necessary before the bill can be taken up on the Senate floor. In reporting favorably on the resolution waiving application of Section 303(a) to S. 3279, the Budget Committee is recommending that the Senate proceed to consideration of the bill, but is not prejudging the merits of the bill.

CARL HAYDEN BEE RESEARCH CENTER

The bill (S. 3274) to designate the United States Department of Agriculture's Bee Research Laboratory at Tucson, Ariz., as the "Carl Hayden Bee Research Center", was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the United States Department of Agriculture's Bee Research Laboratory in Tucson, Arizona, shall hereafter be known and designated as the "Carl Hayden Bee Research Center". Any reference to such laboratory in any law, regulation, document, record, or other paper of the United States shall be deemed a reference to it as the Carl Hayden Bee Research Center.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. STAFFORD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–1115), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

SHORT EXPLANATION

S. 3274 would provide for naming a bee research laboratory in Arizona as the Carl Hayden Bee Research Center in honor of the late Member of Congress, Carl Trumbull Hayden. His strong support and efforts toward the establishment of the Federal facility for research, development, and study of bees and to all agriculture were constant.

BACKGROUND AND NEED

I

Carl Hayden was an avid supporter of American agriculture throughout his 57 years of service in the U.S. Congress. When Arizona became a State on February 14, 1912, Carl Hayden was elected as its Congressman at Large. In 1926, he was elected to the U.S. Senate and served in the Senate until his retirement in 1969. On January 25, 1972, Carl Hayden died. His dedication to agriculture and the Nation was unfailing.

Carl Hayden understood agriculture and put his own firsthand knowledge, experience, and expertise to work for the benefit of the Nation, the people of Arizona, and the Department of Agriculture. His achievements for agriculture were numerous. A member of the Appropriations Committee when he first became a Senator, and chairman beginning in 1955, his efforts and active interest for development and growth in agriculture were decisive in determining what projects would get funded. Of great importance to him, while serving on the Department of Agriculture Appropriations Subcommittee, were the study of honeybees and their significance to the Nation's economy. Hayden recognized the vital role that bees play in agricultural production. It was his awareness that brought about the necessary funding to build a bee research laboratory in Tucson. In addition to his interest in honeybee research, he was a champion of all major agricultural legislation, including the creation of the Farmers Home Administration.

WHAT CONFERENCE REPORT?

Mr. HANSEN. Madam President, there has been considerable discussion of late concerning the consumption of mind-distorting substances in the White House. While that is a matter of some concern, it occurs to me that we should be more concerned about the mind-distorting effect of being in the White House. I am referring to the efforts which I understand from press reports took place there last night concerning the natural gas conference report. It is reported that a majority of both House and Senate conferees have signed a signature sheet entitled "Natural Gas Conference Report." This is remarkable in light of the fact that apparently none of the members so signing were able to state what the natural gas conference report is. Some 3 weeks ago, there was released in accordance with an agreement confirmed by correspondence between Senator JACKSON, Senators MCCLURE, and DOMENICI, and other Senate members of the conference committee, a document for review during a period of at least 72 hours. This document was not acceptable to a majority of the committee, and secret negotiations involving the conferees, the Secretary of Energy, and officials of the Federal Energy Regulatory Commission have been in progress ever since. I have seen a document dated August 16, entitled "Conference Discussion Draft", containing changes on at least 119 pages of the 171-page legislative language, which document was produced by House staff on Wednesday afternoon. Whether this document is the document that conferees think they signed, I do not know. It is clear that the original statement of managers language would not be appropriate to this revised legislative language, but I am informed that no revised statement of managers language exists, or was known to those who signed the conference report.

It seems quite anomalous that men who would not sign a check or a contract in blank for a few dollars will essentially sign in blank a bill affecting billions of dollars. Perhaps this too can be chalked up to the hallucinatory atmosphere of the White House.

That atmosphere too appears able to cause Senators to ignore commitments expressed in documents that they themselves have signed. Senator MCCLURE, by letter of July 12 to Senator JACKSON, confirmed that any conference report on natural gas would be available for 72 hours before signatures would be obtained. And Senator JACKSON, by letter of July 14, confirmed that "the 72-hour review period agreed upon earlier will not begin to run until the final draft has been prepared and circulated to all conferees." It is clear that this did not occur, as "the conference report," whatever it may turn out to be, is not the language which was released 3 weeks ago. I personally consider it to be outrageous that a care-

fully constructed agreement designed to facilitate careful consideration of this most important legislation should be abrogated under White House auspices in the dead of night. Perhaps on his foreign journeys the President, like "the shadow", has acquired the power to cloud men's minds.

I am inserting for the record a series of correspondence and documents relating to the agreements made among Senators for the consideration of draft conference reports before signing. These documents taken together spell in clear and unequivocal language that the 72-hour review period would only run once the final conference report and statement of managers was available. Finally, I particularly note the transcript of the final conference meeting in which Senator JACKSON agreed to reconvene the conference if any Senator had problems with the final language. The extraordinary actions of last night make it difficult for me to assert with complete confidence that I have problems with the conference report, as I am not sure just what the conference report is. However, as I certainly have problems I would like to raise both with the document originally released and with the 119 pages of changes, I would now call upon Senator JACKSON to honor his agreement in the conference and to reconvene the conferees in order that we may examine and express our problems with the language which he now believes to constitute "the conference report."

The material referred to follows:

Attached is the official transcript for the last day of the formal House-Senate Natural Gas Conference. Senator Jackson committed himself to reconvene the Senate Conference if any one Senator had any problems with the final language. The documents which will be discussed refer back to this agreement to reconvene the Senate Conference.

(1) June 26, 1978, letter to Senator Jackson from the Senate Conferees. This letter (which was never delivered) was written to insure that all Senators would have an opportunity to review the final legislative language by announcing that they would withhold their signatures from the conference report until the review was completed

(2) July 12, 1978, meeting on the Senate floor between Senators Hansen, Jackson, and McClure regarding formalizing the signature process. This meeting resulted in the 72 hour review process and your memo to all the Republican Senators.

(3) July 12, 1978, letter from McClure to Jackson stating the conference report would be distributed to Senators the press and public for a 72 hour review period. The report then could be filed after the review period.

(4) Memorandum dated July 12, 1978, to Members of the Committee from Senator Jackson regarding the procedure for review of conference reports. The Natural Gas Conference Report will be made available to the Members of the Committee, press and the public for a 72 hour period before filing.

(5) Letter dated July 13, 1978, from Senators McClure and Domenici to Senator Jackson commenting on the review process. First paragraph: "While we concur in that agreement, we are concerned about the process to be followed for conferees and their staffs to review and comment on drafts of those documents prior to submission for final review and approval." ". . . Scoop, we simply recommend that as the initial and subsequent product of the drafting groups for the report and joint statement become available, an opportunity for meaningful review and comment by conferees and staff be provided prior to presentation of those documents for final approval."

(6) Letter dated July 14, 1978, to Senators McClure and Domenici from Senator Jackson responding to their letter of July 13: "The 72 hour review period agreed upon earlier will not begin to run until the final draft has been prepared and circulated to all conferees."

These documents taken together spell in clear and unequivocal language that the 72 hour review period would only run once the final conference report and statement of managers was available. Therefore, this document entitled, "Conference Discussion Draft", of August 16, 1978, which amends the 171 page final version, makes substantial changes. In fact, there are changes on 119 of the total 171 pages. Therefore, earlier review periods will not suffice to fulfill the 72 hour review period committed. Any Senator may still exercise the option of asking Senator Jackson to reconvene the Senate conference.

TRANSCRIPT OF THE FINAL CONFERENCE MEETING

Mr. DINGELL. Mr. Chairman, I thank you. I believe that the Chair has said that it would be the Chair's intention to circulate the signature sheets, in conformity with the practices of this Committee; and members would, of course, have the opportunity to review and view the draft without the necessity for either circulating draft or having a formal meeting, which I would think—a formal meeting could invite discussions and slow progress.

Mr. BROWN (Ohio). Would my colleague here yield on that?

Senator JACKSON. I think that is the important thing. It is not necessary to have a meeting of this Conference in order to sign the Conference Reports.

Mr. DINGELL. I concur.

Senator JACKSON. I would hope we would keep it in mind so that we could do this as expeditiously as possible on the Conference Reports that we have finished and are ready for signatures.

Mr. BROWN (Ohio). Would the gentleman yield?

Mr. DINGELL. Yes, I yield to my good friend.

Mr. BROWN (Ohio). I would hope that it is true, although it seems to me that one man's meat might be another man's poison in terms of the interpretation in the formal and final language, if, in fact, that fails to get sufficient signatures on the Conference Report.

Mr. DINGELL. Just like my friend and colleague, and I do observe that is the reason the Minority Staff is going to have an important part to play in preparation of this language.

Chairman STAGGERS. Would you yield to the Chair? I would just like to say this. Mr. Jackson has to leave. I want to thank the Senate, not only the Senate, but all members of the House, for their courtesy.

I want to especially thank Don Dingell for the very effective script he has given. I think they have done a tremendous job on both sides; Mr. Ashley, also, for the Ad Hoc Committee.

I will yield to the gentleman from New Mexico.

Senator DOMENICI. Mr. Chairman, I want to raise this point with Senator Jackson on our side. I don't want to leave with any misunderstanding. Do I understand that if you can get a majority of the Conferees to sign the report, without calling a Conference, you will do that.

But if we have objections, and that needs some further discussion, you do intend to seek the signatures indicating their acceptance of the legislation, and the Conference Report, from a majority of the Senators who support the legislation, do you not?

Senator JACKSON. The Senator is correct. I want to avoid more meetings, because I think that we have met the test of meetings. I am just fearful of more meetings, and more confusion that can arise; but I will say, on the Senate side, that I would call our Conferees together upon the request of any one Senator.

We held off here today. We had a meeting at 1:30 in order to accommodate one Senator, and I would have that rule on our side. And I know that our Chairman, Congressman Staggers, will always be collaborative, but the point is we have completed all the basic work here except on one bill, the Energy Conservation as it relates to fuel efficiency standards.

We normally circulate signature sheets, and those who will sign, can sign. We hope there will be a majority on both sides. I just want to say, Mr. Chairman, that we all salute you, Don Dingell, and Len Ashley, and the Minority, especially Bud Brown—are you listening, Bud?

Mr. BROWN (Ohio). Mr. Chairman, I always have one ear open to the gentleman from Washington, but I would have to say that he doesn't really have to include me in the enthusiastic acrimoniums that are being given around. I am only glad to report—I think the gentleman from Connecticut is not here, of the two of us might have some comments to make.

Senator JACKSON. We just want to make sure you stay with the military-industrial complex, at least, and count on your vote there.

Mr. BROWN (Ohio). I will follow you anywhere.

[Laughter]

Senator JACKSON. Mr. Chairman, we all want to thank you, the Majority and Minority alike, on both sides, my colleagues, for your patience, above all else. This you have done. You have met the supreme test, and we are all grateful for your help.

Chairman STAGGERS. Thank you very much. I would like——

(Applause)

Chairman STAGGERS. I would like to say to the press that we appreciate your patience in having stayed with us all of this time, and your generousness.

With that, we will adjourn, subject to the call of the Chair.

(Whereupon, at 5:10 p.m. the Conference was adjourned, subject to the call of the Chair.)

U.S. SENATE,
Washington, D.C., June 26, 1978.

Hon. HENRY M. JACKSON,
Chairman, Committee on Energy and Natural Resources, U.S. Senate, Washington, D.C.

DEAR SCOOP: Because of the uncertainty with regard to the process of obtaining signatures on conference reports, we will withhold our signatures from conference reports, on the National Energy Plan until (1) all Senate conferees have been given copies of the legislative language and conference reports, and (2) each has had adequate time to study the contents of these documents.

We believe this process is essential to assure conformity with your commitment to reassemble Senate conferees should the legislative language or conference reports not comport with the understandings reached during the Energy Conference.

Sincerely,

CLIFFORD P. HANSEN,
JAMES MCCLURE,
PETE V. DOMENICI,
PAUL LAXALT,
DEWEY F. BARTLETT,
WENDELL H. FORD.

JULY 12, 1978.

To: Senators Mark O. Hatfield, James A. McClure, Dewey F. Bartlett, Lowell P. Weicker, Jr., Pete V. Domenici and Paul Laxalt

From: Clifford P. Hansen

Subject: Energy Conference Reports

The following agreement has been reached with regard to the handling of energy conference reports.

1. *Coal Conversion.*—Senators will have the period until tomorrow night, July 13, to analyze the legislative language and Statement of Managers. If sufficient signatures are collected, the bill will be acted on by the full Senate on Friday, July 14.

2. *Energy Conservation.*—Senators will have 48 hours from the time of distribution to analyze the legislative language and Statement of Managers. Provided there are sufficient signatures, the measure will then be brought to the floor of the Senate.

3. *Utility Rate Reform.*—Senators will have 48 hours from the time of distribution to analyze the legislative language and Statement of Managers. Provided there are sufficient signatures, the measure will then be brought to the floor of the Senate.

4. *Natural Gas.*—Senators will have 72 hours from the time of distribution to analyze the legislative language and Statement of Managers. Provided there are sufficient signatures, the measure will then be brought to the floor of the Senate

Implicit in this agreement is that the Statement of Managers and the text of the legislative language will be available publicly.

U.S. SENATE,
Washington, D.C., July 12, 1978.

Hon. HENRY M. JACKSON,
Chairman, Committe on Energy and Natural Resources, U.S. Senate, Washington, D.C.

DEAR SCOOP: This is to confirm our conversation earlier this afternoon regarding the procedure for review of the conference reports of the Conservation, Coal Conversion, Utility Regulation, and Natural Gas Provisions of the National Energy Act.

It is my understanding, pursuant to our discussion, that these individual conference reports will be filed under the following procedure:

Coal Conversion: Copies of the conference report will be made available to Senators, Press and Public 24 hours prior to filing. It is understood that this conference report has been distributed for comment on July 12, 1978, and can be filed at Midnight on July 13, 1978.

Conservation and Utility Regulation: No sooner than July 14, these conference reports will be distributed to Senators, the Press and Public for a 48-hour review period. After this 48-hour review period, these conference reports can be filed.

Natural Gas: No sooner than July 14, this conference report will be distributed to Senators, the Press and Public for a 72-hour review period. The conference report can then be filed after this 72-hour review period.

As I mentioned during our meeting, it is my understanding that this procedure is acceptable for a majority of Senate Conferees.

Sincerely,

JAMES A. MCCLURE,
U.S. Senator.

JULY 12, 1978.

MEMORANDUM

To: Members of the Committee.

From: Senator Jackson.

Re: Procedure for Review of Conference Reports

Copies of the conference report on the coal conversion bill have been made available to members of the Committee today and are also available for examination by the press and public at the Committee offices. If the necessary signatures are obtained, this report will be filed after the close of business on July 13.

With respect to the conference reports on the conservation and utility rate reform bills, these reports will be made available to members of the Committee, the press and the public for a 48-hour review period prior to filing. In the case of the conference report on the natural gas bill, the review period prior to filing will be 72 hours.

U.S. SENATE,
Washington, D.C., July 13, 1978.

Hon. HENRY M. JACKSON,
Russell Senate Office Building, Washington, D.C.

DEAR SCOOP: We are aware of the agreement yesterday to the effect that Senators will have 72 hours to analyze the legislative language for the Natural Gas Conference Report and the Statement of Managers prior to filing of those documents. While we concur in that agreement, we are concerned about the process to be followed for Conferees and their staffs to review and comment on drafts of those documents prior to submission for final review and approval.

In view of the complexities involved in this legislation, we feel that it is extremely important to provide a procedure for Conferees and their staff members to have ample opportunity to review the drafts of these documents, to discuss those drafts with the drafting groups, and to suggest modifications and clarifications. We are concerned that without such a process for development of the fiinal report and statement, the 72 hour time limit for final review and approval cannot be met.

In addition, it could well develop that, absent the kind of meaningful prereview and comment process we recommend, disruptive and destructive disagreements could arise at the last moment, a situation that could undo all the hard work and negotiating we are so painfully familiar with. We must not let that happen when we are so close to completing what we consider to be the most important component of the Energy Plan likely to be passed in the foreseeable future.

In summary, Scoop, we simply recommend that as the initial and subsequent products of the drafting droups for the report and the joint statement become available, an opportunity for meaningful review and comment by Conferees and staff be provided prior to presentation of those documents for final approval.

As always, thank you for your attention to our concerns and consideration of our requests.

Sincerely,

JAMES A. MCCLURE,
PETE V. DOMENICI.

Hon. JAMES MCCLURE,
U.S. Senate,
Washington, D.C.

DEAR JIM: Thank you for your July 13th letter concerning the review process for the natural gas conference report and the accompanying Statement of Managers.

I understand from the Staff that a first draft of the statutory language and Statement of Managers should be completed by next week. That draft has not yet been reviewed by anyone outside of the drafting group which consists of Bill Braun, Bill Demarest, David Schooler, Chip Schroader, and Kathy Segerson of the House Energy and Power Subcommittee staff; Paul Smith of the House Office of Legislative Counsel; and Mike Harvey and Betsy Moler of our Committee staff.

Staff of the Conferees, and other Committee staff, will have an opportunity to review the first draft and to suggest appropriate modifications and clarifications as soon as it is completed. The 72 hour review period agreed upon earlier will not begin to run until the final draft has been prepared and circulated to all Conferees.

I agree with you that it is essential to provide a procedure for Conferees and their staff members to have ample opportunity to participate in the process for development in the final report and statement. If any Conferee personally wishes to review the documents in his office, I have instructed the staff to comply with such a request.

I hope that the process I have outlined will meet your needs as well as those of the other Conferees.

Sincerely yours,

HENRY M. JACKSON,
Chairman.

Hon. PETE V. DOMENICI,
U.S. Senate,
Washington, D.C.

DEAR PETE: Thank you for your July 13th letter concerning the review process for the natural gas conference report and the accompanying Statement of Managers.

I understand from the staff that a first draft of the statutory language and Statement of Managers should be completed by next week. The draft has not yet been reviewed by anyone outside of the drafting group which consists of Bill Braun, Bill Demarest, David Schooler, Chip Schroader, and Kathy Segerson of the House Energy and Power Subcommitee staff; Paul Smith of the House Office of Legislative Counsel; and Mike Harvey and Betsy Moler of our Committee staff.

Staff of the Conferees, and other Committee staff, will have an opportunity to review the first draft and to suggest appropriate modifications and clarifications as soon as it is completed. The 72 review period agreed upon earlier will not begin to run until the final draft has been prepared and circulated to all Conferees.

I agree with you that it is essential to provide a procedure for Conferees and their staff members to have ample opportunity to participate in the process for development in the final report and statement. If any Conferee personally wishes to review the documents in his office, I have instructed the staff to comply with such a request.

I hope that the process I have outlined will meet your needs as well as those of the other Conferese.

Sincerely yours,

HENRY M. JACKSON,
Chairman.

ORDER FOR RECESS UNTIL 9:00 A.M. ON MONDAY

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in recess until the hour of 9:00 a.m. on Monday next.

The ACTING PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

CONCLUSION OF MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask that morning business be closed.

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is concluded.

FEDERAL-AID HIGHWAY ACT OF 1978

The ACTING PRESIDENT pro tempore. Under the previous order, the Sen-

ate will now proceed to the consideration of S. 3073, which the clerk will state .

The assistant legislative clerk read as follows:

Calendar No. 764, a bill (S. 3073) to amend title 23, United States Code, to authorize Federal-aid highways programs through fiscal year 1980, and for other purposes.

The ACTING PRESIDENT pro tempore. Under the previous order, the time for debate on this measure is limited to 3 hours, with 2 hours on title I of the bill, to be equally divided and under the control of the Senator from Texas (Mr. BENTSEN) and the Senator from Rhode Island (Mr. CHAFEE); and 1 hour on title II, to be equally divided and controlled by the Senator from Nevada (Mr. CANNON) and the Senator from New Mexico (Mr. SCHMITT). The time for amendments, except those on which a special time allocation has been made, shall be limited to 30 minutes, with a limitation of 20 minutes on any debatable motion, appeal, or point of order.

Who yields time?

Mr. BENTSEN. Mr. President, will the Chair repeat who is in control of the time on this bill?

The ACTING PRESIDENT pro tempore. The Chair will be happy to do so. On title I there is 2 hours, to be divided equally between and controlled by the Senator from Texas (Mr. BENTSEN) and the Senator from Rhode Island (Mr. CHAFEE).

Mr. BENTSEN. I thank the Chair very much. That was my question.

Mr. President, I ask unanimous consent that during consideration and voting on S. 3073, the Federal-Aid Highway Act of 1978, the following staff members of the Committee on Environment and Public Works, be granted privilege of the floor: John Yago, Bailey Guard, Richard Harris, Barbara Webb, Larry Roth, Lee Fuller, Katherine Cudlipp, Hal Brayman, Rick Herod, Lee Rawls, Ric Fenton, and Phil Cummings.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BENTSEN. I also ask unanimous consent for floor privileges for Mike Naeve and Jack Albertine of my staff; Sam Stern of Senator ANDERSON'S staff; and Robin Carpenter of Senator MCGOVERN'S staff.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BENTSEN. Mr. President, I want to first acknowledge the presence of the chairman of the full committee, the distinguished Senator from West Virginia (Mr. RANDOLPH), a man who has labored hard on this piece of legislation, and one who has done much to build the Interstate Highway System of this country, who has been in the forefront of the fight, who has helped mastermind the greatest investment in transportation that the world has ever seen; a man who is highly respected by his colleagues for his perseverance, his vigor, his drive, his intellect, and his concern for his concern for his constituency and for his country. It is my pleasure to serve on his committee, and to have his advice and counsel, which I truly respect.

Mr. RANDOLPH. Mr. President, will the chairman yield?

Mr. BENTSEN. I am happy to yield.

Mr. RANDOLPH. I wish to express genuine appreciation what the manager of this legislation has just said. Only one exception would I take. He is too generous. Where he said "his committee," referring to the chairman, I want to have the RECORD modified to show it is our committee. I have always considered the 15 members of this committee, Democrats and Republicans, as a working team of this program.

Mr. BENTSEN. I thank the chairman very much.

I also want to acknowledge my colleagues, Senator CHAFEE and Senator STAFFORD, with whom it has been a real pleasure to work with.

It is a tough thing, when we talk about a bill of some $8.5 billion, which affects every segment of transportation insofar as the highways across this land are concerned. There is probably nothing closer to the people than the roads on which they drive. Everyone wants part of the action. Everyone has a particular project for their particular area. To be able to bring fiscal responsibility to it is not easy.

Mr. President, S. 3073, the Federal-Aid Highway Act of 1978, is a 2-year, $16 billion bill of direct and immediate importance to every State in this Nation. The legislation we bring before the Senate today is complex and, in some respects, controversial. It represents an honest, creative, and responsible effort to make maximum effective use of finite resources.

S. 3073, Mr. President, is the product of 10 days of hearings at which over 100 witnesses from the administration, State, local and regional government, the highway industry, and environmental groups presented testimony. This testimony, and the problems inherent in the highway program, were carefully analyzed by the Subcommittee on Transportation and by the members of the Public Works Committee.

Throughout our deliberations, we have been guided by several premises, the most important being fiscal responsibility. S. 3073 is lean legislation; make no mistake about it.

There are going to be many attempts in today's debate to try to fatten it up. We must reject those efforts because this bill is fiscally responsible. It is a reflection of our willingness to live within the limits of the Highway Trust Fund. It reflects the transportation community's overriding concern for a more flexible easier-to-administer Federal highway program. It is keyed to the expedited completion of the Interstate System.

This system is now over 90-percent completed. We have tried to really home in on the segments which must to expedited to finish it. The bill also addresses other urgent national highway needs such as deterioration of existing roads and bridges.

Before addressing specific aspects of this legislation, Mr. President, I would like to comment briefly on the general level of funding proposed—about $8 billion a year.

The figure should not be construed as a judgement on the magnitude of our Nation's actual highway needs. Clearly, the program could use substantially higher levels of funding. We should be closing gaps in the system as soon as possible; costs are escalating at an alarming rate.

Inflation mean it will cost us more next year. We have severe maintenance problems that require urgent attention; many of the bridges in this country are downright dangerous and need repair.

The basic question—at least in my mind, Mr. President—is not how much money the program needs, but the measure of resources available to sustain it. We must weigh highway needs against available trust fund revenues and do the best we can with the funds we have. To ignore factors such as inflation and deficit financing in developing highway legislation would be easy, but it would also be irresponsible and shortsighted. And it would wreck the highway trust fund.

Mr. President, the Subcommittee on Transportation and the Committee on Environment and Public Works have opted for prudence: We have chosen to live within our means.

That may be a little unusual these days, and particularly so for Members of the Congress.

We have maintained the "user pay" principle. We took a close look at the trust fund, determined the size of program it could be expected to support, and used that figure as the basis for this legislation. Rather than tinker with the trust fund concept, with some phony accounting approach, we have chosen instead to make better, more effective use of the moneys available to us.

Let us talk about the trust fund for a minute. Obviously, if you raise the Federal gasoline tax, you will generate more revenue into the trust fund, and we can spend more money on highways. If Congress makes this extra money available, we will do our best to see that it is well spent. I have followed this situation with some care, and I can assure you that the trust fund could use more revenue. The 4-cent tax has not been increased since 1959.

But the fact of the matter is that Congress has not increased the Federal gasoline tax; the fact of the matter is that we have $8 billion a year to work with, no more and, hopefully, no less.

When we talk about raising the gasoline tax, I proposed that step during the embargo, and I received bales of mail over it. I remember going to the Policy Committee and suggesting it as a means of cutting back on the use of gasoline, as a means of putting more money into the trust fund, as a means of taking care of the bridges and the repairs on the highways. I can still recall the distinguished Senator from Rhode Island, John Pastore, who said, "Not me. I am not going to vote for any increase in the gasoline tax." I said, "Why not, Senator?" He said, "Well, I will tell you, when I was Governor I voted for a 1-cent increase in the gasoline tax and they named it after me."

Well, those are the political facts of life that we face in this kind of a situation. So we are trying to live within what we are receiving. I still do not discount the fact that at some point in the future

to meet the increased problems we are having with inflation, the increased problems in deterioration of bridges and highways, we are gong to have to raise that gasoline tax. I will just have to figure out how to answer the bales of mail.

The committee has accepted a fixed gasoline tax rate as a point of departure. The authorization contained in S. 3073—$8.3 billion for each of the next 2 years, with $7.9 billion drawn from the trust fund—are the highest levels we can, in good conscience, recommend to the U.S. Senate. It is the highest level consistent with present economic realities; to exceed it, without increasing the Federal gasoline tax, could jeopardize the integrity of the trust fund which has been such an effective and reliable financing mechanism for more than 20 years.

Now, Mr. President, let me explain some of the steps we have taken to maximize the cost-effectiveness of the highway program. Let me explain how we have attempted to get maximum mileage out of finite funds.

We are giving priority attention to expediting the completion of the interstate system. During the past 22 years we have spent $51.9 billion on the system, which is now 92 percent complete. The problem, Mr. President, is the remaining 8 percent, some portions of which may not be completed until the 21st century under current projections.

With the cost of inflation, that last 8 percent might well cost as much as the first 92 percent before we get through.

Given the fact that highway construction costs have risen by 216 percent over the last 10 years, completing the remaining 8 percent of the system could cost as much as we spent to build the 92 percent already in place. The longer we wait, the more expensive it is going to become.

S. 3073 recognizes that fact and has been carefully drafted to speed up the process of completing the system.

First, the bill authorizes an additional $20 million annually for fiscal year 1980 and 1981 to hasten construction of remaining segments of the interstate system.

By decreasing the period of availability we are attempting to channel funds to the States that are ready to utilize them. Lapsed funds—estimated to be some $1.2 billion in fiscal year 1980—would be redistributed to States with ready to build projects, with preference accorded to essential gap projects.

Fourth, S. 3073 makes more cost-effective use of interstate funds by advancing moneys to States that are in a position to obligate interstate funds beyond their annual apportionments. Under this provision, a State which has spent its allocation in a given year can increase its available Federal funds up to its next year's interstate apportionment.

Any such advance, of course, would be deducted from the next fiscal year apportionment.

Fifth, S. 3073 contains a bonding option for those States that have exhausted all sources for interstate funding but still have ready-to-construct projects on the boards. This provision gives States the ability to issue State Revenue bonds for interstate construction and guarantees that the Federal Government will repay 90 percent of both interest and principal. While, for the first time, interest on such bonds would become a Federal responsibility. This provision would prevent the inflationary impact of project delay and save substantial costs over the longer range.

Finally, in addition to changes in interstate financing, S. 3073 contains several administrative innovations designed to speed up completion of the system. Environmental impact statements for all unconstructed segments of the system must be completed by 1982. After that date, any route without an approved EIS will be withdrawn from the system. To insure that construction begins in a reasonable period of time, we have provided that any interstate or substitute system must be underway by 1986 or it will become ineligible for assistance.

Taken as a package, Mr. President, these initiatives to speed up construction of the system and use our resources more efficiently are worth hundreds of millions of dollars in new resources. They should provide a significant and welcome spur to finishing a job that has dragged out too long, a job that becomes more expensive with each passing day.

There are two other noteworthy provisions of this legislation, two areas in which we have tried to be responsive to problems in the program.

The first item is maintenance. It makes little sense to spend over a hundred billion dollars for a highway network and then permit it to crumble for lack of maintenance. We have no choice but to protect this enormous investment, and maintenance is the key to protection.

Since the inception of the Federal highway programs, the States have been required to adequately maintain their federally funded roadways. In recent years, however, it has become apparent that overall maintenance is beyond the financial capability of most States. In 1976, Congress responded to this problem by broadening the definition of construction so as to include the three R's of maintenance: Rehabilitation, restoration and resurfacing; and a separate authorization was made for 3R work on the Interstate System.

Nevertheless, 2 years later, many portions of the Interstate System are in disrepair; there is a backlog of $2.3 billion of work that needs to be done. Our Interstate System, funded 90 percent with Federal tax dollars, is wearing out 50 percent faster than we are repairing it.

This process cannot be permitted to continue, and the committee has made several changes in the Interstate 3R program to insure better maintenance. We have required an annual Federal inspection of Interstate routes. If a State fails to meet maintenance standards established by the Secretary of Transportation, approval of all Federal-aid primary projects is suspended until the Secretary is satisfied that the State is making a good faith effort to maintain its interstate mileage.

Under the terms of S. 3073, toll roads designated part of the Interstate System become eligible for Federal maintenance assistance; traffic volume is factored into the 3R apportionment formula; and the Federal share is reduced to 70 percent, making it compatible with the primary program.

Mr. President, the final area of concern to the transportation community and to the committee is an expanded special bridge replacement program.

The current annual authorization of $180 million is clearly inadequate to reconstruct the 33,500 deficient bridges on the Federal-aid system. Let us remember that when we are talking about bridges, we are talking more than highway access: we are dealing with human lives.

The committee has recommended increasing the bridge replacement program; from $180 million last year to $450 million this year—250 percent of last year's program. A survey conducted by the Federal Highway Administration suggest that a $450 million annual program accurately reflects the resources the States could obligate next year for bridge replacement.

While on the subject of safety. Mr. President, let me also point out that we have made a major effort toward consolidation in the highway safety program in order to provide administrative flexibility at the State and local levels and to help the States get the greatest return from their highway safety dollars.

I sincerely hope, Mr. President, that as we debate S. 3073, the Senate will understand that we have to hold the line on this program. I should like to spend more money on the interstate program, and I acknowledge that there is a legitimate need for more money. But the $8 billion we recommended, we think, is the limit on a user tax, we run the risk of destroying a successful program of long standing that has helped create an Interstate Highway System of vast significance to this Nation.

We have shunned the line of least resistance; we have made an honest and concerted effort to preserve the highway trust fund and to live within our means. We have tried to stretch available funds by effecting internal economies, by getting a better cost-benefit ratio from available funding.

The House has been less reticent; they are going to take an expensive and inflationary bill to conference and we shall have to attempt to negotiate them down from that figure if the integrity of the trust fund is to be preserved.

I hope the Senate will keep these factors in mind as we move to consider this legislation

I reserve the remainder of my time, Mr. President.

(Mrs. ALLEN assumed the chair.)

Mr. CULVER. Madam President, will the Senator yield for a unanimous-consent request?

Mr. BENTSEN. I am delighted to yield to the distinguished Senator from Iowa, who is a very valued member of this committee.

Mr. CULVER. Madam President, I ask unanimous consent that Peter Rosen-

berg, of my staff, may have the privilege of the floor.

Mr. HODGES. Madam President, I ask unanimous consent that Jon Abele, of my staff, may have the privilege of the floor.

Mr. McGOVERN. I make the same request for Robin Carpenter, of my staff.

Mr. CHAFEE. Madam President, I make the same request for Miss Mimi Feller, of my staff.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CHAFEE. Madam President, first, I want to pay tribute to the distinguished chairman of our subcommittee (Mr. BENTSEN) for the very able leadership he has given in this matter and to say what a pleasure it was to work with him through all the hearings and the markup on this bill. I have considered it a district treat.

Also, Madam President, I want to pay tribute to the chairman of our full committee (Mr. RANDOLPH) who has given us very able leadership, and the ranking minority member, Senator STAFFORD of Vermont. Both of them have been very, very helpful. As was pointed out by the chairman of our subcommittee (Mr. BENTSEN) in his remarks, these gentlemen have long experience in improving the road and highway system of our Nation.

Madam President, the chairman of our subcommittee presented an excellent summary of the Federal Aid-Highway Act of 1978. I wish to associate myself with his views on this bill and say that he and I have agreed on most of the major provisions through the subcommittee deliberations and through the full committee deliberations.

At this time, I want just to touch briefly on some of the major features of the legislation. I believe the provisions to speed completion of the Interstate System are extremely important. For example, as was pointed out, those States that do not use their funds within 2 years, those funds are lapsed back into the trust fund so that the States who are prepared to move ahead can do so. That is a new provision in this act. I believe that it will prove very effective.

Taken together, the changes in the funding procedures should insure that States receive funds equal to their capability to move ahead with interstate construction. These provisions will reduce the large sums of money tied up on projects that the States are not yet ready to move on.

Another provision in this bill also requires the States to make final decisions by September 30, 1982, on which routes they will proceed. In other words, the thrust of this measure is to get on with the construction of the interstate highway program. As the chairman pointed out, now we have 90 percent of the mileage of this program built—90 percent. Yet 33 percent of the funds for this program have to be spent on the last 10 percent of the program. That is not because the last 10 percent is the most difficult section; it is because the delays have caused these remaining sections, the last 10 percent, to rise in price through inflation, through escalation, through all the problems that we are familiar with.

By 1986, these routes or substitutes must be under construction or completed. Firm dates for these decisions are needed, as less definite deadlines in both the 1970 and 1973 highway acts have been ineffective. The country has been preoccupied too long with completing the Interstate System. It is time to get a fresh perspective on highway and transportation needs and the appropriate Federal role in meeting these needs.

As the chairman has mentioned, the mere cost of highway construction has gone up over 200 percent in the last 7 years. So what we have done in this bill is to require that the routes be chosen by September 30, 1982, and by 1986 these routes or substitutes have to be under construction.

In other words, let us get on with it.

People might say, "Well, there might be delays," and so forth. We have not allowed any exceptions in the 1986 deadline.

Now, we have to reconsider this bill every 2 years. So, if there are problems, we can consider those as they come up.

But we say to the States, "Get on with it. If you delay, you delay at your own risk."

As our Nation grew, Madam President, and the population shifted during the last several decades, we planned and designed extensive new highway systems. When this program started, there was plenty of land around. Environmental laws were not yet passed. Costs were lower. People wanted the roads built. We wanted to connect the communities, encourage the flow of commerce from city to city.

But now we need to redirect our thoughts to the way of making more efficient use of highways already in place. This involved increased attention to maintaining, improving and adapting our roads.

Official and unofficial reports from around the country, as has been mentioned by the chairman, suggest that portions of the interstate are already badly deteriorated. The Federal Highway Administration report estimates the costs of needed resurfacing and reconstruction of the older sections of our interstate amount to some $2.6 billion.

So the committee considered this and we continued the authorization of the so-called 3R program, for restoration, resurfacing, and rehabilitation.

In addition, we have strengthened the requirements that States adequately maintain the interstate routes.

These requirements reflect the committee's view that there is an overriding national interest in maintaining these expensive interstate highways at their peak efficiency.

What we want to do is to squeeze the highest possible productivity out of the 40,000-some miles already in existence.

While current funding for the 3R category of resurfacing, rehabilitation, and restoration is relatively low, in future years this will be a greater part of our concern. The needs for interstate reconstruction may vary from year to year and the States will still want to have the flexibility to use these funds in the most productive manner.

This bill, S. 3073, provides this flexibility by permitting States to use the 3R funds on other primary roads whenever interstate needs have been met.

Another important thing we have done here, Madam President, is that we have reduced the Federal share for the interstate 3R from 90 percent to 70 percent.

We might say, "Well, if we are anxious to keep the roads repaired, why cut down the share of the Federal contribution?"

The Federal share for the primary system is already 70 percent. By making the State matching requirements for the interstate and the primary systems the same, we should eliminate any temptation for a State to undertake low priority interstate work instead of doing needed primary work.

In other words, we are looking at the whole highway system as a unit and, certainly, we have seen many instances in the States where they will proceed to upgrade and do useless and, indeed, wasteful projects on the Interstate System because it is 90-percent Federal dollars.

In other words, it only costs the States 10 cents, so they go ahead and spend the money.

There is another measure in this bill to discourage unwise use of Federal funds. The States are prohibited from spending interstate construction funds to clear zones adjacent to existing interstate roads.

Under existing regulations, the States can use the 90-percent funds to eliminate trees and other natural features from within 30 feet of the interstate highways.

I am personally very familiar with such projects which were undertaken, not because these obstacles 30 feet from the edge of the highway had a high priority on the State's list, but because, again, the State wanted this easy Federal money.

No one pays for the Federal money, so that the States take it and spend it in devastation of the sections adjacent to highways.

So this bill requires that where they want to do these types of measures, the State has to put up 30 percent of the cost. This should insure that this type of work will only be done where needed and not as a mere means of using up Federal dollars.

During hearings the subcommittee heard from several witnesses that heavy vehicles—in other words, those carrying large amounts per axle and large amounts per vehicle—do damage to the highway to a far greater extent than more numerous, but lighter vehicles. The heavier the vehicle and axle loads, the higher the vehicle's contribution to road deterioration.

This is a proven fact.

Several provisions in the bill address this problem. States for the first time are permitted to use Federal-aid funds to purchase and install scales for monitoring vehicle weights.

Up to this time, we have not permitted the Federal dollars to be so used. The scales are expensive and a lot of States have not built scales. As a matter of fact, my State is one of those. Also, the Secre-

tary of Transportation is clearly given authority to require documentation from the States to show that they are adequately enforcing weight laws.

Unfortunately, they are not doing it, and, if they do not, they can lose their Federal aid assistance.

Finally, two studies are called for. One requires the Secretary to evaluate the effect and desirability of reducing those State weight limits which are currently in excess of the 80,000 pounds which the Federal Highway System mandates.

What happened is when we put in this program we grandfathered in certain States and let them have higher than the 80,000-pound limit. The question now is whether we should permit those States to continue to have those higher weight trucks running on their highways—they are not their highways, they are our highways since they are Federal aid highways.

We started off, Madam President, by requiring that those States come down to the Federal limit. But I must say, we received considerable mail from our States, and calls. So we said, "All right, we will have a study on it."

It is my hope, before we rewrite this bill 2 years from now, that we will have have the information and recommendations on how best to limit road damage caused by excessively heavy vehicles.

The second study involves cost allocation. It will examine existing revenue sources of the highway trust fund to determine if taxes on the various classes of highway users are equitable.

What is the tax on trucks? Is it fair? The tax on automobiles or tires, are all these fair?

Such a study will be useful in distributing tax burdens among highway user classes. In addition, this study should lay the foundation for evaluating indirect costs of highway transportation. This could lead to more informed decisions on Federal investments in various transportation modes.

I do believe there is much that can be done to improve decisions on transportation investments at all levels of government.

Madam President, I was sorry that an effort to consolidate transit and highway planning procedures was not successful. In other words, there was a suggestion that we combine the planning for transit and the planning for highway—put them all in one package, since it is all transportation. The exact requirements of the planning procedure were less important to me than the need to show that the Federal Government regards transit and highways as complementary and not conflicting programs. In other words, look at them together and do not have them compete.

Under existing Federal programs, transit and highway planning funds are distributed by different procedures, and there is an implication that the planning for the two programs is different. This is detrimental, in my judgment, to the creation of an integrated planning process, which is so badly needed in urban areas.

The section included by the subcommittee and adopted by the Banking Committee in the Federal Public Transportation Act of 1978, S. 2441, would provide a single funding process for transit and highway planning. I think this could be useful.

The committee bill does add some specificity to the statement of goals in the existing planning provision. On my motion, the committee agreed to make it explicit that the lessening of certain adverse social, economic, and environmental effects are goals of our national transportation policy. In my judgment, we need to make our transportation systems "good neighbors" to the people and the communities they serve. Many of our cities are old and polluted. They need revitalization. The competition, as has been mentioned by our chairman, for the national budget, our dollars, is intense. Scarcity of energy supply is on our minds, as can be seen from the fuel efficiency standards for autos and incentives for carpools; so we cannot any longer build in a vacuum.

Senator BENTSEN has ably described other provisions of this act. I think the bill responsibly addresses bridge needs, which are a serious problem in many States. The program and funding changes should produce major improvements in the effectiveness of the program.

Also, I am in complete agreement with the provisions for program consolidation and increased transferability among categories. One of the things we have to fight against in these highway programs is to have a little money for this and a little money for that and a little money for the third thing. That is not necessarily in the best priorities in the States. So we combine the money as much as possible in this bill and let the States use it where they think it would be most productive.

A final major thrust of this bill, as Senator BENTSEN mentioned, is in the whole area of funding levels and Federal-State involvement. The Federal share of noninterstate Federal highway projects was 50 percent up to 1973. Then it went up to 70 percent. This year, there is a push to go to 80 percent. As a matter of fact, the administration so recommended. But we resisted that. Where are we going to stop? We want to see the States get the maximum amount of highways built for the limited amount of Federal money there is, and we feel strongly that the Federal share should be restricted to 70 percent on the noninterstate State programs.

I must say that I suspect we are going to be under a good deal of pressure to push that up, but I think it is well to bear in mind that the Federal Government not only has a limited amount of money, but also, we are running a tremendous deficit—some $40 billion to $50 billion—so I think the Federal share should be kept at 70 percent.

One last general issue deserves discussion: overall funding levels contained in the bill. The committee made a conscientious effort to relate authorizations to expected highway trust fund revenues. In other words, we are spending more than we will have coming in from the various taxes that go into the highway trust fund. The Senate bill thus far can approximately be supported by current highway taxes. Cars will consume less gasoline, and less money will come into the trust fund. Not taking into account fuel efficiencies soon to be realized, the Congressional Budget Office indicates that the Senate bill may require an increase in revenues of less than 2 percent.

Authorizing a program now which is based upon anticipated increases in the gasoline tax or some other anticipated tax increases is irresponsible. I do not think anybody believes that an effort to increase the gasoline tax over the 4 cents per gallon is going to pass Congress.

Madam President, this is a good bill. It strikes a balance between needs and revenues. It insures that States and the Federal Government remain partners in the highway building enterprise. Finally, it makes adjustments in overall program structures to recognize new priorities.

I urge my colleagues to support the Federal-Aid Highway Act of 1978.

Madam President, I reserve the remainder of my time.

Mr. STAFFORD. Madam President, will the distinguished manager of the bill for the minority yield me 5 minutes?

Mr. CHAFEE. I yield to the Senator from Vermont, the distinguished ranking minority member of our committee, such time as he may require.

Mr. STAFFORD. I thank the distinguished Senator.

Madam President, I should like to start by complimenting the managers of the bill, the Senator from Texas (Mr. BENTSEN) and the Senator from Rhode Island (Mr. CHAFEE), for the outstanding way in which they have giuded this bill through the Committee on Environment and Public Works. It is always a pleasure to work with the chairman of the committee, Senator RANDOLPH, whose guidance is always very helpful in proposing sound legislation for the highway systems of the United States.

The bill has been covered so well by Senator BENTSEN and Senator CHAFEE that my comments will be brief and will be directed to another part of the bill, in the main.

At the outset, Madam President, I want to add my endorsement of S. 3073, the Federal Aid Highway Act of 1978, to those already given by the distinguished floor managers and the chairman of the Committee on Environment and Public Works.

I believe the committee has reported a bill which authorizes responsible spending levels and provides necessary program changes to achieve important national goals.

The bill strikes a proper balance between interstate completion and the rehabilitation and restoration of older roads. It is my personal belief that the Federal role in the near future will be even more dramatically one of preserving existing roads and service levels.

It may be, Madam President, that many of us and many other people in the country have forgotten the fact that when the Federal aid program was originated for construction of the Interstate Highway System, one of the basic purposes was that of national defense. A system of major roads which would make possible, if necessary, the rapid move-

ment of men and material in any national military emergency the Nation might face. That still is one of the purposes of the Interstate Highway System and the associated systems that serve this country.

In general, the bill provides greater flexibility to States and encourages better use of Federal highway dollars. A continuing emphasis on low-cost safety construction is a feature of the bill I especially applaud.

I do, however, have one general area of concern. It is less with what S. 3073 contains than with what I see as a trend.

As we worked on the bill in full committee, several amendments to the highway beautification program were raised. This program is only a small part of the total Federal-aid scheme but, in my opinion, is one which functions the least well, raises more controversy, and provides fewer benefits than any other program element.

It seems to me that we have succeeded in tying the hands of those States, such as my own, which want to move aggressively to clear highways of billboards. At the same time we have achieved very little in States which are less interested in the scenic value of their roads. We are fostering the worst of two worlds.

And at the funding levels provided by Congress since the program began in 1965 it is evident that the program has little support from its creators.

Several amendments proposed in the Senate committee and provisions actually adopted by the House Committee on Public Works and Transportation in its Surface Transportation Act strengthen my feeling that the Federal program will never achieve its original goal. In fact, in some instances it seems as if the Beautification Act has been turned around and now promotes rather than discourages billboards.

Because of the piecemeal dismembering of the beautification program by each succeeding highway act, because of the woefully inadequate funding levels, and because of the disruption it has caused in State and local beautification efforts, I have seriously entertained the idea of proposing what, in effect, would be a repeal of the Federal program.

Federal assistance would continue to be available to States which wanted it, but other States would be free to pursue their own programs without the threat of lost Federal highway aid.

Such a change could hardly result in fewer sign removals than we see currently and would permit faster progress in some States with strong State programs.

I did not offer such an amendment in committee, as the changes we made in the program were minimal and authorizations were higher than the funding levels of recent years. I was sorry to note the small amount appropirated for fiscal 1979 by Public Law 95–335.

I will not offer such an amendment during Senate debate on S. 3073 unless attempts are made to further weaken the program. I want my colleagues to consider, however, the possibility that repeal of the highway beautification experiment may ultimately prove to be the only way to further the goals originally sought.

Madam President, in closing I want to repeat my support for S. 3073. My concern over the future of the beautification program does not reflect on the merits of the bill as reported.

I especially want to commend the subcommittee chairman and the whole committee for their responsible actions in setting funding levels for the highway program. The levels are consistent with State's abilities to obligate funds and with expected highway trust fund revenues.

I urge the Senate to support the committee's bill and to reject proposals which woull cause a proliferation of programs and increase authorizations beyond those levels in the committee bill.

Madam President, I yield back the remainder of the time granted to me by the minority manager and yield the floor.

Mr. CHAFEE. Madam President, we reserve the remainder of our time.

The PRESIDING OFFICER. Who yields time?

Mr. BENTSEN. Madam President, I yield time to the distinguished chairman of the committee such as he desires.

The PRESIDING OFFICER. The Senator from West Virginia.

Mr. RANDOLPH. Madam President, we are discussing the provisions of S. 3073 with the leadership and the members of our committee, particularly the chairman of the Transportation Subcommittee, Mr. BENTSEN of Texas, and Mr. CHAFEE of Rhode Island, and, of course, the ranking minority member of our committee, Mr. STAFFORD of Vermont. These three knowledgeable members of the Committee on Environment and Public Works have addressed substantially the provisions of S. 3073.

We are faced with a critical time in the development and strengthening of the road system of our country.

Transportation continues to be a major influence in our Nation's development. As our methods of travel become more modern and sophisticated, the American lifestyle changes in response. Thanks to our coordinated system of air, water, and surface transit, we are now the most mobile people on Earth.

Perhaps no transportation initiative has played a larger role in America's growth than the Federal-aid highway program. Today the continental United States are joined from coast to coast by 975,000 miles of federally aided highways. More than 90 percent of the 42,500-mile Interstate System is open to traffic. The program has proved so successful because it remains flexible. Since the pioneer Federal-Aid Road Act was passed in 1916, the highway program has continually responded to our society's changing transportation needs.

I am proud that S. 3073 represents another major step forward in the Federal-aid highway program. It authorizes over $1 billion annually in additional highway construction funds beyond the current levels. Just as important, the bill makes several substantive improvements in the financing of Federal highways.

For example, S. 3073 provides the legislative groundwork for completion of the Interstate System by expediting funds to States which can best put them to use. Millions of Federal interstate dollars will no longer languish in the accounts of States which are not prepared to use them. Instead interstate funds will be available for only 2 years instead of the present 4 years. Should they lapse, the Secretary of Transportation will redistribute them to States, like my home State of West Virginia, with ready-to-build interstate propects. The costly inflationary impacts of unnecessary project delays will be minimized.

In addition, the legislation gives priority to the construction of missing intercity links in our interstate system. Our expanding economy is dependent upon our highway system, particularly the interstate, for most of its transportation needs. To facilitate the cross-country exchange of farm products, raw materials, manufactured goods, and energy sources, a truly connected national highway network is a necessity. S. 3073, therefore, targets interstate funds to the completion of the so-called essential interstate gaps.

In addition, the committee determined that the current gap designation does not adequately reflect all gaps in the Interstate System. S. 3073 revises the essential gap definition by including two-lane toll roads already eligible for interstate assistance. Thus, two important routes, the West Virginia Turnpike and I–75 in Florida, qualify for priority treatment as essential gaps. The Congress has already recognized the national significance of these highways. The Federal-Aid Highway Acts of 1970 and 1973 authorized that they be brought to four-lane interstate standards.

Those who have traveled the West Virginia Turnpike know firsthand that in its current state, it is truly an essential interstate gap. The congested two-lane road joins our State capital of Charleston with Beckley, W. Va. As part of both I–77 and I–64, it serves as major north-south and east-west connector. Expediting construction of the turnpike as quickly as possible is a vital part in completion of a unified national system.

The bill's added emphasis on interstate completion is coupled with closer attention to the condition of existing interstate mileage. To protect the enormous Federal investment in our Federal-aid highways, rehabilitation must become a Federal priority. S. 3073 focuses on the 3R program and refines requirements for adequate interstate maintenance by the States. In doing so, the legislation provides smooth transition to the approaching postinterstate era which, with the financial mechanisms for accelerated construction contained in the bill, is within future reach.

S. 3073 addresses another serious road deterioration problem, weather-related damage. By broadening the definition of construction, States may use their Federal highway funds to seal the road surface and prevent potholes. The last two winters have been particularly damaging to our roadways. Almost no State escaped the effects of the severe temperature changes during 1977 and 1978. S. 3073 gives the States the added flex-

ibility to prevent potholes during construction and repair of Federal roads.

With the distinguished Senator from Kentucky, I have proposed another amendment for addressing road rehabilitation in the highway program. Nearly every State has or will soon experience the destruction of highway corridors serving the movement of vital energy supplies. As the Federal emphasis has shifted toward coal and other domestically produced resources, regional systems of energy roads must be adequately maintained. Many States have already suffered the consequences of increased coal traffic. Other States, particularly in the West, will undergo similar road deterioration problems caused by expanding energy production in the near future. The proposed amendment is yet another addition to the highway program in response to America's changing national priorities and needs. Congress and the administration have recognized that a sound energy policy, which I think includes an adequate energy transportation system, is of foremost importance.

Perhaps the most widely recognized highway need in the country is greater Federal involvement in bridge replacement and repair. The Department of Transportation estimates that 33,500 bridges on the Federal-aid system are in need of replacement, and the need is over twice as great for off-system bridges. These are startling figures in light of the all too often tragic consequences of bridge collapse. I need not remind my colleagues of the Silver Bridge catastrophe in Point Pleasant, W. Va., which preceded the establishment of the special bridge replacement program, which I authored in 1970. Given the number which remain to be replaced, however, the current $180 million annual authorization is clearly inadequate. S. 3073 increases the Federal allocation to $450 million, which represents a more realistic assessment of our national bridge crisis.

Another meaningful addition to the special bridge program is the creation of a discretionary bridge fund. Because construction of new bridges over major waterways is very costly, it is often beyond the financial capability of many States to undertake important projects. S. 3073 authorizes a discretionary bridge category from which the Secretary provides assistance to States for costly high traffic bridges over major waterways. Funds for the program are deducted from the primary and bridge replacement authorizations and would amount to approximately $48 million yearly. Prior to project approval, all environmental reviews and navigational assessments must be completed.

One project which would be eligible for assistance under this program is a bridge across the Ohio River in Huntington, W. Va. This facility is essential to the economic development of the tri-State area and to the mobility of people and goods, particularly coal, across the Ohio River.

The Senate highway bill is landmark legislation. It symbolizes the best in both fiscal responsibility and programmatic innovation. S. 3073 builds on the responsiveness and flexibility which have hallmarked the modern Federal highway program since its inception in 1956. The creation of this fine piece of legislation was very deliberate indeed. I wish to take this opportunity to commend Senator BENTSEN for his leadership as chairman of the Subcommittee on Transportation and the other Members of the Environment and Public Works Committee, Republican and Democrat alike. With the cooperation of the administration and the entire transportation community, we worked hard and long to design a progressive highway bill which embraces and builds on the best of the Federal highway program. And where necessary, we have instituted changes to make most creative and efficient use of our limited highway trust fund dollars.

This is a particularly crucial time for the Federal-aid highway program. It is essential that the Congress adopt highway legislation before the end of the second session of the 95th Congress. Without it, an estimated 39 States will be forced to cease various aspects of their construction and rehabilitation programs. We must act quickly on S. 2072 to insure that this vital Federal program continues, uninterrupted.

UP AMENDMENT NO. 1667

(Purpose: Amends S. 3073, the Federal aid highway act to increase the authorization for the special bridge replacement program and to require a minimum and maximum range of funds that can be spent for the rehabilitation and replacement of bridges that are not part of the Federal-aid highway system)

Mr. CULVER. Madam President, I send to the desk an unprinted amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Iowa (Mr. CULVER), for himself and Mr. HEINZ, proposes an unprinted amendment numbered 1667:

On page 4, line 5, strike the numeral and—

Mr. CULVER. Madam President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 4, line 5, strike the sum "$450,000,000" and insert in lieu thereof, the sum "$525,000,000".

On page 34, strike lines 13 through 25 and insert in lieu thereof, the following:

"(7) Section 144(c) of title 23, United States Code, is amended by adding the following at the end thereof: Not less than 15 per centum and not more than 25 per centum of the funds authorized to any State to carry out the provisions of this section shall be expended for the replacement or rehabilitation of bridges that are not on any Federal-aid highway."

Mr. CULVER. Madam President, this amendment increases the authorization in the special bridge replacement program to $525 million, and requires that no less than 15 percent and no more than 25 percent of these funds be spent on the replacement or rehabilitation of bridges that are not part of the Federal-aid highway system.

Madam President, our original amendment, which was cosponsored by a number of Senators, called for a $600 million authorization for the special bridge replacement program. In the judgment of many of us, that amount of funds could very effectively be used to meet the pressing bridge replacement needs of this country.

However, after consultation with the floor managers of this bill—and I wish to commend them both for their leadership and their concern, not only in this area but in those other important areas that are involved in this legislation—we have agreed on a compromise level of funding of $525 million, which is represented in the amendment sent to the desk by the distinguished Senator from Pennsylvania (Mr. HEINZ) and myself.

Now, this amount of $525 million does represent a reasonable first step in providing an adequate funding level that hopefully can begin to reverse the nationwide bridge repair situation.

I believe that adoption of this amendment is necessary to make this program more consistent with urgent national needs to reverse the serious state of disrepair which characterizes thousands of bridges both on and off the Federal-aid highway system.

In general, we have one of the finest and most efficient road systems in the world. But one of the major links in any effective road system is safe and well-constructed bridges. And this link is deteriorating at an alarming rate. Our network of roads and highways is all too often connected by outmoded or antiquated bridges that are unsafe and better attuned to the requirements of 19th century transportation and commerce than that of the 20th century.

Over 70 percent of the estimated 564,000 bridges in this country are more than 40 years old, which means that 390,000 were built during the Great Depression or earlier, before modern, uniform design and construction standards were instituted. They were constructed to handle the Model T car—not modern commercial vehicles and farm machinery. This ever-expanding volume of traffic simply hastens the deterioration of these structures and compounds the inability of States, cities, and counties to satisfactorily maintain their bridges.

The number of unsafe bridges in this country is simply appalling. At least 105,000 bridges are classified by the Federal Highway Administration (FHWA) as either structurally deficient or functionally obsolete. That means that about one out of every six bridges in the entire United States cannot meet Federal standards of safety or efficiency. Merely calling a bridge "deficient" or "obsolete", however, does not convey a sufficiently realistic or vivid understanding of the hazards and inconveniences.

The term "structurally deficient" does not adequately describe a bridge that has to be posted at reduced weight limits or closed entirely because rusting steel girders crack at the slightest pressure or concrete sections crumble and buckle under the weight of a car or truck. Every 2 days, another "structurally deficient" bridge in the United States collapses like a house of cards,

severing the road segment, disrupting traffic, and endangering lives.

Similarly, calling a bridge "functionally obsolescent" does not illustrate the major safety problems of bridges too low or too narrow to accommodate traffic efficiently. Many "obsolete" bridges are so narrow that trucks literally bump as they pass in opposite directions. The decks of other bridges are narrower than the approaching roadway, causing motorists—caught off guard—to lose control of their cars. Each year, over 1,000 fatalities result from collisions with a bridge abutment or overpass. Whether these structures are "deficient" or "obsolete", we have to underscore the fact that these bridges are dangerous and a threat to the well-being of everyone who uses them.

It is a popular misconception—and an erroneous one—that these unsafe bridges are situated in rural areas and have little implication for the nationwide flow of transportation and commerce. While many physically inadequate bridges are on low-volume roads, many of the worst bridges are found on our major highways. Of the 105,000 bridges listed by the Federal Highway Administration as unsafe, over 33,500 of them are on-system. The estimated cost of fixing these unsafe bridges which pockmark the Federal system is a staggering $12.5 billion.

Unfortunately, often only a tragedy forces public attention to focus upon a problem. In 1968, the Silver Bridge at Point Pleasant, W. Va., collapsed during the evening rush hour and fell into the Ohio River. Forty-six people died because of that bridge failure, and the resulting public outcry ultimately led Congress to enact the special bridge replacement program in 1970. Senator RANDOLPH, the chairman of the Committee on Environment and Public Works, provided significant leadership in formulating this program, which utilizes the Highway Trust Fund to help States replace some of their most critically deficient structures on the Federal system.

While it proved to be a constructive and necessary first step in recognizing and attempting to stem the growing deterioration of bridges, the special bridge replacement program has not been completely successful in reversing the trend of more unsafe bridges at increasingly higher replacement costs. Despite this program, we are continuing to lose ground in our attempt to solve our national bridge crisis.

The amount of funds made available to the States under the special bridge replacement program has been woefully inadequate when compared with our pressing unmet needs. During the 7 years of the program, only $835 million has been authorized and made available for obligation by the States. Currently, the annual authorization for all 50 States under this program is $180 million. During the last 2 years alone, by comparison, the cost of replacing unsafe bridges on the Federal highways has increased by over $2 billion. Like the man on the treadmill who has to run harder and harder just to stay where he is, a substantial increase in the special bridge replacement program is warranted merely to keep the vast number of bad bridges from accelerating even more sharply.

Another inadequacy of the special bridge replacement program has been its complete neglect of the monumental problem resulting from unsafe bridges located on roads not included in the Federal-aid system. In the past, none of these bridges has been eligible for special bridge replacement program funds despite their critical importance for the economic and personal well-being of small communities. The Federal Highway Administration conservatively estimates that 72,000 "off-system" bridges are deficient or obsolete. As staggering as this figure is, it may well underestimate the extent of the "off-system" problem, since systematic inventories have only recently begun. One recent survey of the National Association of Counties concludes that over 160,000 such bridges are unsafe. At a minimum, reconstructing the 72,000 bridges listed by the FHWA represents an additional $12.6 billion price tag.

My own State is representative of many rural and agricultural areas with substantial "off system" bridge needs. With about one-half of its total production related to agriculture, Iowa's economy is critically dependent upon an efficient and cost-effective transportation system. Particularly at a time of economic difficulty for midwestern railroads, it is imperative that Iowa and other Midwestern States be able to ship their produce to markets over safe and well-maintained local and county roads. Each year, over 45 million tons of grain and 5 million tons of milk traverse the 21,000 bridges located on Iowa's "off system" roads. An estimated 7,000 of these bridges are inadequate. They place a heavy economic burden upon farmers who must detour miles out of their way to get modern tractors—which weigh 10,000 to 12,000 pounds—out to fields or commodities to market. This results in higher costs to consumers and producers alike.

In Iowa and elsewhere, it is commonplace for school children to get off buses and walk across bridges that cannot accommodate loaded buses, before continuing their ride on the other side. Iowa has over 4,000 bridges that a loaded school bus cannot cross.

In other communities, fire trucks have been unable to get to burning houses in time because bridges across the most direct roads could not accommodate the weight of the vehicle. These are not isolated incidents; they are facts of life that citizens in small communities and rural areas must live with every day.

The problem that local and county officials have in trying to maintain or reconstruct inadequate bridges on local roads has been accentuated by the recent reassignment of a significant number of bridges—primarily from secondary roads in rural areas—to the "off system" network. The 1973 Federal-Aid Highway Act mandated this reassignment, but did not amend the special bridge replacement program to extend Federal funds to any of these formerly Federal-aid highway bridges. This realinement has placed an additional economic burden upon local governments already experiencing great difficulties in meeting their bridge replacement needs. Iowa's Federal system network was reduced from 33,000 miles to 13,000 miles.

Some 1,680 bridges were reassigned to the "off system" at an estimated replacement cost of $100 million. Nationally, there are 14,000 fewer bridges on the Federal-aid system than there were in 1976. While some of these bridges have been replaced with Federal funds from the "safer off system road program," the Federal Government has compounded the local bridge problem by adding outmoded and unsafe spans to the "off system" without concurrently providing financial resources through the special bridge replacement program to help alleviate this additional burden.

Mr. President, as a member of the Transportation Subcommittee, I held a series of hearings which examined the critical bridge problem facing this Nation. Testimony from Federal, State, and local transportation officials were unanimous concerning the need for a more comprehensive bridge replacement program. I introduced legislation designed to expand that program in order to bring the Federal effort more in line with the nationwide magnitude of the problem. S. 394 amended the special bridge replacement program to permit funds to be spent on the rehabilitation—as well as replacement—of existing bridges. By allowing Federal dollars to be used to repair bridges where it is cost-effective to do so, States can leverage their expenditures in a more satisfactory fashion. They would no longer exhaust their funds replacing completely one or two expensive structures that could be repaired at lower cost. In order to help meet the "off system" crisis that has been neglected for so long, I also provided that a minimum of 5 percent of special bridge replacement funds be directed specifically to bridges under the jurisdiction of counties. S. 3073 also authorized an annual increase in the special bridge program from $180 million to $600 million annually.

Several of these provisions have been incorporated in the Federal-aid highway legislation we are considering now. I want to acknowledge the efforts of the Senator from Texas, the chairman of the transportation subcommittee, in expanding the special bridge replacement program. The amendment that I am offering in no way detracts from those efforts, but complements them by providing additional resources to reverse this $25 billion problem which threatens our lives.

This amendment increases the authorization for the special bridge replacement program from $450 million to $525 million. These additional funds can be used by the States to accelerate the rehabilitation and replacement of deficient and obsolete bridges. During the last 7 years, 1,648 bridges have been replaced—or are currently being replaced—with special bridge replacement funds. This represents only about 10 percent of the more than 16,000 bridges that States have registered with the FHWA as potential recipients of these funds. Addi-

tional moneys can be directed toward many of these bridges that have already been identified as priority candidates for replacement.

A $525 million can also be obligated by the States in a timely and effective manner. The FHWA's inventory of State highway departments indicated that $493 million could be obligated by the States in 1978 for work on Federal system bridges alone. In its most recent report to Congress, the FHWA also stated that "in light of all the congressional activity that has transpired this past year regarding the Nation's deficient bridges, the States are expecting an expanded bridge replacement and rehabilitation program. The Federal Highway Administration has encouraged the States to obtain required permits and to prepare plans in anticipation of the availability of bridge construction funds." With the States gearing up to expand their bridge programs—and with "off system" bridges becoming eligible for specific Federal special assistance for the first time—$525 million does not tax the ability of the States to plan for the obligation of these funds in an orderly and constructive fashion.

Most importantly, an increase in the authorization by $75 million does not threaten the integrity of the highway trust fund nor provide an unwarranted or unjustified commitment of resources by the Federal Government.

Mr. President, we are all aware that the Federal Government has a $60 billion deficit, while a majority of States enjoy budget surpluses. During the hearings I conducted on the nationwide bridge problem, I repeatedly cautioned State, local, and county officials that a consistent, good faith effort would have to be forthcoming from them in meeting their share of the costs of bridge replacement and rehabilitation. All too often, States have relied on the Federal Government to commit an overabundance of resources in order to meet pressing needs. Perhaps the States have been too complacent by seeking an almost exclusive reliance on Federal moneys to meet State and local problems in some instances. I firmly believe that the effort to reduce the number of unsafe bridges must be a genuine Federal-State-local effort. The Federal Government cannot—and should not—undertake the task of trying to correct a $25 billion problem by itself. My amendment does not change the Federal cost share formula from that in S. 3073. States must demonstrate that they consider this of sufficient importance to place a high priority on authorizing the revenues necessary to obtain Federal matching funds. But I also strongly believe that an increase in the Federal authorization to $525 million is a prudent and responsible use of public funds.

This amendment also requires that a minimum of 15 percent and no more than 25 percent of the funds a State receives will be expended for work on bridges not part of the Federal system. This is, I believe, preferable to the permissive language currently in S. 3073 which may allow up to 30 percent of the special bridge replacement funds to be used for rehabilitating or replacing structurally deficient bridges on non-Federal roads.

To many towns and markets whose economic vitality and community well-being depend upon an adequate transportation system, modern and safe bridges are absolutely essential. Yet, one reason that "off system" bridges have deteriorated so dramatically in recent years has been their ineligibility for special bridge replacement program funds. Local and county officials have often had to defer maintenance of these structures because the full financing of bridge costs is well beyond their means. I strongly believe that—having recognized the seriousness and extent of the "off system" bridge crisis—this legislation should assure that a minimum amount of funds do, in fact, reach these bridges. If we are really serious about reversing the "off system" situation—remembering that at least 72,000 such bridges are unsafe—a level of funds to these "off system" bridges is warranted.

Mr. President, the very fact that we are discussing the nationwide bridge situation is an encouraging sign that we are finally going to make a consistent, sustained effort to turn this $25 billion problem around. No practical solution can solve this backlog overnight. But increasing the authorization for the special bridge replacement program to $525 million and directing between 15 and 25 percent of those funds to the long neglected "off system" network is a necessary first step in addressing this national problem in a systematic and effective fashion.

Mr. President, I ask unanimous consent that "Unsafe Bridges," an article in the current edition of Transportation USA published of the Department of Transportation, and this table depicting the number of deficient and obsolete bridges on the Federal-aid system be included as part of the RECORD.

At the same time, the amendment puts a 25-percent ceiling on the amount of funds that a State can direct to its "off system" bridges. This "cap" assures that the majority of funds are spent for the reconstruction or replacing of "on system" bridges which do carry the majority of people and vehicles. The amendment thus provides an equitable and reasonable allocation of funds between the two systems.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

UNSAFE BRIDGES

(By Elliott Himelfarb)

Tragedy struck the small West Virginia town of Point Pleasant during the height of the 1967 Christmas shopping rush, when the Silver Bridge gave way and fell into the icy waters of the Ohio River. Forty-six people died—the largest number ever killed in a highway bridge disaster.

The collapse began on the Ohio side and moved rapidly eastward toward West Virginia. Within one minute after a suspension support joint separated, the 700-foot center span, both 380-foot side spans, and the two towers had fallen. Thirty-one vehicles on the bridge fell with the structure.

Not all deficient bridges kill people, but once a bridge is weakened by age or a structural defect, the potential for catastrophe exists.

When the Federal-Aid Highway Act was signed into law in the spring of 1968, it contained a provision for the establishment of a nationwide bridge inspection program—the direct result of the Silver Bridge collapse a few months earlier. The inspections that followed revealed the shocking extent to which the bridges on U.S. roads had deteriorated: approximately 105,000 bridges need to be rehabilitated or replaced. The estimated cost is a staggering $25 billion.

"The condition of our bridges is one of this country's major highway problems," says Acting Federal Highway Administrator Karl Bowers. "It's not just that many of them are deficient. Poor bridges lead to wasted fuel when drivers have to take long detours to get where they are going. Then there is the added problem of traffic tieups when forced rerouting puts an overload on roads not designed to handle these volumes of traffic."

Winters can be especially hard on bridges, and the past two have been particularly cold and wet in some parts of the country. As the sign says, "Bridges freeze before roadways" since they get the effects of frigid winds from both top and bottom. The action of freezing and thawing can damage a bridge, and the salt used to keep snow and ice from accumulating can seep through the deck to corrode the reinforcing steel and crack the concrete.

Another problem is old age. A good many of the nation's bridges were built prior to 1935.

And overloaded trucks can do great damage to even the newest of bridges.

The Federal Highway Administration's bridge design and inspection branch, headed by Stanley Gordon, puts inadequate bridges into two categories: structurally deficient and functionally obsolete. "A structurally deficient bridge has a defect that has caused it to be restricted to light vehicles or closed," Gordon says. "A functionally obsolete bridge is one whose deck geometry, load-carrying capacity, clearance, or approach roadway alignment can no longer safely service the system of which it is an integral part."

Out of the 234,000 bridges on the federal-aid highway system, FHWA has found about 33,500 to be deficient. Of these, about 6,900 are structurally deficient and 26,600 are functionally obsolete.

As a means of dealing with this overwhelming problem, Congress created the Special Bridge Replacement Program in 1970. Funding was supplied for the replacement—but not the repair—of deficient bridges on the federal-aid system. By the end of 1977, work on 1,648 bridges had been approved and funded. Approximately one-third of these are now open to traffic.

The total amount of money originally allotted to the program was $816 million, of which $655 million was obligated to the states from 1970 through 1977. Since there are so many deficient bridges around the country, the demand for these funds is high. In fact, during fiscal year 1977, many states exhausted their allocations. As a result, the federal government advanced them funds from their fiscal year 1978 allocations so some important projects could keep moving.

To help decide which bridges should be replaced first, the Federal Highway Administration is working with state highway departments on assigning a rating to each bridge. The lower that rating, the higher the priority for replacement. The ratings take into account such things as structural soundness, safety, and necessity for public use.

The federal government is also encouraging the states to use regular federal-aid highway funds for bridge replacement whenever possible, and some work is being done entirely with state and local money.

A major difficulty is that the money from the Special Bridge Replacement Program can

be used only for bridges on the federal-aid highway system, so the program is no help to the many deteriorating bridges that are off the system. In fact, about 70 percent of the more than 100,000 deficient bridges identified by FHWA are not on the federal-aid system.

Many of these bridges are in rural areas and are the only bridges for miles around. Crossing a particular bridge may be the only convenient way for a farmer to get his crops to market, for shoppers to get to stores, or for children to get to school.

Pope County, a rural area in southern Illinois, has a serious problem with deficient bridges. In 1975, a truck carrying the local road commissioner fell through a county bridge. The commissioner was killed, and the person with him was injured. Since school buses were using many similar bridges each day, the superintendent of the county school system became concerned that the children were not safe as they went to and from school.

It turned out that twelve bridges within the school district were able to support a weight of eight tons or less, not enough to carry a loaded school bus, which weighs in at about nine tons. Pope County's solution to the problem was—and is—to have the buses stop on the near side of a deficient bridge. The students all get out and walk across, the driver takes the empty bus across, the students get back in, and the trip continues.

Not only is this solution time-consuming, it also creates other problems: First, the driver is not able to maintain discipline while the children are outside on foot and he or she is maneuvering the bus across the bridge. Second, children exposed to rain or snow may have to spend the day in wet clothes. Third, and most important, since the bridges do not have hand rails, smaller children could fall off the side while they are crossing.

The superintendent wrote to the federal government and then appealed to his county highway department for help. He was told that it would cost more than $2 million to make the 12 bridges meet minimum Illinois standards. With only $18,000 available each year for bridge construction, it was considered "unlikely" that improvements would be made.

The Department of Transportation, through the Federal Highway Administration, has been giving support and advice to state and local efforts to upgrade bridges not on the federal-aid system. The Department hopes, however, that in the future it will be able to give more.

In its seventh annual report to Congress on the status of the nation's bridges, the Department recommended that the states be allowed to use up to 30 percent of their bridge allocations for work on bridges off the federal-aid system.

The report also recommended that the existing replacement program be expanded to include rehabilitation. This change would make the program more cost-effective since it takes a lot less money to fix a bridge than to wait until it becomes unsafe and then replace it.

Another recommendation calls for increasing the federal share of bridge-replacement costs from 75 percent to 80 percent, which would put the bridge ratio on a par with that proposed for other highway programs.

Finally, the report suggests that $450 million be authorized for each of fiscal years 1979 and 1980 and that $500 million be made available in 1981 and again in 1982.

This country's bridges are the weakest and most hazardous link in our highway network. As many of these structures approach the end of their useful lives, the amount needed to replace or rehabilitate them is overwhelmingly large. No one expects $25 billion to be made available right away, but neither does anyone want the inconvenience and danger of bridges that are unsafe to travel on.

The Special Bridge Replacement Program has been making a dent in the problem for seven years. If the changes being recommended this year are accepted, even more can be done to make sure we have no more tragedies like Silver Bridge.

LIST OF DEFICIENT BRIDGES ON FEDERAL-AID SYSTEM BY STATE

State	Total Federal-aid bridges	Structurally deficient	Functionally obsolete	Number of deficient bridges	Percent
Alabama	6,353	154	389	543	8.54

Mr. CULVER. I thank the Chair.

Madam President, I ask unanimous consent, on behalf of Senator NELSON, that Peter Connolly of his office may be accorded the privilege of the floor during consideration of this legislation.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CULVER. I am delighted to yield to the distinguished Senator from Pennsylvania, who throughout his service in Congress has been concerned with this particular problem and who has been so instrumental in fashioning this amendment. He appeared before our subcommittee and gave valuable testimony during the course of our earlier consideration of this problem. It has been a great pleasure to be associated with him in this common effort.

Mr. HEINZ. I thank the distinguished Senator from Iowa (Mr. CULVER) for the effective work he has done in the Senate Environment and Public Works Committee in behalf of making the bridge repair and rehabilitation program a reality.

I particularly compliment him for working so effectively with me and the other members of the committee to bring about this amendment, which would increase the sum for bridge repair and replacement to $525 million and insure that not less than 15 percent nor more than 25 percent of the funds authorized to any State be earmarked to carry out the provisions of the replacement and repair section, and that those bridges which are not on any Federal-aid highway system will be eligible for this help.

I am also very grateful to the other Members of the Senate Public Works and Environment Committee. I thank Chairman BENTSEN and I thank Senator CHAFEE for the long hours they have put in, including the time they spent listening to my testimony back on March 6, 1978, and for the very intelligent and probing questions that were asked at that session. I think that, as a result of their careful work, we can now say that we have come an enormous and very necessary distance in meeting an essential but heretofore unmet need. Senator CULVER has spoken at length on the problems of bridge repair and replacement in the United States.

Madam President, the present special bridge replacement program was established primarily as a result of a sobering tragedy which occurred 10 years ago at Point Pleasant, W. Va., when the Silver Bridge collapsed into the icy waters of the Ohio River, carrying 46 people to their deaths.

However, the existing program, the special bridge replacement program, is not working. At the 1977 replacement rate, 670 bridges, it would take 150 years

to replace existing deficient bridges, not to mention bridges which will fall into disrepair. For those who remember the Silver Bridge and other disasters, 150 years is too long a time to gamble that more rotting bridges will not collapse.

We must do something about the problem of unsafe bridges and we must do it fast. Inaction by Congress on this issue could cost lives. We have a chance today to act before tragedy happens, to anticipate it, and not simply to react to it. I would hope that we seize this opportunity.

There are 564,000 bridges in the United States, and 72 percent or 407,000 were built prior to 1935. In 1935, the first uniform design standards and construction material qualifications were instituted. Thus, the bridges constructed before this date are very likely to be unsafe by today's standards. Furthermore, bridge usage has changed drastically in the last 50 years; vehicles are heavier, more numerous, and travel at greater speeds. The impact of these changes on substandard, obsolescent bridges threatens public health and safety.

On the Federal-aid system alone there are over 248,000 bridges. Over 33,000 of these bridges are structurally deficient or functionally obsolete. If off Federal-aid system bridges are included, the total number of bridges requiring major repairs or replacement is 105,000.

I must emphasize that the Commonwealth of Pennsylvania faces an emergency situation.

According to DOT statistics as of September 30, 1976, no bridges had been replaced in Pennsylvania and only 14 were being constructed or were being prepared for construction. The inadequacy of this effort is unquestionably established by the fact that the vast majority of Pennsylvania's 67 counties have deficient bridges. Thirteen counties have 10 or more.

Permit me to discuss briefly one of these counties, Allegheny County, where I make my home. The $19,700,000 allocated to Pennsylvania under the existing program is only a fraction of the amount which would be needed to repair the bridges in Allegheny County alone. In the 6 years since it was created, the present bridge program has resulted in Federal aid to only one bridge in that county, only one bridge out of the 115 which are classified as deficient.

I find this unacceptable and I am sure that the residents of Allegheny County, who must use these dangerous bridges daily find it unacceptable. How can we expect them to accept the fact that ambulances and other emergency vehicles are forced to take long detours in order to avoid deteriorated, obsolescent bridges? I assert we cannot.

However, the bridge crisis is not by any means limited to my own State Every State of the Union is affected by it. Six of our States, Iowa, Kansas, New York, Oklahoma, Pennsylvania, and Texas, have over 5,000 deficient bridges and another 13 have over 2,500 bridges in need of major repairs or replacement. As evidence of the disturbing magnitude of this problem and of the fact that it is a truly national problem, I ask unanimous consent to have printed in the RECORD a modified form of the "List of Deficient Bridges by State," which was contained in the seventh annual report in the special bridge replacement program prepared by the Secretary of the Department of Transportation.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

LIST OF DEFICIENT BRIDGES ON FEDERAL-AID SYSTEM BY STATE

State	Total Federal-aid bridges	Structurally deficient	Functionally obsolete	Number of deficient bridges	Percent
Alabama	6,353	154	389	543	8.56
Alaska	507	11	12	23	4.54
Arizona	3,999	24	125	149	3.73
Arkansas	5,134	57	706	763	14.84
California	12,269	85	589	674	5.49
Colorado	3,062	105	37	142	4.64
Connecticut	1,509	23	52	75	4.97
Delaware	456	14	21	35	7.68
District of Columbia	193	9	12	21	10.88
Florida	4,788	107	664	771	16.10
Georgia	7,350	180	1,515	1,695	23.60
Hawaii	564	37	34	71	12.59
Idaho	1,542	210	34	244	15.82
Illinois	9,285	276	1,790	2,066	22.25
Indiana	5,861	101	399	500	8.53
Iowa	6,808	172	895	1,067	15.68
Kansas	9,544	523	1,391	1,914	20.05
Kentucky	4,635	66	1,169	1,235	26.64
Louisiana	4,964	85	1,900	1,985	39.99
Maine	1,169	37	74	111	9.50
Maryland	2,338	20	191	211	9.03
Massachusetts	2,310	61	146	207	8.96
Michigan	5,328	200	325	525	9.85
Minnesota	4,466	70	751	821	18.31
Mississippi	6,177	638	320	958	15.51
Missouri	7,558	277	335	612	8.09
Montana	2,186	29	129	158	7.23
Nebraska	4,119	395	661	1,056	25.64
Nevada	718	32	100	132	18.39
New Hampshire	1,121	53	266	319	28.46
New Jersey	2,259	100	105	205	9.08
New Mexico	2,715	22	217	239	8.80
New York	6,639	277	933	1,210	18.22
North Carolina	3,981	186	690	876	22.36
North Dakota	1,753	166	380	546	31.15
Ohio	11,259	397	547	944	8.38
Oklahoma	7,222	220	358	578	8.01
Oregon	3,514	65	282	347	9.88
Pennsylvania	7,949	185	723	908	11.43
Rhode Island	503	7	26	33	6.56
South Carolina	3,997	124	259	383	9.58
South Dakota	2,674	85	1,220	1,305	48.80
Tennessee	6,845	263	1,130	1,393	20.35
Texas	23,800	51	1,360	1,411	5.92
Utah	1,183	35	149	184	15.56

West Virginia	2,503	172	354	526	21.01
Wisconsin	5,912	207	916	1,123	18.99
Wyoming	1,839	13	256	259	14.63
Puerto Rico	706	8	171	179	25.35
Total	234,016	6,912	26,603	33,515	14.32

Mr. HEINZ. Madam President, the statistics speak for themselves. They cry out for a greatly expanded bridge program. The legislation which is presently before the Senate, the Federal-Aid Highway Act of 1978, makes a step, a positive step, a justified step, in the right direction. The funding level for the special bridge replacement program is increased to $450 million a year, the rehabilitation as well as the replacement of bridges is authorized, and up to 30 percent of the funds may be used to rehabilitate or replace bridges which are not on the Federal-aid system. I applaud the Committee on Environment and Public Works, and especially the chairman, the Senator from West Virginia, and the chairman of the Subcommittee on Transportation, the Senator from Texas, for the unquestionable improvements in the existing bridge program.

I do want to emphasize that the need that struck me as one of our highest priorities in 1976, when I testified before the House Public Works Committee on this issue has, at long last, after 2 years of careful study, been recognized and partially, if not wholly, addressed.

The amendment that Senator CULVER and I are offering today represents what I would call both a way station and a watershed on the route to an adequate bridge repair and replacement program. It is a way station because it does mark significant progress and, to me personally, it is a watershed because it goes nearly two-thirds of the way to the goal that I set in 1976—namely, $720 million a year for bridge repair and replacement—and between the current and existing level of funding, which has been authorized at $180 million a year for the past several years. That difference, that increase of $345 million, from $180 million authorized to $525 million by virtue of this amendment, is a 64 percent or nearly two-thirds increase toward the goal of $720 million that I recommend in 1976.

The scope of the bridge crisis, Madam President, its magnitude, its universality, frankly, requires a still more comprehensive effort, not just more comprehensive than the $525 million, but more comprehensive still, in my judgment, than the $720 million I recommended 2 years ago.

I would say that the $525 million figure proposed by our amendment is a much more realistic addressing of our Nation's bridge needs, one which authorizes funds that can be readily and effectively obligated by the States. It is, as my good colleague from Iowa has pointed out, accurate that the Federal Highway Administration estimates that the States can more than efficiently ob-

ligate approximately $500 million in fiscal 1979 alone for bridges on the Federal system alone. That, or course, does not count the amount of money they are prepared to obligate on off-system bridges. Insofar as this earmarking of 15 to 25 percent will go to those off-system bridges, we should expect the States to be able to handle proportionately more obligated bridge repair and replacement money and to see that money obligated most efficiently. The increase, therefore, in this total authorization to $525 million, given the eligibility and given the neglect of the off-system bridges in our country, is warranted and, I think, should be favorably acted upon by the Senate.

I want to say that the minimum 15 percent earmarked that we have proposed to be expended for off-system bridges is to assure that smaller communities, especially rural communities, are going to obtain the money they need to repair and maintain their critically deficient bridges.

The inability to use an isolated rural bridge could result in economic isolation of farmers who need to get their goods to market. It can result in residents who, for years, have depended on that bridge as their only means of access to the closest market, being literally cut off.

On Tuesday, I visited just such a bridge in south central Pennsylvania, in Dauphin County. It was a typical Federal off-system highway bridge. It had originally been built in 1902. Its original weight limit, at least as far as we could research it about 10 years ago, had been in the neighborhood of 13 tons. But it had been posted now at 5 tons, with the result that a farmer whose land adjoined that bridge and who had a typical farm truck—not a giant highway truck, just a typical farm truck—could not bring his truck across that bridge empty, let alone full. One could see by looking at the bridge that some people had not been as careful and judicious as that farmer, Dale Mangle, and had taken a heavy truck on the bridge and literally bent it.

We could see both the mesh surface of the bridge bent and we could see the underlying structural elements also distorted.

This, Madam President, is an example of the severe kind of off-system bridge problems that have been exacerbated not only by constant unrelenting deterioration, but by the reclassification by the Federal Highway Administration of bridges from the Federal-aid system to an off-system category where they have been ineligible for any assistance whatsoever.

In the sixth annual report on the special bridge replacement program, which sumarized the statistics as of December 1976, the Department of Transportation noted that there were 39,900 deficient bridges on the Federal-aid system. The seventh annual report stated that as of December 1977, there were 33,515 deficient bridges.

But what happened to the difference? What happened to the more than 6,000 bridges? Did they disappear, did they fall down, did a good fairy come along and magically replace them?

No. The fact is that they are still there. They are still deficient. The only thing that happened is that they have been reclassified, taken off the Federal-aid system and put onto somebody else's highway rolls.

Thus, nationwide nearly 6,385 bridges were eliminated from the federal system. The burden of repairing these bridges falls squarely on those governmental entities least able to bear it, smaller communities and rural counties.

My State of Pennsylvania has what I believe to be the largest rural population of any State in the Union. Three and one-quarter million Pennsylvanians live in rural areas. Partly because I suspect they are not right next to or part of the jurisdiction of a big city with a powerful political machine, they simply are not able, either financially or politically, to get the help they need to solve this serious problem without the Federal assistance and I think Senator Culver's and my amendment will provide for them. That is why the amendment mandates a set-aside for establishing a minimum level of dependable funding to be spent for these off-system bridges.

I know that there are many States that have the same kind of critically unsafe bridge problem as my home State of Pennsylvania.

In my State, there are more than 1,700 off-system bridges that we know about which have been rated critically unsafe.

But I would have to say, Madam President, that there are probably thousands of other bridges that we do not know about simply because they have never been inspected, never been rated, never been evaluated, and without doubt the vast majority of both the bridges we know about and those we do not know about are located in rural areas.

As to the ones we do know about, at present prices, it will cost more than $222 million to replace these bridges in my State alone, or, roughly, $142,000 per bridge.

Now, that $142,000 per bridge amount simply is beyond the means, the financial abilities, of most rural counties and rural communities.

Many rural bridges are victims of years of neglect simply because they are not located near major population centers. But many people forget that these bridges are vital to our agricultural system. Without these bridges, millions of dollars worth of Pennsylvania's—and other States—crops would rot on the farms, school buses would have to make long and torturous and extremely inconvenient detours, ambulances could not get to the nearest hospital expeditiously, and large areas of our most scenic countryside would become inaccessible to tourists and sportsmen.

The amendment we offer today would clearly further the public interest.

First, by taking care of the obsolete, deteriorating bridges that threaten public safety.

Second, by insuring that our highway system is more effective and not restricted by load restrictions and bridge closings.

Third, it will have the very beneficial effect of creating thousands of jobs in an industry where unemployment is often very high.

Madam President, the amendment Senator CULVER and I offer is clearly, critically needed. It is modest. It is responsible. I urge my distinguished colleagues to seize this opportuntiy to focus Federal assistance on a serious national problem by supporting this amendment.

Mr. MCGOVERN. Will the Senator yield briefly?

Mr. CULVER. I am delighted to yield to the Senator from South Dakota.

Mr. MCGOVERN. Madam President, I rise to offer my support on this amendment offered by Senator CULVER and Senator HEINZ, which I am happy to cosponsor, to increase the authorization for the special bridge replacement fund.

I say in that connection, Madam President, that we are all indebted to Senator BENTSEN, the chairman of the Transportation Subcommittee, not only for bringing an excellent bill to the floor dealing with our Federal-aid highway system, but also for increasing the funding for bridge replacement.

The purpose of this amendment is to further build on what Senator BENTSEN and his colleagues have done in recognizing the seriousness of this problem.

I heard Senator HEINZ describing the situation in his State and Senator CULVER speaking about the situation in Iowa.

In my State, we have bridges in the near state of collapse, bridges being used that are dangerous to be used, some that have been taken out of use almost entirely because of their dilapidated state. We do not have the resources to repair, replace, and upgrade those bridges, and it is hampering the entire transportation system across the State.

I welcome this opportunity to join with my colleagues Senator CULVER and Senator HEINZ in support of an increased authorization for the special bridge replacement fund.

One of our most serious and growing transportation problems is the ever increasing number of unsafe and obsolete bridges spanning the Nation's highways and roads.

For the past several years, our Nation's bridges have been deteriorating at a rate faster than States and local governments can repair them.

This has become an especially critical problem in our Nation's rural regions where inadequate bridge and highway funding through State and Federal sources has long been a problem.

Rural America saw some relief last year after the enactment of a special bridge replacement fund; however, the $180 million authorized at that time is not enough to allow us to keep pace with this steadily growing dilemma.

According to the Federal Highway Administration, over 33,500 bridges on the Federal-aid system are either structurally deficient or obsolete.

At this time we do not even have accurate figures to determine exactly how

many off-system bridges have these same problems, although data from individual States indicate that the problem may be much worse on our off-system bridges than those currently on the Federal-aid system.

However, even rough estimates from the FHWA indicate that over 72,000 off-system bridges are unsafe.

The minimum investment of funds needed to correct both bridge types is now estimated at over $25 billion.

I applaud the Environment and Public Works Committee for their realization of the need to assure adequate and safe bridges and their actions to increase the annual authorization for this fund to $450 million. This amendment builds on the committee increase to meet more of the remaining need for improved bridges.

Already, especially in energy development areas, hundreds of bridges are rapidly deteriorating, becoming unsafe and collapsing as heavy loads become more frequent.

In the new energy development and production fields, these bridges were not designed to carry this traffic.

Oil rigs and coal trucks of more than 100,000 pounds cross several such bridges daily.

In South Dakota, where a few small oil fields exist, some bridges have been closed to all traffic because of the increased travel of such energy production equipment.

And the bridges have remained closed due to lack of funds for repair.

The situation in my State and others will continue to worsen until we expand the bridge replacement fund and mandate minimum requirements to be used on off-system bridges.

I believe the centerpiece of this amendment to be its minimum required assistance for off-system bridges.

While in some States this provision will greatly benefit declining urban bridges, in rural agricultural States this provision is an absolute necessity.

In South Dakota, a primarily rural State, we have 4,276 off-system structures, as compared to 2,674 Federal-aid bridges.

While almost 50 percent of our Federal-aid bridges are deficient or obsolete. over 70 percent of our off-system structures are unsafe.

The great majority of these off-system structures are located on county roads throughout the State.

The counties in my State have made considerable efforts to repair these bridges on their own and with minimal help from our financially distressed State transportation development.

In fact, the major budget expenditures of several counties have been for bridge replacement and repair, many times to the detriment of other needed programs.

The provision within this amendment to mandate at least 15 percent of funds from the special replacement fund is vital to the safety of the off-system bridges.

However, the increased funding level requested by this proposal is also essential.

To establish minimum off-system funding through the present committee proposal is deficient, as it would reduce the flow of badly needed revenue for the repair of our Federal aid structures.

The requested increased authorization would allow States to increase essential repairs as well as establish some assistance for the most critical needs for off-system repairs.

Again, I must reiterate that given the Federal Highway Administration's own figures regarding the Nation's deficient and obsolete bridges, I am firmly convinced that this program is crucial to the safety of human lives and to every American's right to adequate transportation.

Mr. BENTSEN. Madam President, Senator CULVER, a very distinguished member of our committee, has devoted a great deal of effort and time in holding hearings, working on them here in Washington and again in Iowa, to concentrate on the problems of bridges. We do not argue the question of urgency. We understand that. We felt it strongly enough to raise the amount expended from $180 million to $450 million, 250 percent of the previous authorization.

We went further than that and set up a special fund for the replacement of bridges from the primary system over substantial bodies of water. That was an additional $37.5 million.

The problem we run into is finite resources and competition for funds. The Senator from Alaska wants additional funds for Alaska and for New York. The Senator from Kentucky wants additional funds for coal haul roads.

But with respect to Senator CULVER, Senator HEINZ, and Senator MCGOVERN, who have worked long on this project, when they talk about bridges, they are talking about something for the entire Nation, not for any one region. We all share in that concern.

We have listened to their eloquent presentations, and we have arrived at what we think is a reasonable compromise, raising the authorization an additional $75 million, putting a limitation of a minimum of 15 percent and a maximum of 25 percent on the off-system bridges, realizing that the priority efforts must address on-system bridges.

I, for one, in managing the bill for the majority, am willing to accept that amendment, subject to the manager of the bill for the majority. I understand he has a modification to the amendment. I will withhold the remainder of my time and yield to the Senator.

Mr. CHAFEE. Madam President, there is no question that the distinguished Senator from Iowa has been a persistent battler for this cause. He is a member of the subcommittee dealing with this matter. Since rejection, he has regrouped his forces, prepared another onslaught in the full committee, was repulsed, but was not discouraged. He came up with a further modification and plunged on to success here, before the full Senate. So the Senator from Iowa deserves high marks for his persistence and determination on this bridge matter.

Also, the Senator from Pennsylvania has appeared before the committee, with some persistence, and has stated his views here very eloquently. So their oratory has carried it.

I am persuaded—perhaps not enthusiastically, but nonetheless persuaded. I suppose that if one is doing something, one might as well do it graciously.

I suggest a caveat, which will go completely unheeded, I am certain. I point out that we are embarking into a new area here. We are going into bridges on off-system highways. We do not have enough money to care properly for the responsibilities that the trust fund presently has, but nonetheless we are going off in this direction.

However, there is no point in adding what might be considered a sour note to the otherwise happy proceedings, so I will join my distinguished chairman in supporting this.

I might propose to the Senator from Iowa a slight modification, if I may, to take care of particular situations.

In his State and in the State of Pennsylvania there are, of course, many miles of off-system roads. In some States either there are not that many miles of off-system roads and consequently the bridges, or there may be that many miles of off-system roads but not many bridges that require the maintenance that is so necessary in the States of Iowa, Pennsylvania, South Dakota, and some others.

My amendment would do the following: If the Secretary, after consultation with State and local-officials, with respect to the requirement for expenditure on bridges not on the Federal-aid system, determines that such State has inadequate needs such bridges which justifies such an expenditure, he may reduce the 15 percent requirement.

How often that will come up, I do not know, but I suspect that in my own State we may not have as much off-system bridge work.

So I suggest this modification to the Senator from Iowa, and I send it to the desk.

The PRESIDING OFFICER. Until the time on the amendment has expired——

Mr. CULVER. Madam President, we have 2 hours on the amendment.

The PRESIDING OFFICER. The Senator is correct. The time expires at 12:53.

Mr. BENTSEN. Madam President, I understand that the parliamentary point is being made that all time has to expire before there can be an amendment to the amendment.

The PRESIDING OFFICER. The Senator is correct.

Mr. BENTSEN. I would be willing to yield back the remainder of my time if the proponents would, and then have the modification considered. Would that be appropriate?

The PRESIDING OFFICER. That could be done.

Mr. CHAFEE. Madam President, a parliamentary inquiry. I would consider this to be an addition to the Senator's amendment, rather than an amendment. Is such possible?

Mr. ROBERT C. BYRD. It still is an amendment.

Mr. BENTSEN. Madam President, a parliamentary inquiry. Could the proponent of the amendment, by unanimous consent, change the submission of his amendment?

The PRESIDING OFFICER. The Senator from Iowa could modify his amendment by unanimous consent.

Mr. BENTSEN. Could that be done?

Mr. HEINZ. Madam President, I do not have a copy of the amendment by the Senator from Rhode Island. Is a copy available?

Mr. BENTSEN. Madam President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Clerk will call the roll.

Mr. HEINZ. I think that could be withheld.

Mr. BENTSEN. Madam President, I withhold the request for the quorum call.

Mr. HEINZ. I might enter into a colloquy with the Senator from Rhode Island, if he would be willing to do so.

As I understand the amendment of the Senator from Rhode Island, which I believe he is about to ask Senator CULVER to incorporate in our amendment, it would allow the Secretary of Transportation to waive the minimum 15 percent set-aside under certain conditions.

Mr. CHAFEE. He first has to consult with the State and with the local officials. He then could reduce the requirement for the expenditure. when he determines that such State has inadequate needs on such bridges to justify such expenditure.

Mr. HEINZ. I appreciate that and I understand that, but I would like to be a little clearer on who is in the driver's seat.

Would it be the intention of the Senator's amendment that the Secretary could waive such requirement if the State was against waiving such requirement?

Mr. CULVER. Madam President, if the Senator will yield, the language of the proposed amendment does not speak in terms of waiver. It refers to reducing. There may be a technical distinction.

Mr. HEINZ. I will restate my question: Is it the intention of the Senator from Rhode Island that his amendment will allow the Secretary of Transportation to reduce or completely eliminate or waive the 15 percent requirement set-aside for off-system bridges if the State did not request it or was opposed to it?

Mr. CHAFEE. Let me read the amendment.

Mr. HEINZ. I have listened carefully to the amendment. I know what it says. I am trying to understand what it means.

Mr. CHAFEE. Madam President, the Secretary has to consult prior to doing anything about reducing the 15 percent. He has to consult with the State and the local officials and then if he, the Secretary of Transportation, determines that the State has inadequate needs on such bridges to justify this expenditure, then he can reduce it.

So in the final analysis, yes, it is the Secretary of Transportation who has the say. That is correct.

But I can just suggest that the amendment mandates that there be a minimum of 15 percent expended on off-system bridges. I think you would find a Secretary very, very reluctant to unilaterally get in here and violate the 15-percent rule unless indeed he found after consultation with State and with local—I assume the Senator is concerned with the local people where the bridges are—the local officials, he would be very reluctant to make the reduction.

Mr. HEINZ. Let me be very explicit about what my concern is. I say this to the Senator. The fact is that the smaller communities we are talking about do not have the political clout of the major population areas, and I am concerned about some Governor who owes his election to a big city mayor is going to make a deal with the Secretary of Transportation and return us to the situation in which we now find ourselves, namely that we are not just ignoring the off-system of bridges but they are being added to by virtue of action by the Federal Highway Administration loping off of the Federal-aid system, as we have seen in just the last year some 6,300 bridges, and putting them on system and consigning them there to a future of inadequate maintenance, repair, or no replacement whatsover.

I appreciate the desire of the Senator from Rhode Island to have flexibility. I salute him on the intention, and I do not question the good intentions of vesting flexibility in the Secretary.

On the other hand, I think we have to face some of the political realities here, and the political realities are not very favorable to these smaller communities.

Mr. CHAFEE. I think that the Senator's point has been well expressed here in the colloquy and certainly in the RECORD. I think it is clear that the thrust of the pending Senator's amendment is to see that 15 percent of the $5.25 million of the States' allocation is spent on bridges on off-system roads, and that it be not more than 25 percent. The Secretary would be, I believe, extremely loath to reduce that percentage, and indeed the suggested amendment provides he has to consult with State and local officials. So I think the record is pretty clear on what the intent of the language is and I think we could safely proceed.

Mr. CULVER. Madam President, will the Senator yield at this point?

Madam President, I ask for the yeas and nays on the amendment.

The PRESIDING OFFICER. Is there a sufficient second?

There is a sufficient second.

The yeas and nays were ordered.

Mr. CULVER. Madam President, I just wish to say that I have had an opportunity to discuss this proposed amendment to the pending Culver-Heinz amendment with the author, the distinguished Senator from Rhode Island, Senator CHAFFEE. It seems to me that he has raised a valid point. It really does not make much sense to arbitrarily require a rigid application of 15 percent of the total amount of funds available to a particular State for the off-system if in fact, as is the case in his own native State of Rhode Island, there is not a sufficiently large off-system to responsibly, reasonably, sensibly accommodate those funds unless you required those bridges to be paved in gold.

I think that his concern for some flexibility is valid, although the legislative history should emphasize that this is a unique situation that does not otherwise obviate the need for required funding for off-system bridges.

So I think we should have the most powerful expression here of legislative intent and I think that the reduction of the minimum 15 percent requirement for the off-system must not be used as a vehicle for denying local and county units of government their allotment of special bridge program funds when a demonstrable need is evident.

I hope that this emphasis in the course of our consideration of this amendment will be a very strong indication to the Secretary of Transportation that a reduction of the 15-percent requirement would be considered only in the most exceptional situations and only in the absence of demonstrable need to avoid what is frankly a very real and serious potential loophole that could be subjected to serious abuse if it is not carefully watched and constrained.

I certainly agree with the description of the kind of situation that concerns local officials in terms of the priority allocation of these scarce resources and how easy it might be to bypass their very legitimate needs through an overcentralized political determination of where these funds are to be applied.

But I hope, Madam President, that with that general explanation the Senator from Pennsylvania will agree with me that we have emphasized the very special circumstances under which this legislation, as amended, could tolerate that kind of reduction of the 15-percent requirement.

Mr. HEINZ. Madam President, will the Senator yield?

Mr. BENTSEN. Madam President, I think the Senator from Pennsylvania has pointed out something that has to be highlighted. I think he has made a major contribution in showing how you could go through some political machinations that would really deny the utilizations of the funds as you would want them. But I believe, as Senator CULVER has said, we have built a legislative record here now because of what the Senator from Pennsylvania has brought forth that will accomplish the objective that he is striving for and at the same time assure what the Senator from Rhode Island is concerned about that we do not mandate the 15 percent when we cannot use it, do not have a reason for it, no place to put it, and as the Senator from Iowa

says, have to goldplate some project to expend the funds. So this is the way these things finally are worked out, and I think a contribution has been made here if it is acceptable to the Senator from Pennsylvania.

Mr. HEINZ. Madam President, if the Senator will yield, I compliment the Senator from Iowa and the Senator from Texas on making very clear the legislative record on this amendment. I think what they have said and with which I will concur makes very clear the intention that this amendment offered by Senator CHAFEE be very carefully and narrowly construed, and with that being made clear on the legislative record, as I think has been by both Senator CULVER, the author of the principal amendment, and Senator BENTSEN, the chairman of this subcommittee, I can accept the Chafee amendment and will support it.

Mr. BENTSEN. Madam President, I ask as a parliamentary point that the author of the amendment urge the modification of his amendment by unanimous consent.

Mr. CULVER. I so move at this time, Madam President.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered. The amendment is so modified.

Will the Senator please send the amendment, as modified, to the desk?

Mr. BENTSEN. If there is no further debate on it, and if the proponents of the legislation—the yeas and nays have been ordered, as I understand it.

The PRESIDING OFFICER. Yes.

Mr. BENTSEN. I am ready to yield back my time if the proponents are ready to yield back their time.

Mr. CHAFEE. I am prepared to yield back my time.

Is there any reason for the yeas and nays?

Mr. CULVER. They have been requested and have been ordered.

Could we have the clean language of the amendment, as modified, the Culver amendment, as modified, read?

The PRESIDING OFFICER. The clerk will report the amendment, as modified.

The assistant legislative clerk read as follows:

On page 4, line 5, strike the sum "$450,000,000" and insert in lieu thereof, the sum "$525,000,000".

On page 34, strike lines 13 through 25 and insert in lieu thereof, the following:

"(7) Section 144(c) of Title 23, United States Code, is amended by adding the following at the end thereof: Not less than 15 per centum and not more than 25 per centum of the funds authorized to any State to carry out the provisions of this section shall be expended for the replacement or rehabilitation of bridges that are not on any Federal-aid highway.

"The Secretary, after consultation with State and local officials may, with respect to a State, reduce the requirement for expenditure for bridges not on any Federal-aid system when he determines that such State has inadequate needs on such bridges to justify such expenditure."

Mr. FORD. Mr. President, I rise in strong support of Senator CULVER'S amendment to increase the authorization for the special bridge replacement program from $450 million to $600 million, with a minimum of 15 percent available for off-system bridges.

This additional funding is desperately needed to alleviate the bridge crisis faced by nearly every State in the Union. With well over 30,000 bridges on the Federal highway system either structurally deficient or obsolete, and with at least 72,000 off-system bridges unsafe for normal use, it is unrealistic to expect the States to adequately shoulder the burden of repair and replacement.

A case in point is my State of Kentucky. Among Kentucky's highest priorities is a replacement structure for the U.S. Grant Bridge between Portsmouth, Ohio, and Greenup County, Ky. This bridge, close to collapse now, has been closed to motor traffic since July and soon will not even be safe for pedestrian traffic.

As one can imagine, the effect upon the Portsmouth service area and Greenup County has been severe. Portsmouth depends on the citizens of Kentucky for its economic stability. Businesses in the city rely on Kentuckians for 25 percent to 40 percent of their inventory turnover. Many ventures require movement of goods that are dependent on Grant Bridge. Forcing such movement to another bridge down the river would both raise the cost of the goods and add to their delivery time. The economic viability of the area is clearly in danger.

Kentucky residents depend heavily on the facilities of Portsmouth for such essential services as fire and police protection, ambulance and hospital services. Obviously, they cannot be provided without a bridge and, obviously, a community cannot exist without them. I might also add that Kentuckians use the bridge daily to travel to and from their jobs.

Finally, the closing of Grant Bridge has had a significant impact on the atomic energy facility at Piketon, Ohio. One of the critical issues considered in locating the enrichment facility at Piketon was the adequate employment resources found in southern Ohio and northeast Kentucky. Currently over 150 Kentuckians are employed there, with two to three times more projected in the future. Since local union arrangements may require significant additional representation of Kentuckians in the construction work force, both the construction of the facility and the potential work pool for the completed facility are significantly affected by the loss of Grant Bridge.

The cost of a new structure is roughly estimated at about $30 million. Under the Culver amendment, Kentucky's allotment of Federal funding would increase from $15 million to $20 million, a total figure that falls short of the money needed to replace Grant Bridge and from which must come funds for other projects, too.

With 27 percent of Kentucky's on-system bridges deficient—we have 1,235 bridges that are either structurally unsound or functionally obsolete, Mr. President, the sixth largest number in the Nation—I feel that the Culver proposal is not at all too much to ask and I urge my colleagues to support the amendment.

Mr. EAGLETON. Mr. President, I have cosponsored the Culver-Heinz amendment because I think the issue of bridge repair and replacement has managed for too long to escape the serious concern of Federal budget makers.

The problem is twofold. First, the current funding level of $180 million is totally inadequate. Second, the current special bridge replacement program cannot reach thousands of bridges which are not on the Federal aid system, and this is where some of the greatest needs occur.

The funding problem is well illustrated by my own State of Missouri's situation, a situation which I am sure is duplicated in many States. It is now estimated that Missouri has as many as 4,700 faulty bridges. Bringing these existing bridges up to safe standards will cost by some estimates at least $1.7 billion. But under the special bridge program, Missouri will receive only $4.8 million this year. This level of funding is not even adequate to keep pace with the continuing decay of Missouri's bridges, let alone to make any progress toward solving the overall problem. Increasing the funding level of this program to $600 million annually, as is proposed by this amendment, would be a constructive step, albeit still far from a sufficient commitment of dollars to get the job done.

Dollars alone will not help users of many off-system bridges, however, and the amendment also attempts to deal with this problem. Many of the bridges, especially in rural areas, are under county jurisdiction. These structures often provide the only link between the farmer and his markets, and between his children and their schools. Under this amendment, these county bridges would be eligible for a minimum of 15 percent of the money allocated to a State under the program.

I strongly urge adoption of this amendment to expand the Federal commitment in insuring the safety of the bridges in this country. We have let this problem fester too long, and we must now pay the price. The only question is whether we will act now and pay the price in dollars, or whether we will wait and risk paying the price in human lives.

Mr. CULVER. Madam President, if it is agreeable with the floor managers of the bill, I see no need to have a rollcall vote, and I ask unanimous consent that the order for the rollcall vote be vitiated.

The PRESIDING OFFICER. Without objection, it is so ordered. The yeas and nays are vitiated.

Do the Senators yield back their time?

Mr. CULVER. I yield back my time.

Mr. BENTSEN. I said that earlier. I yield back the remainder of my time.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment, as modified.

The amendment, as modified, was agreed to.

Mr. CULVER. Madam President, I move to reconsider the vote by which the amendment, as modified, was agreed to.

Mr. HEINZ. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. CULVER. Madam President, I ask unanimous consent to include the cosponsors who have requested to be transferred from the original amendment to the one just agreed to, the amendment, as modified.

The following Members were added as cosponsors: Mr. JOHNSTON, Mr. CHURCH, Mr. INOUYE, Mr. FORD, Mr. MCGOVERN, Mr. ZORINSKY, Mr. DURKIN, Mr. MORGAN, and Mr. ANDERSON.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STAFFORD. Madam President, will the Senator yield?

Mr. CHAFEE. Before I do that, I ask unanimous consent that the following staff members be accorded the privileges of the floor: Senator BARTLETT, Ben Kirk and Tom Wasinger; Senator THURMOND, Eddie Twilley; Senator HEINZ, Bob Hepler; Senator JAVITS, Barbara Washburn; Senator YOUNG, Karen Steidl; Senator DANFORTH, Charles Wood; and Senator STEVENS, Chip Wagoner.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 1668

(Purpose: Amend S. 3073, Federal-Aid Highway Act to permit construction of new road segments for the Great River Road)

Mr. CULVER. Madam President, I send to the desk an unprinted amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The assistant legislative clerk read as follows:

The Senator from Iowa (Mr. CULVER) proposes an unprinted amendment numbered 1668.

Mr. CULVER. Madam President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 5, line 18, insert the following: after the word "for," the new words "construction or".

On page 5, line 22, after the word "for," the new words "construction or".

Mr. CULVER. Mr. President, this amendment to S. 3073, the 1978 Federal-Aid Highway Act, allows funds authorized by the Great River Road program to be used for both construction and reconstruction of road segments. It amends section 104, subsection 15 of this bill, which authorizes $35 million annually for this project in fiscal years 1979 and 1980.

This amendment is consistent with guidelines regarding the scope of the Great River Road developed by the Congress and the Federal Highway Administration. As the conference report accompanying the 1976 Federal-Aid Highway legislation specifically stated:

The Great River Road is not meant to be a major roadway along the Mississippi River. It is to be one road that criss-crosses the River several times. The conferees want to confirm that existing road beds should be used feasibly except where there are significant breaks in the continuity of the Great River Road.

In 1977, I worked closely with then Federal Highway Administrator William Cox to further clarify the specific focus of the Great River Road. Consistent with the original mandate that this be a scenic road, we worked out language which was included in the conference report of the fiscal year 1978 Transportation Appropriations Act. That language stated that no State could obligate Great River Road funds to construct new segments until 60 percent of the road is completed. This agreement underscores the point that priority consideration be given to preliminary planning, acquisition of scenic easements and areas of scenic, historical, and scientific interest, and construction of rest areas, overlooks, and bicycle trails, but that reconstruction and rehabilitation of existing route segments and the construction of new route segments will also be permitted.

The amendment adopted by the Environment and Public Works Committee this year authorized $35 million annually for both reconstruction and construction of the Great River Road through fiscal year 1980. Inadvertently, the word "construction" was left out of the printed copy of S. 3073. This technical amendment, which, I believe, has been discussed fully with the floor managers of this legislation, simply addresses this error in the final filing of the legislation and puts back in language that was already approved by the committee.

I urge its adoption.

Mr. BENTSEN. The author of the amendment has discussed it with the manager of the bill, with the manager for the minority side, and it is a constructive amendment. We are prepared to accept it.

Mr. CULVER. I want to thank the distinguished Senator from Texas for his consideration and cooperation in this and other matters with respect to this legislation. I am very grateful to him indeed.

The PRESIDING OFFICER. Does the Senator from Iowa yield back his time?

Mr. CULVER. Yes, I yield back my time.

The PRESIDING OFFICER. Does the Senator from Texas yield back his time?

Mr. BENTSEN. I yield back my time.

Mr. CHAFEE. I yield back my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Iowa.

The amendment was agreed to.

The PRESIDING OFFICER. Who yields time?

Mr. BENTSEN. Madam President, I suggest the absence of a quorum, with the time to be equally charged to both sides.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. CRANSTON. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT NO. 3476

Mr. CRANSTON. Madam President, I call up my amendment No. 3476 and ask that it be considered immediately.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

The Senator from California (Mr. CRANSTON) proposes an amendment numbered 3476.

Mr. CRANSTON. Madam President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 35, line 4, strike "and", and in line 7, strike the period and insert in lieu thereof a semicolon and the word "and".

On page 35, between lines 7 and 8, insert the following:

"(10) adding at the end the following new subsection:

"'(i) Notwithstanding any other provision of law, any toll bridge which is owned and operated by an agency (1) which does not have taxing powers, and (2) whose functions include operating a federally assisted public transit system subsidized by toll revenues, shall be eligible for assistance under this section, but the amount of such assistance shall in no event exceed the cumulative amount which such agency has expended for capital and operating costs to subsidize such transit system. Before authorizing an expenditure of funds under this subsection, the Secretary shall determine that the applicant agency has insufficient reserves, surpluses, and projected revenues (over and above those required for bridge and transit capital and operating costs) to fund the necessary bridge replacement or rehabilitation project.' ".

Mr. CRANSTON. Madam President, this is a noncontroversial amendment which I have discussed with the distinguished chairman of the Subcommittee on Transportation and he has agreed to accept it. The purpose of the amendment is to enable toll bridges which subsidize another federally promoted and assisted program—such as mass transit—to receive Federal funds for bridge replacement or rehabilitation which are required as a result of their commitment of revenues or reserve funds to broader transportation purposes than merely the operation of a bridge.

In offering this amendment, I believe it is important to establish stringent test of financial need. Consequently, my amendment differs in two respects from a similar amendment in the House bill. First, Federal assistance should be limited to the cumulative amount an agency has actually spent on transit capital and

operating costs. Second, the amendment requires that the Secretary of Transportation determine that a toll bridge has insufficient reserves, surpluses, and projected revenue to fund the necessary work.

Given Federal policy to reduce congestion, pollution, and energy consumption through the promotion of public transit, an expansion of eligibility for bridge replacement funds to include only toll bridges that use vehicle tolls to subsidize transit would seem a highly laudable policy in the broad public interest.

My amendment is also consistent with fiscal restraint. It would not require an appropriation of more moneys than would otherwise be necessary under the act. It merely expands eligibility to a very small number of toll agencies that are supporting transit. The role of the States and the role of the Secretary of Transportation in determining priorities would remain as they are.

The Senate bill provides new and much-needed flexibility in the bridge replacement program, and I believe my amendment is in concert with these important new provisions as well as the committee's policy of fiscal restraint.

Mr. BENTSEN. Madam President, the amendment offered by the Senator from California (Mr. CRANSTON) seeks to address the problem of toll bridges on the Federal-aid system where the revenues assist a transit system. Currently the special bridge replacement program prohibits the use of these funds on any bridge on which a toll is collected. This is done because one of the purposes of the collection of tolls other than paying off bonds used in construction, is the operation and maintenance of the structure. To allow the use of Federal funds on such a structure would run contrary to the general policy of the highway program.

However, the Senator from California brings to us a very unique problem in that a bridge which is of a toll nature supports a federally assisted transit system. Under this type of arrangement all of its revenues are not directed to the usual purpose. In this unique situation there is a Federal interest in seeing that the bridge is maintained and, if necessary, replaced to continue its important use. I support the inclusion of such a bridge within the program authorized by section 144.

With that in mind, I support the amendment as presented by the distinguished Senator from California, subject to the concurrence of the manager of the minority and his comments.

Mr. CRANSTON. I thank the Senator very much.

Mr. CHAFEE. Madam President, I join with our colleague from Texas in support of this amendment. Representatives of the California group spoke to me about it. They have a unique situation there, where they are using the funds for the support of other transportation systems. I think it is a good amendment to support.

I yield back any time I may have remaining.

Mr. BENTSEN. I yield back the remainder of my time, subject to the proponent of the amendment doing likewise.

Mr. CRANSTON. I thank both Senators, and yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from California.

The amendment was agreed to.

Mr. BENTSEN. Madam President, I suggest the absence of a quorum, with the time to be charged equally to both sides.

Mr. CRANSTON. Madam President, if the Senator will withhold that, I ask unanimous consent that Kathy Hoffman of my staff be accorded the privilege of the floor during the consideration of this measure and any votes thereon.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CRANSTON. I thank both Senators very much for their cooperation and understanding.

Mr. BENTSEN. Madam President, I ask unanimous consent that Tom Dougherty of Senator GLENN's staff be accorded the privilege of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CHAFEE. Madam President, I make the same request on behalf of Patty White of Senator HAYAKAWA's staff.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BENTSEN. Madam President, I renew my suggestion of the absence of a quorum, and request that the time be charged equally to both sides.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. BENTSEN. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BENTSEN. Madam President, I ask unanimous consent that the Senator from Mississippi (Mr. STENNIS) be recognized for 5 minutes on a nongermane subject, without the time being charged to either side.

The PRESIDING OFFICER. Without objection, it is so ordered. The Senator from Mississippi.

VETO OF THE MILITARY PROCUREMENT AUTHORIZATION BILL

Mr. STENNIS. Madam President, I deeply appreciate the courtesy extended by the Senator from Texas and the Senator from Rhode Island, and that of the Chair. I am compelled to leave shortly.

With reference to the veto of the military procurement authorization bill by President Carter, I will not join in or be drawn into any attacks on the President for what he has done, either by implication or in any other way.

On the other hand, we do have a very serious matter here. It concerns the authorization bill which is the basis for appropriations; that is the bill that was vetoed. Appropriations bills have to rest on the outcome of an authorization bill. So this stops the proceedings on the defense appropriations bill also, which was within a few hours of completion by the full Senate Committee on Appropriations, having already been passed by the House of Representatives.

I am not here to complain. We must be constructive, and we must proceed, because our military program is a must. I personally think the best way out of this situation—the President has exercised his constitutional function of a veto, and I think the best, way is to exercise our function in the same way, and pass the bill, the veto notwithstanding, which is no slap at the President and represents no fight with the President. Absolutely we must keep the military program separate and above partisan politics.

We are now faced, though, with a great number of facts. It seems from the President's remarks that he was using one set of facts, and we have found a far different set of facts in our perusal of these bills for almost 8 consecutive months by highly competent staff people as well as the membership.

The fiscal year 1979 defense appropriations bill has the greatest sum of money of any bill ever presented to the Senate, and there are more than 3,300 line items in it, requiring someone to pass on those items.

Secretary Brown is an honest man, a man of great competence. I know he is not misleading anyone intentionally, but I am told, as an illustration, that this morning on an early morning national television show, Secretary Brown said that Congress is cutting three anti-submarine warfare ships.

He is bound to have been referring to what we call the TAGOS ships, three ocean surveillance ships totaling $98 million. Those ships are in the authorization bill that was vetoed, Mr. President. That is an illustration of the false facts. Those three ships are in the bill the President vetoed.

The real facts are that the House did not provide appropriations for the ships. The further facts are that the Senate Defense Subcommittee on Appropriations did approve those three ships. The Senator from North Dakota and I were the subcommittee of the subcommittee, and we recommended them, the subcommittee approved them, and the full committee has not challenged them in any way.

So those are just false facts. The President made reference to matters that had been taken out of the bill. There was a reference to a $500 million reduction in the operation and maintenance accounts.

Here is what this is: In those operation and maintenance accounts there is an allowance of 6 percent for inflation in fiscal year 1979. That comes to about $1.5 billion—think of that, a billion and a half dollars.

I know what a family taxpayer does when inflation hits him so hard he can-

not buy what he has been buying. He tightens his belt a little, and he gets along on a little less. So the Defense Appropriations Subcommittee figured that the military could absorb at least a part of that $1.5 billion, and the subcommittee reduced the amount by one-third, to see how it works if they try it. If they cannot do it, we can consider a supplemental appropriation.

All right; that came on to the full Appropriations Committee of the Senate, and the Senator from Missouri (Mr. EAGLETON) moved further reduction, and the full committee voted to reduce it by another $150 million, making somewhat beyond the one-third reduction. These operation and maintenance funds are not included in the authorization bill which the President is vetoing.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. STENNIS. May I have an additional 2 minutes?

Mr. BENTSEN. Madam President, I ask unanimous consent that the Senator be allowed to proceed for 2 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. I thank the Chair.

Madam President, I have been speaking from the record through every bit of this, from the record before us now.

The President certainly did not fully understand what we had done in regard to research and development concerning alleged reductions.

Madam President, I thank the Senate again. We look at the facts, and we should pass on these things with regard to the facts.

I am greatly disappointed that the President has decided to veto the fiscal year 1979 Department of Defense authorization bill. It is certainly within the President's constitutional power and responsibility to veto any legislation passed by the Congress which in his judgment does not pass muster. However, Congress has the constitutional power and responsibility to pass legislation even in the event of a Presidential veto. This bill passed the Senate Armed Services Committee unanimously and passed the Senate by a vote of 87 to 2. I believe that this bill is so well balanced and represents so much agreement on the part of the Congress that I will work to override the veto of this legislation.

The committees of Congress have worked since January preparing this bill hearing expert witnesses, visiting field locations and factories and analyzing the budget in detail. The President's veto is based on information provided by his advisers which may not have been complete or fully covered the situation.

In view of the world situation and the need to maintain our military preparedness, we must move along with our defense programs. If we must go back into every item in this bill it will mean months of delay, and I doubt a new bill can be drawn that way by the end of the year. The new fiscal year begins October 1—only 6 weeks away. Unless this veto can be overriden or a new bill produced the Defense Department will have to go on a continuing resolution for money which means no new starts, no increase from last year, and no movement forward—either Presidential or congressional initiatives. This is no way to run a military department.

This bill does not "bust the budget." It has been carefully drawn to be both within the President's overall budget figures and the congressional figures. It is a fiscally responsible bill.

This bill gives the President most of what he requested in the budget. It, together with the appropriations bill it precedes, represents the largest defense spending in any year in history—wartime or peacetime.

In the R. & D. area the bill authorized $12.3 billion, which is $900 million more than last year and an 8-percent increase. It is the largest increase in R. & D. spending in at least 6 years. While the Senate bill was about $100 million above the President's request for R. & D., the final bill is only $200 million or 2 percent below the request. Some 80 percent of the 750 line items in the R. & D. budget were approved as requested. Many of the reductions were small and for the most part represented changes or delays that occurred after the time the budget was submitted.

This R. & D. contains seed money for new classes of smaller Navy ships and VSTOL aircraft so that in the future we will have alternatives to the large carrier. Most of this money was not requested in the budget. Even though strongly opposed by some, the R. & D. budget provides for the President's request for the M–X missile. It provides funds for the cruise missile carrier, and it provides more funds than requested for a go ahead on cruise missiles—air launched, sea launched and ground launched.

This bill does contain $1.9 billion for a nuclear powered *Nimitz*-class aircraft carrier for the Navy. This was not requested in the budget. It should be noted, however, that every witness both from the civilian side and the military side all agreed that the Navy must have another carrier. The President indicated he might request another conventionally powered large deck carrier in next year's budget. The overwhelming sense of the Congress, as I see it, is that if we are going to have another carrier it should be a nuclear carrier. I want to note that after the President's budget was submitted it was discovered that $1 billion for a Trident submarine that had been requested was not needed in fiscal year 1979 because of slippages and construction difficulties in shipyards. This billion dollar deferral of the submarine goes a long way toward paying for the carrier.

There are a number of initiatives to improve both our NATO forces and the readiness of our armed forces overall. In addition to a number of items requested in the President's budget this bill would add to the number of tanks to be modernized for the Army. It would add funds for the development of an infantry fighting vehicle and would add funds for the Army tank gun program done in cooperation with the German Government. It would add funds for increasing the procurement of modern Navy torpedoes. In the personnel area, military personnel were added to improve training and improve the readiness of the Armed Forces. Civilian personnel were added to aircraft maintenance depots to improve the maintenance and operational readiness of our aircraft. The Reserve components were strengthened with additional manpower, as well as equipment and hardware for the Reserves. In summary, this is a balanced bill. It is a fiscally responsible bill and it is a bill that moves forward for our military preparedness both now and in the future.

FEDERAL-AID HIGHWAY ACT OF 1978

The Senate continued with the consideration of the bill.

Mr. ZORINSKY. Madam President, I ask unanimous consent that Delbert Terrill and John Mussman of my staff be granted the privileges of the floor during the course of debate on this bill and during rollcall votes.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 1669

(Purpose: To require the Secretary of Transportation to conduct a study of the adverse community impacts occasioned by increased coal unit train traffic and to recommend appropriate legislation)

Mr. ZORINSKY. Madam President, I send an unprinted amendment to the desk on behalf of Senator ANDERSON and myself and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Nebraska (Mr. ZORINSKY), for himself and Mr. ANDERSON, proposes an unprinted amendment numbered 1669.

Mr. ZORINSKY. Madam President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 58, line 8, insert the following:

SEC. 146. (a) The Secretary of Transportation, in cooperation with the State highway departments, and appropriate officials of local government, is authorized and directed to undertake a comprehensive investigation and study of techniques for alleviating the environmental, social, economic, and developmental impacts of increased unit train traffic to meet national energy requirements in communities located along rail corridors experiencing such increased traffic. Such study and investigation shall include, but not be limited to, the following:

(1) identification of specific adverse impacts on affected communities;

(2) examination of specific techniques to alleviate such impacts, including but not limited to low cost systems management methods, grade crossing separation, and rail line relocation, together with an assessment of the cost and benefits of each such technique;

(3) delineation of criteria to determine whether grade crossing separation or rail line relocation is appropriate for a given location;

(4) determination of the proper share of the cost of implementation for each such technique to be borne by the railroad or railroads based on the net benefit derived, and;

(5) determination of various costs for different types of separation construction based on such factors as number of rail lines and number of highway lanes intersecting at the crossing.

(b) In the conduct of the investigation and study authorized by subsection (a) of this section, the Secretary shall specifically consider the following rail corridors:

(1) The Burlington Northern mainline from Beach, North Dakota to Staples, Minnesota, from Staples, Minnesota to Minneapolis/St. Paul, Minnesota and from Staples, Minnesota to Duluth, Minnesota/Superior, Wisconsin;

(2) The Burlington Northern line from Joder, Nebraska to Rulo, Nebraska;

(3) The Chicago Northwestern line from Harrison, Nebraska to Blair, Nebraska; and

(4) The Union Pacific line from Scottsbluff, Nebraska to Steele City, Nebraska.

(c) The Secretary shall report to the Congress on the results of the investigation and study authorized by subsection (a) of this section not later than March 31, 1979. Such report shall include the information required by subsection (a) together with the Secretary's conclusions and recommendations for appropriate legislation.

(d) There is hereby authorized to be appropriated not to exceed $350,000 to carry out this section.

The PRESIDING OFFICER. Is this the amendment on which there is to be 1½ hours of time?

Mr. ZORINSKY. That is correct.

The PRESIDING OFFICER. The Senator from Nebraska is recognized.

Mr. ZORINSKY. Thank you, Madam President.

The amendment I offer this morning I believe will form one more link in the process of alleviating the impact of unit coal trains on many of this Nation's communities.

In September almost a year ago I introduced legislation (S. 2164) cosponsored by my colleagues Senators ANDERSON, HART, HASKELL, HUMPHREY, GRAVEL and RIEGLE. This legislation would have created a new category of funding from the Highway Trust Fund by which energy impacted rail and highway crossings would be separated. On March 16, 1978, during hearings before the Subcommittee on Transportation of the Committee on Environment and Public Works on the bill now pending before the Senate, the cosponsors and I testified in support of the inclusion of such a new category.

Such an effort was not to prevail in the wake of pressure to stop the proliferation of categories and especially in light of the actual consolidation of categories which took place during executive session in committee and subcommittee.

Madam President, I was prepared to make this issue a fight here on the floor of the Senate by offering the amendment I had previously had printed. However in view of the adamant opposition of the manager of the bill to new categories, I am therefore sending forth an amendment which I believe will help facilitate the passage of comprehensive coal transportation legislation early in the session next year.

The amendment I send forward today provides for a study by the Secretary of Transportation of the impact of unit coal trains on communities and the costs to help alleviate such impacts. This amendment also requires that the Secretary of Transportation come forward with recommended legislation on this issue.

I understand that this amendment has been cleared with the manager of the bill and is acceptable to him.

Finally, it is also my understanding that the manager of the bill in accepting this amendment has committed himself to helping move comprehensive legislation on this issue early in the 1st session of the 96th Congress.

Mr. BENTSEN. The manager of the bill has committed himself to hold hearings on this legislation and, dependent upon the outcome of those hearings, as to whether the committee votes for it and pushes the legislation. That is all that was committed. I do not doubt the seriousness of the problem as stated by the Senator from Nebraska. The record documents the potential community disruption by coal trains. As manager, I am prepared to accept the amendment for a study. We will hold hearings and it is subject to the outcome of those hearings as to what disposition we will make.

Mr. JACKSON. Will the Senator yield for a unanimous-consent request?

Mr. BENTSEN. Yes.

Mr. JACKSON. I ask unanimous consent that Larry Phillips and Denny Miller have the privileges of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GRAVEL. Madam President, I ask unanimous consent that Janet Iak, Richard Aks, and Bill Hoffman, of my staff, be granted the privileges of the floor.

The PRESIDING OFFICER. Without objection, is is so ordered.

Mr. CHAFEE. On behalf of the minority we are prepared to accept the study to go further into the problem that the Senator from Nebraska testified about before our committee, the problems he pointed to in his home State and the problem with these long coal hauling trains.

Mr. BENTSEN. The Senator from Nebraska has been very effective and persuasive in his presentation. I am prepared to accept the amendment and yield back the remainder of my time.

Mr. ZORINSKY. I thank the manager of the bill and the minority manager of the bill for their acceptance and their fine consideration. Hopefully, as the Senator from Texas indicated, the hearings will substantiate or validate my concerns with the proliferation of the increased hundred unit coal trains which currently are increasing on a daily basis from the coal fields in the western part of our country.

I yield back the remainder of my time.

Mr. ANDERSON. Madam President, I would like to join my distinguished colleague from Nebraska (Mr. ZORINSKY) in thanking the floor managers of S. 3073 for agreeing to our unprinted amendment, No. 1669. I am particularly pleased to have a public commitment to hold hearings next year to bring about legislation which will finally alleviate the rail/highway grade crossing conflict problems brought about by America's increased dependence on coal mined from the Western States and shipped to markets in the East.

It has been nearly a year since I first referred my colleagues to a growing transportation problem faced by communities in the Western United States. On September 7, 1977, during debate on Senator DURKIN's railroad rehabilitation amendment to the Coal Utilization Act, I warned that Congress must soon address itself to problems of incompatibility between highway traffic and rail traffic in rail corridors experiencing increased coal transportation between western mines and eastern consumers.

This problem may seem regional on its face. However, I have pushed for Federal legislation for nearly a year now because I believe it is the responsibility of the Nation as a whole to help solve the rail/highway grade crossing conflict problems. Madam President, a Federal solution is only equitable since the increase in coal traffic results from our efforts to meet skyrocketing domestic energy needs through significantly increasing consumption of western coal.

I believe the action we take today goes a long way toward recognizing that the Federal Government has a responsibility to protect residents of communities experiencing increased coal train traffic. Of the $350,000 authorized in our amendment, $150,000 is earmarked to fund a study in the rail corridor consisting of the Burlington Northern mainline from the west border of North Dakota to the cities of Minneapolis and St. Paul, Minn., and to the Minnesota/Wisconsin border near the Port of Superior.

This corridor contains the communities which make up the Rail Traffic Task Force, an organization devoted to evaluating how local communities can work together to solve the rail/highway grade crossing conflict problem. This evidence of local concern demonstrates a deep commitment to solving the problems presented. Moreover, Madam President, it is a credit to Burlington Northern Railroad that it has cooperated fully with members of the Rail Traffic Task Force to evaluate ways of alleviating the adverse impacts of increased coal traffic on the communities.

Now, with this study and the promise of hearings next year, the Rail Traffic Task Force will have the advantage of being in the forefront of communities eligible for Federal aid. Since the Minnesota and North Dakota highway departments and the Federal Departments of Energy and Transportation have all endorsed the proposed Rail Traffic Task Force study, we start on this endeavor

with the promise of full cooperation by all parties involved. Moreover, Madam President, weary taxpayers will take heart in the fact that a major emphasis of the proposed study is to determine the feasibility of low cost alternatives to grade separations and rail line relocations.

Finally, Madam President, I would like to share with my colleagues three letters from officials in communities in Minnesota which have experienced serious adverse impacts from the increased coal traffic. Each letter, written in support of our withdrawn amendment to S. 3073, No. 2233, cites the experiences of the respective communities as they face a future of increased coal production and transportation from the West.

I am confident that the steps we take today will lead to the solution of the rail/highway grade crossing conflict problems faced by these communities without impairing the financial security of the transporting railroads or the energy needs of coal-dependent America.

I ask unanimous consent that the texts of the letters from the mayors of St. Cloud and Moorhead, Minn., and from the city engineer of Sauk Rapids, Minn., be printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

CITY OF ST. CLOUD, MINN.,
July 27, 1978.

Hon. WENDELL R. ANDERSON,
U.S. Senate,
Russell Building,
Washington, D.C.

DEAR SENATOR ANDERSON: It has come to my attention that the Federal-Aid Highway Act of 1978, S3073, may be passed without any provision addressing the problems caused on local streets by the increased transport of coal. On a previous occasion, I provided some comments in regard to St. Cloud's auto/rail conflict problems. I would like to review these comments and add my thoughts on funding.

The City of St. Cloud initiated a study on the rail impact. The study identified that our rail traffic will increase from 25 thru trains per day in 1976 to 46 thru trains per day by the year 2000. This constitutes an 84 percent increase over a 24-year period. It should be noted that this does not include local switching activities. Most of the increase can be attributed to increased coal train traffic. For example, in 1976, there were approximatetly 2.5 coal trains per day traveling through St. Cloud and by 2000. based upon the best information available, we anticipate approximately 15 coal trains per day. These increases will cause a number of problems. They are:

(1) Frequent and prolonged delays to highway, street and sidewalk users. According to the study, there will be approximately a 42 percent increase in delay time at major crossings in the St. Cloud area by the year 2000.

(2) The safety of pedestrians and vehicle operators at grade crossings. The rate of accidents at the crossings, based upon the Minnesota Department of Transportation's Hazardous Rating System, will increase approximately 67 percent.

(3) Disruption of emergency vehicle service including ambulance, police and fire vehicles. The small communities along the rail line are greatly concerned because most of them do not have grade separation facilities. Bearing in mind that unit coal trains as well as many freight trains exceed 1¼ miles in length, grade crossings may be occupied for long periods of time. Based upon average speeds and lengths of trains, it takes at least two minutes for one unit coal train to clear a grade crossing. For fire and ambulance vehicles, a two-minute delay in response time can be critical.

(4) Environmental Degradation. In St. Cloud, noise levels along the rail corridor (East St. Cloud) exceed state standards. More specifically, residential noise standards established by the Minnesota Pollution Control Agency are currently being exceeded and will continue to be exceeded in the future.

(5) Impairment of Redevolpment Potential. This particular concern applies moreso to the St. Cloud and Fargo-Moorhead metropolitan areas. As you may be aware, both communities are extensively involved in redevelopment efforts. The disruptive nature of frequent and long train traffic through downtown areas has been a deterrent to attracting investments in the downtown areas.

Because of the rapid development of coal, we feel it is urgent that the Congress move expeditiously in establishing programs to assist impacted communities. I understand there is opposition to funding a program from the Highway Fund. Although it may not be the most appropriate source of funds for 100 percent funding, it certainly seems reasonable to include it as a funding source. Therefore, we support and urge your colleagues to support your Printed Amendment 2233.

Thank you for your concern and your efforts.

Sincerely,

AL G. LOEHR,
Chairman, Rail Traffic Task Force.

CITY OF MOORHEAD, MINN.,
July 25, 1978.

Senator WENDELL ANDERSON,
Russell Senate Office Building,
Washington, D.C.

DEAR SENATOR ANDERSON: The City of Moorhead is facing an ever increasing problem because of the increased rail traffic volume passing through the central business district. Once regarded as a blessing, the railroad tracks on the north and south side of the central business district are now strangling the vitality of the downtown by restricting access.

In the central business district of Moorhead there are 15 crossings within a ten block area for two existing, and near parallel, railroad tracks (only two blocks apart). According to the Minnesota Department of Transportation 5 of these crossings are among the top 30 crossing points in the State causing extreme exposure and delay. Four of the crossings are critical for access to the urban renewal area. The crossing on 8th Street South is regarded as one of the 10 worst crossings in Minnesota. This street is a major north/south arterial with an average daily traffic volume of 12,000. It is also the major connector to the interstate highway system.

The present rail traffic is 53 trains a day, consisting of 12 coal trains (Fargo Forum). In contrast with the coal train traffic volume of 11 trains weekly in 1970, this shows a 750% increase in seven years. Using the Burlington Northern growth rate projection of 10% annually for coal trains, the number of coal trains will double within 10 years with the overall number of trains reaching 65 per day (assuming no change in other rail traffic). If each train, depending on the speed, blocks the intersections 2–5 minutes, the result is a tie up of 2:10 hours to 5:25 hours daily. This amount of delay is devastating to the businesses and services in the central business district and will cause a total shifting of the retail and service functions to the outlying areas.

This community has recently completed a successful urban renewal project in which $30 million dollars was reinvested into the downtown from many levels of funding—private and public. Instead of experiencing the anticipated growth from the renewal plan, however, the City is watching its central business district slowly suffocate due in part by the restricted access caused by train traffic.

In the past few years the downtown has lost Moorhead's only hotel service. It has also been unsuccessful in attracting a major department store to the downtown. In addition, the Moorhead Center Mall containing some 20 retail stores has continued to have a constant turnover in businesses; and the Center Avenue Plaza, another retail complex, is in the process of dissolving as a retail center. This demonstrated inability to generate any sizable interest in the downtown can be attributed in part to the restricted access caused by the increased train traffic passing through our community.

It is our position that Moorhead and other communities, large and small, along the main coal routes are being adversely impacted as a direct result of national energy policies in regard to the mining of western coal. The Federal Government has the responsibility to aid such communities in addressing this growing rail problem. We heartily support your printed Amendment No. 2233 to the Federal-Aid Highway Act which will aid communities in solving their rail related problems along the main coal routes. Thank you for your support on this important issue.

Sincerely,

WAYNE INGERSOLL,
Mayor, City of Moorhead.

CITY OF SAUK RAPIDS, MINN.,
July 28, 1978.

Senator WENDELL ANDERSON,
Russell Senate Office Building,
Washington, D.C.

DEAR SENATOR ANDERSON: We wish to thank you for your involvement in the writing of the Federal Highway Act of 1978—especially as it relates to provisions for future funding of railroad-highway grade separations. As you know, we have had one fatality and many serious accidents at our two major crossings in town, and we have effectively been severed for purpose of fire, ambulance and commercial traffic, all due to increased coal and general rail traffic.

We encourage you to press for the adoption of your Printed Amendment No. 2233, a measure we feel is vital to the future well being of our community.

Sincerely,

MARK A. JOHNSON, P.E.,
City Engineer, City of Sauk Rapids.

Mr. BENTSEN. I yield back the remainder of my time.

Mr. CHAFEE. I yield back the remainder of my time.

The PRESIDING OFFICER (Mr. STONE). All time has been yielded back. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. ZORINSKY. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. CHAFEE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. CHAFEE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. CHAFEE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT 1670

Mr. CHAFEE. Mr. President, I send to the desk an unprinted amendment and ask that it be considered.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Rhode Island (Mr. CHAFEE) proposes unprinted amendment No. 1670.

NATIONAL TRANSPORTATION POLICY STUDY COMMISSION

Page 58, line 8, insert:

SEC. 146. Section 154(c) of the Federal-Aid Highway Act of 1976 is amended by striking out "December 31, 1978" and inserting in lieu thereof "July 1, 1979."

EXTENSION OF THE REPORTING DATE OF THE NATIONAL TRANSPORTATION POLICY STUDY COMMISSION

Mr. CHAFEE. Mr. President, as a member of the National Transportation Policy Study Commission, I offer this amendment today to extend the reporting date of the final report of the Commission from December 31, 1978, to July 1, 1979. This amendment has already been adopted in the House Public Works and Transportation Subcommittee.

As you are aware, Mr. President, and I am sure you are aware, the Transportation Commission was established by the 1976 Federal-Aid Highway Act and given the mandate of examining all modes of transportation, both domestic and international, and both passenger and freight, the final report is to contain recommendations to Congress and to the President on transportation policy that must be implemented to bring about a more responsive balanced transportation system through the year 2000. As you can readily tell, this is a job of great magnitude.

Unfortunately, because of start-up difficulties, the Commission completed hiring its top staff only in June of 1977. This means that the bulk of the study has only been underway for less than a year. Congress originally envisioned a 2-year study for this critical Commission, and I think it only appropriate that the reporting deadline be extended to allow the full 2-year time period. I wish to stress at this point that no new additional appropriations are anticipated to meet the 6-month extension.

I believe that we should provide the time needed by those of us on the commission to deliberate the alternative policy recommendations being developed.

That completes by statement. I move that the amendment be agreed to.

Mr. BENTSEN. Mr. President, I have discussed the amendment with the manager of the bill for the minority. It certainly appears to be a worthwhile contribution and a necessary one, the extension for 6 months to complete the study. I support it and yield back the remainder of my time.

Mr. CHAFEE. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

UP AMENDMENT NO. 1671

(Purpose: To amend the Federal Aid to Highways Act)

Mr. JACKSON. Mr. President, I call up my amendment which is at the desk.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Washington (Mr. JACKSON) proposes an unprinted amendment numbered 1671.

Mr. JACKSON. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 31, after line 6, insert the following:

(c) Clause (3) of subsection (c) of section 131 of title 23, United States Code, is amended by inserting immediately after "devices," the following "including those which may be changed at reasonable intervals by electronic process or by remote control,". (d) Subsection (j) of section 131 of title 23, United States Code, is amended by inserting immediately after "agreement" at the end of the first sentence, the following: "; provided that permission by a State to erect and maintain information displays which may be changed at reasonable intervals by electronic process or remote control and which provide public service information or advertise activities conducted on the property on which they are located shall not be considered a breach of such agreement or the control required thereunder.

Mr. JACKSON. Mr. President, the purpose of this amendment is to clarify the on-premise exemption under section 131 to accommodate improvements in sign technology. We need to update what is permissible under the Bonus Act agreements that many States entered into before this modern technology existed.

Current law permits signs visible from the highway if they describe activities being conducted on the premises. However, confusion in the interpretation of these Bonus Act agreements has resulted in extensive litigation, and differing interpretations between State highway departments as to the interpretation of these agreements has compounded the confusion.

Purely and simply, what this amendment will allow is the use of electronic signs on the premises of businesses adjacent to interstate highways. It does not extend beyond this as some have advocated to off premise commercial and industrially zoned properties. That is an entirely different matter.

The Federal Interstate Highway Systems now use these electronic information displays to communicate important highway safety information, such as warnings to the motoring public. They have proven to be of positive safety and public information benefit.

Mr. President, the second part of my amendment insures that States which permit the use of these modern information displays will not be penalized under the Bonus Act. By this subsection the Secretary of Transportation would take the necessary action to make the Bonus Act contracts comply with the purpose of the amendment.

Mr. STAFFORD. Mr. President, will the manager of the bill yield me some time?

Mr. BENTSEN. If I might just comment for a moment, then I will yield.

From what I have seen of the Senator's amendment, I think it is a clarification that will be helpful and deals with the on-premise signs.

I have great concern about the House version which would go off premise and would mandate it, in effect, instead of just a study of regulations.

Therefore, I hope the Senator from Vermont is going to deal with that particular question because, as I understand it, he shares the same concern.

Mr. STAFFORD. Mr. President, I do, indeed, share the same concern as the distinguished manager of the bill on the majority side, with respect to further electronic signs beyond those which might be under this amendment authorized onpremise for activities carried on premise.

Mr. BENTSEN. I yield such time as the Senator desires.

Mr. STAFFORD. Mr. President, I thank the manager of the bill for yielding me time, which I will not require at any great length.

I have examined the existing law and the amendment of the distinguished Senator from Washington (Mr. JACKSON).

Mr. President, I want to register my concern over any proliferation of these electronic signs off premise. My concern is that these signs, if sanctioned off premise, may be a threat to highway safety.

No one at this time can say with certainty that those signs are more hazardous than regular billboards.

We can say with assurance that an illuminated sign diverts the motorist's attention more than a nonilluminated one.

We also know that flashing signs are more distracting than illuminated ones.

And we have good evidence that 25 percent of automobile accidents involve distractions—by signs and other objects—as a principal cause.

As I understand the distinguished Senator's amendment it removes any Federal barrier only to electronic signs which provide public service information or advertise activities on the property on

which they are located. This does not change Federal regulations forbidding these signs in commercial or industrial areas, where the signs are not on-premise. Is that correct?

Mr. JACKSON. That is correct.

Mr. STAFFORD. Is it fair to say that permitting these signs only onpremise is as far as the Senator from Washington believes it advisable to go, given the lack of experience in judging the effect they may have on the traveling public?

Mr. JACKSON. I think that is a fair statement.

Mr. STAFFORD. Would the Senator agree that a good assessment of the effect of electronic signs on highway safety should be made before these signs are permitted to proliferate further?

Mr. JACKSON. I think that is imperative.

Mr. STAFFORD. I thank the Senator from Washington.

Mr. President, I say to the managers of the bill that, having long been deeply interested in the highway beautification program, I personally will not object to the acceptance of this amendment.

Mr. JACKSON. Mr. President, I thank the distinguished Senator from Vermont and the distinguished Senator from Texas who have been consulted in connection with this amendment. I think it will greatly clarify the existing law. I appreciate the cooperation. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. Is all time yielded back?

Mr. CHAFEE. No, not on this side.

The PRESIDING OFFICER. The Senator from Rhode Island.

Mr. CHAFEE. Mr. President, I am deeply interested in this whole subject, as is, of course, the Senator from Washington and the Senator from Vermont.

As we know, we originally got into a bonus system for the States willing to agree to more restrictive agreements 7 years prior to passage of the Highway Beautification Act. Those States are continuing to receive this bonus.

It seems to me we have got to be careful here to make certain that those States receiving the bonus are, indeed, putting some more extensive restrictions on themselves, or are adhering to more severe restrictions than are on the other States which are not entitled to the bonus.

To a degree, this amendment, it is true, is a question of interpretation. I understand that. But it seems to be chipping away a bit on the restrictions that are imposed in order to receive the bonus.

Now, it is a close call, and there are many who would maintain, and I find it hard to dispute, that these electronic signs were not the type that they were attempting to prohibit when the agreements were signed and the bonuses granted.

Mr. President, I am not going to object to this, on the part of the minority in connection with this bill I am not going to object, but I do think it behooves us on the committee to monitor this bonus provision which, I believe, gives an additional half of 1 percent of individual interstate apportionments to the different States that originally made this commitment around 1958. We must look to see if, indeed, they are doing anything more than States who are not getting the bonus.

The States getting the bonus are controlling on-premise signs, something not covered by the Highway Beautification Act, but if we keep chipping away at what the on-premise restrictions, I am not sure they should still be entitled to the bonus.

I am prepared to support the amendment and yield back the remainder of my time.

Mr. JACKSON. Mr. President, I thank the distinguished Senator from Rhode Island for his statement. I just say that at the time the original legislation was adopted, this technology was not known. It is now being used, however, by State highway departments for safety purposes. I am sure we have seen all those signs.

I feel very strongly, as both of my colleagues have expressed it here, Mr. President, that we should not extend the sign business in terms of what is now prohibited by law. It is only in connection with that interpretation that this amendment is offered.

Mr. CHAFEE. Mr. President, just one minute. I say that I certainly agree with the Senator from Washington. I think the colloquy the Senator from Vermont had is going to be very valuable when we go to the conference.

Mr. JACKSON. I agree, and I thank the Senator.

Mr. RANDOLPH. Mr. President, Senators BENTSEN, CHAFEE, and STAFFORD have discussed this amendment proposed by the knowledgeable Senator from Washington (Mr. JACKSON).

I do feel it is important to indicate for the record that no member of our Committee on Environment and Public Works has been closer to the continuing development of highway beautification than has the Senator from Vermont (Mr. STAFFORD).

He has brought to it a commitment and expertise which we all recognize.

After having studied the amendment, we feel it is equitable, it is valid, and can well be a part of this legislation.

So from the standpoint of the committee we are ready to accept the amendment.

The PRESIDING OFFICER. Is all time yielded back?

Mr. RANDOLPH. I yield back the remainder of my time.

Mr. JACKSON. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. JACKSON. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. STAFFORD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 1672

(Purpose: To provide authorizations for the priority primary program)

Mr. STEVENSON. Mr. President, I send an amendment to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Illinois (Mr. STEVENSON) proposes an unprinted amendment numbered 1672.

Mr. STEVENSON. Mr. President, I ask unanimous consent that reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 3, line 13, strike $1,475,000,000 and insert in lieu thereof, $1,600,000,000.

On page 8, after line 11, insert:

(3) In the case of priority routes, $125,000,000 per fiscal year of the sums authorized for each of the fiscal years ending September 30, 1979, and September 30, 1980 by subsection (a)(1) of this section for such routes shall not be apportioned. Such $125,000,000 of each such authorized sum shall be available for obligation on the date of apportionment of funds for each such fiscal year, in the same manner and to the same extent as the sums apportioned on such date, except that such $125,000,000 shall be available for obligation at the discretion of the Secretary of Transportation only for projects of unusually high cost or which require long periods of time for their construction. Any part of such $125,000,000 not obligated by such Secretary on or before the last day of the fiscal year for which authorized shall be immediately apportioned in the same manner as funds apportioned for the next succeeding fiscal year for such routes, and available for obligation of the same period as such apportionment.

Mr. STEVENSON. Mr. President, this amendment would add $125 million per year to the Federal-aid primary program. These funds would not be apportioned like ordinary primary program moneys. They would be available for obligation at the discretion of the Secretary of Transportation, but only for primary system projects of unusually high cost or which require unusually long periods of time for their construction. Because of the need to use regular primary program apportionments to maintain primary system routes, funds are not available to upgrade or add needed capacity to high-priority, heavily used primary system roads.

Consequently, the House bill contains $125 million for such a Federal aid primary program. The purpose of this amendment is to add to the Senate bill the same amount for the same purpose.

The amendment I am offering will help provide the States with the extra help they need to finance these needed highway projects. Two Illinois projects are good examples of the type of project that this amendment is designed to assist—the Rockford-Decatur expressway and the Chicago-Kansas City highway.

The Rockford-Decatur route runs for 156 miles through the center of Illinois. Because of the heavy traffic on this route, which will reach over 20,000 vehicles per day in the near future, the State of Illi-

nois is expanding the present inadequate two-lane road into a four lane divided highway. Discussion and study of this project have been going on for over 30 years. The State has invested over $55 million in State and Federal highway funds in this project to date. However, the remaining cost to complete the route is estimated to be between $360 to $415 million. At the current pace of construction, completion of the project is over 10 years away.

The project is important to Illinois. It provides the connection between Rockford and Decatur, the 2d and 5th largest cities in Illinois. It acts as a connecter for five existing interstate routes: I–90, I–80, I–35, I–74, and I–72. This route was included in every recommended Interstate System plan, since 1945, but was dropped from the plan that was finally adopted for cost reasons. If priority primary funding is made available in sufficient amounts, the completion time for this route could be cut by 50 percent, enabling the route to open to traffic by the mid-1980's.

Mr. President, the Chicago-Kansas City route is another example of the type of project that could be aided by priority primary funding. The proposed freeway has been under discussion for over 20 years; it was the subject of a special study mandated by the Federal-Aid Highway Act of 1973. In 1977, the Department of Defense called for upgrading the Chicago-Kansas City corridor as part of the Nation's Strategic Highway Corridor Network.

The segment of the route between Peoria and Quincy, a distance of 172 miles, is now served only by two-lane highways. These roads, are inadequate, due to deficient bridges, narrow pavement, and insufficient capacity. Construction of an upgraded four-lane highway for this segment is estimated to cost over $388 million, but unless priority primary funds can be made available, completion is many years away.

The problems caused by the inadequate highways in this area will continue to grow. The area served by this route is rich in agricultural and coal resources. The urban areas along the route, including Peoria, Macomb, and Quincy, are sites of numerous manufacturing firms. Employment in the region is expected to increase 27 percent by the year 2000. The existing highways are simply not adequate to meet the demand that will result from this growth, and if they are not upgraded, could actually impede attainment of the area's development potential.

The State of Illinois recognizes the importance of this route, and has begun construction, but because its primary system apportionment must be used almost exclusively for maintenance and rehabilitation work, completion of the road is not in sight. Priority primary funding is a necessity if the needed additional highway capacity is to be made available in the near future.

Mr. President, highways in Illinois, like highways across the Nation, are wearing out twice as fast as they are being maintained, which means that States must use more and more of their highway funds, including their Federal highway funds, for maintenance and rehabilitation projects. As a result, many States do not have the funds to add needed highway capacity to priority primary routes. My amendment would provide additional assistance designed to aid the States in financing the construction of these needed links. This assistance is necessary if the highway system is to meet future needs.

I hope, therefore, that the distinguished managers of the bill will look with some favor on this amendment.

Mr. RANDOLPH. Mr. President we, are gratified that the able Senator from Illinois (Mr. STEVENSON) has brought this matter to the attention of the Senate. We all are sympathetic with respect to the concerns he has expressed. We also are grateful for his understanding of the need for a commitment to the continuing repair and rehabilitation of our roads. For that reason, I would hope the amendment could be accepted.

However, in our committee we have decided, after careful consideration by many members, not to authorize additional funds for the priority primary program. This is because there are very severe demands placed on somewhat limited financial resources of the highway trust fund at the present time.

We know the importance to the State of Illinois of what the Senator is talking about.

Since what the Senator is discussing is actually in the House bill, we would take a second look at it in conference. I hope that would be a sufficient indication to the Senator, without his attempting at this point to press for action in this body on the amendment he has just discussed.

Mr. STEVENSON. Mr. President, the able managers of the bill have had a difficult task, and they have discharged it well.

I am grateful for those words by the distinguished chairman of the Committee on Environment and Public Works. The concerns which I expressed, and which the chairman has indicated he shares, are shared by many others. This is not a matter of concern to the State of Illinois alone.

I can understand that the distinguished Senator from West Virginia might desire to go to conference with the House with a good deal of flexibility. The House bill is excessive.

It contemplates expenditures that are far in excess of the revenues that will be received into the highway trust fund. I can recognize, therefore, that there is a need to compromise the differences between these two bills, and for that reason the distinguished Senator is reluctant to see additional large sums added to the Senate bill.

Mr. President, I ask unanimous consent that the name of the Senator from Florida (Mr. STONE) be added as a cosponsor of this amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

● Mr. STONE. Mr. President, I support this amendment offered by the senator from Illinois. U.S. 19 in the State of Florida is a primary road that would certainly qualify for this type of priority assistance. There are other such roads in Florida greatly in need of extra attention such as U.S. 41 and I hope that a reasonable compromise can be worked out in conference.

I associate myself in all respects with the remarks of the distinguished Senator from Illinois and his withdrawal of the amendment to facilitate the Senate position.●

Mr. STEVENSON. Mr. President, because I recognize the situatioi. and appreciate the indications by the Senator from West Virginia that this subject will receive additional and sympathetic consideration in the conference—and I am very grateful for that—I will not press this amendment. With those expressions by the distinguished Senator from West Virginia and with my gratitude to him, I withdraw the amendment.

The PRESIDING OFFICER. The amendment is withdrawn.

Mr. RANDOLPH. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. CANNON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CANNON. Mr. President, I ask unanimous consent that Aubrey Sarvis, Bill Johnson, Dan Jaffe, Tim Lynch, and Chip Barclay of the Commerce Committee staff, be accorded the privilege of the floor during consideration of the highway bill, S. 3073.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CANNON. Mr. President, the Senate Environment and Public Works Committee, due to its regulation of highway construction, and the Senate Commerce, Science, and Transportation Committee, due to its jurisdiction over highway safety, have joint jurisdiction over various aspects of the 55 miles per hour national maximum speed limit. As a reflection of this fact, there are identical provisions in the Fedreal Aid to Highways Act and the Highway Safety Act in regard to the development of State enforcement standards for the national maximum speed limit. In order to avoid duplication concerning these provisions, I will offer an amendment to delete the specific provisions in the Highway Safety Act concerning State enforcement standards for the 55 miles per hour speed limit. This action, however, will not alter these enforcement standards in any way. Also this amendment, of course, will not affect the Highway Safety Act's discretionary authorization of funding to assist

the States in carrying out their 55 miles per hour enforcement programs. The Commerce, Science, and Transportation Committee looks forward to continuing to work closely with the Senate Environment and Public Works Committee in regard to this issue.

Mr. President, I may say that it has been agreed that the Highway Safety Act will be offered as a separate title to S. 3073 once we have completed the title that is presently under consideration.

Mr. RANDOLPH. Mr. President, I very much appreciate this action by the distinguished chairman of the Senate Commerce, Science, and Transportation Committee. As the chairman has rightly stated, this amendment is strictly technical and will not affect the requirements of the enforcement provisions, as an identical provision is contained in title I of S. 3073. The Senate Environment and Public Works Committee intends to continue our close, effective, and cooperative relationship with the Commerce Committee in carrying out our joint jurisdiction relating to the standards for the national maximum speed limit.

Mr. President, I am sure that Senator CHAFEE and others who are managing the legislation will feel that in this instance we appreciate the action that the able chairman of the Commerce, Science, and Transportation Committee, Mr. CANNON, of Nevada, brings to our attention.

He has correctly stated this amendment will not affect the requirements of the enforcement provision. I think that it is important that the record so reflect his feeling. That provision, of course, is contained in title I of S. 3073.

Our committee intends to continue a very close and cooperative relationship with the Commerce Committee. We have joint jurisdiction, on the standards for the national maximum speed limit. I assure him that it is the feeling of the committee.

Mr. CANNON. I thank the chairman very much for his kind remarks. We have a close working relationship. I did want to get some clarification in the RECORD concerning the speed limit because I was afraid it might be misunderstood if we offered an amendment to remove these provisions from the highway safety portion of the bill because we do not intend to lessen the requirements under that 55-mile-per-hour speed limit as we think it has been useful from the highway safety standpoint. It has saved many lives throughout this country, and served to facilitate conservation of fuel.

I thank the chairman.

Mr. RANDOLPH. I thank the knowledgeable Senator who brings this matter to our attention.

Mr. CHAFEE. Mr. President, I join in expressing our appreciation on this side to the chairman of the Commerce, Science, and Transportation Committee for the cooperation and effort he has made to work these matters out.

I yield back any time I might have remaining.

I thank the Chair.

Mr. RANDOLPH. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Chair inquires of the distinguished Senator from West Virginia, on whose time?

Mr. RANDOLPH. I ask unanimous consent that it be equally divided.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 1673

(Purpose: Repeal of section 142(k) of title 23, U.S.C.)

Mr. KENNEDY. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The assistant legislative clerk read as follows:

The Senator from Massachusetts (Mr. KENNEDY) proposes an unprinted amendment numbered 1673.

Mr. KENNEDY. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 33, line 4, after "Sec. 127." insert "(a)".

On page 33, between lines 14 and 15 insert the following:

"(b) Subsection (k) of section 142 of title 23, United States Code, is repealed."

Mr. KENNEDY. Mr. President, first of all, I would like to thank the floor managers of the bill, the Senator from Texas (Mr. BENTSEN), and the Senator from Rhode Island (Mr. CHAFEE), and also Senators RANDOLPH and STAFFORD for the cooperation they and their staffs have given on a number of different issues during the consideration of this legislation and during the course of their own hearings and markup.

I have found them greatly responsive to a number of different questions we face, and I am enormously grateful for their help and assistance.

Later I will have an opportunity to have a brief dialog with my friend and colleague from Nevada on a different issue. I am grateful for his understanding and support.

Mr. President, this amendment, just very briefly, is an amendment with respect to section 142(k) of this legislation which says:

The Secretary of Transportation shall not approve an interstate transfer project when there has been enacted an urban transportation trust fund or similar assured funding for both highways and public transportation.

This amendment would delete this provision. The provision was added in conference the last time the highway authorization bill was approved, in 1973. It was not part of the House or Senate bills, and the effect of this provision on funding of transfer projects and urban transportation as a whole really has not been considered. It was not considered in 1973 nor was it considered this year.

It is unclear what might trigger this particular provision. The conference report in 1973, in referring to this particular section says:

In addition, the Secretary shall not approve any project for buses and rail facilities in any fiscal year when there has been enacted an urban transportation fund or similar assured funding for both highways and public transportation.

We really do not know what "assured funding" means. Proposals which assure money for mass transit might eliminate the interstate transfer. Section 142(k) cannot assure that funding would be adequate to the mass transit needs of the Nation; cannot assure us of the conditions which would attach to its use; cannot assure us that it would be distributed in a way which provides enough to replace the funds now available after a locally determined decision to move ahead with mass transit funded from an interstate transfer.

This may very well deter communities, from moving toward an interstate transfer when they feel that they want to meet their transportation needs by public transportation, such as improving a rail system.

And, we must remember what we are talking about are nonessential links of the highway system here, and in these situations we have tried to provide flexibility to the States and local communities to exercise their judgment.

Mr. President, the effect of such a termination could be enormous. It would surely prevent the transfer of funds from the interstate system to other uses. Currently, there are 185 miles of urban interstate not yet started. Four hundred and seventy-five are only in the preliminary stage. Of this 500 miles are potential transfers and this represents between $3 and $4 billion.

In addition, the language might prevent the use of already transferred funds which have not yet been obligated. This could wreak havoc—by stopping some project that an urban area is counting on, while the former interstate route may already have been turned over to other purposes. The conference report says that the Secretary shall not approve any project for buses and rail facilities when a trust fund has been set up—it does not just forbid the initial transfer. If this were the case many of the cities which have transferred funds which are not yet obligated might not be able to use them. These cities include Boston ($725 million); Philadelphia ($190 million); Maryland-D.C. suburbs ($75 million); District of Columbia ($130 million); Hartford, Conn. ($270 million); Portland, Oreg. ($200 million); Tucson, Ariz. ($40 million); Salem, Oreg. ($35 million); Albany, N.Y. ($35 million); Minneapolis ($70 million). This represents over $2.4 billion.

We should not eliminate the potential for transfers and perhaps prevent the obligation of funds already transferred, as an automatic consequence of some other fund being set up which might aid urban public transit when we do not know how much money might be allotted to that fund; when we do not know the conditions under which funds could be drawn; when we may confound the plans of a locality which has switched money or has applied to switch money for a particular purpose.

The concern I have and my colleagues have is with a trigger on interstate transfer caused by the establishment of a mass transit system. It may very well vitiate the planning and the programs of many States and local communities.

That is why the amendment is offered.

Mr. RIBICOFF. Mr. President, will the Senator yield?

Mr. KENNEDY. I yield.

Mr. RIBICOFF. I wish I could have the attention of the managers of this bill, because the Senator from Massachusetts (Mr. KENNEDY) makes a very important point, and I am not quite sure whether the managers realize the inequities involved.

Take my own State of Connecticut: There local and State authorities have decided not to go forward with $270 million in highway projects. That money is apportioned to Connecticut under the basic Federal aid highway law formula that divides money among all of the States. Instead of building highways that no longer serve our transportation needs, local and State authorities plan to use that money for public mass transit projects.

That is what Congress intended when it passed what is now section 142(c) of the Federal Aid Highways Act.

But that money which is apportioned to Connecticut and other States which have made similar transportation decisions could disappear under the authority granted to the Secretary of Transportation by section 142(k) of that same act. Should Congress at some point enact and fund a trust fund that provides money for both highways and mass transit, Connecticut and similarly situated States will lose money that has been lawfully and fairly apportioned for transportation.

For example, last year, the Senate approved the creation of an Energy Production Conservation and Conversion Trust Fund. That was our amendment. We passed it in the Finance Committee, and we passed it on the floor of the Senate. It is now in conference, and I do believe has the enthusiastic backing of the Senator from Texas. One of the major purposes of this trust fund was to assist in the development and construction of energy efficient forms of transportation. Currently, the most energy efficient form of transportation is mass transportation. The thrust and purpose of the energy production, conservation, and conversion trust fund would be substantially thwarted if, because of the existence of this trust fund, certain States were denied other Federal funds for mass transportation purposes.

We were very careful, in devising that amendment in the Senate Finance Committee, about reserving for the proper committee the authorization process, and also preserving the appropriation process. If we pass this energy trust fund measure, the Public Works Committee would determine how that trust fund would be allocated, and the Appropriations Committee would allocate the appropriation.

You could, then, make up your mind in the authorization process whether you were going to allocate part of the trust fund for States like Massachusetts, Connecticut, and other States which were using the funds under 142(c) for mass transit. It is completely within your jurisdiction. The Senator from Massachusetts is absolutely right, because we believe there is an oversight here, and there will be a complete penalty to our States, which I do not think was intended at all.

I believe if our States decide to use our highway funds for mass transit, they should be encouraged to do so, instead of our forcing them to go into the construction of highways which they believe will not solve their transportation needs.

So I hope the managers of the bill will accept the Kennedy proposal, and I ask unanimous consent to be a cosponsor of the Kennedy amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BENTSEN. Mr. President, I understand the concern of the Senator from Connecticut.

Senator KENNEDY is concerned that if a crude oil equalization tax is enacted into law, some sort of "energy efficient trust fund" might be established on the basis of COET revenues and would pose a threat to the successful transfer provisions provided by the committee.

My initial reaction to this concern is that it is by now generally conceded, openly by many and tactically by the administration, that there will be no crude oil equalization tax and, hence, no cause for concern on this score. If COET is somehow resurrected, the committee would have ample opportunity to deal with the problem.

Let me make some general observations on this amendment and how it developed. Senator KENNEDY played a big role in that I have noted on several occasions that we have made a conscious effort to build flexibility into the Federal-aid highway system; we have tried to be responsive to the requirements of urban areas. Senator KENNEDY's amendment is testimony to our success.

I guess we saw this in—was it 1974?

Mr. KENNEDY. 1973.

Mr. BENTSEN. 1973. I think we had 40 conferences with the House in trying to bring it about.

Let me say that this drive toward flexibility was not always easy or popular. We have to overcome substantial objections from people and businesses whose prosperity depends on a sound, stable transportation system. People who actually pay for the system through gas and other user charges and were concerned that revenues would be diverted to subsidize other, competitive transportation modes.

But we rose above this controversy and provided highway dollars for those with other transportation concerns like urban mass transit assistance. That was the big fight in 1973.

There has been no corresponding correlative legislation on mass transit. Even though cities get unneeded mass transit funds, it is not flexible; it does not go back to highways. Our cities do not have the flexibility to use transit funds for road constructions if the needs of a particular urban area justify such a shift in expenditures.

Mr. RIBICOFF. Mr. President, will the Senator yield at that point?

Mr. BENTSEN. I yield.

Mr. RIBICOFF. I think that the flexibility should go both ways, if the State authorities or local authorities make that choice. I would vote to support that.

But that is not the issue the Kennedy amendment presents at this time.

Mr. BENTSEN. I think unless you get that kind of flexibility, there is a concern by the people we finally got to go along with this that they will withdraw their support, and we will have some problems.

The original administration bill provided flexibility in both directions, from roads to transit and from transit to roads. We bought the concept, we provided greater flexibility. The transit people did not. Transfer has always been—and continues to be—a one-way street.

That is what we are up against.

Mr. KENNEDY. Mr. President, if the Senator will yield, our concern here is with transfers from nonessential aspects in the Interstate System, not that which obviously has a national importance to maintain the integrity of the interstate highway transportation system.

We want to provide maximum flexibility to States and localities under the legislation as it exists. The amendment seeks to protect those who make the decision to do an interstate transfer under this existing legislation. Where communities believe their transportation needs can be met by means other than highways and develop alternative programs, they should not lose their interstate resources or the right to propose and get a transfer if there is the establishment of a mass transit fund. That is our concern.

There is nothing in the language that would protect us. Some $2.4 billion has already been transferred, but not yet obligated. An additional $3 to $4 billion is eligible for transfer. I cannot see the establishment of a mass transit fund that would begin to provide those resources let alone meet the other mass transit needs of communities throughout this country. That is what we are concerned about.

Mr. CHAFEE. Mr. President, I wonder if I could yield a minute to the Senator from Wyoming (Mr. HANSEN).

Mr. KENNEDY. Mr. President, how much time do we have remaining?

The PRESIDING OFFICER (Mr. CHILES). The Senator from Massachusetts has 6 minutes remaining. The Senator from Texas has 11 minutes.

Mr. CHAFEE. Could I yield time on the bill to the Senator from Wyoming (Mr. HANSEN)?

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KENNEDY. I yield to the distinguished Senator from Maryland.

Mr. SARBANES. Mr. President, if I could have the attention of the manager of the bill, it seems to me that the problem that is in the bill, and the reason the amendment is a constructive one, is that there is a trigger mechanism which would jeopardize these interstate transfers, either to be done or maybe to be done but not yet obligated, unrelated to what might be contained in an urban transportation process.

I agree with the Senator from Connecticut about a two-way street and would be prepared to support that concept in a proper context.

But what has been done here is, in effect, to have established a trigger unrelated to the substance of the fund and its context that will endanger and jeopardize these transfers on which State and local communities have based their transportation planning. That is the difficulty with this. It has a retroactive impact upon it. That is why I think it really ought to be taken out of the law.

Mr. BENTSEN. Let us see if we can work this out. The concern in this fight was that it was a one-way street. The Senator from Connecticut and I have addressed ourselves to the problem that it ought to be a two-way street. Can we work out this language that if there is such a fund established and it provides for the two-way street, that this provision will not apply?

In trying to put this through finally, we have put together very diverse interests and it was a tough and bloody fight. I want to be able to hold this together if we can. Can we phrase this language—and I say this to the Senator from Connecticut and the Senator from Massachusetts—where this would be stricken, if comparable transferability is provided for transit?

Mr. KENNEDY. The only problem is that if we are talking about a two-way street, we have to talk about a two-way street for the whole program. We have spent 10 times as much on the Federal aid to highways on transit.

Mr. BENTSEN. Then we are getting into the user tax question.

Mr. KENNEDY. I know. But if the Senator accepts this now, we will be glad to work with the Senator. I think the importance is to leave it to the local communities and the States to make their judgments. We will work with the Senator on it in the future. We want to meet our particular problem.

Mr. DECONCINI. Will the Senator yield?

Mr. KENNEDY. I yield 3 minutes to the Senator.

Mr. DECONCINI. I support the distinguished Senator from Massachusetts with the amendment to eliminate this particular section. It could be very damaging and devastating to communities in my State. I daresay if a careful scrutiny was made of many States the option ought to remain available for exactly what the Senator from Massachusetts is proposing.

I would like to address a question to the Senator from Texas, unless he has given an explanation prior to my arriving.

How was section 142(k) enacted to begin with?

Mr. KENNEDY. Mr. President, I suggest the absence of a quorum without the time being charged to either side.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BENTSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BENTSEN. Mr. President, in discussing this with the Senator from Maryland, the Senator from Connecticut, the Senator from Massachusetts, and the Senator from Arizona, we are trying to achieve the same objective. I fought hard for this in the conference in 1973. Senator KENNEDY led the fight on the floor to try to get these funds used in urban areas. We have gone further than that. When cities give up part of the interstate we now allow that money to go into mass transit. The concern is that there also be given consideration for transfer of transit funds to be used by the local area to build roads, if they so want. I think we are all in agreement in trying to achieve that kind of an equitable treatment of these funds.

With that in mind, for the majority on the committee I will accept the amendment with the understanding that we will also work to bring that about.

Mr. RIBICOFF. Personally, I would like to pay my thanks to the distinguished Senator from Texas who always is able to see the implications of complex problems and act with a degree of statesmanship which takes the national interest into account. I find that working with him constantly. He can be assured, whether it is in the Finance Committee or on the floor, we will try to work this out to put into effect the agreement that we all have had during these last few minutes.

Mr. DECONCINI. I join in thanking the Senator from Texas for his consideration and great understanding of this particular problem.

Mr. HANSEN. Mr. President, I ask unanimous consent that excerpts from a letter written by Ed Crowell, senior vice president and general manager of Salt Creek Freightways, be printed in the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

SALT CREEK FREIGHTWAYS,
Casper, Wyo., July 18, 1978.

Hon. CLIFFORD P. HANSEN,
U.S. Senate,
New Senate Office Building, Washington, D.C.

DEAR CLIFF:

* * * * *

To give you some specifics in why I oppose any reduction in the length from 45 feet to 40 feet and also any reduction in lengths now established by the various states, Salt Creek Freightways, due to the distances traveled and the sparse population in the states of Wyoming, Montana and Idaho, has actively pursued methods through the legislatures and through our own equipment purchasing and handling over the past three years towards fuel conservation, increased productivity and a constant on-going safety program. The most productive method which we have so far been able to implement is the use of the 85 foot combination which is comprised of one 45 foot trailer with a trailing 27 foot trailer. We have had this combination in operation in Montana since October 1975 and in Wyoming since June of 1977 when it was authorized by the Wyoming 1977 General Session.

The period June 1977 through May 1978, Salt Creek operated this combination a total of 1,208,604 miles. Our data indicates that by combining the 27 foot trailer with the standard 45 foot unit, we estimate a fuel savings in the 12 month period of 143,881 gallons, for which Salt Creek has been cited as contributing to fuel conservation by the Governor's Committee on Energy Conservation. We also estimate an increase in productivity of somewhere between 40% and 50% in our over-the-road operation.

Since Wyoming observes the 80,000 pound federal interstate highway gross limitations, we have not been able to implement this unit in as many cases as we could have if we could operate on federal interstate highways with the same gross weight as we have been allowed since 1974 to operate on other than interstate highways in the state of Wyoming.

We also are, in some cases, limited to the utilization of this vehicle configuration by the demands of service and scheduling to the commercial communities of the state of Wyoming. However, considering the limitations of 80,000 pounds on the federal interstate highways, we still have been able to experience a very high ratio of fuel savings and increased productivity, both of these factors which have been main points of the federal government's administration as goals to be attained by industry. This is not only contributory to savings in fuel but acts as a definite depressant to any future rate increases aiding in cooling of the present inflationary spiral.

In relationship to any safety hazard that might be introduced by the use of multiple trailers as far as the present twin 27 foot combination which has been utilized by our company since the early 1960's, or the present twin combination of a 45 foot and a 27 foot, we have absolutely no evidence of a safety hazard. Since the full utilization of this combination on June 1, 1977 in both the states of Wyoming and Montana, Salt Creek has operated this 85 foot combination for the previously cited 1,208,604 miles completely accident free and as further information, when this increased length was proposed before the Wyoming legislature, one of our drivers, Ramon Greene, who operated this vehicle a considerable amount of time

in Montana, testified before the joint House-Senate Transportation Committee of the Wyoming Legislature that in his own personal opinion this was an extremely stable and safe combination.

* * * * *

I feel that traditionally the various states have been quite competent and effective in enforcing the length laws that are applicable to their particular region of the United States and that any federal intrusion would place, particularly the western states, in a position that they must conform to economic and populace conditions indicative of the east and not compatible with the western way of life.

Very truly yours,

ED CROWELL,
Senior Vice President and General Manager.

Mr. BENTSEN. With the understanding that the proponent of the amendment is yielding back the remainder of his time, I will yield back the remainder of mine.

Mr. KENNEDY. I yield back the remainder of my time.

The PRESIDING OFFICER. All time has been yielded back. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. KENNEDY. Mr. President, I do not think it is necessary, but I move to reconsider the vote by which the previous amendment was agreed to.

Mr. BENTSEN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

S. 3431

Mr. KENNEDY. Mr. President, I send an amendment to the desk and ask that it be considered.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk proceeded to ready the amendment.

Mr. KENNEDY. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KENNEDY. Mr. President, this legislation deals with truck length, which is an important safety issue for truckdrivers and indeed for all motorists. It is an issue which I have had the opportunity to talk about with the distinguished chairman of the Commerce Committee (Mr. CANNON). I have also exchanged views with the manager of the bill (Mr. BENTSEN).

The issue before us is an issue of safety. What we are concerned with is removing the economic incentive for truckers to have to choose increased profits—meaning longer trailers—over safety. This proposal would require the States to set lengths of trailers only, exclusive of overall length.

The increased truck weights Congress has allowed on the Interstate System has encouraged trucking companies to order larger trailers, and has fostered the development of dangerously foreshortened tractors with limited cab space. This weight increase took place in the years of the energy crisis, yet the States had limitations on the length of the trailer. In order to meet the length laws, truck manufacturers have had to significantly reduce tractor lengths and cab sizes to the point where, in many instances, they appear to pose potential threats to the safety of those who use the Interstate System. While some segments of the trucking industry dispute the evidence of this, I find it satisfactory and indeed persuasive.

If States still want to set overall length under this amendment, they can. However, those overall lengths must exceed by at least 15 feet the trailer lengths they set, to allow enough space for a comfortable and safe cab.

Congress must act, Mr. President, to alleviate this conflict between the increased weight allowances and State length laws. I know the Senator from Illinois (Mr. PERCY) has noticed a vast increase of traffic fatalities involving trucks—over a 20-percent increase since 1975. Many of the drivers strongly feel that this is due to the increased length of trailers combined with shorter tractors.

I know Senator CANNON has requested that the Committee on Commerce have a chance to consider this proposal. The Senator from Nevada and I had an opportunity to visit with truckdrivers and to see for ourselves the problems passed by the new truck and trailer designs. I know that he anticipates having a hearing on this and come back to Congress. I should like to elicit his ideas on this issue and see if we can reach a common understanding.

The PRESIDING OFFICER. Who yields time?

Mr. KENNEDY. I yield whatever time the Senator from Nevada needs.

Mr. CANNON. Mr. President, first, I want to take a moment to commend Senator KENNEDY for his interest in motor carrier safety and for focusing attention on the issues of motor carrier length laws and highway safety. I would also like to point out that the Commerce Committee, which has jurisdiction over highway safety, has been active over the years in the area of motor carrier safety. The committee has scheduled 2 days of hearings on motor carrier safety for the first week in September. Specifically, the question of vehicle length, both tractor/trailer combinations and individual trailers, will be the subject of a hearing on September 7.

There are a number of legitimate questions raised by Senator KENNEDY'S amendment concerning driver safety and comfort, State motor carrier length laws, motor carrier operating efficiencies, and various tractor/trailer configurations that should carefully be reviewed and evaluated during the September 7 hearing. Though it is my understanding that the amendment is intended to carefully balance a Federal safety standard with the historical role that individual States have played in setting tractor/trailer and trailer length standards, there are a number of questions concerning the impact the legislation will have on State length laws. It is my understanding that this proposal will allow States to concentrate their efforts in setting vehicle length standards to trailer size and to permit tractor size to be dictated solely by safety and driver comfort considerations.

It is my hope that Senator KENNEDY will introduce his proposal as a bill in order that the Commerce Committee may have the benefit of legislative language during the course of the September 7 hearing. I look forward to working with Senator KENNEDY on this issue during the course of the Commerce Committee's review and consideration of motor carrier length standards.

I hope he will not press this amendment now so that we can have the benefit of the hearings that are currently scheduled before legislating in this area.

Mr. KENNEDY. I thank the chairman of the committee and I look forward to working with him. I recognize completely both the jurisdiction and the long-time interest of the Senator from Nevada and the Commerce Committee in this issue. We want to cooperate and work with the committee in every possible way. What he suggests seems not only a satisfactory, but an appropriate way to proceed.

I want to thank the Senator from Texas as well for his interest.

Mr. President, I am, therefore, going to offer the language of this amendment in the form of a new bill, and I ask that it be appropriately referred as a bill.

(See S. 3431 under bills introduced.)

The PRESIDING OFFICER. The amendment is withdrawn and the bill is appropriately referred.

Mr. KENNEDY. I thank the floor manager and Senator CANNON.

Mr. BENTSEN. Mr. President, I commend the Senator from Massachusetts for his interest in transportation and safety. Our committee deals with highway safety. It addresses the width of trucks and the weight of trucks. I well understand the problem he is concerned with on the length of trucks. I have had some truckdrivers tell me that with these cabs over the motors, they now arrive at the accident first. I can understand their concern on that.

I am delighted to see that the chairman of the Committee on Commerce shares the concern and will be interested in the legislation.

Mr. CANNON. Mr. President, I commend Senator KENNEDY for his decision to introduce this as separate legislation. It will facilitate the consideration of this complex issue and I look forward to working with him on this proposal during the hearings before the Commerce Committee on September 7 and 8. We certainly will review and give full consideration to this very complex issue of motor carrier length. I am sure that we can come out with some legislation that will be reasonable, but we shall have the facts to support whatever legislation we come out with.

I thank the chairman of the subcommittee for his participation.

(Later the following proceedings occurred:)

Mr. BARTLETT. Mr. President, I rise in opposition to the amendment that was introduced by the Senator from Massachusetts (Mr. KENNEDY), and was taken down by Senator KENNEDY.

The PRESIDING OFFICER. Who yields time to the Senator from Oklahoma?

Mr. CHAFEE. Can we yield time on the bill?

The PRESIDING OFFICER. Yes.

Mr. CHAFEE. How long will the Senator require?

Mr. BARTLETT. Could I have 5 minutes?

Mr. CHAFEE. I yield the Senator 5 minutes from our side's time on the bill.

The PRESIDING OFFICER. The Senator from Oklahoma.

Mr. BARTLETT. Mr. President, I ask unanimous consent that these remarks be placed in the RECORD at the conclusion of the dialog on the amendment on trucks introduced by Senator KENNEDY.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BARTLETT. Mr. President, I rise in opposition to this amendment. My objection is not founded on the amendment's intent; surely none of us here are opposed to improving highway safety. My objection is rooted in the substance of the amendment itself. This amendment, which is being promoted as a safety measure, is no guarantee that highway safety would be improved by its adoption. The anticipated improvement in safety is only theoretical, as the manufacturers and the motor carriers would still be able to use whatever size cab they choose. If we pass this legislation, we are only assuming that the motor carriers would stop purchasing cab-over engine (COE) tractors except for limited use and the manufacturers would voluntarily slow down or cease production of the small COE power unit.

More importantly, this measure would force all but a handful of States to rewrite their existing laws on truck length limitations. The amendment stipulates that if a State does not comply by June 1, 1980, the Congress will withhold all of that State's Federal aid highway funds.

I believe that we should not be debating what we feel is best for the States. On a matter of commerce such as this, only a State legislature can accurately make this judgment. They are the ones who best know the capacities of their State's highway system and the subsequent needs of their constituents. By proposing this amendment the authors appear to be saying that the States do not care about improving highway safety, and they are not qualified to do so.

Mr. President, this issue should be left to the individual legislatures to determine what is best for their State.

This amendment will also greatly affect the future utilization of twin trailers. Only five States would not have to revise their statues in order to avoid the elimination of twin trailer usage. Of the 26 States which presently allow twin trailers, an average increase of 7 feet would be required in overall length limit. Should these States choose to comply with the proposed amendment by setting only trailer lengths, an average decrease of 7 feet would be necessary.

In my own State of Oklahoma, if we wish to protect the future use of twin trailers, we would have to either decrease our present trailer length to 57 feet or increase the overall length limit to at least 72 feet.

The twin trailer, according to a recent Supreme Court decision (S. Ct. (76–558)), is the safest of all trailers. Furthermore, this type of trailer is the most fuel efficient for nearly every type of cargo load. The Federal Energy Administration estimates that these trailers could save 30 percent in terms of vehicular trips and 21.4 percent in fuel consumption.

Mr. President, I ask unanimous consent that these and other pertinent statistics be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

FEDERAL ENERGY ADMINISTRATION,
Washington, D.C.

Hon. JAMES B. LONGLEY,
Governor of Maine,
Augusta, Maine.

DEAR GOVERNOR LONGLEY: As part of the Federal Energy Administration (FEA), the Office of Conservation and Environment has the primary goal of increasing the efficiency of energy utilization in the transportation sector of the economy. Priority issues include emphasis on cost-effective and maximum efficiency savings among the modes in the intercity freight market.

The Project Independence Report published in November 1974, by FEA, listed "liberalization of truck sizes and weights" as one of the possible fuel conservation options. The report stated, "For example, substituting twin trailers for conventional trailers could save 30 percent in terms of vehicular trips and 21.4 percent in fuel." More recently, in connection with the Federal Grant Program authorized by the Energy Policy and Conservation Act (EPCA) to implement State Energy Conservation Plans, the option of fuel saving through liberalization of truck sizes and weights has received further study. The Stanford Research Institute (SRI), evaluated the energy savings which could be achieved by expanded use of 65-foot twin trailer combinations. SRI concluded that more than 181 million gallons of fuel could be saved annually in the 19 States which now do not permit operation of these combinations. Fuel savings of 2.2 million gallons annually would be achieved in Maine.

Our conclusion is that such action in all of the States would be a positive step toward improved fuel efficiency in highway freight transportation. For this reason, FEA supports efforts in the States to secure nationwide operation of 65-foot twin trailer combinations as an effective means for conserving fuel.

Sincerely,

MARTIN E. SENECA, Jr.,
Acting Assistant Administrator, Conservation and Environment.

EXCERPTS FROM REPORT

Even more such specialization is expected in the future, a trend that militates against the establishment of arbitrary national fuel-use standards that would apply equally, for example, to the 55-foot moving van and the 55-foot dumptruck carrying crushed gravel. As the Post 1980 Goals Study determined, "attempts to standardize the national fleet about some 'average' could destroy the service evidenced today and result in greater national fuel consumption."

TWIN TRAILERS ARE FUEL SAVERS

Recent studies have shown that twin trailers, that is, tractors hauling two 26- to 28-foot trailers, with an overall length of 65 feet, are the most energy-efficient mode of freight transportation in common use. Twins have even made a better showing in fuel-use tests than "piggyback" trains—trailers on flat cars (TOFC)—widely touted as the ideal hybrid of road and rail transportation.

A 1975 study conducted for the U.S. Department of Transportation by Reebie Associates of Greenwich, Conn., found that twin trailers used less fuel than other modes of transportation in a test run between Portland, Oreg. and Los Angeles, Calif. comparing fuel consumed in loading, transfer, pickup and delivery as well as that used in traversing the 950-mile route.

Fully expecting to find the railroads to be more efficient than trucks, and an improved intermodal system using both trucks and trains to be better than either, the Reebie researchers were surprised at the results of their study—"piggyback" trains required 120 more gallons per 40-foot container equivalent than triple-trailers, and 80 more gallons per container than twins. Although regular rail carloads outperformed tractor-semitrailers by 10 gallons per container, twin and triple-trailers proved much more fuel-efficient than any rail operation.

Moreover, the authors reported:

"Part of the hypothesis for this study was that an improved intermodal system could have environmental advantages which would supplement whatever economic advantages were identified. Certainly, based on traditional comparisons of rail and truck fuel consumption, such advantages would seem self-evident. But close investigation revealed that the traditional analysis was insupportable in terms of a unit of delivered freight, as it is actually moved in this corridor. It was found, instead, that in comparing a hypothetical, improved intermodal operation with an efficient truck operation trucks use less fuel per unit of freight."

The study went on to present an even greater contrast between the fuel-efficiency of truck operations and the fuel use of railroads. "Almost 60 per cent of the truck fuel is used 'productively' in providing the energy to move the payload, assuming the same five percent empty equipment ratio as has been used elsewhere in this report. In contrast, only 34 per cent of the rail carload fuel, and only 24 per cent of the TOFC fuel, is used for the payload, while the rest is consumed in moving empty equipment, equipment tare (weight), and excess mileage."

Twin trailers' economies show up not only in comparisons with rail freight operations. Sixty-five-foot twin combinations carry one-third more freight than conventional 55-foot tractor-semitrailer combinations and it has been estimated that transferring light and bulky freight from semitrailer combinations to twins would reduce by 30 per cent the number of vehicle trips required to move a given amount of freight and would result in a 21.4 per cent fuel saving.

The use of 65-foot twin trailer combinations in the 30 states in which they are permitted has already saved the nation billions of gallons of fuel. The Stanford Research Institute estimates that changing the laws of the states in which twins are not now permitted would save more than 180 million gallons of diesel fuel each year in those 20 states alone. The fuel savings in the entire country would be vastly increased if those states allowed twin trailers because cross-country haulers would not have to bypass the states with shorter length limits or stop and reload into conventional trailers to pass through those states.

Recognizing the fuel economies that can be gained with twin trailers, officials of the Federal Highway Administration, Federal

Energy Administration, U.S. Agriculture Department and the American Association of State Highway and Transportation Officials, among others, have endorsed the use of 65-foot twins nationwide.

TABLE VIII.—POSSIBLE PERCENTAGE SAVINGS IN TRUCK TRIPS AND FUEL CONSUMED IN HAULING 1,000,000 TONS OF HIGHWAY FREIGHT IN VARIOUS TRUCK COMBINATIONS

	Percent of truck trips saved	Percent of fuel saved
Light and bulky freight:		
Substitute 45-ft for 40-ft semi-trailers	14.4	8.5
Substitute 65-ft twin trailers for 40-ft semitrailers:		
At old twin trailer weight limit	27.2	22.0
At new twin trailer weight limit	32.4	25.9
Substitute 65-ft twin trailers for 45-ft semitrailers:		
At old twin trailer weight limit	17.8	14.7
At new twin trailer weight limit	23.7	18.9
Dense freight:		
Substitute new for old weight limits:		
With 40-ft semitrailers	11.3	7.7
With 45-ft semitrailers	11.4	7.8
With 65-ft twin trailers	13.2	9.1
Substitute 65-ft twin trailers at new limit for—		
40-ft semitrailer at old limit	12.1	9.0
45-ft semitrailer at old limit	12.9	9.8

Legal or maximum practical	Old limit	New limit
Light and bulky freight:		
40-ft semitrailer	60,725	60,725
45-ft semitrailer	65,250	65,250
65-ft twin trailer	73,280	76,677
Dense freight:		
40-ft semitrailer	73,280	79,000
45-ft semitrailer	73,280	79,000
65-twin trailer	73,280	80,000

TABLE X.—FUEL SAVINGS POSSIBLE IN STATES NOT PERMITTING GROSS VEHICLE WEIGHT OF 80,000 LB OR TWIN TRAILERS

State	Possible gallons saved by— Increased weight	Use of twin trailers	Total
Alabama	0	12,100,000	12,100,000
Arkansas	1,300,000	0	1,300,000
Connecticut	2,200,000	7,900,000	10,100,000
Florida	0	19,400,000	19,400,000
Georgia	0	17,900,000	17,900,000
Illinois	5,800,000	0	5,800,000
Indiana	7,100,000	0	7,100,000
Iowa	4,400,000	0	4,400,000
Maine	0	2,600,000	2,600,000
Maryland	6,900,000	0	6,900,000
Massachusetts	0	6,600,000	6,600,000
Minnesota	[1] 2,300,000	0	2,300,000
Mississippi	2,600,000	6,800,000	9,400,000
Missouri	2,700,000	0	2,700,000
New Hampshire	0	1,100,000	1,100,000
New Jersey	0	9,700,000	9,700,000
New York	0	13,300,000	13,300,000
North Carolina	0	16,400,000	16,400,000
Pennsylvania	10,400,000	20,000,000	30,400,000
Rhode Island	0	2,900,000	2,900,000
South Carolina	0	7,400,000	7,400,000
Tennessee	6,900,000	14,900,000	21,800,000
Vermont	0	1,000,000	1,000,000
Virginia	0	12,300,000	12,300,000
West Virginia	0	2,500,000	2,500,000
Wisconsin	[1] 4,200,000	6,500,000	10,700,000
Total	56,800,000	181,300,000	238,100,000

[1] 80,000 lb effective January 1978.

Source: Based on energy savings stated in Btu's in a 1976 Stanford Research study for the Federal Energy Administration and converted to gallons at the rate of 136,000 Btu's per gallon of diesel fuel. Revised, August 1977.

Mr. BARTLETT. Finally, Mr. President, this amendment represents a needless duplication of efforts. There is presently a comprehensive study being conducted by the Bureau of Motor Carrier Safety on truck length limitations with respect to safety. The results of this study can be expected later in the year.

In addition, there is a proviso in the Federal Aid Highway Act of 1978 in section 122(b)(1)(a) which authorizes the Secretary of Transportation "to study and investigate the need for, and desirability of uniformity in maximum truck size and weight limits throughout the United States."

Mr. President, this measure, though meritorious in its intent, represents a hasty solution to an as yet undefined problem. I recognize the need to continue to improve upon highway safety, but I recommend to the Senate that we defer action on this measure or any of a similar context until these studies have been completed and the results carefully analyzed.

Thank you, Mr. President.

Mr. CHAFEE. Mr. President, I would like to say that I agree with the points the Senator was making. There are certain things around here which should be left to the States. Everything does not have to be determined by big brother, the Federal Government. However, this is going to the Commerce Committee and they are going to look at it. I agree with the Senator from Oklahoma, that this is something the Federal Government should not be involved in. I hope it will not go any further.

(Conclusion of later proceedings.)

UP AMENDMENT NO. 1674

(Purpose: To permit certain use of the Dulles Airport Access Highway)

Mr. HARRY F. BYRD, JR. Mr. President, I send an amendment to the desk and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Virginia (Mr. HARRY F. BYRD, JR.) proposes an unprinted amendment numbered 1674.

On page 36, line 7, after the period, insert the following:

Notwithstanding any other provision of law, the Secretary of Transportation shall permit carpools and vanpools (as defined by the Secretary) to enter and leave the Dulles Airport Access Highway during rush hours using those entrances, exits and ramps which are in existence on the date of enactment of this Act.

Mr. HARRY F. BYRD, JR. Mr. President, the amendment that I am offering today would require the Secretary of Transportation to permit carpools to use the Dulles Airport access road during rush hours.

The Dulles access road is within the boundaries of the airport, and access to the road is controlled by the Federal Aviation Administration. The 1973 amendments to the Federal Aid Highway Act authorized funds for a demonstration program to improve mass transit service between Washington and Dulles Airport.

The Metropolitan Washington Council of Governments conducted a study to determine the elements of the demonstration program. Although the primary objective of the study was to analyze ways to improve accessibility of the airport, a secondary objective was to study the potential for improving commuter travel in the corridor between the airport and Washington.

The study has been completed, and on the subject of improving commuter travel, the study recommends to the council of governments a demonstration program permitting carpool vehicles use of the Dulles access road during the peak commuter periods in both the peak and off-peak direction. My amendment would faciliate implementation of the recommendation of the Dulles Airport access study for commuter travel, and is similar to language included in H.R. 11733, as reported by the House Public Works Committee.

Mr. President, I yield to the Senator from Nevada.

Mr. CANNON. Mr. President, I must reluctantly, at this time, oppose the distinguished Senator from Virginia's amendment. While the concept of the amendment is commendatory, this issue must be reviewed more carefully before we act.

A number of potential problems, which may or may not materialize, must be examined, including police powers and traffic enforcement; commuter traffic "turn-arounds" in the terminal area; and of course potential traffic versus the road capacity. I am aware that one study, conducted by the Metropolitan Council of Governments, was published only 2 months ago and is currently under review by the Department of Transportation.

I may say, that study was authorized in 1973 and has only just 2 months ago been referred to the Department of Transportation for review.

I have also been informed that DOT has a task force independently reviewing the issue of opening the access road to commuters.

Therefore, to be certain that we do not act to the disservice of commuters and passengers, I would suggest a revision to the Senator's amendment. If Senator BYRD will modify his amendment to require that DOT complete the agency examination and provide the Senate with a Department recommendation, within 90 days after enactment, I would support such an amendment. I assure my colleague from Virginia that the Aviation Subcommittee will consider this matter as soon as all the facts we need to make a decision are provided.

I am, myself, very sympathetic, completely sympathetic, toward what he is trying to achieve, but I do not want to see the solution of one problem create six more, at the same time, without having the necessary facts to support it.

So we have contacted DOT and they have suggested they will have their independent study ready within 6 months.

But I am willing to see it written into the law here, that they come to us with the results of their study and report their recommendations within 90 days, so that we can get at this matter in an expeditious fashion and try to act as rapidly as we can.

Mr. HARRY F. BYRD, JR. I think it is very important that this matter be handled as expeditiously as possible. The Dulles limited access road is underutilized. I hope that it will be possible that carpools will be permitted to use that road.

I can understand the viewpoint of the Senator from Nevada that, since there

have been no congressional hearings on this matter, there could be points that would need to be considered before opening that road to commuter traffic.

The Senator from Nevada indicated that he would express no opposition to writing into law that the Department of Transportation must act quickly in bringing the facts to the appropriate Senate committees. While I would prefer that the Senate go ahead with the amendment I originally introduced, in view of the observations made by the Senator from Nevada, I will modify my proposal. Probably it would be the most expeditious way to resolve the problem.

I think it would be unfortunate to enact legislation and then later find that, after the commuters began to use the road, there were elements involved that had not been anticipated and have to shut the commuter traffic off.

So for that reason, and acting on the assurances given by the able Senator from Nevada (Mr. CANNON) that his committee will move expeditiously to attempt to resolve this problem with which he is sympathetic, I send to the desk a modification and ask that it be stated.

The PRESIDING OFFICER. The clerk will state the modification.

The assistant legislative clerk read as follows:

On page 36, line 7, after the period, insert the following:

The Secretary of Transportation shall, within 90 days after enactment of this Act, complete its ongoing study of commuter access to the Dulles Airport Access Highway, and report its findings and recommendations to the appropriate committees of Congress.

The PRESIDING OFFICER. The Senator from Virginia modifies his amendment.

Is there further discussion?

Mr. BENTSEN. Mr. President, with the understanding of the colloquy the manager of the bill heard between the chairman of the Commerce Committee and the Senator from Virginia for the study to be made, the manager of the bill is prepared to accept the amendment.

The PRESIDING OFFICER. Is all time yielded back?

Mr. BENTSEN. Yes.

Mr. HARRY F. BYRD, JR. Yes.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Virginia, as modified.

So the amendment (UP No. 1674), as modified, was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. KENNEDY. Mr. President, I ask unanimous consent that Mr. Parker be granted privilege of the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 1675

(Purpose: To amend the discretionary bridge program)

Mr. ROTH. Mr. President, I call up my unprinted amendment.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Delaware (Mr. ROTH) proposes unprinted amendment numbered 1675.

Mr. ROTH. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 53, between lines 15 and 16, insert the following:

(e) Notwithstanding the preceding provisions of this section, the Secretary, in making available the amounts authorized under this section, shall give priority to any otherwise eligible project in any State where:

(A) the State allocation of funds under the special bridge replacement and rehabilitation program of section 144 of title 23, United States Code, for the fiscal year in which project approval is requested does not exceed two-tenths of one per centum of the aggregate sum of the amounts authorized to be appropriated in the same fiscal year for the said special bridge replacement and rehabilitation program; and

(B) the total project cost for such project is an amount in excess of the product of the amount of such allocation for such year multiplied by five, but in no case in excess of $8,000,000.

The PRESIDING OFFICER. Is this the amendment on which the Senator from Delaware has a 1-hour time agreement?

Mr. ROTH. Yes, that is correct, But I do not expect it will take that long, Mr. President.

Mr. President, I have spoken to the distinguished chairman and ranking member concerning my amendment, and I appreciate the interest they have shown and the cooperation they have given in responding to the needs of States such as Delaware.

I am especially interested in how this legislation affects my own home State of Delaware. The $50 million discretionary bridge program established by section 140 of this bill addresses the needs of these States to be able to fund high-cost bridge projects which cannot be funded in a reasonable time under the regular bridge program.

However, Mr. President, the States with the smallest annual allocations under the regular bridge program, such as Delaware, are in a real bind when it comes to funding bridge replacement projects. The annual allocations of these small States are so small and so miniscule under the regular bridge program, that in no way can they even accumulate enough funds in a reasonable time to undertake moderate-cost projects, much less the large-scale projects contemplated by section 140 as now drafted.

For example, Delaware's annual allocation in fiscal 1978 was $216,481, or only 0.12 percent of the total $180 million available under the regular bridge program.

Under this formula as carried through in the bill now before us, Delaware would be unable to complete a moderate-cost, $5 million bridge replacement project in less than 9 years.

Mr. President, my amendment, simply stated, would require the Secretary of Transportation in making funds available under the discretionary bridge program to give priority to those otherwise eligible projects whose total project cost would exhaust at least 5 years of a State's annual allocations under the regular bridge program, but whose cost in no case would exceed $8 million. In addition, only projects in those States whose annual allocations under the regular bridge program do not exceed two-tenths of 1 percent of the total funds available annually nationwide would be eligible.

The $8 million ceiling placed on projects given priority under my amendment insures that the needs of States such as Delaware to be able to fund moderate-cost but high-traffic volume bridge projects over a reasonable period of time will not outweigh the needs of other States for larger projects whose costs exceed $8 million. For example, the Secretary of Transportation could fund a $5 million bridge project over a period of 2 years—$2.5 million each year—under the discretionary bridge program without significantly depleting the total $50 million available annually nationwide under the program.

Mr. President, I use the example of a $5 million bridge because my home State of Delaware and its half a million citizens are in just the bind I have spoken of over the replacement of a high-traffic-volume bridge of similar cost. The 93-year-old Augustine Bridge over the Brandywine River in Wilmington, Del. was closed to all traffic as unsafe on May 24, 1978, on the unanimous recommendation of structural engineers from the State of Delaware, the Federal Highway Administration, and Lehigh University.

The bridge, built by the B. & O. Railroad in 1885 and converted to public highway use in 1920, is nearly 1,000 feet long and 110 feet above the water, and carries average weekday traffic of 17,000 vehicles on a principal arterial route through the heart of the metropolitan commercial center of Wilmington, Del., the largest city in my home State. Mr. President, I ask unanimous consent that a description of Augustine Bridge prepared by bridge engineer R. C. McDowell in May 1978 be placed in the RECORD at this point in my remarks.

The Federal Highway Administration has given the Augustine Bridge the maximum sufficiency rating possible on its list of bridges with highest priority for replacement under the special bridge replacement program. The FHWA in 1977 estimated the replacement cost of the Augustine Bridge at $4 million. Now, after inflation, design costs, and the costs of complying with environmental and historic preservation requirements are factored in, Delaware officials advise me replacing the bridge will cost $5 million.

There is the rub, Mr. President—$5 million to replace a high-traffic-volume bridge of critical importance to the commercial and economic well-being of a metropolitan area of half a million people—in a State whose total annual allocation under the regular bridge program was only $216,000 in 1978 and will be only $631,000 under this legislation.

I believe the committee has intended the discretionary bridge program they have wisely added to this year's highway

bill to cover the needs of large States similar to the needs of small States which the Augustine Bridge exemplifies. I believe my amendment is fiscally sound and reinforces the priorities the Environment and Public Works Committee places on bridge replacement under this bill.

In closing my remarks, I would like to address a question to the distinguished Senator from Texas in connection with the Discretionary Bridge Program:

Is it not true that the Augustine Bridge as I have described it is the type of bridge the committee has in mind for eligibility under the Discretionary Bridge Program in section 140(a) of this bill, as an example of "high traffic volume bridges located on the non-interstate primary system which traverse major bodies of water"?

Mr. BENTSEN. That is correct. The Senator from Delware is correct in stating that that is the type of bridge the committee had in mind.

Mr. ROTH. I appreciate that answer, and I appreciate the interest that the members of the committee have taken in my problem.

At this time, I yield the floor.

Mr. STAFFORD. Mr. President, will the Senator from Delaware yield for a question or two?

Mr. ROTH. I am happy to yield.

Mr. STAFFORD. It is my understanding that this amendment at the present time, under current circumstances, will affect only the States of Alaska, Delaware, Hawaii, and Nevada. Am I correct in that understanding?

Mr. ROTH. The Senator is correct.

Mr. STAFFORD. Is there a cap of $8 million on any single bridge project that might be authorized under the Senator's amendment?

Mr. ROTH. Yes, there is a cap of $8 million on any project that would be considered.

Mr. STAFFORD. I thank the Senator for his responses.

The PRESIDING OFFICER. Who yields time?

Mr. BENTSEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BENTSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BENTSEN. Mr. President, we are prepared to accept the amendment offered by the Senator from Delaware.

The PRESIDING OFFICER. Is all time yielded back?

Mr. ROTH. I yield back the remainder of my time.

Mr. BENTSEN. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. ROTH. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. BENTSEN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROTH. Mr. President, I thank the distinguished Senator from Texas as well as the distinguished chairman of the committee, the Senator from West Virginia (Mr. RANDOLPH), and Senator STAFFORD for their consideration and acceptance of my amendment.

The PRESIDING OFFICER. The bill is open to further amendment.

AMENDMENT NO. 3507

Mr. RANDOLPH. Mr. President, I call up amendment No. 3507.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from West Virginia (Mr. RANDOLPH), for himself and Mr. HUDDLESTON, Mr. MCGOVERN, Mr. BAYH, Mr. GRAVEL, Mr. FORD, Mr. MELCHER, Mr. PAUL G. HATFIELD, and Mr. HEINZ, proposes an amendment numbered 3507.

Mr. RANDOLPH. Mr. President, I ask unanimous consent that reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 58, line 8, insert the following:

ENERGY IMPACT ROAD REHABILITATION PROGRAM

SEC. 145. (a) Chapter 1 of title 23, United States Code, is amended by adding at the end thereof the following new section:

"§ 157. Energy impact road rehabilitation program

"(a) A Governor with the concurrence of the Secretary of Transportation may designate an area or areas within his jurisdiction as an energy impact road area if the Governor finds that—

"(1) there is an existing energy resource development involving exploration, mining, or production of energy supplies;

"(2) a substantial amount of the energy produced in such development will not be consumed in the designated area;

"(3) without assistance under this provision there will be an immediate or long-range deterioration in the physical condition and safety of Federal-aid primary and secondary roads within the designated area.

The Governor shall consider any request or petition for such designation by elected officials of local governments in an affected area. The Secretary of Transportation may refuse to concur in any designation only where the Secretary finds that a requirement of this subsection is not satisfied.

"(b) The Secretary of Transportation may approve as a project on the Federal-aid primary or Federal-aid secondary system roads the repair of routes which have incurred a substantial increase in use and subsequent deterioration as a result of the transportation of coal, uranium, oil, and gas resources and related resource recovery and exploration equipment to meet national energy requirements and will continue to be used for such transportation. To be eligible for assistance under this section, projects shall be designed to enable such routes to accommodate the maximum vehicle weight allowed thereon by State law where appropriate and to permit subsequent maintenance at reasonable cost.

"(c) For the purpose of subsection (a) of this section, there is authorized to be appropriated, out of the Highway Trust Fund, not to exceed $100,000,000 for each of the fiscal years ending September 30, 1979 and September 30, 1980. Such funds shall be apportioned to the States in accordance with a fair and equitable formula developed by the Secretary including, but not limited to, the respective mileage of such routes, number of miles traveled by vehicles transporting energy resources and related equipment, and total production of energy supplies.

"(d) All of the provisions of this chapter applicable to the Federal-aid secondary system shall apply to projects approved under subsection (a) for this section, except provisions relating to the apportionment formula and provisions limiting expenditure of funds to routes located on such Federal-aid system. The Federal share payable on account of any such project shall not exceed 70 per centum of the cost thereof.

"(e) Each agreement executed for a project approved under subsection (a) of this section pursuant to section 110 of this title shall provide for State enforcement of applicable vehicle weight limitation to the satisfaction of the Secretary in accordance with section 141 of title 23, United States Code.".

(b) The analysis of chapter 1 of title 23 of the United States Code is amended by adding at the end thereof the following:

"157. Energy impact road rehabilitation program.".

Mr. STAFFORD. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. RANDOLPH. I yield.

Mr. STAFFORD. Mr. President, I ask unanimous consent that Malcolm Sterrett, Cindy Douglass, and Ronald Johnson of the Commerce Committee minority staff be granted the privilege of the floor during the debate and votes on S. 3073, the Federal aid to highways bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. RANDOLPH. Mr. President, the able Senator from Kentucky (Mr. HUDDLESTON) is unable to be present today. But in his absence and with his understanding, I wish to offer an amendment, of which I am a cosponsor, which will have his further attention on Monday, when we return to the completion of the pending measure. This proposal would establish an energy impact road rehabilitation program.

Too often in past years, in formulating or attempting to formulate a national policy on energy, we have tended to neglect the crucial question of how our energy resources are to be transported from the area of production to the areas of consumption.

This problem has been studied extensively. Section 153 of the Federal-Aid Highway Act of 1976 required the Secretary of Transportation to report to the Congress by May of 1977 on the need for special Federal assistance for construction or reconstruction of on-system highways necessary to promote the solution of the Nation's energy problems. This long-delayed report, entitled "Highway Needs To Solve Energy Problems," arrived only this week.

Yet another Department of Transportation study was released in January of this year. That study, entitled "Transporting the Nation's Coal—A Preliminary Assessment," recommended that. and I quote:

Immediate consideration be given to the establishment of a coal roads and highways program to assure that near-term highway transportation problems will not seriously hamper coal production.

While the Congress has awaited these studies, the road and highway networks in those areas where energy resources are produced or extracted have continued to deteriorate. The increased volume of energy-related traffic on roads not designed for such traffic together with often lax enforcement of State vehicle weight limitation laws are responsible for this deterioration. The time for action is now.

The magnitude of need in this area is staggering. The effort to meet the projected increase in energy production, primarily in coal, as called for in the President's energy plan, will place unprecedented demands on our highway system. For example, our State of West Virginia, with its vast coal reserves, has the energy producing potential of the equivalent of 246 billion barrels of oil.

In fact, in the Appalachian region of 13 States, eight of those States produce about 64 percent of all the coal that is mined in this country.

For some 6 or 7 weeks we have had a shutdown of the Norfolk & Western Railway, perhaps, with one other rail carrier, the most important carrier of coal in the United States of America. Very few people know that that coal is not moving over the rail system. That is another reason why we must think in terms of the mobility of energy products, notably coal, over not rail but over the highway network.

The amendment we offer today is specifically designed to address these problems of roadway reconstruction. It is entirely consistent with the emphasis of S. 3073 on highway rehabilitation and repair. While it is true that we must protect the massive Federal investment in our Nation's roads and highways, this notion applies with even greater force when those roads and highways are vital links in meeting our national energy needs. Delay on this issue can only result in the creation of serious bottlenecks in energy deliveries to the Nation's consumers.

I note that the able Senator from Florida (Mr. CHILES) is in the chair. In connection with the conversion of powerplants from natural gas and petroleum to the use of coal, I point out that in his State is located the Florida Power & Light Co.

Mr. STONE. Mr. President, will the Senator yield for a unanimous consent request?

Mr. RANDOLPH. I yield.

Mr. STONE. I thank the distinguished Senator from West Virginia.

Mr. President, I ask unanimous consent that Bruce Rowen of my staff, be accorded the privilege of the floor during debate and votes on this bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STONE. I thank the Senator.

Mr. RANDOLPH. That one utility, the Florida Power & Light Co. is committing $3.3 million annually for the purchase of coal for the generation of electricity. It is this very increase in the demand for coal which necessitates the adoption of the measure before us.

Our amendment, the amendment of Senator HUDDLESTON, myself, and others empowers a State Governor, with the concurrence of the Secretary of Transportation, to designate as an energy impact road area those regions where there is ongoing energy resource development which will result in a substantial amount of energy being transported to consumers outside the area, provided that without assistance under this program, immediate or long-range deterioration in the area's primary and secondary system roads would result. Eligibility for assistance would be restricted to projects located on these Federal-aid systems, and assistance would be provided for 70 percent of project cost.

I believe, along with many of my colleagues, that if a State is not required to finance a significant portion of project cost, frivolous projects may result. The ratio of 70 to 30 addresses this concern.

An even stronger assurance of responsibility is provided by the requirement that the State commit itself to enforce applicable vehicle weight limitations to the satisfaction of the Secretary. Without that commitment, the requirement that projects be designed to enable routes to accommodate the heaviest traffic allowed by State law and to permit subsequent maintenance at reasonable cost would be meaningless. Further, this State commitment to enforce vehicle weight limitations to the Secretary's satisfaction is consistent with the amendment to section 141 of title 23, United States Code, contained in section 126 of S. 3073.

Finally, the amendment authorizes $100 million for each of fiscal years 1979 and 1980. At a time when the revenues available to the highway trust fund are limited, we must carefully examine the need for substantial increases in authorization for existing programs as well as for significant authorizations for new programs.

I submit that the need for this new program has been firmly established. The most recent Department of Transportation study, "Highway Needs To Solve Energy Problems," cites a $4.1 billion backlog in energy related highway needs. This figure is exclusive of the normally accruing needs through 1985, the period of the greatest projected increase in coal production. The study recommends that in the short term these needs be addressed by the Federal-aid highway program, especially for those roads on the primary and secondary systems.

(Mr. SASSER assumed the chair.)

Mr. RANDOLPH. It is clear that the need for this program is thoroughly documented and well-established, as is the need for a significant increase in funding provided for the special bridge program in S. 3073.

While I have supported the effort to restrict highway spending to responsible levels, as the able Senator from Texas has continued to emphasize, I think there are some matters that are important to the Nation and to our people, and this justifies increased expenditures in some categories.

So let us not forget the people of the energy-producing regions. It is those men, women, and children who inhabit these regions, who have their livelihood there, whose children are educated there and who, as good citizens, take part in the community life of the area.

With the energy consumers at the other end, away from the production line, everyone in this country will benefit. These energy-impacted roads are their lifeline to the rest of the world.

When the Middle East embargo came with a shocking impact in 1973, it was not something that took months and months to have its impact dawn upon the consciousness of the American people. They found almost overnight that the flow of petroleum in the form of gasoline was not available for the cars they used to go to and from their work.

So often we are acting in this country after the fact rather than before, not anticipating what we need to do ahead of time.

I have said this before, and I repeat, we have spent $12.5 billion of taxpayers' money in this country merely to store petroleum as a partial hedge against another Middle East embargo. Had we worked before the fact and realized the independence which we could achieve in this country through synthetic fuels, we might have avoided a serious fuel shortage.

These roads of which I speak carry not only coal but other industrial goods to and from these regions.

These roads are in an almost shocking, a tragic state of disrepair. This is something that I cannot overemphasize as I conclude these remarks.

Mr. EAGLETON. Mr. President——

The PRESIDING OFFICER. Who yields time?

Mr. EAGLETON. Mr. President, I have an amendment.

The PRESIDING OFFICER. There is an amendment pending.

Mr. BENTSEN. Mr. President, I ask unanimous consent that the pending amendment be temporarily put aside, and that the Senator from Missouri may proceed with his amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 1676

(Purpose: To allow the Secretary to reallocate funds not expended)

Mr. EAGLETON. Mr. President, for myself and Senator DANFORTH, I send to the desk an unprinted amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Missouri (Mr. EAGLETON), for himself and Mr. DANFORTH, proposes an unprinted amendment numbered 1676.

Mr. EAGLETON. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 22, line 19, insert the following: "(a)" after "SEC. 118." and by adding on page 23, after line 16 the following:

(b) Section 118(b) of title 23 is further amended by adding after the first sentence the following:

The Secretary at any time thereafter may make available sums apportioned under sec-

tion 104(b)(6) and not obligated within the time period preserved by the proceeding sentence to any other state applying for such funds for the Urban System, if the Secretary determines that the applicant is willing and able to (1) obligate the funds within one year of the date the funds are made available; (2) apply them to a ready-to-commence project; and (3) for construction work, begin work within ninety days of obligation. Any funds allocated pursuant to the preceding sentence and not used by a State in accordance with the requirements of this subsection shall be available for relocation by the Secretary in accordance with the preceding sentence.

Mr. EAGLETON. Mr. President, the purpose of this amendment is to give the Secretary of Transportation authority to reallocate unused urban highway moneys. It would create a discretionary power similar to that which the Secretary already has with regard to interstate highway moneys.

According to the Federal Highway Administration, more than $27 million in Federal-aid urban system funds are about to lapse and be lost to the program simply because States and communities to which they were allocated under formula grant were unable to obligate them. Under present law, those moneys would be returned to the trust fund. Under my amendment the Secretary would be able to make those funds available to communities further along in their urban highway programs.

In my own State of Missouri, there is a significant backlog of urban highway projects owing to the lack of Federal funds. The Kansas City, Mo., area has estimated that it has over $13 million worth of priority urban projects which have had to be deferred because of insufficient Federal support. Similar situations exist in the St. Louis area and I am sure a great number of other urban areas throughout the country.

Given the need that exists, it makes no sense to have unused urban highway money sent back to the Treasury. The Secretary ought to have flexibility to reprogram this money, and that is all my amendment does. It simply gives him a tool to carry out a rational plan for meeting urban highway needs.

Mr. President, I have talked with the distinguished floor manager about this amendment. I am grateful to the committee for their help in drafting it. I am hopeful that it may be accepted.

Mr. BENTSEN. Mr. President, as manager for the majority, I have no objection to the amendment. I defer to the manager for the minority for his comments.

Mr. CHAFEE. Mr. President, on behalf of the minority, we concur in the amendment. I think it is a good one, and we give it our support.

Mr. EAGLETON. Mr. President, I thank my colleagues, the Senator from Texas and the Senator from Rhode Island.

Mr. BENTSEN. Mr. President, I yield back the remainder of my time, subject to the proponent yielding his.

Mr. EAGLETON. I yield back the remainder of my time.

The PRESIDING OFFICER. All remaining time having been yielded back, the question is on agreeing to the amendment (UP No. 1676) of the Senator from Missouri.

The amendment was agreed to.

Mr. BENTSEN. Mr. President, I ask unanimous consent that Mr. Mike Harvey of the staff of the Committee on Energy and Natural Resources be given the privilege of the floor during the debate today.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CHAFEE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. BENTSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 1677

(Purpose: To clarify policies relating to the accommodation of utilities on highway rights-of-way)

Mr. BENTSEN. Mr. President, I send to the desk an amendment on behalf of Senators HUMPHREY and ANDERSON, and I ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Texas (Mr. BENTSEN) proposes and unprinted amendment, on behalf of Mrs. HUMPHREY and Mr. ANDERSON, numbered 1677.

Mr. BENTSEN. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, the amendment offered by the Senator from West Virginia will continue to be set aside.

Without objection, further reading of the amendment is dispensed with.

The amendment is as follows:

At the end of the bill insert a new section as follows:

UTILITIES ON RIGHTS-OF-WAY

SEC. 146. Section 109 of title 23, United States Code, is amended by adding at the end thereof the following new subsection:

"(l)(1) In determining whether any right-of-way on any Federal-aid system should be used for accommodating any utility facility, the Secretary shall—

"(A) evaluate the direct and indirect environmental and economic effects of any loss of productive agricultural land or any impairment of the productivity of any agricultural land which would result from the disapproval of the use of such right-of-way for the accommodation of such utility facility; and

"(B) consider such environmental and economic effects together with any interference with or impairment of the use of the highway in such right-of-way which would result from the use of such right-of-way for the accommodation of such utility facility.

"(2) For the purpose of this subsection—

"(A) the term 'utility facility' means any privately, publicly, or cooperatively owned line, facility, or system for producing, transmitting, or distributing communications, power, electricity, light, heat, gas, oil, crude products, water, steam, waste, storm water not connected with highway drainage, or any other similar commodity, including any fire or police signal system or street lighting system, which directly or indirectly serves the public; and

"(B) the term 'right-of-way' means any real property, or interest therein, acquired, dedicated, or reserved for the construction, operation, and maintenance of a highway.".

Mr. BENTSEN. Mr. President, this amendment which I am offering on behalf of Senator HUMPHREY and Senator ANDERSON simply clarifies Federal policies relating to the accommodation of utilities on Federal-aid highway rights-of-way.

Mr. President, American agriculture is the economic backbone of our Nation. The toil of our farmers and the productivity of our farms has to a large extent made our great bounty possible.

Therefore, Mr. President, whenever Federal policies interfere with our farm community's ability to provide for our citizens, the policies ought to be closely examined. A case in point is the Federal policy of discouraging accommodation of utility facilities, such as powerlines, along Federal-aid highways. There are good reasons for the present policy. Safety, environmental, and esthetic considerations all play a part in the current policy. However, as a result of the policy, the only alternative often available to persons responsible for planning the siting of utility powerlines is to use productive farmland.

This amendment would help remedy this situation by allowing the Secretary of Transportation to weigh the detrimental effect on productive agricultural land likely to result if utility facilities are not sited along a Federal-aid highway right-of-way. The bill does nothing to impair the Secretary's consideration of other factors relating to highway accommodation of utility facilities such as issues relating to safety and traffic flow. Rather, the intent and effect is merely to give Federal highway officials the legislative authority to consider the interests of the farmer and the impairment of his ability to provide for us all, if his land, and not the highway rights-of-way, is used to site utility facilities.

Mr. President, the necessity of constructing future powerplants and future powerlines is a fact of life for energy consuming America. Even if the most optimistic conservation forecasts come true, our energy demands will continue to grow. If Congress does not act to give the Federal Highway Administration some leeway in the accommodation of utility facilities along Federal highway rights-of-way, more and more productive agricultural land will be lost and the farmers' ability to produce that all-important energy source, food, will be increasingly impaired.

Mr. President, this amendment will be a useful addition to Federal policy and I urge my colleagues to give it their support.

Mr. President, the manager for the majority believes this amendment will be helpful and I am prepared to accept the amendment.

Mr. CHAFEE. Mr. President, this amendment is a good one. On behalf of

the minority we, too, will accept it. I yield back any remaining time.

Mr. BENTSEN. I yield back the remainder of my time and urge adoption of the amendment.

The PRESIDING OFFICER. All time has been yielded back. The question is on agreeing to the amendment.

The amendment was agreed to.

UP AMENDMENT NO. 1678

(Purpose: To permit a State or local government to use its Federal-aid funds, except funds for the Interstate System, to study a privately-owned toll bridge as necessary to determine whether the facility should be acquired by a public body)

Mr. DANFORTH. Mr. President, I send an amendment to the desk and ask for it immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The second assistant legislative clerk read as follows:

The Senator from Missouri (Mr. DANFORTH), for himself and Mr. EAGLETON, proposes an unprinted amendment numbered 1678.

On page 29 after line 19 insert the following new section and renumber the succeeding sections accordingly:

TOLL BRIDGES

SEC. 123. Section 129 of title 23, United States Code, is amended by adding a new subsection (i) as follows:

"(i) Notwithstanding section 301 of this title, the Secretary may permit Federal participation, through funds for any Federal-aid system other than the Interstate System, in any engineering and fiscal assessments, traffic analyses, network studies, preliminary modification planning, and any other study necessary to determine whether a privately owned toll bridge should be acquired by a state or political subdivision thereof."

Mr. DANFORTH. Mr. President, the purpose of this amendment is to permit a State or local government to use its Federal aid funds, except funds for the Interstate System, to study a privately owned toll bridge as necessary to determine whether the facility should be acquired by a public body. This amendment is offered on behalf of myself and Senator EAGLETON. It concerns a serious traffic problem which currently exists on the Mississippi River bridges in the St. Louis area between the State of Missouri and the State of Illinois. Various units of government are considering the possible rehabilitation of Eads Bridge, which is a very old toll bridge over the Mississippi, to help alleviate this problem.

Such rehabilitation would be very costly, yet under a provision of existing law Federal highway funds are not available for this purpose unless the bridge is publicly owned. Eads Bridge is owned by the Terminal Railroad Association, a private company. Therefore, before Federal funds could be available, Eads Bridge would have to be purchased by a public entity. No purchase will take place, however, unless an engineering study is conducted as to the feasibility of Eads' rehabilitation.

An engineering study of Eads would also be expensive. Therefore, the local governments need the financial help of Federal highway funds. Unfortunately under the same provision of law already referred to, Federal funds are not available for engineering studies of toll bridges unless the toll bridges are publicly owned.

At the present time, Poplar Street Bridge carries most of the traffic between the city of St. Louis and Illinois.

Poplar Street Bridge is a multilane, toll-free structure opened in 1967. Poplar serves as a Mississippi River crossing for three interstate highways.

Traffic on Poplar has already exceeded projections for 1990. On the other hand, four other bridges on the St. Louis waterfront are underutilized. They include: Eads, McKinley, Douglas MacArthur, and Martin Luther King. Tolls are charged on Eads, McKinley and King. None of the four bridges is currently part of the Federal-aid system.

St. Louis groups have sought Federal funds for a series of studies—and I am told they are very expensive studies—to determine if and how any of the existing underutilized structures could be used to relieve Poplar by attracting local traffic.

Existing Federal law provides that Federal money is available for bridge rehabilitation and related engineering studies only in the form of aid for one of the Federal-aid highway systems. The bridge replacement program provides money only for replacement, not rehabilitation. The new highway legislation would remove that limitation, but because the four St. Louis area bridges are not State-owned, there is no guarantee that money would actually be made available by Missouri or Illinois. A more certain source, therefore, is the apportionment for the Federal-aid urban system.

As I have already stated, with respect to one of the bridges, Eads, there is in current law an obstacle to Federal aid. 23 U.S.C. 129, 301 require as a condition of Federal aid with respect to toll bridges that such bridges be publicly owned.

My amendment would permit a State or local government to use its Federal-aid funds, other than for the Interstate System, to study a privately owned toll bridge as necessary to determine whether the facility should be acquired by a public entity. No money would be available for repair or replacement of such privately owned facility.

Although my reason for offering this amendment is related to a particular problem in St. Louis, the amendment is drafted generally because I believe that St. Louis cannot be the only area where a privately owned bridge that is inadequately maintained might be of significant value to such area if acquired by a public entity and then rehabilitated. Before a State or local government can decide whether or not to acquire a privately owned bridge, expensive engineering studies will often be necessary. I believe Federal-aid funds should be available for such purposes.

I believe my amendment is acceptable to the distinguished floor managers of the bill.

The PRESIDING OFFICER. Who yields time?

Mr. CHAFEE. Mr. President, the Senator has how much time on his amendment, evenly divided?

The PRESIDING OFFICER. Thirty minutes, evenly divided.

Mr. CHAFEE. I shall take the time on the other side, if I might.

Mr. President, this amendment by the Senator from Missouri seems to me to be a fine amendment. As I understand it, the Secretary must give his permission before such funds can be used for a study of a nonpublic bridge; that is, for a privately owned toll bridge.

Mr. DANFORTH. That is correct.

Mr. CHAFEE. Furthermore, the funds that would be used by the State of Missouri in this instance would come out of the funds that the State of Missouri has already received from the Federal Government. In other words, this is not extra money?

Mr. DANFORTH. It is not extra money, that is correct.

Mr. CHAFEE. That is my understanding of it.

Certainly, we have no objection on this side to the amendment, Mr. President.

Mr. BENTSEN. Mr. President, I have examined the amendment and discussed it with staff and with the Senator from Missouri. It appears to be a meritorius amendment. I am pleased to accept it on behalf of the majority.

I yield back the remainder of my time, subject to the proponent's yielding back his.

Mr. EAGLETON. Mr. President, I support Senator DANFORTH's amendment providing for a St. Louis bridge acquisition study.

In St. Louis, we have a very critical problem with Mississippi River crossings. One bridge, the Poplar Street Bridge, carries traffic for four interstate highways, two U.S. routes, and the bulk of local traffic between downtown St. Louis and Illinois. The bridge has exceeded its design capacity, and an alternate structure is needed.

There are four currently existing bridges in the area which could be better utilized. Local jurisdictions, in cooperation with the Missouri and Illinois highway departments, have funded a $22,000 network study to determine how traffic patterns can be altered to better utilize these bridges. There is a good possibility that a feasible plan will be developed; however, one of the bridges that could well be the best alternative, the historic Eads Bridge, is ineligible for Federal urban system funds because it is owned privately. The other bridges under review would be eligible under existing law, provided that certain agreements are entered into to retire the tolls, for further Federal study money. This amendment would simply permit Federal funds to be used to determine if it is in the public interest to acquire the Eads Bridge. I urge approval of Senator DANFORTH's amendment.

Mr. DANFORTH. I yield back any time I have.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment.

The amendment was agreed to.

UP AMENDMENT NO. 1679

(Purpose: To relieve States of the obligation to repay monies disbursed for withdrawn Interstate Highway routes)

Mr. JAVITS. Mr. President, I send an amendment to the desk for myself and Mr. MOYNIHAN and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from New York (Mr. JAVITS) for himself and Mr. MOYNIHAN proposes unprinted amendment numbered 1679.

On page 12, strike lines 6 through 10, and insert in lieu thereof:

(3) Strike out the last sentence of such paragraph and insert in lieu thereof the following: "After the date of enactment of this sentence the Secretary may not redesignate any mileage as part of the Interstate System as a consequence of any withdrawal made pursuant to this paragraph.

On page 11, line 2, insert (a) after Sec. 107 and on page 12 between lines 10 and 11 insert the following new subsection:

(b) Section 103(e) of title 23, United States Code, is amended as follows:

(1) Redesignate paragraph (5) as paragraph (6); and

(2) Insert after paragraph (4) the following new paragraph:

"(5) Notwithstanding any other provision of law—

"(A) Upon the withdrawal of approval of any route or portion thereof on the Interstate System under this section, a State, subject to the approval of the Secretary, shall not be required to refund to the Highway Trust Fund any sums paid to the State for intangible cost.

"(B) refund will not be required for the costs of rights-of-way or construction and materials, provided that the obligation to pay the costs of such construction and materials has been incurred prior to the enactment of this paragraph, of the withdrawn route or portion of the Interstate System which will be or have been applied (i) to a transportation project permissible under this title, (ii) to a public conservation or public recreation purpose, or (iii) to such other purpose as may be determined by the Secretary to be in the public interest: *Provided*, That the State shall make assurances satisfactory to the Secretary that such construction items or materials or rights-of-way have been or will be so applied by the State or any political subdivision thereof to a project under clause (i), (ii), or (iii) within 10 years from the date of the withdrawal of approval; and

"(C) sums due the State from the Highway Trust Fund which the State has paid or is legally obligated or otherwise committed to pay on the date of the withdrawal of the approval and which are attributable to such nonrefundable cost items shall be paid promptly to the State upon the enactment of this paragraph or the incurrence of such costs, whichever last occurs.".

(3) The amendment made by paragraphs (1) and (2) of this subsection shall apply to any withdrawal of approval before, on, or after the date of the enactment of this subsection.

Mr. JAVITS. Mr. President, this amendment would relieve the States of the responsibility or repaying funds paid from the trust fund for interstate highways where the property has been withdrawn from construction and the State proposes to use the land in question for another public purpose, such as parks or housing or the supplies and equipment for another public project, subject, under the criteria of the amendment, to the discretion of the Secretary.

The amendment has also been revised after consulting with the professional staff of the committee to provide that, as to materials—let me read that proviso, because I think it is very important:

provided that the obligation to pay the costs of such construction and materials has been incurred prior to the enactment of this paragraph.

And so on.

Mr. President, we have a letter from the Secretary of the Interior which was addressed to a similar amendment to be made in the other body by Congressman WYCHE FOWLER, which approves of this effort. I think it makes a point which is critical and which I hope will commend the amendment to the managers of the bill. I read from this letter, which is dated August 9 and addressed to Brock Adams, the Secretary of Transportation. It reads as follows:

As you may know, the Department of the Interior completed its National Urban Recreation Study earlier this year. Mr. Fowler's amendment and your recent policy directive provide an opportunity to directly respond to some of the recommendations of this study. As pointed out in the study, the greatest urban recreation deficiencies for land and facilities exist in the inner cores of the Nation's largest cities. It is precisely in these areas that the abandoned interstate segments lie. Implementation of these provisions would permit the transfer of these properties to other Federal agencies, States, and localities at no cost. To attempt to duplicate a similar effort through land acquisition today would be prohibitive due to the costs involved.

It seems to me, Mr. President, that that gives a very strong endorsement to and rationale for the amendment which is proposed by Senator MOYNIHAN and myself.

My amendment would add little cost to the Federal Treasury for, with few exceptions, the moneys have already been disbursed from the trust fund. The additional cost is small when compared to the benefits to be derived from utilization of lands for worthy public projects.

The Department of Transportation recently proposed regulations to implement such a program. However, the statutory basis for such regulations is vague. It is for that reason that we have offered the amendment, in order to deal with the possibility that legal challenges could tie up the program indefinitely rather than facilitate it by working in concert with the administration to achieve this important goal.

I hope very much, Mr. President, that the managers of the bill may find this amendment acceptable in its redrafted form.

Mr. BENTSEN. I think there is merit in the proposal of the Senator from New York. I would like to ask him a few questions to clarify the way in which the amendment would operate.

First, as I understand it, the Secretary of Transportation is given the authority to disapprove a request from a State for waiver of the refund. He would disapprove the request if the proposed use of the property was not for a transportation project or project he determined to be in the public interest. In any event, if the State sold the property, the Federal Government would recoup the same percentage share of the proceeds as the share it provided for acquisition of the property. Is this correct?

Mr. JAVITS. That is correct.

Mr. BENTSEN. The Secretary of Transportation has proposed regulations on the use and disposition of property in cases such as your amendment addresses. The proposals prohibit the Secretary from approving reuse of property where State laws have not been observed or where the property will be used as part of the State or local matching share for a Federal program. Do you agree these limitations on reuse are appropriate?

Mr. JAVITS. Yes.

Mr. BENTSEN. Do you agree that a State should assure the Secretary that all Federal requirements for the relocation assistance will be observed in the reuse of the property?

Mr. JAVITS. I certainly do.

Mr. BENTSEN. I note that your amendment applies to withdrawals already made and to those which may be approved after enactment. Is it correct to say that your proposal will not affect any case in which a State has already made a refund to the Federal Government?

Mr. JAVITS. I do not intend my amendment to reopen previously closed projects and would answer that the Senator's interpretation is correct.

Mr. BENTSEN. In addition to that, there is some question about the authority of the Secretary to issue the regulations, and this would buttress the authority.

Mr. JAVITS. Exactly. It would make it clear that that is what we want.

Mr. BENTSEN. The manager of the bill for the majority has no objection and will be willing to accept it in behalf of the majority.

I defer to the manager for the minority.

Mr. CHAFEE. Mr. President, on originally looking at this, one gets the impression that it is using Federal funds for purposes other than highways, of which the Federal Government has paid 90 percent, then the local community or the State has changed its mind and the Federal Government has lost its 90 percent. However, when one takes the next step and sees that under this measure, the land which has been condemned or the construction that has taken place can only be used for very limited purposes; namely, for a transportation project or for a public conservation or public recreation purpose or such other purposes as may be determined by the Secretary to be within the public interest, it does seem that it is in the best interest of the Nation to do this.

In other words, I do not think we ought to encourage States to plunge ahead with highway programs when, indeed, they do not want them and they are not necessary and they might have substituted mass transit, or some other form of transportation, in lieu thereof.

So I think it is a good amendment. I commend the Senator from New York for bringing it up. I certainly support it.

Mr. JAVITS. I thank my colleague.

Mr. President, I yield back the remainder of my time.

Mr. BENTSEN. I yield back the remainder of my time and suggest adoption of the amendment.

The PRESIDING OFFICER. All time has been yielded back. The ques-

tion is on agreeing to the amendment of the Senator from New York.

So the amendment (UP No. 1679) was agreed to.

Mr. JAVITS. Mr. President, I wish to thank the managers of the bill very much.

The PRESIDING OFFICER. Who yields time?

Mr. GRAVEL. I am prepared to go ahead with some of my amendments if the managers of the bill will accommodate me.

UP AMENDMENT NO. 1680

(Purpose: To authorize for a five-year period the transportation within the State of Alaska of passengers and merchandise in foreign-built hovercraft)

Mr. GRAVEL. Mr. President, I send to the desk an unprinted amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Alaska (Mr. GRAVEL) proposes unprinted amendment numbered 1680.

Mr. GRAVEL. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered. The amendment is as follows:

At the end of the bill insert a new section as follows:

SEC. 146. (a) Effective during the five year period beginning on the date of enactment of this Act, nothing in section 27 of the Merchant Marine Act, 1920, or any other provision of law restricting the coastwise trade to vessels of the United States shall prohibit the transportation within the State of Alaska of merchandise or passengers by foreign built hovercraft.

(b) For the purpose of this section the term "hovercraft" means a vehicle which travels over land or water on a cushion of air generated by such vehicle.

Mr. GRAVEL. Mr. President, I am offering an amendment which authorizes the use of foreign-built hovercraft within the State of Alaska for the purpose of transporting passengers or merchandise.

A hovercraft is an extremely unique vehicle of which most U.S. citizens are unfamiliar. It was invented in Britain, and the technology has mainly been developed there. The vehicle can travel over land, water, and even ice and is supported by a cushion of air trapped beneath the vehicle through the use of a flexible skirt. The usual means of propulsion is through an air propeller, powered by a gas or turbine engine.

Hovercraft are especially well suited to Alaskan terrain. They can span ice-clogged rivers, marshlands, and delicate tundra with only a minimum of ecological damage. No friction is established with the surface over which they are traveling since the vehicle rides on a cushion of air.

The all-weather capability of hovercraft also makes it especially appealing to my State. So many areas of Alaska are inaccessible by the usual modes of transportation for a large part of the year due to the harsh climate. The hovercraft is not slowed down when the rivers are frozen over in winter. They are unaffected by the storms and wind which can ground air traffic. For this reason, Alaska hopes to be able to employ them in a search-and-rescue capacity when such emergencies arise. While other vehicles are grounded, the hovercraft can be in full operation.

Since 1886, transportation of passengers in foreign vessels between points in the United States has been forbidden. In 1920, foreign-built vessels were prohibited from engaging in the carriage of merchandise between U.S. points. These provisions, commonly referred to as the Jones Act, were enacted for the protection of the U.S. shipbuilding industry and maritime trade. Currently hovercraft are subject to the requirements, although a domestic hovercraft industry has not yet developed.

In 1969, the Treasury Department issued a ruling classifying hovercraft as "vessels" when operating over water. Thus, hovercraft are subject to the Jones Act. However, until a U.S. market is demonstrated, a domestic industry will never be realized. For this reason, I am requesting a 5-year waiver from the Jones Act for the use of foreign-built hovercraft in Alaska. The State legislature has already appropriated funds for a hovercraft demonstration project, of which the main purpose is to determine the economic viability of such craft. One million dollars was also set aside under the urban mass transportation administration's fiscal year 1979 authorization for the program.

Hovercraft, also known as air-cushion vehicles, are actually more closely tied to aerospace technology than to the maritime industry. They are powered by aviation equipment and built to aviation standards. Aircraft manufacturers, such as Boeing and Bell Aerospace, have been involved with development of the technology. Hovercraft actually serve to complement shipping when used for lighterage purposes. They can reach inland areas where boats cannot travel and are best suited for short-range high-speed transport. Hovercraft are not very adaptable to the high winds of the open seas and prefer sheltered areas as the best environment for operation.

The Seafarers International Union has been consulted regarding this amendment and is in support of a 5-year waiver for Alaska. They are also hopeful that with a hovercraft demonstration project in Alaska, the craft can be shown to be economically viable and, thus, appealing to even more areas of the country.

Introduction of this technology into not only Alaska, but elsewhere in the United States is an exciting prospect. My amendment will encourage the development of a domestic hovercraft industry through the demonstration of a market within the United States.

To recount, Mr. President, is very simple. Right now, nobody is doing this in the United States. If we can create a viable economic market, Boeing would get involved, Bell would get some manufacturing. It could serve areas not only in Alaska because we are suggesting that rather than putting roads in, the Yukon and other rivers could be our roads. We would not have to pave any roads.

Puget Sound would open to rapid transit because some of these go 50 miles an hour.

They are already using this from Great Britain to France. The gulf coast and east coast of the United States, Puget Sound, all of these could use them.

We just have to bring about the feasibility. Alaska has put up some money. There are Federal authorizations to this. We need the waiver and the unions involved are prepared.

Mr. BENTSEN. The Senator is really asking for a waiver from the Jones Act for hovercraft, a craft which is quite a departure from a normal naval vessel. It is probably more airplane than it is a ship.

Mr. GRAVEL. No question.

Mr. BENTSEN. I think the Senator has made a very good case. I, as manager for the majority, would be willing to accept it, subject to the comments of the manager for the minority.

Mr. CHAFEE. I have had some experience with hovercraft and can testify that they do just what the Senator from Alaska has pointed out. The ones I have ridden on have been British-made.

Although the U.S. Navy was experimenting with some craft domestically made, I take it they do not have those in production and, indeed, have gotten a little bit discouraged with them.

So, I would support the amendment of the Senator from Alaska.

Mr. GRAVEL. I was instrumental in getting two hovercraft to Alaska during the construction of the pipeline. They did have a lot of problems with respect to the skirts freezing up. We had a big one, during construction of the pipeline, for a bridge across the Yukon River.

They used the hovercraft to ferry it back and forth. It just needs more work on the technology and experience on what is involved.

I think that eventually we will go ahead in this whole area.

I appreciate the concern of my colleagues. I would not anticipate any difficulties in conference. One never knows, but I hope we will try the best we can.

Mr. BENTSEN. Mr. President, I am prepared to yield back the remainder of my time, and I urge adoption of the amendment.

Mr. GRAVEL. Does the Senator from Arizona wish me to yield any time?

Mr. GOLDWATER. I was not going to address myself to this subject.

Mr. BENTSEN. Perhaps we could dispose of this matter first.

Mr. GOLDWATER. In today's Journal of Commerce is a very interesting article on the Finn jet, which tells how the Finnish Government is making money out of this same kind of transportation.

I have piloted the Boeing craft like this, and I think there is a real market for it. In fact, Japan is the best customer going for it.

Mr. GRAVEL. I thank my colleague.

I yield back the remainder of my time.

The PRESIDING OFFICER (Mr. MATSUNAGA). All time having been yielded back, the question is on agreeing to the amendment.

The amendment was agreed to.

Mr. BENTSEN. Mr. President, I ask

unanimous consent that the Senator from Arizona be allowed to speak for 2 minutes on a nongermane subject.

The PRESIDING OFFICER. Is there objection? The Chair hears none.

The Senator from Arizona is recognized for 2 minutes.

Mr. GOLDWATER. I thank the Senator from Texas.

VETO OF THE MILITARY PROCUREMENT AUTHORIZATION BILL

Mr. GOLDWATER. Mr. President, I had hoped to make this announcement yesterday, but I could not get the floor.

I approve of the President's veto of the military authorization bill because it contains a little more than $2 billion for a nuclear powered aircraft carrier.

We do not need another large carrier, in my opinion. What the Navy needs is more ships of the fleet, ships of the line.

I was glad to hear the President say that the money that would be saved from this nuclear carrier would not be counted as money saved but would be spent for weapons for all the services.

Mr. President, it was saddening to watch the operations of some of the subcommittees of the Appropriations Committee as they began to cut aircraft out of all the services—the Navy, the Army, and the Air Force—such as F–16's, A–10's, A–14's, AWACS, and cutting tanks out of the Army, all for justification to spend this money on an aircraft carrier that most strategic thinkers believe we can exist without.

I would hope that we could spend this money to strengthen the Navy.

Mr. President, a very peculiar commentary: Every President this country has had since Herbert Hoover, except two, has been a member of the Navy, and those two were Harry Truman and Dwight Eisenhower. All of them were Navy. Yet, the Navy is probably in worse shape today, from an inventory standpoint, than it ever has been.

I backed the President's decision to veto this bill, and I will work my hardest on the floor to see that this veto is sustained. I congratulate him for having done this.

Again, I thank my friend from Texas for his kindness and his courtesy in yielding.

FEDERAL-AID HIGHWAY ACT OF 1978

The Senate continued with the consideration of the bill.

Mr. GRAVEL. Mr. President, if I could engage the managers of the bill in a brief colloquy, we might be able to save a good deal of time.

The PRESIDING OFFICER. Does the Texas Senator yield to the Senator from Alaska?

Mr. GRAVEL. Will the Senator yield me 1 minute?

Mr. BENTSEN. I yield.

Mr. GRAVEL. If I could have the attention of the Senator from Rhode Island, also, since he will be passing judgment on this, I would appreciate it.

I have an amendment which is supported by Senator STEVENS, and I will be working with him on it. I do not know that the managers of the bill would have any difficulty with it. It is nothing that would cost money. It is to permit greater flexibility for the use of highway funds within the State of Alaska.

We have a community that you cannot get to by air or by road. You can get to it only by railroad through a tunnel. The ferry system comes into that and carries vehicles, the vehicles are put on a train, and the train takes them to Anchorage.

We would rather leave the vehicles off on the other side of the tunnel and maybe in some cases actually build a highway inside the tunnel, so that normal vehicles could ride in the tunnel, since it is only used twice a day.

We in Alaska pioneered the use of highways funds for ferries where you have no highways. This certainly has not impaired the health of the highway system in the Nation.

All this amendment does is to ask for greater flexibility because of the unique situation we have, and there may be other unique situations in other parts of the country.

I hope the managers of the bill will accept the amendment. If not, I will wait for Senator STEVENS on Monday and offer it, and we will push for a vote. To me, the amendment seems so minor and reasonable that I cannot understand why there would be any difficulty. That is why I requested time to judge the temper of the managers of the bill. I will be guided by whichever way they want to approach the problem.

Mr. BENTSEN. I say to the distinguished Senator from Alaska that the problems of transportation for Alaska are unique, and we have addressed ourselves to them at length.

In this situation, the Senator is talking about the railroads. We already have provided highway funds for ferries, and now to say that the same should be done for the railroads—yes, I would have to oppose it. We should wait until Monday.

Mr. CHAFEE. Mr. President, I second the comments of the floor manager of this bill.

This proposal by the Senator from Alaska is unique. I must say that he has been very vigorous in fighting for funds for Alaska. However, as he recalls, we gave Alaska, which does not have any interstate highways, the 3–R money that they normally have for the interstate, and we let them use it for their primary system.

Now he apparently is attempting to go one step further and use these primary funds not just for the construction of the railroad but also for the financing of the railroad's operations.

I was in Alaska recently and rode on that railroad, and I could not have been treated in a more splendid fashion. It is with some regret that I would oppose the amendment by the Senator from Alaska because of the new territory it is breaking into. I take it that we are going to discuss this matter further on Monday.

Mr. GRAVEL. Yes. I think we should reserve the debate until Monday, at which time I will discuss it with my colleague from Alaska.

To respond to the point raised by the Senator, it is a question of flexibility. I think the arguments to have some flexibility in a unique situation are overpowering.

I can appreciate my colleague holding forth to prevent the railroad industry from invading highway funds. If they want to put the staff to work over the weekend to find ways by which they can restrict it adequately——

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. GRAVEL. Mr. President, will the Senator yield me 1 additional minute?

Mr. BENTSEN. I yield the Senator an additional minute.

First, I should like to add to what Senator CHAFEE has said: The Senator from Alaska has been extremely vigorous in pursuing the interests of his State and trying to help his State. In fact, we have gone the extra mile time and time again in that regard; and I must say that when I look at this amendment, perhaps the appropriate word is "chutzpah."

Mr. GRAVEL. I would be happy to confess to "chutzpah" any time I fight for my State. However, I am baffled by the argument that when you have nothing and you get a half-loaf, when you should be getting a whole loaf, you should go away happy.

We will have time on Monday to address ourselves to this subject.

Mr. CHAFEE. The Senator will come back on Monday and try to get the bakery.

[Laughter.]

Mr. GRAVEL. My colleagues do me more service than I deserve. This may read well in Alaska, but I would not stand here and ask for more than my fair share. I have too much concern for this great country of ours and its justice, and I will demonstrate that with an amendment I have coming up shortly.

I shall call up my next amendment.

I notice the presence of the distinguished Senator from the State of Washington, the distinguished chairman of the committee, who has a great interest in Department of Interior affairs. I do have an amendment that may involve that. I wish to accommodate his time.

The PRESIDING OFFICER. The time of the Senator from Alaska has once more expired.

UP AMENDMENT NO. 1681

(Purpose: To promote transportation planning on Federal lands)

Mr. GRAVEL. Mr. President, I send to the desk an amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Alaska (Mr. GRAVEL) proposes unprinted amendment numbered 1681.

Mr. GRAVEL. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the end of the bill insert a new section as follows:

TRANSFER OF CERTAIN AUTHORITY OVER FEDERAL LANDS FOR TRANSPORTATION PURPOSES

SEC. 146. (a) Except as provided in subsection (b) of this section all authority and duties of the Secretary of the Interior with respect to—

(1) the approval of any application from a State or local government for a right-of-way, easement, use permit, lease, or license for highway, road, railroad, pipeline, airport, or other transportation purpose on Federal land; and

(2) the preparation of the environmental impact statement pursuant to section 102 of the National Environmental Policy Act of 1969 with respect to the actions on such application,

is transferred to the Secretary of Transportation to be exercised in accordance with the law relating to such applications and statements and the transportation policies of the Federal Government.

(b) The Secretary of the Interior shall review the final action of the Secretary of Transportation under the authority transferred pursuant to subsection (a) (1) and (2) and shall on the basis of such review approve or disapprove any such final action with any recommendations he deems appropriate. Any such approval or disapproval and recommendations with respect to an environmental impact statement shall be made available in the same manner provided for such statement in section 102 of the National Environmental Policy Act of 1969.

(c) In the event one Secretary approves and the other disapproves an application described in subsection (a)(1) the final decision on such application shall be made by the President.

(d) Notwithstanding any other provision of law, action on applications subject to this section shall not be final until the requirements of this section are complied with.

(e) The provisions of this section shall be effective only with respect to applications filed after thirty days following the date of enactment of this section.

Mr. GRAVEL. Mr. President, today I am offering an amendment which will inject a broader perspective into the transportation planning process on Federal lands. My amendment will require the Department of Transportation to approve applications regarding transportation corridors on these Federal lands. Applications for rights-of-way, easements, use permits, leases, and licenses relating to transportation corridors or sites will be covered by this provision.

Present policy routes all such applications to the Department of Interior. This leaves the Department of Transportation virtually no voice in matters which clearly impact the transportation planning process in any State with large areas of public land. Establishment of the Transportation Department as the lead agency for the processing of such applications will lend a much needed broader perspective to management of Federal land.

My amendment would encourage wise land-use planning. Incorporation of the Department of Transportation into the process would insure the necessary input of the transportation perspective. Presently transportation officials can only comment in the aftermath—after final decisions have been issued. The Department of Transportation is, after all, where the expertise lies with regard to transportation planning issues. It is only reasonable to place the responsibility for such decisionmaking where the resources can be found.

The PRESIDING OFFICER. The Chair wishes to inquire of the Senator from Alaska whether this is the amendment on which he has been given 1 hour of debate.

Mr. CHAFEE. One hour totally, evenly divided.

The PRESIDING OFFICER. Yes, 1 hour total, divided equally.

Mr. GRAVEL. Yes, this is.

The PRESIDING OFFICER. The Chair thanks the Senator from Alaska.

Mr. GRAVEL. Mr. President, the Department of Transportation is a relatively young agency. It was created by statute in 1966 when the major role that transportation plays in American society was finally recognized and the need for coordination on the Federal level led to its establishment. In contrast, the Interior Department has been with us for 129 years. Various functions have been added and subtracted over the years that it has served as landlord for the U.S. Government, and a great deal of power has been allowed to accumulate with time. This amassing of power has brought us to the point today where, although a Cabinet-level department has been created to handle just such issues, transportation planning is still in the jurisdiction of the Department of Interior.

When the Department of Transportation was created in 1966, however, it was specifically called upon "to assure the coordinated, effective administration of the transportation programs of the Federal Government." I am confident that the Department would be able to assume the responsibility for these new transportation planning decisions with little problem. The resources are already present. The mechanisms are in operation. This amendment will simply be one more step toward further coordination of our Federal transportation policy.

The present administration has stated that transportation policy must be fashioned in a manner to integrate all transportation modes and to coordinate programs so that this multimodal perspective can be implemented. My amendment would encourage the integration of such a policy perspective into the transportation planning process, relative to the planning process on Federal lands. It is necessary for States to obtain right-of-ways for roads, airstrips, tunnels, and railroad beds in cases where these modes of transportation cross federally owned lands. In light of the jurisdiction which the Department of Transportation holds over all these transportation modes, it is surprising that it has not been included in the planning process on Federal lands previously. It is time to amend that previous exclusion.

I think it is time to make that change. I think it is an intelligent coordination of Federal activities.

It has baffled me up to this point in time why transportation for the Federal Government has to be different from transportation for the rest of our society when they are both at the Cabinet level. I am not suggesting we should leave out the Interior Department. What I am suggesting is that the lead agency in question be Transportation and not the Interior Department, and that the Interior Department be involved in the process.

But it is preposterous, it is truly preposterous, and I can cite some examples of what happens in this regard. We had a letter from the Secretary of Transportation who pushed away the cup of additional power and influence that was offered him in this regard because quite obviously there was a contest between the Department of Interior and Department of Transportation in this regard. They could not resolve their act. And so we get a situation where we have the Interior Department as the lead agency for transportation on Federal lands. It is truly preposterous, and I will be interested to hear the comments why this has to be so.

I reserve the remainder of my time.

Mr. BENTSEN. Mr. President, I yield such time as the Senator from Washington desires of my time.

The PRESIDING OFFICER. The Senator from Washington is recognized.

Mr. JACKSON. Mr. President, I am strongly opposed to this amendment.

So the Senate will understand what we would be doing in effect is to amend the entire body of law applicable to Federal lands administered by the Secretary of Interior.

This includes national parks and monument, national recreation areas, national wildlife refuges and ranges, national resource lands, national conservation areas, and areas of the national wilderness preservation system.

It would also amend the law governing grants of rights-of-way over all Federal lands for oil, gas, and other fuel pipelines.

Mr. President, I point out that it would amend the basic statute relating to the Alaska pipeline and it would amend the basic statute relating to the grants of rights-of-way over Federal lands for gas and oil pipelines.

It is that far-reaching, without any hearings. This matter had no hearings. It is one of the most far-reaching amendments that could be offered in this Chamber.

Mr. President, I can only say that I see no justification for this sweeping change which would affect matters under the jurisdiction, may I say, of several comittees, including the Committee on Energy and Natural Resources; the Committee on Environment and Public Works; the Committee on Agriculture, Nutrition, and Forestry; and the Committee on Commerce, Science, and Transportation.

Mr. President, I finally wish to state and point out that the Department of Transportation is now involved both by statute and by an executive agreement in the planning process in connection with roads. But I think it would be obviously most unfortunate if the Senate were to adopt this amendment.

I can only refer to one other matter, and I understand and I appreciate what the Senator is desiring to do as far as

Alaska is concerned, but this matter is now pending before our Committee on Energy and Natural Resources in connection with the markup on what we call the d2 lands. This involves a program which is extremely important in making decisions as to the classification of the Federal lands in Alaska pertaining to parks, national preserves, monuments, wilderness areas, scenic rivers, wild rivers, and so on.

I would point out, Mr. President, as my distinguished colleague in the chair (Mr. MATSUNAGA) knows, we have been holding night sessions. I cannot think of anything more disorderly than in the midst of our final markup to turn around and remove that which we are now addressing in the committee on the question of access. We are dealing with this problem, and some of the amendments we have already adopted, Mr. President, relating to access in transportation do involve the work of the Department of Transportation on a consultative basis. That has already been agreed to.

I think it would be most unfortunate for the Senate to adopt this amendment, and I shall have to oppose it and, at the appropriate time, will offer a motion to table.

Mr. CHAFEE. Mr. President, let me just say it seems to me the Senator from Washington has set forth pretty clearly the problems with the proposed amendment, and certainly, speaking for this side, we would not be prepared to move into anything as substantial as proposed under this amendment without some type of hearings for a far better understanding of the ramifications of the amendment than we have now. So we would be opposed to it.

Mr. BENTSEN. Mr. President, on behalf of the managers of the bill on the majority side, I would have to endorse the statement that was made by Senator CHAFEE and be in opposition to the amendment.

The PRESIDING OFFICER. Who yields time?

Mr. GRAVEL. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator from Alaska has 23 minutes remaining.

Mr. GRAVEL. Mr. President, just speaking to the issue, the distinguished Senator from Washington has stated the obvious. He really has not responded to the question I raised, but stated the obvious, that it is far-reaching legislation and it amends a lot of laws. Of course, it does, and I mean it to do so. So I certainly intend to do that. We pass far-reaching laws at all times in this body.

The second point made by the distinguished Senator is that this is being treated in the markup on d–2 legislation. That understates the problem considerably. The amendment I have deals with the United States of America and not just with the State of Alaska.

So nobody has spoken to the obvious, and that is we have a Department of Transportation. It is quite interesting that the managers of the bill—and I interpret their positions to be that they think the question has been raised and we should have hearings—I do not interpret their position as being that this should not be undertaken.

I think the statement was made by the Senator from Rhode Island that we should find out what the situation is, and I am prepared to accept that. I think this is probably putting a lot on the table very quickly. I think this should have some extensive hearings because I think it is well-nigh time to stop this tomfoolery of letting one department keep something that it had just because of historical precedent, particularly when we went to the trouble to set up a Department of Transportation.

Think how odd it looks to the average citizen to see that the Department of Transportation is the lead agency with respect to Penn Central, but then when you are dealing with Federal ground in the State of Pennsylvania of course it is not. It is the Department of Interior. They are supposed to know more about transportation than does the Department of Transportation.

I can understand Members jumping forward here and not wanting to give up prerogatives and powers, and wanting to safeguard their facet of their sphere of influence, but that battle should have been fought when we set up the Department of Transportation. If there was any thought we were going to lose any of our influence, we should have done it then.

So this amendment is very clear. It is to treat the Government like we treat the rest of the private sector. Since it is so far-reaching, I would be happy to withdraw my amendment with the hope that since I am on the committee—I would obviously press for it as a member of the committee—that we would have hearings on this subject. The Interior Committee should similarly have hearings on the subject, and if it can make a case for hanging on to this sphere of influence, then let it make that case.

If they cannot, then some of us will come back to the floor of the Senate and lay down logic and, hopefully, not always, but hopefully, that logic will prevail in this body.

It is very simple: We have a department that deals with transportation, and all I am suggesting is that it deal with all transportation in the United States and not make an exception for a part of the country.

I think on closer examination my colleagues will realize this is a very, very sound amendment.

So, therefore, with the thought of having hearings and pursuing this subject in greater detail, in a more methodical pattern than I have done this far, since this issue has only come to my attention within the last month, I will withdraw this amendment and bring it through the normal committee process of the Senate.

The PRESIDING OFFICER. The amendment is withdrawn. The Senator has a right to withdraw it.

UP AMENDMENT NO. 1682

(Purpose: To provide Federal assistance to improve the appearance of New York City)

Mr. GRAVEL. Mr. President, I have one additional amendment.

The PRESIDING OFFICER. The clerk will report.

Mr. GRAVEL. I have an amendment, Mr. President, and I ask for its immediate consideration.

The PRESIDING OFFICER. The Clerk will report the amendment.

The assistant legislative clerk read as follows:

The Senator from Alaska (Mr. GRAVEL) proposes an unprinted amendment numbered 1682.

Mr. GRAVEL. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the end of the bill insert a new section as follows:

NEW YORK CITY PROGRAM

SEC. 146. (a) The Congress finds and declares the poor physical appearance of the City of New York and particularly the Borough of Manhattan to be a matter of national concern and further finds it to be in the national interest to establish a program of grants to the City of New York for the express purpose of improving the physical appearance and attractiveness of Manhattan Island through rehabilitation and reconstruction of Manhattan's street and highway system.

(b) The Secretary of Transportation is authorized to make grants to the City of New York for the purpose of improving the physical appearance and attractiveness of the Borough of Manhattan through the rehabilitation and reconstruction of the street and highway system. No grant shall be approved under this section until:

(1) New York City submits to the Secretary of Transportation and the Committee on Environment and Public Works of the Senate and the Committee on Public Works and Transportation of the House of Representatives an appropriate plan to insure daily collection of refuse and garbage within Manhattan and the regular provision of street cleaning services and provides satisfactory assurance that such plan will be carried out;

(2) New York City submits to the Secretary of Transportation and the Committee on Environment and Public Works of the Senate and the Committee on Public Works and Transportation of the House of Representatives an appropriate plan for a demonstration program to provide sanitation services through contract with a private sector provider;

(3) New York City submits to the Secretary of Transportation and the Committee on Environment and Public Works of the Senate and the Committee on Public Works and Transportation of the House of Representatives an appropriate plan to develop and enforce standards and safety codes for taxicabs operated in New York City.

(c) There are authorized to be appropriated $50,000,000 for the fiscal year ending September 30, 1980 and for the fiscal year ending September 30, 1981 for the purpose of carrying out the provisions of this section.

The PRESIDING OFFICER. Is this the amendment on which the Senator has an agreement of 1½ hours divided equally?

Mr. GRAVEL. Yes, it is the amendment.

The PRESIDING OFFICER. The Chair so notes.

Mr. GRAVEL. Mr. President, this would be somewhat of a unique approach because——

Mr. ROBERT C. BYRD. Mr. President,

will the distinguished Senator yield? Might I get an understanding as to whether or not there will be a rollcall vote on the amendment?

Mr. GRAVEL. I would have to get a feel for the tenor of the leadership before I make the decision.

Mr. ROBERT C. BYRD. I thank the Senator. I thought we ought to let the Senate know.

Mr. GRAVEL. If there is a rollcall. I would be happy to put it over until Monday.

Mr. ROBERT C. BYRD. There is no request to do that. If the Senator decides there is going to be one, as soon as he can do that, we can alert Senators so that they will know. I thank the Senator.

Mr. GRAVEL. I thank my colleague.

This is a little unique because I am placed in the role of advocating something for another State that will have an unusual impact, and I will go through the philosophical background for this action if it is not thoroughly explained in the course of my statement.

This amendment would set aside $50 million, beginning in fiscal year 1980, and, incidentally, I stretch it out that far so that it will not have impact on the present budget and require a waiver under the Budget Act.

Mr. President, this amendment would set-aside $50 million beginning in fiscal year 1980 for the city of New York for the express purpose of improving the physical appearance of Manhattan Island. In return, the city would be required to develop plans to phase-in private sanitation services, to insure daily collection of refuse and garbage and to develop standards and safety codes for city taxicabs.

There is little doubt that New York City is one of the most important cities in the world. It is clearly the world center in finance and industry, transportation, communications, medicine, graphic arts, culture, and entertainment. Manhattan is the cultural, economic, and entertainment center of the city. It is the residence of 1.5 million people. More than 2 million people from the city and region work in the borough and more than 14 million people from throughout the world visit it each year.

Some of the financial data for New York City is incredible. Six of the seven largest banks in the Nation are headquartered in New York City, with combined assets in excess of $438 billion. The volume of stocks and bonds traded on the New York Stock Exchange accounts for 83 percent of the market value of all securities traded nationally; 84 of the Fortune 500 largest corporations are headquartered there. Each year New York City ports handle $30 billion in foreign trade, accounting for 17 percent of the Nation's annual foreign trade.

Mr. President, one of the most eloquent spokesmen for the unique role that New York City plays in the world is none other than the distinguished Senator from Wisconsin (Mr. PROXMIRE). During consideration of the conference report on the New York City financing legislation, he said:

> If you really want to be challenged . . . whether it is law, whether it is accounting, whether it is writing, whether it poetry, whether it is art, whether it is ballet—regardless of what it is, that is the place to go, if you want a challenge, if you want to take on the toughest place in the world and aspire to the greatest heights.

From my own personal perspective, the State of Alaska has been quite dependent on the financial resources which are made available through the New York City marketplace. Much of the capital that was used to finance the trans-Alaska oil pipeline and much of the capital that will be used to finance the Alaska highway natural gas transportation system originated in New York. These projects play a major role not only in economic development in Alaska but in securing energy independence for the United States.

Within this framework, I am proposing today that the Senate go on record recognizing the importance of New York City to our national well-being. I propose that we begin to treat New York as an international capital and as a national treasure. I propose that we make nationwide commitment to improve the physical appearance of this most important city so that New York City can remain the crown jewel of the free enterprise system.

My colleagues should be aware that more people visit New York City than any other city in the Nation, including our political capital, Washington, D.C. The Department of Commerce has provided me with data indicating that over 8 million people visited New York City in 1972, compared with 5.5 million for Washington, D.C. I ask unanimous consent to have printed in the RECORD a chart showing data relating to tourism.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Tourism—1972

City:	*Number of person/trips*
Atlanta	3,625,800
Boston	3,225,213
Chicago	6,644,072
Cleveland	2,481,712
Columbus, Ohio	2,729,569
Dallas	3,044,108
Denver	2,882,330
Detroit	3,342,393
Houston	3,529,273
Las Vegas	2,726,693
Los Angeles	7,345,227
Miami	3,260,756
Minneapolis-St. Paul	3,861,744
New Orleans	2,267,051
New York	8,480,030
Orlando	2,920,366
Philadelphia	4,109,198
Pittsburgh	2,780,060
Riverside, Calif	3,926,768
Sacramento	3,541,397
St. Louis	4,029,312
San Diego	4,473,482
San Francisco-Oakland	6,098,745
San Jose	1,916,986
Tampa	3,092,593
Washington, D.C	5,535,915

Source: "National Travel Survey," Bureau of the Census, Department of Commerce, 1972.

Mr. GRAVEL. Mr. President, the focus of my amendment is on improvement of the physical appearance of Manhattan through the rehabilitation and reconstruction of the streets and highways. In addition, the city of New York must make certain commitments to improve sanitation services in the borough.

I have no doubt that my colleagues share my distress that the current state of disrepair of the streets in New York as well as the amount of dirt and filth that pervades the city's thoroughfares. However, nowhere else in the Nation do streets and highways take the pounding they do in New York. According to the city's department of transportation, Manhattan's streets supports an average daily traffic volume of 26,800 vehicles. The next highest city is Dallas, with a volume of 19,000 vehicles. I ask unanimous consent to insert in the RECORD a table comparing street mileage and usage among several major cities.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

COMPARISON OF MILEAGE AND STREET USAGE IN MAJOR CITIES

City	Miles of street in main business district	Average daily traffic (vehicles)
Manhattan	153	26,800
Dallas	27	19,000
Los Angeles	51	16,200
Austin	34	13,500
Seattle	13	10,000

Source: New York City Department of Transportation.

Mr. GRAVEL. Just to recapitulate, Mr. President, that list shows Manhattan at 26,800 vehicles, Dallas 19,000 vehicles, Los Angeles 16,200, Austin 13,500, and Seattle 10,000 vehicles.

Mr. President, a well-known urbanologist, Jane Jacobs, has articulated the concept that the quality of the streets has a very direct bearing on the quality of city life. In her work "The Death and Life of Great American Cities", Ms. Jacobs says that "streets provide the principal visual scenes in cities". Not only do streets draw people together and create the diversity that brings vitality to the city, but streets also create a sense of trust among residents. Ms. Jacobs says that city residents make "an almost unconscious assumption of general street support when the chips are down".

In my mind, these academic generalizations support that which is obvious to many people on an emotional level. The streets of New York make the city an exciting place to be, and the quality of the streets has a very direct bearing on the future quality of life within the city.

I regret to report to the Senate that the fiscal crisis in New York has crippled the city's ability to maintain those streets. New York City has over 6,200 miles of streets, covering 30 percent of the land area. Streets should be resurfaced every 10 years and reconstructed every 30 years. Before the fiscal crisis, funds were allocated on a 120-year replacement cycle. Now, funds are allocated on a 200-year replacement cycle.

Over the last 7 years, the city has faced 35,000 lawsuits over potholes and defec-

tive sidewalks and paid out over $61 million in damages.

Inadequate replacement and poor maintenance has removed 35 percent of all sanitation trucks and 265 of the city's 400 mechanical brooms from service.

It is important to keep in mind that city streets also serve as the pathway for water, gas, and electric supply and for sewers. City engineers estimated that reasonable street replacement standards will cost $200 million a year. Installing new water mains and sewer pipes should cost in the neighborhood of $300 million. Thus, a reasonable program to upgrade New York thoroughfare will cost about $500 million a year for 30 to 40 years.

Not only do I believe that New York City cannot afford this type of improvement, but I also believe it should be a matter of national pride that the Federal Government become involved in the effort.

Mr. President, I am sure my colleagues are somewhat taken aback by another proposal to provide financial assistance to New York City. There has been a lot of talk on the Senate floor in recent weeks that New York City is undeserving of Federal support. According to the latest data available from the Treasury Department, there are many more cities which have been treated to terrific beneficence on the part of the Federal Government and have not made anywhere near the effort made by New Yorkers to be self-sufficient.

The Treasury has compiled a list of cities which shows the percent of municipal revenues obtained from the Federal Government over the period of 1972 to 1976. New York City received 4.8 percent of its revenues from the Federal Government during this period. Houston received 13 percent, Boston 26.6 percent, Detroit 24.0 percent, and Philadelphia 13.0 percent. I ask unanimous consent to insert in the RECORD a table on this subject.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Fiscal profiles—1972–76 Federal revenues as percent of city's general revenue

[In percent]

City:	
Boston	26.6
Chicago	14.4
Cleveland	16.8
Detroit	24.0
New Orleans	14.5
Newark	4.4
Philadelphia	16.4
St. Louis	13.7
Atlanta	13.8
Dallas	4.9
Kansas City	17.6
New York	4.8
Houston	13.0
Los Angeles	10.9
Nashville-Davidson	10.6
Omaha	20.5
San Antonio	24.4
Toledo	20.3
Denver	15.1
Memphis	7.0
Phoenix	16.9

Source: "Report on the Fiscal Impact of the Economic Stimulus Package on 48 Large Urban Governments, Department of Treasury, Office of State and Local Finance, January 23, 1978.

Mr. GRAVEL. Some have claimed that the State of New York has not done its fair share in assisting New York City. The Treasury has also published data on the percent of municipal revenues derived from State governments. New York City has one of the highest percentages at 44.5 percent. Houston shows 1.8 percent in State assistance, Boston 20.8 percent, Detroit 16.9 percent, and Philadelphia 15.0 percent. I ask unanimous consent that this table be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Fiscal profiles—1972–76 State revenues as percent of city's general revenue

City:	*Percent*
Boston	20.8
Chicago	14.6
Cleveland	11.8
Detroit	16.9
New Orleans	28.1
Newark	49.1
Philadelphia	15.0
St. Louis	11.2
Atlanta	11.3
Dallas	3.0
Kansas City	4.6
New York	44.5
Houston	1.8
Los Angeles	13.1
Nashville-Davidson	21.5
Omaha	14.5
San Antonio	2.9
Toledo	11.1
Denver	19.1
Memphis	52.5
Phoenix	20.8

Source: "Report on the Fiscal Impact of the Economic Stimulus Package on 48 Large Urban Governments", Department of Treasury, Office of State and Local Finance, January 23, 1978.

Mr. GRAVEL. Finally comes the issue of effort on the part of the city residents. According to Treasury data, New Yorkers pay the highest per capita taxes, both to the city and to the State. New Yorkers paid $1,660 per capita in 1975. Again, compare this with Houston at $652 per capita, Boston at $1,346 per capita, Detroit at $890 per capita and Philadelphia at $878 per capita.

In addition to this data, a recent article appeared in the New York Daily News detailing the results of a survey which showed that 6 percent of New Yorkers would prefer to improve the physical condition of the city instead of cutting taxes. The most highly taxed people in the Nation on a per capita basis are willing to pay more to improve the quality of life in this most important city.

I ask unanimous consent that a table showing per capita tax effort be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

FISCAL PROFILES

City	1975 city average per capita taxes	1975 State average per capita taxes	1975 combined
Boston	$532	$814	$1,346
Chicago	188	730	918
Cleveland	134	534	668
Detroit	208	682	890
New Orleans	145	566	711
Newark	314	725	1,039
Philadelphia	242	636	878
St. Louis	251	523	774
Atlanta	162	508	670
Dallas	176	515	691
Kansas City	210	523	733
New York	635	1,025	1,660
Houston	137	515	652
Los Angeles	175	869	1,044
Nashville-Davidson	290	451	741
Omaha	119	577	696
San Antonio	67	515	582
Toledo	104	534	638
Denver	230	631	861
Memphis	110	451	561
Phoenix	106	658	664

Source: Statistical Abstract of the United States, Bureau of the Census, Department of Commerce, 1977.

Mr. GRAVEL. In my mind, this data shows that New Yorkers have made a sincere effort to help themselves and that the Federal Government has been less than generous in its relationship with New York City. As a final note, in 1977, Washington, D.C., received $2.2 billion in Federal assistance or $3,021 per capita. New York City received $4.97 billion or $660 per capita. I would hope that we can begin to even out this inequity by equating the importance of New York City with that of Washington, D.C.

With regard to my amendment, I am proposing that New York City be eligible to receive $50 million a year to improve the physical appearance of Manhattan. Keep in mind that this is about one-tenth of the city's projected needs. In return, the city must take the following steps:

First, the city must prepare a plan for a demonstration program for provision of sanitation services through contract with a private sector provider. I share the chagrin of some of my colleagues at the high cost of provision of services through the public sector and this element would offer the mayor an opportunity to reverse that trend.

Second, the city must prepare a plan for daily collection of garbage and regular street cleaning. I have discussed this proposal with Mayor Koch and he is prepared to undertake some real creative action in this area.

Third, the city must prepare a plan to implement and enforce a code of standards for city taxicabs. As a former New York City cabbie, I have some experience in this area. I have found that Checker Cabs are the most efficient, long-lasting, comfortable vehicles on the streets of New York. We should have the same pride in the cabs on the streets of New York that Londoners have in their cabs in that great city.

All of these plans would be submitted to the Senate Committee on Environment and Public Works and the House Committee on Public Works and Transportation as well as the Secretary of Transportation for review.

Let me conclude by saying that I believe New York City deserves a Federal commitment to improve the quality of life in the city. It is deserved because New York is an international city. It is deserved because New Yorkers have made

a good faith effort to improve their own quality of life. It is deserved because of the need to preserve this national treasure for future generations.

At the close of debate on the New York City bill, Senator PROXMIRE recited the invitation to the tired and the poor which is inscribed at the foot of the Statue of Liberty, he then said:

> Nothing expresses America better than those words. In my view, it also expresses New York. New York has not only said this to the world, we often view this as an invitation to Europe, or the people abroad, to come to our country.
>
> It is also in my view an invitation to people to come to New York, American people to come to New York and not simply visit, but to come and face it, to face the biggest challenge in so many fields of endeavor anywhere.

Mr. President, if we did not have New York as the economic capital of the world, Americans would have to travel as they did in days of old on clipper ships to London, to the financial heart of the world at that point in time, and negotiate their financial affairs.

There is not a mayor or a Governor in the United States of America who does not have to travel to New York City now to sign bonds to finance the capital improvements in his or her community.

If we did not have New York City as the capital of the world, we, the superpower of the world, would be prepared to spend billions of dollars to acquire it. I, as an American, am ashamed when I go to New York City and see the level of disrepair, when I think that this is the heart of the free enterprise system. In many respects it looks like a pigsty.

When I travel to Moscow and see the status of Moscow or any other city under Communist domination and make a comparison on surface values, I am appalled.

For too long we have ridiculed, we have made fun of, this great city. We are truly making fun of ourselves. I would hope that this ridiculousness would begin to end.

I would like to hear a response from the managers of this bill as to why this situation should not be attended to, and why we should continue to let this neglect go forward when the statistics show that quite obviously in 200 years New York will not be able to dig itself out of this dilemma.

I would hope that we would begin to take New York, the city, and put it aside and look at Manhattan Island, New York, the capital of the world which just happens to be under the American flag, in which I take great pride.

I reserve the remainder of my time.

Mr. BENTSEN. Mr. President, I rise to strongly oppose the amendment of my friend, the Senator from Alaska.

The PRESIDING OFFICER. The Senator from Texas is recognized.

Mr. BENTSEN. He said that New York City is a world capital. I agree it is a great city. It is a city which has been traditionally a magnet of opportunity for the people of America, a city which has been a vital element in forging American prosperity and American development. But I am constrained to strongly disagree with my friend from Alaska when he says that New York City has not been treated fairly by the Federal Government. When we examine the figures of the Senator from Alaska, we become convinced that the hand is really quicker than the eye.

Let us take a look at the numbers that the Senator sent out on his account "fact sheet." The Senator says that the Federal assistance to New York City received in 1977 was $4.97 billion.

Those are the numbers. Then I go down a little farther on the page and he says that the Federal revenue as a percent of the city's general revenue was 4.8 percent.

If I am to believe those numbers, then the city must have had about $100 billion of revenue. The revenue of the Federal Government is only $500 billion. I do not think the numbers stand up at all.

One of the things that has not been included in here, of course, is the passthrough funds from the State. That is approximately $5.9 billion. Roughly $2 billion of that is money passed through from the Federal Government, through the State as a conduit, which obviously would very materially change these numbers.

Let us examine these figures: According to the Bureau of Census study entitled "City Government Finances in 1975–76," in fiscal year 1976, New York City's general revenue was $13.45 billion. Federal aid to New York City totaled $961 million. That means Federal assistance, just direct, was 7 percent of total city revenues.

But the catch is that only $6.8 billion of the city's $13.8 billion general revenue was generated by the city itself.

For example, $5.9 billion of the city's $13.8 billion general revenue actually came from the State of New York. And much of this money represents an actual passthrough from the Federal Government through the State government to the city.

If you take Federal assistance New York City received as a percentage of the revenue actually generated by New York City, the figure roughly doubles, up to 14 percent. If you add to this the money which comes to the city from the Federal Government via the State, of course, as I said earlier, that percentage gets much higher.

For example, for this year, there are estimates that total Federal assistance as a percentage of city generated revenue could range all the way up to 45 percent. So instead of New York receiving only 4.8 percent in Federal revenues, as Senator GRAVEL has suggested, the actual figure is closer to 40 or 50 percent.

If the Senator believes such estimates to be exaggerated, he should remember that in 1976, State aid to New York City—much of which comes from the Federal Government—constituted a full 86 percent of the total revenues generated by New York City.

Mr. President, Senator GRAVEL says that New York gets shortchanged on a per capita basis in terms of Federal assistance. Well, let us compare the largest city in the Nation with the fifth largest city in the Nation.

The Senator has made that comparison. Let us compare it with Houston.

Between 1974 and 1976, New York City received 15.75 times more in Federal aid than did Houston, even though New York City has only five times the population of Houston.

That works out to New York City receiving more than three times per capita what Houston received.

Between 1973 and 1976 New York City, a city of 320 square miles, received three times as much money under the Federal aid urban systems program as did Houston, even though Houston is a city of some 540 square miles.

Mr. President, Houston is a very large city. You could fit Boston, Denver, Atlanta, Louisville, Detroit, and San Francisco within the city limits of Houston. That means Houston has a lot of streets and the public works department tells me that, like New York City, Houston is on a replacement cycle of 200 years—a lengthy cycle which, in the view of the Senator from Alaska merits a special setaside for New York City but not for Houston.

Mr. President, New York City is receiving fair treatment, indeed more than fair treatment, from the Federal Government. To suggest otherwise is to ignore the facts in an attempt to prove that a great city is being swindled in its transactions with the Federal Government.

Furthermore, Mr. President, the amendment by the Senator from Alaska would establish a dangerous precedent for the use of Federal aid highway funds. For very practical reasons, we have never permitted funds to be used for the routine repair of city streets.

We were bombarded in the spring by cities all over this Nation talking about potholes. Every person in an urban community was being subjected to them. There was an outcry to have them repaired. If we had succumbed to that, we would have destroyed the Federal highway system. We would never finish it. Can the Senator say that the people of Manhattan Island had any greater discomfort in that situation, or any greater right to have attention paid to their local streets?

Because Federal highway funds actually amount to a very small percentage of the total public expenditures on roads and streets, we have intentionally chosen to limit their use to the construction of roads that are of national significance. Otherwise, the funds we authorize would be no more than a small drop in a very large bucket. We would see no measurable impact on the transportation system as a result of our Federal efforts.

This great Interstate Highway System that General Eisenhower called for is the biggest public works project in the history of the world. Have you ever stopped to think what our transportation problems would be in this country and how much additional energy and fuel we would be using if we had not done what we did on the Interstate Highway System?

We have, however, attempted to be responsive to the needs of urbanized areas. The bill reported by the Environment and Public Works Committee authorizes $700 million annually for roads on the Federal aid urban system. These

funds are not widely available for all city streets, but rather, must be spent on important urban arteries designated by local governments in cooperation with their State transportation agencies.

Even though Senator GRAVEL's amendment would not authorize the expenditure of highway trust fund revenues, I must nonetheless object because it would, for the first time, permit Federal aid funds to be used on urban routes that are not a part of the designated Federal system. I can think of nothing more local in nature than the maintenance of average urban roads. Congress simply cannot afford to get into the business of fixing city streets. I strongly urge my colleagues to defeat this amendment.

Mr. President, I reserve the remainder of my time. I yield to the distinguished Senator from Rhode Island.

Mr. CHAFEE. Mr. President, I am on the time in opposition to the amendment.

The PRESIDING OFFICER. The Senator is recognized.

Mr. CHAFEE. Mr. President, I join wholeheartedly in the sentiment so ably expressed by my colleague from Texas. This is really, a very, very far-reaching and unique amendment which the Senator from Alaska has proposed. He has proposed that we get into the business, as the Senator from Texas mentioned, of paving the streets of the city of New York, tied to some kind of proposal dealing with a safety code for the taxis and street cleaning and daily sanitation pickup.

Mr. President, we just have a limited amount of money. I have not seen anybody around the Senate floor propose that we increase the amount of money in the highway trust fund. As a matter of fact, as was mentioned earlier, we cannot get anybody to budge from the 4-cents-a-gallon tax which is presently imposed. Even with that amount of money presently existing, $70 million annually is paid to the State of New York for urban highways; in other words, urban through-streets, such as Park Avenue; that would qualify. The bulk of that $70 million a year goes to the city of New York and, as of June 30, just a month and a half ago, there were $145 million in New York's urban highway funds unspent.

So if the city of New York is so anxious for this money, they should approach the State of New York, where the funds are presently existing and unspent. They would be under a 70-percent-Federal 30-percent-local ratio. The proposal of the Senator from Alaska would be a flat, outright grant of $50 million. But it seems to me if New York wants to get on with this urgent project, that some of the unspent $145 million in urban system funds should be used for this purpose.

We have not received any indication on the floor here from the Senator from Alaska that the city of New York has proposed this program, or requested it. We do not even know what the requirements will be for daily garbage collection and other provisions.

So, Mr. President, I think that while this is laudatory in certain respects, while we all would like to have our streets paved—I wish they would stop by Providence, R.I., while they are doing it and take care of some there, then move up to Pawtucket and Central Falls—there is no way in the world that the Government can start on a program like this.

I join my colleague in opposition to it.

Mr. BENTSEN. I say to Senator CHAFEE that I noted that the city of New York has passed a new ordinance on dog sanitation. That appears to be one of the requirements of the Senator from Alaska on a sanitation program.

I suppose this is a help in that regard.

Mr. GRAVEL. Yes, they launched a "pooper-scooper" campaign up there.

The PRESIDING OFFICER (Mr. PROXMIRE). Who yields time?

Mr. GRAVEL. Mr. President, I yield myself whatever time I need at this point.

I just announce that I will not press for a vote on this. This is something I made my mind up on in the last 45 days.

I think the process should go through more of a committee deliberation. I think what I am trying to do is begin to see if a movement cannot be generated with respect to what I think is something important.

Although my colleagues have made good points, I do not think they have addressed themselves, really, to the goals that I am going after.

First speaking to the remarks of my distinguished colleague from Rhode Island, for whom I truly hold great affection, he is right. Let us stop and pave all streets in Providence and all streets in Anchorage. But the truth of the matter is that Providence and Anchorage are not the international capitals of the world. We do not get 8 million people coming to Providence nor to Anchorage. Nor do we get 8 million people coming to Houston, and Houston is a very important community in this country. But it is not as important as Manhattan Island because Manhattan Island is the capital of the world, both politically, in my mind, and also economically, culturally, artistically, and it happens to be under the American flag.

There is no question, we can take my figures or the Senator's figures. He can make a case and I can make a case.

The figures I was using, incidentally, were from 1972 to 1976 because that is where we had the relative data in charts.

I think the Senator knows, and certainly the distinguished Senator in the chair knows, that from 1976 to today there has been an unusual effort in New York, there has been a lot of targeting because of the recession and because New York took the brunt of the recession, like a few other communities in this country.

But I think we cannot walk away from the fact that New York City is making as good a tax effort as anybody else in the United States, and more than most.

There is no one, on a per capita basis in the United States, that is paying any more taxes than a resident of Manhattan—no one.

So we must deduct from empirical evidence that the effort they are doing for their own community is not sufficient.

We could turn around and say, "To hell with it," to their community.

It is not their community. It is our community. We have as much at stake, as a citizen anywhere in the United States, in New York City as a New York City resident has.

So we must deduct from empirical evidence that, regardless of what is being done, it is not going to be enough.

If we can tolerate the situation, to have the capital of the Western world, the capital of the free enterprise system, look as it does, then fine. I, for one, as an American, am fed up with having my capital look that bad. I am prepared to stand here as a Senator from Alaska and say that I am prepared to take my cut, percentagewise with the rest of the people of this country, take that one area of ground, Manhattan Island, and to make it look like something to be proud of in the free enterprise world, make it a showcase.

But now we can walk across town faster than we can take a cab and the streets are the worst in the world. There are no streets like that in Anchorage, Alaska. I have been to Houston. It is a fine community. Texas can be proud of Houston. But Houston does not begin to have the problems of New York City.

I am not talking about the boroughs of Staten Island or Queens. I am talking about the area within Manhattan. If we were to take a foreigner and come in on the Triborough Bridge and get off at 125th Street, do not scoot down the FDR Drive, but get off at 125th Street, take the streets down, you would think your were driving through Berlin in 1946.

That is the window of the world that we have, to tell the world, "Boy, isn't the free enterprise system something great?"

That is what they see. That we can let our capital get into such disrepair is preposterous.

So I do not make an appeal on the basis of, "Well, my people in Anchorage are not getting as much as the person in Manhattan." I hope my colleague would not make his appeal and say the people in Houston are not getting that much, or the people in Wisconsin are not getting that much. That is not the issue.

The issue is that they are taxing themselves as much as they can. They say they are prepared to tax themselves more, and that will not do the job.

So the obvious question is, do we want the job done?

I, for one, starting today, am going to look for programs in the American budget, for the balance of my term in office, and if that is extended by the people of Alaska, even further on into that, I will look for moneys and programs so I can focus on that unique problem of making Manhattan look better than it looks now. That is the Sunday suit that I, as a member of the free enterprise society, wear to Sunday meeting. That suit is tattered now, and the people who hold that suit cannot afford to do more than they are doing now. So it is our responsibility.

With that placed in the RECORD, hopefully there will be other Americans that will believe such as I, and other Mem-

bers of the Senate and the Congress that will believe such as I, and that will come forward, hopefully, we can make efforts as time goes on to try to do something about this problem.

I want to reemphasize again, we have put our partisanship aside. We have to think of our nationality in terms of not an Alaskan or a Texan or an Arizonian.

We have to think, first, we are Americans, that we believe in a free enterprise system, and that the window of that system to the world is Manhattan Island, located just accidentally in the city of New York.

We can let that window look the way it looks now, tattered. As we know, we judge a person by the way he looks. So if he looks like a slob, we tend to treat him like a slob. But if he looks good, then we are inclined to treat him good.

So when the leaders of the world come to the United Nations to address that august body in the political heart of the world, what they ride through to get to the United Nations is what we exhibit as our economic system, this great and successful economic system.

I wish we at least had the decency to let that city mirror the success of that system, and it does not. If you landed from Mars and you walked the streets of Moscow and you landed from Mars and walked the streets of New York, you would have to say that Moscow has a much more successful economic system than the economic system that shelters the city of New York.

So, obviously, the only answer is to recognize that they are making an effort, a greater tax effort, than anybody else in the United States. Obviously, through empirical observation, that is not enough.

You can drive to Rhode Island and you can drive to Texas and you can drive to Alaska, and in no instance is it as bad as driving through Manhattan. I think that is a national disgrace, and I hope this speech will launch the effort to do something about this problem, extraneous to our normal biases to our own communities and constituencies.

With that in mind, Mr. President, since I will be coming to the floor on numerous occasions to make the case, we will attempt to refine our figures more precisely, work them over a little more, try to get more current data, and will come back again, and we will come back at hearings, not only on the highways but also on mass transit and a whole host of other areas, to try to do something to give us a little more pride in our capital city.

We have expressed that pride in Washington, where we have put in more than $3,000 per capita. I hope we do not have to equal that in New York. But I hope we will do substantially more for not New York City the city, but New York City the capital of the free world.

I thank my colleagues for their patience, and I withdraw my amendment.

The PRESIDING OFFICER. The amendment is withdrawn.

UP AMENDMENT NO. 1683
(Subsequently numbered amendment No. 3513)

(Purpose: To provide funds for the Arkansas share for the I–40 Arkansas River bridge)

Mr. BARTLETT. Mr. President, the senior Senator from Oklahoma and I have an unprinted amendment at the desk, and I ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The second assistant legislative clerk read as follows:

The Senator from Oklahoma (Mr. BARTLETT), for himself and Mr. BELLMON, proposes an unprinted amendment numbered 1683:

At the end of the bill insert the following:

SEC. 146. (a) There is hereby authorized to be appropriated from the General Fund of the Treasury the sum of $640,100 to provide the share of the State of Arkansas for the Interstate 40 bridge across the Arkansas River.

(b) Sum authorized by this section shall remain available until expended.

The PRESIDING OFFICER. Without objection, the amendment is in order.

Mr. BARTLETT. Mr. President, I should like to give a little background on this amendment.

As Congress knows, and the Senate very well knows, through the efforts of Senator McClellan and Senator Kerr, the United States embarked on a very expensive and expansive development program of the Arkansas Basin. This program has cost $1.2 billion and provides water transportation for the area served by the Arkansas River, which benefits particularly certain States, such as Arkansas and Oklahoma, but also Kansas, Nebraska, Colorado, and many others.

Indirectly, and actually even directly, it benefits other States on the inland waterway system. As part of the interstate highway system, Interstate Highway 40 crosses the Kerr-McClellan Waterway at Little Rock. The bridge is a important part of Arkansas interstate system, and it is important that this river be traversed by a modern bridge. The bridge is being held up because of a difference of opinion between the State of Arkansas and the State of Oklahoma as to the size of the span over the channel of the waterway.

There was testimony in a recent hearing by the St. Louis Division of the Coast Guard that this channel should be traversed by a span of 600 feet. The State of Arkansas would prefer building a span of 500 feet which, of course, would cost less than a span of 600 feet. There are people in the State of Oklahoma who filed suit in this matter and then set it aside for the hearing to which I referred.

After the hearing, notwithstanding the fact that the decision of the Coast Guard recommended the 600-foot span, the admiral in charge of the Coast Guard made a suggestion—and the Department of Transportation, I suppose, actually made the ruling—for a 500-foot span to be built.

What is at stake here? The barge owners have testified and agreed with the Division of the Coast Guard from St. Louis that a 600-foot span is needed over the waterway at this particular point because it occurs in the bend of the river opposite the port at Little Rock; that because of the two things impacting on each other—the curve of the channel in the river and the activity around the port—it would be unsafe to carry a normal towload of barges up the river if the 500-foot span is constructed. If the 500-foot span is constructed, they would be able to tow only eight barges, plus a towboat. The towboat would be able to tow safely eight barges; whereas, with a 600-foot span, it would be able to tow 17 barges safely.

It is very obvious that the cost of transportation for that segment from Little Rock to Catoosa would be much larger, because of the smaller load permitted, than for the remainder of the segment of the Arkansas waterway and the entire inland waterway.

Let us look at it from the point of view of the Federal Government. It has this tremendous investment in the Arkansas waterway, for partly the purpose of inland waterway transportation. I think it is very vital that its interests in having a waterway that is fully usable at its most efficient rate be available for the full extent of the waterway. Yet, the Federal Government engaged in the construction of the whole Arkansas basin development, including the waterway. Why? For the reason that the States which directly and intimately benefit from it would not be able to support it. They, themselves would not be able to construct such a project, which some have called a boondoggle.

I might say that the amount of transportation, the tonnage, on the Arkansas to Tulsa is larger than anticipated for this stage of development.

Here we have two States that are disagreeing over the size of the bridge, one-tenth of the bridge to be paid for—on a 90 to 10 basis—by the State of Arkansas, and the benefits accruing to the State of Oklahoma.

I think we have the same kind of situation as we have with the construction of the Arkansas Basin, where the Federal Government steps in because the States are incapable of dealing with the problem themselves.

The State of Oklahoma, through its legislature, would not be in a position to authorize the necessary appropriation for the increased span from 500 to 600 feet of the bridge crossing the Arkansas at Fort Smith.

The State of Arkansas, for reasons of constructing the bridge as soon as possible and because of the extra costs involved prefers the 500-foot span.

It appears that there will now be, because of the recent Department of Transportation decision favoring the 500-foot span, a new lawsuit filed or the old lawsuit reactivated and that there will be definitely delays. So there is going to be a delay it appears either way, whether the Federal Government would step in to make certain that the waterway, in which they have such a tremendous investment, is going to be properly constructed or, on the other hand, whether the decision is reached not to finance this span of the bridge.

So it gets down just to the question of whether or not Congress, and first the Senate, should authorize the appropriation of a very small amount of money, an amount totaling $640,100, which would pay the share of the State of Arkansas of the additional cost of constructing the bridge with a 600-foot span instead of a 500-foot span over the channel of the Arkansas waterway.

I hope that the floor managers of the bill will accept what appears to this Senator to be a most reasonable position for the Federal Government, for this Congress to make certain that the navigation of the Arkansas which is proceeding very well is going to continue to proceed very well. Efficiency and the benefits accrue to all citizens of the country in lower transportation costs, not only in barge transportation but competing transportation of all kinds.

So, it is my pleasure to participate in this with my distinguished colleague from Oklahoma, and I am sorry that I have taken so long in making my presentation but, I know that he wishes to make some remarks, and I yield for that purpose.

Mr. BELLMON. Mr. President, how much time remains on the amendment?

The PRESIDING OFFICER. Two minutes remain for the Senator from Oklahoma.

Mr. BELLMON. Mr. President, I shall be very brief. I believe my colleague from Oklahoma has covered the matter thoroughly and succinctly and there is not a great deal more to be said. I am very proud to join in sponsoring this amendment.

It is a matter of utmost importance to the State of Oklahoma and in a way to the Nation because of lowering the cost of moving grain and other commodities up or down the navigation channel will certainly increase the efficiency of our commerce. It makes no sense to be in this case pennywise and pound foolish. A few dollars we may save in building the shorter span will cost more overtime in increased freight cost.

This is one of those unusual situations where the action of one State, which is perhaps in that State's interest, is contrary to the interest of a neighboring State and it seems that the only solution to the problem is for the Federal Government to step in and to pay the very nominal cost of building the 600-foot span which will properly serve the needs of the users of the channel.

I might say that we have discussed this matter, and I believe my colleague will agree, with both the Senators from Arkansas and I believe they are in agreement that this is the proper action and will join us in support of this amendment. I cannot speak for them with total assurance, but I believe they are in agreement, that this is a joint effort between the Senators from both Arkansas and Oklahoma.

I urge the adoption of the Bartlett amendment.

The PRESIDING OFFICER. Who yields time?

The Senator from Texas.

Mr. BENTSEN. Mr. President, I rise in opposition to the amendment. I do it with great reluctance because of my high regard for the two Senators from Oklahoma and in turn the two Senators from Arkansas, my colleagues and my neighbors.

But as I understand what they are seeking to do is to increase the span from approximately 500 feet to approximately 600 feet. The primary reason for that is not highway transportation, I would deem that the highway purpose would be equally served by a 500-foot span. So the reason is for navigation, and here we are talking about trying to put it on the highway bill.

In addition to that, it seems to me it is a very bad precedent when you talk about adding the excess span from 500 to 600 feet and then saying the Federal Government, in effect, is going to come in and pick up all of the State's portion. It is like saying "Even though you are going to 90–10, that is not enough. Give us the extra 10 percent from the Federal Government."

I cannot remember such a precedent in our highway programs and if there is one I think it is a very bad one. I hate to have this one become a precedent in that regard.

So, as much as I am concerned about the problem, I am further concern on what we will be looking on down the road in this kind of precedent-setting amendment.

Therefore, I have to oppose the amendment.

I withhold the remainder of my time.

Mr. BARTLETT. Mr. President, it is my understanding that we have used up all of our time.

The PRESIDING OFFICER. The Senator from Oklahoma is correct.

Who yields time?

Mr. BARTLETT. Will my good friend from Teaxs yield me 2 minutes?

Mr. BENTSEN. I am delighted to yield 2 minutes to the Senator from Oklahoma of my time.

The PRESIDING OFFICER. The Senator from Oklahoma is recognized for 2 minutes.

Mr. BARTLETT. I thank the distinguished Senator and my good friend from Texas.

I wish to point out that I do not believe that this would establish a precedent. The purpose, as the distinguished Senator from Teaxs very clearly and succinctly outlined, is to facilitate construction of a bridge for the purpose of having a navigational channel that will be fully and efficiently usable so that it will not require the barge operators to shift their loads around and reduce the size of the tow which obviously raises the transportation costs. So this is a very unusual, unique, and I am certain not repeatable kind of request.

But it happens to be a bridge, and the bridge happens to carry a road and the road happens to be an interstate highway, and so obviously we need both the interstate highway bridge to be constructed for the purpose of carrying Interstate 40 which we, Texas, Oklahoma, Arkansas and across the Nation, are interested in.

We are also interested, as is Texas and other States, in the navigation part. So I do not think there is any precedent here. I am sure this has not been done before because I cannot imagine this ever happening before. It happens to involve two States in which the costs accrue to one, the benefits accrue to the other. So I think this is the kind of situation in which the Federal Government has an obligation to enter for the purpose of making certain that their plans with the Arkansas waterway are going to go through and not be interfered with because of a disagreement between two States.

This, according to my colleague from Oklahoma, is supported by the Senator from Arkansas (Mr. BUMPERS), and in my conversation with the other Senator from Arkansas (Mr. HODGES) it is supported by him.

So as far as this legislation is concerned, there is no disagreement between the two States. Therefore, we would like a vote on this. If the Senator, the floor manager of the bill, does not accept it——

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. BARTLETT. Mr. President, if I could have 30 seconds more.

Mr. BENTSEN. I yield 30 seconds to the Senator from Oklahoma.

The PRESIDING OFFICER. The Senator is recognized for half a minute.

Mr. BARTLETT. The Senators from Oklahoma—and I am speaking for my colleague, Mr. BELLMON—of course, would like to have it accepted today. If the distinguished floor manager does not find it acceptable to him, then we would like to have a vote on it Monday, with the yeas and nays.

Mr. BENTSEN. Would the Senator like to have it now?

I understand we have a quorum. I frankly, do not know who is here, so I do not know who would be favored by a vote now. Would the Senator like to have a vote now? I would like to get it out of the way, if we can, one way or the other.

Mr. BARTLETT. I think it would be unfair to the Senators who are not here, those who have gone. It is my understanding that both cloakrooms have notified the Senators that there will not be another vote.

Mr. BENTSEN. That is not correct. In fact, the leadership has continued to advise them that there probably will be a vote, and the leadership is asking that we get as many votes as we can out of the way.

Mr. BARTLETT. I do not know how the vote would come out today as compared with Monday.

Mr. BENTSEN. I think there are as many here today as there will be Monday.

Mr. BARTLETT. I think it would be fairer to have it on Monday because we would have at least an opportunity to present the matter, which is a little bit—it does not take long to present it, I think, but it is a rather unusual request and we would like to have the opportunity of doing that over the weekend, and Monday morning. Therefore we would much prefer a vote on Monday.

Mr. BELLMON. Mr. President, I would agree. This matter needs to be explained in a dear colleague letter which we will send out this afternoon, and we hope the manager and assistant manager will take it. It is $640,000, and it would not seem to be much of a strain.

Mr. BENTSEN. I would say to my good friend when we talk about strain, I have the distinguished Senator from Maryland waiting for another strain, and his is a unique situation also. It is once again the precedents we are concerned about.

Mr. BELLMON. Mr. President, if the Senator will yield, the problem with precedents would not seem to be that troubling. I cannot imagine another situation like this occurring where one State's interests are contrary to the other State's interests, and where only the Federal Government would be able to straighten it out. We would like as much as possible to make it plain that this is not a precedent-setting action.

Mr. President, I ask unanimous consent that there be a time set for a rollcall on the matter on Monday. Are there other votes set for Monday?

Mr. BENTSEN. No.

The PRESIDING OFFICER. No time has been set for votes on Monday as of now.

Mr. BENTSEN. I could move to table, of course, and have the vote now.

Mr. CHAFEE. Mr. President, may I just make a comment or two?

The PRESIDING OFFICER. Who yields time? Does the Senator from Texas yield time?

Mr. BENTSEN. Is the Senator speaking for or against the amendment?

Mr. CHAFEE. I am speaking for it.

The PRESIDING OFFICER. All time has expired.

Mr. BENTSEN. I would yield 5 minutes to my friend from Rhode Island.

Mr. CHAFEE. That is what you would call above and beyond the call of duty.

Mr. President, I have spoken to the two Senators from Oklahoma on this subject, and they have made a very persuasive plaintiff's case for their side, and I have indicated to them that I would support the amendment.

I guess the question now being debated——

Mr. BENTSEN. Well, considering the two Senators want to make their case over the weekend with a dear colleague letter, I will not move to table. I would hope they would have given us a vote today. We have been trying all day to get votes, and everyone says wait until Monday. I do not know why the odds change at all on Monday.

I ask unanimous consent that we schedule a vote—for what time would you gentlemen like?

Mr. CHAFEE. I would like it in the afternoon if we could.

Mr. BENTSEN. How about 2:00?

Mr. CHAFEE. How about 2:30?

Mr. BENTSEN. That is fine.

Mr. BARTLETT. That would be fine with us.

Mr. BENTSEN. I ask unanimous consent that this vote be scheduled for 2:30 p.m. on Monday. We should check with the leadership. Let me withhold that.

Mr. SCOTT. Mr. President, I suggest the absence of a quorum.

Mr. CHAFEE. Will the Senator withhold that?

Mr. President, I wonder if I might make an inquiry?

The PRESIDING OFFICER. Who yields time?

Mr. CHAFEE. I think I still have some time left on the bill. I will take 1 minute on the bill.

The PRESIDING OFFICER. The Senator has that right.

Mr. CHAFEE. Mr. President, just a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. CHAFEE. What is the vote situation for Monday? Are the votes to be in the afternoon so far? In other words, we have some stacked up that were assigned for Monday, such as the Alaska Railroad, the Kennedy-Weicker amendment dealing with the highway trust fund, the Huddleston amendment dealing with coal haul roads. Those I understand were to be in the afternoon.

The PRESIDING OFFICER. No time has been set. They will occur on Monday, but no time has been set.

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. CHAFEE. Yes. I just have a little bit left.

Mr. SCOTT. Mr. President, there was a unanimous-consent agreement with regard to the District of Columbia representation bill whereby we would have an allocation of time, and it was agreed by the majority leader that we would have the time fairly equally divided between Monday and Tuesday. There is a special order on this, I believe, and we would not want to be put in a cramp on Monday because we would hardly have time to dispose of the bill and vote at 6 o'clock Tuesday.

Mr. BENTSEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. Is the Senator from Texas charging his time on the bill?

Mr. BENTSEN. I ask unanimous consent that it be charged to both sides equally.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the vote occur in relation to the amendment by Mr. BARTLETT at 5 o'clock p.m. on Monday.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, have the yeas and nays been ordered?

The PRESIDING OFFICER. The yeas and nays have not been ordered.

Mr. BARTLETT. I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. ROBERT C. BYRD. Mr. President, that request does not rule out a motion to table. I hope the Senator understood my request.

Mr. BARTLETT. I understand.

Mr. ROBERT C. BYRD. Mr. President, the amendment is automatically temporarily laid aside; or, if not, I ask unanimous consent that it be so.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Is there time remaining on the amendment?

The PRESIDING OFFICER. Five minutes remain in opposition. No time remains in favor.

Mr. ROBERT C. BYRD. Very well. I believe the Senator from Maryland (Mr. MATHIAS) has an amendment that he is about to call up, and on which he wants a rollcall vote today.

Mr. MATHIAS. Mr. President, I have three amendments. Two of them, I think, are agreeable to the committee. So the two can be disposed of very rapidly, and then we can go to the other one.

UP AMENDMENT NO. 1684

(Purpose: To amend the provisions relating to Interstate substitutions)

Mr. MATHIAS. Mr. President, I send an amendment to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Maryland (Mr. MATHIAS) proposes an unprinted amendment numbered 1684.

Mr. MATHIAS. I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 11, between lines 1 and 2, insert the following:

SEC. 107. (a) Section 103(e)(2) of title 23, United States Code, is amended in the fourth sentence by striking out all beginning with ", except" to the period at the end thereof.

On page 11, line 2, strike out "Sec. 107." and insert in lieu thereof "(b)".

Mr. ROBERT C. BYRD. Mr. President, will the Senator want the yeas and nays on his amendment?

Mr. MATHIAS. Not on this one, but on a succeeding one.

Mr. ROBERT C. BYRD. And today?

Mr. MATHIAS. And today.

Mr. ROBERT C. BYRD. Could we get the order for the yeas and nays, so that Senators will be on notice? I ask unanimous consent that it be in order to order the yeas and nays on the——

Mr. MATHIAS. I–95 tunnel amendment.

Mr. ROBERT C. BYRD. On the I–95 tunnel amendment at this time.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. ROBERT C. BYRD. I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. ROBERT C. BYRD. Does the distinguished Senator wish to have the rollcall vote this afternoon on that amendment?

Mr. MATHIAS. I have no objection, if that is the desire of the leadership. We will meet the leadership's desires.

Mr. ROBERT C. BYRD. No, do not put it on the leadership. I am always willing to take it if nobody else will.

Mr. MATHIAS. Well, let me advise the distinguished majority leader that I do not want to preclude the manager of the bill from the opportunity of accepting the amendment.

Mr. ROBERT C. BYRD. Well, the yeas and nays have been ordered. Senators should know if the rollcall vote will occur today. There has been no indication that we would not have rollcall votes today.

I think the important thing is to make progress on the bill. Shall we say to the cloakrooms that the rollcall will occur today?

Mr. BENTSEN. That is fine with the manager of the bill.

Mr. MATHIAS. Very well.

Mr. President, unprinted amendment No. 1684 provides for continued Federal share participation and cost escalation for interstate highway routes which have been substituted by certain States. Under present law, the cost of transit routes which are substituted for interstate highway routes are permitted to fully escalate. The cost escalation is pegged to rises in the construction cost index. The cost of interstate highway substitutions, however, are not permitted to full rise with inflation to their true project costs.

Yet, such substitutions, which have been designated as interstate routes, are frequently better routes which have been carefully planned, designed, and evaluated from a citizen and environmental point of view to minimize disruption. This effort to propose and build the best possible interstate route does take time, however. The process of interstate substitution involves delay which means money. In the interim, material costs can escalate due to changes in highway design or construction standards.

Mr. President, we ought to be consistent in our funding treatment of interstate highways. They should all be treated the same regardless of whether they are substituted routes, transit routes, or were fully funded originally. This amendment provides for such an equitable situation.

Mr. CHAFEE. Mr. President, this is a good amendment. It just makes sense that sometimes substitutions are necessary, and the substitutions are accepted because they are better than the original route. I think it would be unfortunate if the substituted route had to be done at the fixed sum for the original route, without taking the escalation into account.

So I believe this is just common sense, and should be accepted.

The PRESIDING OFFICER. Is all remaining time yielded back?

Mr. BENTSEN. Mr. President, I would say, as manager of the bill for the majority, that I favor the idea of an equal escalator for both sides, and I am pleased to accept the amendment on behalf of the majority.

The PRESIDING OFFICER. Does the Senator yield back his time?

Mr. MATHIAS. I yield back the remainder of my time, and move the adoption of the amendment.

Mr. BENTSEN. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Maryland. Without objection, the amendment is agreed to.

UP AMENDMENT NO. 1685

(Purpose: To modify the standards for the reconstruction of the Baltimore Washington Parkway)

Mr. MATHIAS. Mr. President, I send an amendment to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Maryland (Mr. MATHIAS) proposes an unprinted amendment numbered 1685.

Mr. MATHIAS. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the end of the bill insert a new section as follows:

BALTIMORE-WASHINGTON PARKWAY

SEC. 146. Section 146(a) of the Federal-Aid Highway Act of 1970 is amended (1) by striking out "to six lanes" and (2) by striking out "for the National System of Interstate and Defense Highways" and inserting in lieu thereof a comma and "agreed upon by the Secretary of Transportation and the Secretary of Transportation of the State of Maryland, which preserve the Parkway characteristics".

Mr. MATHIAS. Mr. President, this amendment simply confirms an agreement which has been worked out between the Federal Highway Administrator and the Maryland Department of Transportation concerning the Baltimore-Washington Parkway.

The Federal Aid Highway Act of 1970 authorized the rebuilding of the Baltimore-Washington Parkway which was orginally constructed in 1952. The 1970 legislation stated the roadway was to be rebuilt to interstate standards, which meant a significant widening of the roadway and interchanges, additional lanes, and a high cost. This would mean a substantial change in the character of the Parkway.

Subsequent planning, environmental reviews, and citizens participation concerning the rebuilding of the Parkway led highway planners to conclude that the parkway-like setting should be retained. As many of my colleagues know, the Baltimore-Washington Parkway is one of the more pleasant roadways linking Baltimore and Washington with its green spaces, trees, and buffers from the adjacent urban areas.

This amendment simply authorizes the reconstruction of the parkway to standards acceptable to the Secretary of Transportation, which, by agreement, would be in keeping with the parkway nature of the roadway.

Mr. BENTSEN. Mr. President, I not only accept that amendment for the majority as manager of the bill, but I enthusiastically endorse it. I think it is an admirable thing to do. It is a beautiful parkway. I met with the Secretary of Transportation in Maryland and with the distinguished Senator about the matter, and I applaud him on it.

Mr. CHAFEE. Mr. President, let me say that this is not only an excellent amendment, but it makes one wonder why it is necessary, why we are so bogged down in bureaucracy that in order to maintain a beautiful highway like the Baltimore-Washington Parkway, we have to have a special act of Congress in order to retain its beauty and yet have it deemed an interstate road. It makes us wonder about some of the procedures around here.

I commend the Senator from Maryland for his amendment. I am delighted that the beauty of that road can be preserved.

The PRESIDING OFFICER. Does the Senator yield back the remainder of his time?

Mr. CHAFEE. Yes.

Mr. MATHIAS. I retain only so much of my time as necessary to thank both managers of the bill for their enthusiastic support of this amendment.

Mr. BENTSEN. I yield back the remainder of my time.

The PRESIDING OFFICER. Without objection, the amendment is agreed to.

UP AMENDMENT NO. 1686

(Purpose: To authorize advances for the completion of certain essential gaps in the Interstate System)

Mr. MATHIAS. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Maryland (Mr. MATHIAS) proposes an unprinted amendment numbered 1686.

Mr. MATHIAS. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 16, between lines 10 and 11, insert the following:

(c) Section 124 of title 23, United States Code, is amended by adding at the end thereof the following: "Notwithstanding the above, in the case of any toll bridge, toll tunnel or approach thereto which meets the requirements of section 129 of this title and will complete an essential gap in the Interstate System, upon the request of a State highway department, the Secretary shall at any time during the period of construction of such bridge, tunnel, or approach and up to one year after it is opened for traffic, subject to the conditions and limitations set forth in such section 129, advance to such State out of any existing appropriations 100 percent of the cost of construction thereof. If the total amount so advanced exceeds the Federal share, 50 per centum of the excess shall be repaid to the United States within one year of the opening of such bridge or tunnel to traffic, 25 per centum of the excess shall be repaid within two years of

such opening, and the balance of the excess shall be repaid within three years of such opening.".

Mr. MATHIAS. This amendment is a little more difficult than the two we have just considered, Mr. President. This amendment would authorize the Secretary of Transportation to advance 100 percent the cost of constructing any toll bridge or tunnel as part of the Interstate System which has been determined by the Secretary of Transportation to be an essential gap in that system. The amendment further requires that the 10-percent difference between the 100-percent construction financing and the normal 90 percent Federal share shall be repaid—repaid—let me repeat that for the third time: repaid—by the locality to the highway trust fund over a 3-year period.

There are only two essential gaps in the Interstate System which would benefit from this amendment. This is information supplied to me by the Federal Highway Administration. The two essential gaps that could possibly benefit from this amendment are the proposed I–95 tunnel under the Baltimore Harbor and the proposed Boston I–90 airport-spur tunnel. So we are not here suggesting something which is going to prove to be a cornucopia of golden fruit for construction companies across the country. There are just two places, Mr. President.

It is important to note that this amendment involves no increase in either budget authority or in outlay.

As Senators know, virtually all the Interstate Highway System is now complete. The few remaining sections to be built are those in the most congested urban areas. The new I–95 tunnel is planned to relieve the existing Baltimore Harbor Tunnel which, as anyone knows who has traveled I–95 going north, is the worst bottleneck on the entire Northeast corridor from Washington to Boston. The existing harbor tunnel through Baltimore was opened in 1957, and it was a masterpiece of its time. It is a four-lane, narrow tunnel, which daily becomes congested due to rush hour traffic and/or vehicle breakdowns in the tunnel itself. Too many Northeast corridor commuters have had the unfortunate experience of being stalled in the traffic buildup of the Baltimore Harbor Tunnel, their engines idling, pollution building, their temperatures and frustration rising, and wishing that they had the capacity to jog that some Members of the Senate enjoy. But the new I–95 tunnel will, I urge upon the managers of the bill, end that kind of problem.

It will be an eight-lane roadway completing Interstate 95 through Baltimore. While the approaches of this new tunnel are presently under construction, there is a significant reason why the tunnel has not gotten under construction as yet. That reason is that the city of Baltimore, a municipality, and not the State of Maryland, as is normally the case, must provide the entire local share of the construction cost.

Maryland law provides for the separation of financing authorities. Under that law, Baltimore City is completely responsible for the construction, maintenance, and operation of all highways and streets within its corporate limits, including 1,400 miles of streets and a $1.9 billion, 32-mile interstate system.

The I–95 tunnel will complete the final 2 miles of Interstate 95 remaining to be completed within the State of Maryland. The estimated cost to the city of Baltimore for the interest charges during the construction period on the city funds for the I–95 tunnel is 27 percent of the city's total debt service on highway bonds during the period. That is an enormous amount of money for the city of Baltimore to pay in interest costs to finance a project which benefits the entire east coast transportation network.

You are asking the citizens of one city to pick up the bill for those good Rhode Islanders who are coming to the Nation's Capital: for those Texans who may come up through Washington to go on to New York and Boston.

You are asking the citizens of Baltimore to pay for everybody else's transportation.

The city has already spent $210 million on the interstate system within the city limits.

Mr. President, I will reserve the remainder of my time. I see the distinguished Senator from Texas is prepared to speak.

Mr. BENTSEN. I would say to the distinguished Senator from Maryland that his eloquence is only matched by his financial genius in preparing this piece of legislation, and with the trouble the dollar is in these days we ought to put him in charge trying to solve its problems. Geneva, London, or Wall Street would be no match for him at all.

Here he has proposed a very costly transportation facility at little or no cost to the city of Baltimore or to the State of Maryland, and a very high cost to the Federal Government. Let us look at what is proposed here.

During the construction and for 1 year after the opening of the Fort McHenry tunnel—who knows how long it will take to build it and how much interest is going to pile up during that period of time—during that time, the Federal Government would pay 100 percent of the construction bills which come due. How do you like that, Mr. President? One hundred percent. At the end of the first year the tunnel is opened and the tolls are collected, then the Federal Government, which has been paying 100 percent, is going to get 50 percent of the local share of the project. The remainder of the local share, which ultimately is 10 percent of the total cost of $140 million, is going to be repaid in installments during each of the next 2 years. That is pretty sharp.

I think that is about one of the cleverest financial things Maryland will ever get. I congratulate the Senator.

This repayment would come from toll collections and would require no contribution from State or city revenues.

I understood the Senator from Maryland to say that the city of Baltimore has certain limitations placed on it in borrowing money and, therefore, has to turn to the Federal Government.

Why not turn to the State government, which is a major beneficiary of this transportation aid?

It is said that the tunnel will provide a vital link for interstate traffic along the east coast. There already exists two such links, the Baltimore Harbor Tunnel and the Francis Scott Key Bridge, which I think a Texan would go over anyway because that gives him such a beautiful view of that magnificent area. So the travelers through the Baltimore area are provided for.

It is also pointed out that the tunnel provides critical access to and from the Port of Baltimore. That is certainly true. But as a document from the Maryland Transportation Department says, "the port is the single most important element of Maryland's economy." It is a magnificent port. I have been up there on a boat and I have seen the great construction, all the ships lined up, and I know how much it must contribute to the economy of the Senator's great State. I revel in it with the Senator.

But should not Maryland and the city contribute to a facility which means so much to its welfare?

The relatively modest cost to the Federal Government is noted as well as the limited application the amendment would have to other projects. While almost $10 million is small compared to the total size of the highway program, it is the principle, again, which is important. We saw that demonstrated by the amendment which was proposed earlier.

The provision relieves the local or State governments of any substantial burden for a project from which they gain great benefits, and a very expensive project. I do not think it is too much to ask the State or local area to come up with $1 for each $9 of Federal funds it receives.

Surely, there is a kind of desirable discipline involved in saying that whoever undertakes this project and builds this project does a good job and does an economical job.

For the foregoing reasons, I oppose the amendment of the distinguished Senator from Maryland with as much enthusiasm as that with which I endorsed his previous amendment.

The PRESIDING OFFICER. Who yields time? Does the Senator from Texas yield time to the Senator from Rhode Island?

Mr. BENTSEN. I am delighted to yield time. I want to reserve a minute, at least, of my time.

The PRESIDING OFFICER. The Senator has 10 minutes remaining.

Mr. BENTSEN. Then I shall ask that the distinguished Senator from Maryland allow his amendment to be set aside for a period of a couple of minutes, so the Senator from Kansas can propose an amendment that I understand the managers are going to take.

Mr. BIDEN. A parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. BIDEN. What is the rationale for setting aside a vote at 5 o'clock in the afternoon for something that is not a vote? I am not sure I understand what is going on.

Mr. BENTSEN. We are trying to take 1 minute to take care of the Senator from Kansas today who cannot be here on Monday. We are going to accept his amendment. Then we are going to go right to a vote.

That is a pretty good rationale. We are trying to accommodate two Senators.

The PRESIDING OFFICER. How much time does the Senator from Rhode Island wish?

Mr. CHAFEE. Five minutes.

Mr. President, we certainly admire the Senator from Maryland because he comes in here with a delightful smile and a tremendous presentation on a proposal that, really, would make most people smile as they presented it. To term it "outrageous" is perhaps going too far, but it is certainly the key to the Treasury of the United States. There is a man I knew once who was a good lawyer. They said he could talk a dog off a meat wagon. If this Senator can put across that proposal, he qualifies under that title.

Just remember that the Federal Government is going to pay 90 percent of the cost of this tunnel to start with. That only leaves a teeny-weeny 10 percent for the State of Maryland or the city of Baltimore to carry. Yet they do not even want to do that.

Furthermore, this is a self-liquidating proposition. They are going to charge tolls until the thing is entirely paid for.

It seems to me that to ask that the Federal Government come up with 100 percent and then wait to be paid back for the 10-percent local share over a period of 4 years strains my imagination.

Mr. MATHIAS. Three years.

Mr. CHAFEE. Only 3 years. It seems to me that is still pressing the case a little far.

Mr. STAFFORD. Will the distinguished Senator yield for a question?

Mr. CHAFEE. Yes.

Mr. STAFFORD. During that 3 years of repayment, could the distinguished Senator tell me what the interest rate would be to be paid on the indebtedness of the city of Baltimore?

Mr. CHAFEE. Oh, no interest. Do not talk such a mean word as the city of Baltimore or the State of Maryland paying interest on a sum they borrow. That would not fit in with this proposal. This proposal does not deal with things like paying the Federal Government interest. It is a wonder that we are not asked to pay them interest while they have our money.

I think, Mr. President, that this amendment so graciously presented should receive the deep six.

The PRESIDING OFFICER. Who yields time?

Mr. MATHIAS. Mr. President, the distinguished former Secretary of the Navy remembers his nautical vocabulary when he talks about giving this amendment the deep six. He has joined with the distinguished Senator from Texas in saying some very nice personal things that I appreciate.

But let me tell you, I do not want sweet talk, I want a little commonsense.

The Senator from Texas says, well, the State of Maryland ought to pick up the bill. Well, you can argue that. I guess it is a good question to ask. But the fact is that the law does not let the State of Maryland pick up the bill. It puts it all on the citizens of Baltimore. The Senators may not like that and I may not like that, and the citizens of Baltimore may not like that, but that is what the law is.

If wishes were horses, beggars would ride. The State of Maryland and the city of Baltimore have looked at that law and the possibility of changing the law has been explored.

Mr. BENTSEN. Will the Senator yield for a question?

Mr. MATHIAS. Yes.

Mr. BENTSEN. Will he agree that the law also does not allow the Federal Government to do it? It is a question of changing the law in either place.

Mr. MATHIAS. We are talking about changing the law as it relates to a national construction project. This is a Federal project. It seems to me that, rather than change the basic law, to require the State of Maryland to change a basic organic law which affects every aspect of State highway construction, we can change one small aspect of the law which deals with the national highway system, of which this is an "essential gap."

Mr. President, in conclusion, I reemphasize that this amendment does not require any additional outlay. It does not require any new budget authority. The city is prepared to repay the additional 10 percent Federal money within 3 years after the tunnel is completed.

The Senator from Texas treated that with the kind of disdain with which the humorists say that Texans deal with large sums of money, but I take that as a very serious commitment—a very serious commitment.

This amendment not only calls for repayment, it mandates it, it requires it. Under the provisions of section 129 of title XXIII of the United States Code, the new tunnel would be a toll facility until such time as local costs are recovered. This amendment will enable the tunnel to become a toll-free facility at an earlier date because it will reduce the total bond offering which must be sold by Baltimore to finance its share of the construction cost. Thus, the bonds can be retired sooner and, therefore, the tunnel becomes toll free sooner. One of the goals of the Federal Highway Administration is to eliminate toll facilities on the Interstate System at the earliest possible date.

This will benefit Texans, it will benefit Rhode Islanders, it will benefit the people in Delaware. In fact, the distinguished Senator from Delaware is a commuter. I do not want to put him in a position where it will be a conflict of interest if he votes for this amendment, but the citizens of his State stand to benefit by this amendment. All citizens of the United States who use the Interstate Highway System will benefit.

Mr. President, this is not something that has come up overnight. The Maryland State Highway Administration has been working on the problem of financing this vital link for several years. And, I might add, they have done a very thorough job of analyzing all the alternatives in this situation. Once they determined that a 100-percent Federal advance was necessary, they sought out the opinions of each of the other States on this amendment. As of August 16 of this year, they had received 43 responses. Of those responses, 30 States either supported or had no objection to this amendment. Three opposed it and 10 had no position.

Now, you might say with some proposals that this is self-serving, because these States would hope to gain something. But let me remind the Senate that there are only two "essential gaps" in the national highway system. So, Mr. President, I ask unanimous consent that a chart listing these State responses be printed in the RECORD at this point.

There being no objection, the chart was ordered to be printed in the RECORD, as follows:

State	Prior sec. 129 projects		Planned sec. 129 projects		Position of proposed amendment			
	Yes	No	Yes	No	Support	No objection	Oppose	No position

Mr. MATHIAS. Mr. President, the new I–95 tunnel has been in planning and design for some time. It has received the necessary environmental clearances. It is ready to go. The Secretary of Transportation has designated it an "essential gap;" That is, a route that must be completed to connect an intercity system. I note that the Environment and Public Works Committee report on the Federal-Aid Highway Act of 1978 pays special attention to the early completion of these essential gaps of the Interstate.

As the committee appropriately notes:

Some estimates conclude that at current funding levels some portions of the system may not be completed until the twenty-first century. With costs rising swiftly, this could mean that the remaining ten percent of the system will cost as much as that completed in prior years.

The new I–95 tunnel is one of those last vital links, which, if further delayed, could well end up costing the highway trust fund substantially more than its present cost estimate.

Mr. President, passage of this amendment would assist Baltimore in completing its total interstate program, as well as benefiting the entire Northeast corridor.

The economic effect of this amendment is minimal as it would apply to only two interstate projects. It would, however, alleviate a serious local financing problem that is unique to Baltimore and the State of Maryland and it would expedite completion of the Interstate System in the Northeast corridor.

Mr. BIDEN. Before the Senator yields back his time, may I have 30 seconds for a question?

Mr. MATHIAS. I am happy to yield to the distinguished Senator from Delaware.

Mr. BIDEN. The Senator from Delaware, I think, has this argument in perspective. I want to make sure I do.

The Senator from Texas and the Senator from Rhode Island are sure that the people of Baltimore are beggars and the Senator from Maryland wants to give them all horses. Is that the way it all works out?

Mr. MATHIAS. No, I do not think the Senator from Delaware has quite the perspective.

Mr. BIDEN. The Senator from Delaware wants to know how much the horses are going to cost that we are giving all the beggars in Baltimore.

Mr. MATHIAS. That is the nice thing, they are not going to cost anything.

Mr. BIDEN. They are good ones, then.

Mr. MATHIAS. All we are doing is financing, for the brief period of 3 years, the 10 percent which the State normally invests in a section of the Interstate Highway System but which, under the peculiarities of this situation, are required to be advanced by the city of Baltimore. In so doing, we provide for all of the users of the Interstate System, from whatever State or whatever city they may come. We provide for them sooner a toll-free interstate facility.

Mr. BIDEN. I thank the Senator.

Mr. BENTSEN. Mr. President, I ask unanimous consent that we temporarily lay aside this amendment to consider the amendment of the Senator from Kansas and return forthwith to this amendment.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas?

Without objection, it is so ordered.

The Senator from Kansas is recognized.

UP AMENDMENT NO. 1687

Mr. DOLE. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Kansas (Mr. DOLE) proposes an unprinted amendment numbered 1687:

On page 423, line 2, insert immediately before the period a comma and the following: "including criteria which take into account the variability of speedometer readings and criteria which are based upon the speeds of all vehicles or a representative sample of all vehicles".

Mr. DOLE. Mr. President, the Federal-aid highway bill includes a provision that authorizes the Secretary to withhold up to 5 percent of a State's Federal highway aid if a certain percentage of vehicles in that State are violating the 55 mile-per-hour limit.

I do not quarrel with that, but by this amendment I would change that provision to apply to all vehicles, or a representative sample of all vehicles.

In my home State, the highway patrol has considerable difficulty enforcing the 55 miles-per-hour speed limit, despite an enforcement program that is universally recognized as one of the best in the country—and maybe the best. My amendment is designed to improve the gathering of speed statistics in a way that makes this provision a little less onerous for the States. My amendment in no way limits our commitment to the 55 miles-per-hour speed limit.

It does, however, provide a more realistic statistical basis for applying the compliance formula set out in the bill.

Currently, statistics on compliance with the speed limit are based on the "free-flow" monitoring system. Basically, this means that only certain vehicles are measured—vehicles driving under the best road conditions, without cars in front of them, on straight, flat roads. Obviously, this produces artificially high statistics on the speeds of vehicles and lowers the level of compliance with the 55 miles-per-hour speed limit.

Now that we are going to start penalizing States for noncompliance, it is important that we change our statistical base to include the speeds of all vehicles. This is obviously more fair, and the Department of Transportation has already been thinking about going to a "full monitoring" system of measuring speeds once this bill goes into effect. My amendment mandates that they do so.

In addition, the amendment requires that statistics take into account the effect of inaccurate speedometers on speed.

Mr. President, I urge adoption of this amendment.

Mr. BENTSEN. Mr. President, this amendment, I think, is an important one for the enforcement of the 55-mph speed limit, to make it work, to enforce it, to check the tolerances in the speedometers. I think it would make it a more equitable enforcement.

The PRESIDING OFFICER. Does the Senator from Texas yield to the Senator from Rhode Island?

Mr. BENTSEN. I am delighted to.

Mr. CHAFEE. Mr. President, on behalf of the minority, we agree on the amendment.

The PRESIDING OFFICER. Do the Senators yield back the remainder of their time?

Mr. DOLE. I yield back the remainder of my time.

Mr. BENTSEN. I yield back the remainder of my time.

The PRESIDING OFFICER. All time having been yielded back, the question is on agreeing to the amendment of the Senator from Kansas.

So the amendment (UP No. 1687) was agreed to.

UP AMENDMENT NO. 1686

Mr. BENTSEN. Mr. President, I ask unanimous consent that we now return to the amendment of the Senator from Maryland.

The PRESIDING OFFICER. The question automatically recurs.

Mr. MATHIAS. One final brief comment.

Some wise man once said, "Oh, that mine enemy should write a book."

The committee in this case wrote a book. I hope they are not my enemy, but they did write a book.

In that book, the committee noted:

Some estimates conclude that at current funding levels some portions of the system may not be completed until the twenty-first century. With costs rising swiftly, this could mean that the remaining ten percent of the system will cost as much as that completed in prior years.

Mr. President, I agree totally with the committee on this. I think any artificial delays in completing the system are going to artificially escalate the cost.

If we do not adopt this amendment, there will be continued delays on one of the essential gaps in the system.

So I urge the Senate to adopt the amendment.

The PRESIDING OFFICER. Is all time yielded back?

Mr. BENTSEN. I yield back the remainder of my time.

Mr. MATHIAS. I yield back the remainder of my time.

The PRESIDING OFFICER (Mr. MATSUNAGA). All time having been yielded back, the question is on agreeing to UP amendment No. 1686 of the Senator from Maryland. The yeas and nays have been ordered and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. ROBERT C. BYRD. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Minnesota (Mr. ANDERSON), the Senator from Arkansas (Mr. BUMPERS), the Senator from North Dakota (Mr. BURDICK), the Senator from Nevada (Mr. CANNON), the Senator from Idaho (Mr. CHURCH), the Senator from California (Mr. CRANSTON), the Senator from Arizona (Mr. DECONCINI), the Senator from New Hampshire (Mr. DURKIN), the Senator from Mississippi (Mr. EASTLAND), the Senator from Kentucky (Mr. FORD), the Senator from Maine (Mr. HATHAWAY), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Kentucky (Mr. HUDDLESTON), the Senator from Louisiana (Mr. JOHNSTON), the Senator from Minnesota (Mrs. HUMPHREY), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Vermont (Mr. LEAHY), the Senator from New Hampshire (Mr. MCINTYRE), the Senator from North Carolina (Mr. MORGAN) the Senator from New York (Mr. MOYNIHAN), the Senator from Maine (Mr. MUSKIE), the Senator from Wisconsin (Mr. NELSON), and the Senator from Georgia (Mr. NUNN), the Senator from Rhode Island (Mr. PELL), the Senator from Connecticut (Mr. RIBICOFF), the Senator from Mississippi (Mr. STENNIS), the Senator from Illinois (Mr. STEVENSON), and the Senator from Georgia (Mr. TALMADGE) are necessarily absent.

I further announce that, if present and voting, the Senator from Nevada (Mr. CANNON) would vote "nay."

Mr. BAKER. I announce that the Senator from Massachusetts (Mr. BROOKE), the Senator from New Jersey (Mr. CASE), the Senator from Missouri (Mr. DANFORTH), the Senator from Arizona (Mr. GOLDWATER), the Senator from Michigan (Mr. GRIFFIN), the Senator from Wyoming (Mr. HANSEN), the Senator from Oregon (Mr. HATFIELD), the Senator from Pennsylvania (Mr. HEINZ), the Senator from North Carolina (Mr. HELMS), the Senator from Nevada (Mr. LAXALT), the Senator from Idaho (Mr. MCCLURE), the Senator from Kansas (Mr. PEARSON), the Senator from Illinois (Mr. PERCY) the Senator from Delaware (Mr. ROTH), the Senator from New Mexico (Mr. SCHMITT), the Senator from Alaska (Mr. STEVENS), the Senator from South Carolina (Mr. THURMOND), and the Senator from Texas (Mr. TOWER) are necessarily absent.

I further announce that, if present and voting, the Senator from Oregon (Mr. HATFIELD) and the Senator from Michigan (Mr. GRIFFIN) would each vote "nay."

On this vote, the Senator from New Jersey (Mr. CASE) is paired with the Senator from South Carolina (Mr. THURMOND). If present and voting, the Senator from New Jersey would vote "yea" and the Senator from South Carolina would vote "nay."

The result was announced—yeas 8, nays 45, as follows:

[Rollcall Vote No. 331 Leg.]

YEAS—8

Bellmon	Domenici	Sarbanes
Byrd, Robert C.	Javits	Weicker
Chiles	Mathias	

NAYS—45

Allen	Gravel	Metzenbaum
Baker	Hart	Packwood
Bartlett	Haskell	Proxmire
Bayh	Hatch	Randolph
Bentsen	Hatfield, Paul G.	Riegle
Biden	Hayakawa	Sasser
Byrd, Harry F., Jr.	Hodges	Schweiker
Chafee	Inouye	Scott
Clark	Jackson	Sparkman
Culver	Long	Stafford
Curtis	Lugar	Stone
Dole	Magnuson	Wallop
Eagleton	Matsunaga	Williams
Garn	McGovern	Young
Glenn	Melcher	Zorinsky

NOT VOTING—47

Abourezk	Hansen	Moynihan
Anderson	Hatfield, Mark O.	Muskie
Brooke	Hathaway	Nelson
Bumpers	Heinz	Nunn
Burdick	Helms	Pearson
Cannon	Hollings	Pell
Case	Huddleston	Percy
Church	Humphrey	Ribicoff

Danforth	Kennedy	Schmitt
DeConcini	Laxalt	Stennis
Durkin	Leahy	Stevens
Eastland	McClure	Stevenson
Ford	McIntyre	Talmadge
Goldwater	Morgan	Thurmond
Griffin		Tower

So the amendment (UP No. 1686) was rejected.

Mr. CHAFEE. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Several Senators addressed the Chair.

The PRESIDING OFFICER (Mr. HARRY F. BYRD, JR.). The Senator from New Mexico is recognized.

UP AMENDMENT NO. 1688

Mr. DOMENICI. Mr. President, I send an unprinted amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from New Mexico (Mr. DOMENICI) proposes an unprinted amendment numbered 1688.

Mr. DOMENICI. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 16, after line 10, insert the following new subsection:

"(c) Out of the sums apportioned under Section 104(b)(5)(A) of title 23, United States Code, for fiscal years 1980 and 1981, each State may obligate an amount not to exceed one-half of 1 per centum of the total so apportioned to all States for projects to resurface, restore or rehabilitate those lanes on the Interstate System which have been in use for more than five years, except that that portion of each State's apportionment which is based on the estimated cost to complete essential gaps on the Interstate System may not be obligated for such projects. Eligible projects under this subsection must be located on Interstate segments which are essential to a unified and connected Interstate System and which are deficient with respect to pavement or bridge deck serviceability. The Federal share payable on account of any project authorized under this subsection shall be the same as that authorized under Sec. 105(b) of this Act."

The PRESIDING OFFICER. The Senator from New Mexico has the floor.

Mr. DOMENICI. Mr. President, this bill pending before the Senate has taken giant strides in a very difficult area of maintenance of the interstate system. My amendment that is pending has been discussed at length with the chairman of the full committee and with the chairman of the subcommittee and the distinguished Republican ranking member. It merely seeks to allow States a further option to use some of the interstate money that is not absolutely necessary, to fill critical gaps and for major rehabilitation projects for maintenance up to a certain amount of money out of their interstate funds if they so elect.

It just adds to and buttresses the 3R program that is in the bill for rehabilitation. I have stated the purposes and the goals in more detail in a statement.

Mr. President, S. 3073 contains a provision requiring States to adequately maintain their interstate routes. Failure to comply results in a suspension of Federal-aid funding.

I supported the provision. I believe it is imperative that we not neglect existing, heavily traveled interstate routes in our rush to finish new mileage. Closing existing interstate gaps will serve little purpose if we let new gaps open up in the completed system.

I was concerned when we mandated adequate maintenance, however, that we were not providing a realistic level of assistance to get the job done. The costs of resurfacing, restoring, and rehabilitating interstate routes are staggering. The Federal Highway Administration esti-

mates there is a $2.6 billion backlog of Interstate 3R work. Annual expenditures to do the job right are estimated to be over $900 million. S. 3073 authorizes $175 million annually for this work.

There is an understandable desire to get the interstate system built. Much of the committee's attention was focused on this need. I agree we ought to do what we can to accelerate its completion. But we must seriously, at this point think about the whole system, including older segments. Two-thirds of the mileage now open to traffic has been in operation 10 years; 37 percent for 15 years and 14 percent for more than 20 years.

My amendment is not a permanent solution to the Interstate 3R program. I think it is a useful interim measure to address the deterioration problem while we are still concentrating on completing all essential segments.

My proposal would let a State with seriously deteriorating interstate segments use up to $16 million a year of its interstate construction money to restore those segments. The State would not be allowed to spend money apportioned to it to complete essential gaps for rehabilitation of older routes. Only funds—up to the $16 million figure—apportioned to complete nonessential gaps would be available for reconstruction.

The amendment further limits diversion of funds from construction to reconstruction by setting the Federal share for rehabilitation at 70 percent rather than the 90 percent share for new routes. Thus, a State would have to have a serious deficiency in interstate payment or bridge decking before it would undertake projects requiring a 30-percent State match instead of a 10-percent share.

Finally, routes eligible for 3–R type work under my amendment would have to be routes that are essential to a connected, unified system. This is to insure that only routes of national significance are eligible for this special interim program.

Mr. President, the provision is permissive, only. No State is required to use these funds for 3–R work. Where there are few serious problems on existing interstate routes, States will not have to avail themselves of this option. But where poor road conditions pose safety hazards and unwarranted delays, the States will need this flexibility to make costly improvements.

Mr. President, I ask unanimous consent to print three tables in the RECORD.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

INTERSTATE 3–R PAVEMENT NEEDS [1]

[In millions, 1975 dollars]

State	Existing backlog 1976–78	Immediate future 1979–80	Total needs through 1980	Total long-range needs 1976–96
Alabama	$41.7	$39.6	$81.3	$599

[1] Needs, in 1975 dollars, as reported by the States, from U.S. DOT's "Interstate Resurfacing, Restoration, and Rehabilitation Study." This does not include bridge deck needs.

Mr. DOMENICI. I understand the Senator from Rhode Island, the ranking Republican, might have a question with reference to this amendment, and I would be pleased to try to answer it.

Mr. CHAFEE. Yes; Mr. President.

This amendment would provide that the Federal share for the 3–R work would be at the 70 percent level, which we currently have in the bill, and I think the Senator from New Mexico has made a good suggestion here. I just want to ask him one question.

As the Senator mentioned, there is a requirement in our bill, S. 3073, that each State adequately maintain its interstate routes or cease receiving the Federal aid primary funds. In other words, this is the requirement under the bill.

Mr. DOMENICI. Right.

Mr. CHAFEE. The requirement for adequate maintenance is independent of the amount of Federal 3–R funds made available to a State. In other words, the States have to maintain the roads regardless of the 3–R funds, although the 3–R funds are for the interstate system primarily, but they then can be used for what the Senator is seeking here.

Is it correct to say that the Senator's amendment in no way relaxes the requirement for adequate maintenance or makes the requirement conditional upon the availability of the Federal funds?

Mr. DOMENICI. Absolutely.

Mr. CHAFEE. Then I think the Senator's amendment is helpful, and I would certainly urge its acceptance.

Mr. RANDOLPH. Mr. President, the amendment offered by the able Senator from New Mexico (Mr. DOMENICI), a member of our Committee on Environment and Public Works, certainly is one that I think is a valid approach.

Senator CHAFEE of Rhode Island, of course, has had the colloquy which is fully explanatory. We agree to the amendment, and I see no reason for me to talk longer.

Mr. DOMENICI. I thank my good friend, the chairman of the full committee, and I thank the Senator from Rhode Island.

I yield back the remainder of my time.

Mr. CHAFEE. We yield back the remainder of our time.

Mr. RANDOLPH. I yield back the remainder of our time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from New Mexico.

The amendment was agreed to.

Mr. DOMENICI. I move to reconsider the vote by which the amendment was agreed to.

Mr. RANDOLPH. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

● Mr. STONE. Mr. President, I rise in support of S. 3073, the Federal-Aid Highway Act of 1978. I believe that the Environment and Public Works Committee and especially the Subcommittee on Transportation is to be commended for the work they have done on this important legislation.

I am particularly pleased that this bill would give States the authority to issue bonds to accelerate interstate construction and pay back a percentage of the principal and interest of these bonds out of their future trust fund apportionments. In March of this year, I testified before the Transportation Subcommittee and urged them to include such an option in their bill. This bonding option is similar to legislation, S. 563, that I had introduced in 1977.

The State of Florida has more interstate mileage to complete than any other State. Under current levels of funding, Florida would not be able to complete its interstate system until the next century. However, because of the bonding option and the other acceleration measures found in S. 3073, Florida will be able to complete its system in the late 1980's. By accelerating completion of our interstate system, we are substantially reducing the increased costs of inflation while we save lives and energy.●

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business of not to exceed 30 minutes, with Senators permitted to make statements therein of not to exceed 5 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Marks and Mr. Chirdon, two of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

PRESIDENTIAL APPROVALS

A message from the President of the United States reported that on August 17, 1978, he approved and signed the following act:

S. 2424. An act to amend the act incorporating the American Legion so as to redefine eligibility for membership therein.

The message also reported that on today, August 18, 1978, he approved and signed the following act:

S. 2821. An act to authorize appropriations for certain insular areas of the United States, and for other purposes.

MESSAGES FROM THE HOUSE

At 11:40 a.m., a message from the House of Representatives delivered by Mr. Berry, one of its reading clerks, announced that the House agrees to the amendments of the Senate to the amendment of the House to the amendment of the Senate numbered 2 to H.R. 10878, an act to extend until October 1, 1981, the voluntary insurance program provided by section 7 of the Fishermen's Protective Act of 1967, and for other purposes.

The message also announced that, pursuant to the provisions of 20 U.S.C. 42 and 43, the Speaker appoints Mr. RYAN as a Member of the Board of Regents to the Smithsonian Institution, vice Mrs. BOGGS, resigned.

The message further announced that, pursuant to the provisions of section 204 (b), Public Law 94–141, as amended, the Speaker appoints Mr. HAMILTON, Chairman, Mr. LEHMAN, Mr. EVANS of Colorado, Mr. DUNCAN of Oregon, Mr. IRELAND, Mr. WON PAT, Mr. BROOMFIELD, Mr. DERWINSKI, Mr. MCCLORY, Mr. VANDER JAGT, Mr. WIGGINS, and Mr. BUTLER as members and delegate on the part of the House to attend the conference of the Interparliamentary Union held in Bonn, Germany, from September 3 to September 14, 1978.

At 3:15 p.m., a message from the House of Representatives delivered by Mr. Hackney, one of its reading clerks, announced that the House has passed the following bill and joint resolution, in which it requests the concurrence of the Senate:

H.R. 10898. An act to amend the Regional Rail Reorganization Act of 1973 to authorize appropriations for the U.S. Railway Association for fiscal year 1979; and

H.J. Res. 1014. A joint resolution designating April 28 and 29 of 1979 as "Days of Remembrance of Victims of the Holocaust."

ORDER TO HOLD H.R. 10898 AT DESK

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that H.R. 10898, an act to amend the Regional Rail Reorganization Act of 1973 to authorize appropriations for the U.S. Railway Association for fiscal year 1979, be held at the desk pending further disposition.

The PRESIDING OFFICER. Without objection, it is so ordered.

HOUSE JOINT RESOLUTION REFERRED

The following joint resolution was read twice by its title and referred as indicated:

H.J. Res. 1014. A joint resolution designating April 28 and 29 as "Days of Remembrance of Victims of the Holocaust"; to the Committee on the Judiciary.

COMMUNICATIONS

The PRESIDING OFFICER laid before the Senate the following communications, together with accompanying reports, documents, and papers, which were referred as indicated:

EC–4199. A communication from the President of the United States, transmitting requests for supplemental appropriations for the fiscal year 1978 in the amount of $3,320,000 and an amendment to the request for appropriations for the fiscal year 1979 in the amount of $1,300,000; to the Committee on Appropriations.

EC–4200. A communication from the Acting Director, Defense Security Assistance Agency, reporting, pursuant to law, concerning the Department of the Army's pro-

posed letter of offer to Saudi Arabia for defense articles estimated to cost in excess of $25 million; to the Committee on Armed Services.

EC–4201. A communication from the Vice President for Government Affairs, National Railroad Passenger Corporation, transmitting, pursuant to law, a report on the average number of passengers per day on board each train operated and the on-time performance at the final destination of each train operated, by route and by railroad, for the month of May 1978; to the Committee on Commerce, Science, and Transportation.

EC–4202. A communication from the Secretary of Energy, transmitting, pursuant to law, a financial statement for all of the electric power generating projects and the transmission system comprising the Federal Columbia River Power System (FCRPS); to the Committee on Energy and Natural Resources.

EC–4203. A communication from the Assistant Administrator for Legislative Affairs, Agency for International Development, Department of State, transmitting, pursuant to law, justification of an increase in the funding level of our proposed basic fiscal year 1978 program in Kenya; to the Committee on Foreign Relations.

EC–4204. A communication from the Deputy Under Secretary of State for Management, transmitting, pursuant to law, a report of the Department's proposal to alter a record system; to the Committee on Governmental Affairs.

EC–4205. A communication from the Chairman, Council of the District of Columbia, transmitting, pursuant to law, an Act adopted by the Council on July 11, 1978, which would provide for priorities of distribution of general assets and to provide for early access to the assets of an insolvent insurer for the benefit of the guaranty associations (act 2–254); to the Committee on Governmental Affairs.

EC–4206. A communication from the Assistant to the Deputy Administrator, National Aeronautics and Space Administration, transmitting, pursuant to law, a report regarding NASA's intention to alter a system of records; to the Committee on Governmental Affairs.

EC–4207. A communication from the Chairman, U.S. Railroad Retirement Board, transmitting, pursuant to law, the annual report of the Railroad Retirement Board for the fiscal year ended September 30, 1977; to the Committee on Human Resources.

EC–4208. A communication from the Secretary of Health, Education, and Welfare and the Secretary of Commerce, transmitting, pursuant to law, a report on alternative methods of estimating the number of children in poverty, August 1978; to the Committee on Human Resources.

EC–4209. A communication from the Acting Executive Secretary of the Department of Health, Education, and Welfare, transmitting, pursuant to law, interim final regulations for: First, supplemental education opportunity grant program (20 U.S.C. 1070b, subpart 2 of part A of title IV of the Higher Education Act of 1965, as amended, Public Law 92–318, amended by Public Law 94–482, Education Amendments of 1976); second, college work-study program (42 U.S.C. 2751, part C of title IV of the Higher Education Act of 1965, as amended, Public Law 92–318, amended by Public Law 94–482, Education Amendments of 1976, and third, national direct student loan (20 U.S.C. 1087aa, part E, title IV of the Higher Education Act of 1965, as amended, Public Law 92–318, amended by Public Law 94–482, Education Amendments of 1976); to the Committee on Human Resources.

EC–4210. A communication from the Secretary of Health, Education, and Welfare, transmitting, pursuant to law, a report on the status of health professions personnel in the United States; to the Committee on Human Resources.

PETITIONS

The PRESIDING OFFICER laid before the Senate the following petitions and memorials, which were referred as indicated:

POM–779. A petition from the Scarsdale Friends Meeting of the Religious Society of Friends (Quakers), Scarsdale, N.Y., relating to transfer of funds from the military functions of government to Departments and functions in the civilian sector; to the Committee on the Budget.

ORDER FOR PERMISSION TO FILE REPORT

Mr. JACKSON. Mr. President, I ask unanimous consent that the Committee on Energy and Natural Resources and the Committee on Commerce, Science and Transportation be given permission to file their report on S. 2053, the Deep Seabed Mining Act, until midnight, Saturday, August 19, 1978.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR STAR PRINT

Mr. DOMENICI. Mr. President, I respectfully ask unanimous consent that a star print be made of S. 3199 with the following corrections: That the word "cancer" be replaced by the word "disease" on page 1, the title and line 8, on page 2, lines 14, 15, and 18, on page 3, line 18, on page 4, lines 7 and 19, on page 5, lines 12, 14, and 19, on page 6, lines 5, 8, 11, 12, 15, and 19, on page 10, line 4, and on page 14, line 12. On page 2, line 3, replace the word "cancer" with "lung disease." On page 13, line 16, replace "textile plant" with "uranium mine" and on line 20, correct the spelling of "dessertion" to read "desertion." On page 14, line 14, that "plants" be replaced by the word "mines."

The PRESIDING OFFICER. Without objection, it is so ordered.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. MUSKIE, from the Committee on the Budget, without amendment:

S. Con. Res. 104. A concurrent resolution revising the congressional budget for the U.S. Government for the fiscal year 1979 (together with additional and minority views) (Rept. No. 95–1124).

By Mr. BUMPERS, from the Committee on Energy and Natural Resources, with an amendment, and from the Committee on Commerce, Science, and Transportation, with amendments:

S. 2053. A bill to promote the orderly and environmentally sound exploration for and commercial recovery of hard mineral resources of the deep seabed, pending adoption of an international regime relating thereto (together with additional views) (Rept. No. 95 1125). Referred to the Committtee on Foreign Relations, pursuant to order of August 14, 1978, for not to exceed 30 days.

NATURAL GAS POLICY ACT OF 1978—CONFERENCE REPORT

By Mr. JACKSON, from the committee of conference, submitted a report on the disagreeing votes of the two Houses on the amendment of the House to the amendment numbered 8 of the Senate to the bill (H.R. 5289) for the relief of Joe Cortina of Tampa, Fla. (Rept. No. 95–1126).

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. NELSON:

S. 3430. A bill to amend the Internal Revenue Code of 1954 to exclude from gross income the value of stock received under qualified dividend reinvestment plans; to the Committee on Finance.

By Mr. KENNEDY:

S. 3431. A bill to amend certain provisions of title 23, United States Code, relating to commercial vehicle lengths and axle weight loads; to the Committee on Commerce, Science, and Transportation.

By Mr. DOLE:

S. 3432. A bill for the relief of Roman Enriquez, Andrietta Enriquez, and their son Sol Allan Enriquez; to the Committee on the Judiciary.

By Mr. TALMADGE:

S. 3433. A bill to amend the Internal Revenue Code of 1954 to clarify the application of the investment tax credit to certain enclosures or structures used for single purpose food or plant production; to the Committee on Finance.

By Mr. HART:

S. 3434. A bill to amend chapter 5 of title 37, United States Code, to revise the special pay provisions for certain health professionals in the uniformed services; to the Committee on Armed Services.

By Mr. BENTSEN:

S. 3435. A bill to rename the Palmetto Bend Reservoir, located on the Navidad River near Edna, Tex., Lake Texana; to the Committee on Energy and Natural Resources.

By Mr. HASKELL (for himself and Mr. NELSON):

S. 3436. A bill to provide for the valuation of options to purchase stock in a small business; to the Committee on Finance.

By Mr. CULVER (for himself, Mr. CHAFEE, Mr. HATHAWAY, Mr. BENTSEN, Mr. HATCH, Mr. NUNN, Mr. PERCY, Mr. RIBICOFF, and Mr. THURMOND):

S. 3437. A bill to amend the Comprehensive Drug Abuse Prevention and Control Act of 1970 and other laws to prevent the illicit importation of controlled substances into the United States, and for other purposes; to the Committee on the Judiciary.

By Mr. BARTLETT (for himself and Mr. BELLMON):

S.J. Res. 154. A joint resolution authorizing the President to invite the States of the Union and foreign nations to participate in the International Petroleum Exposition to be held at Tulsa, Okla., from September 10, 1979, through September 13, 1979; to the Committee on Foreign Relations.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. NELSON:

S. 3430. A bill to amend the Internal Revenue Code of 1954 to exclude from gross income the value of stock received under qualified dividend reinvestment plans; to the Committee on Finance.

QUALIFIED DIVIDEND REINVESTMENT PLANS

● Mr. NELSON. Mr. President, today I am introducing legislation which would defer current Federal tax dividends reinvested in original issue stock of any com-

pany having a qualified dividend reinvestment plan. A qualified reinvestment plan would be defined as a plan which provides for reinvestment of a cash dividend in the original issue stock of a company.

Under the proposal, a single taxpayer would be allowed to reinvest a maximum of $1,500 in dividends annually. A married taxpayer filing a joint return would be allowed a maximum of $3,000.

The purpose of this proposal is to encourage capital formation and to provide a stimulus to construction of essential capital facilities, employment opportunities and a stronger economy. In essence, this proposal would encourage increased reinvestment of dividends in original issue stock of capital intensive companies by deferring current taxes on dividends which are reinvested.

This legislation would be beneficial not only to the companies involved, in assisting them to obtain essential equity capital, but also to the participating stockholders, in providing them with a simple, convenient and economical way to build up their investment.

In recent years businesses requiring periodic infusions of new capital have had great difficulty raising equity capital at reasonable cost. Utility companies in particular, are capital intensive and must continually offer new common stock to finance their capital requirements. However, they find it more and more difficult and expensive to attract this necessary capital through large public offerings in the marketplace.

Accordingly, many of these companies have adopted dividend reinvestment plans under which their stockholders have the option of automatically investing any cash dividends declared by a company in original issue stock of the company.

Under existing law, Federal income tax is imposed currently on the value of the stock received by the stockholder who opts to participate in a dividend reinvestment plan and take stock instead of cash. This is a disincentive to those stockholders who may be pressed to use the cash dividends to pay the current tax. Deferral of the current tax would greatly encourage increased participation.

Several provisions in the proposal prevent abuse of the tax deferral privilege. If a corporation purchases its own stock within 1 year of making a distribution pursuant to a dividend reinvestment plan, the distribution shall be presumed not to have been made pursuant to a qualified dividend reinvestment plan.

Moreover, although stock purchased with reinvested dividends would basically be regarded as the equivalent of a conventional stock dividend, the cost basis of the stock would be zero and the holding period of the stock would commence on the date of purchase.

Under the proposal, a shareholder purchasing stock with reinvested dividends would be required to hold the stock for at least 1 year. If the shareholder sells stock acquired with reinvested dividends within 1 year of acquisition, any gain on the sale would, in effect, be taxed at ordinary, rather than capital gains rates.

Because this proposal is aimed at encouraging capital formation, dividend reinvestment plans which use reinvested dividends to purchase a company's previously issued and outstanding stock in the marketplace will not qualify. The proposal is strictly limited to plans which purchase original issue stock.

This proposal would provide substantial, direct, and immediate help in the formation of new capital. This proposal would represent a step in the direction of reducing the double tax on dividends by eliminating the tax imposed at the stockholder level when the dividends are reinvested in the corporation.

Finally, this proposal would encourage savings by supplementing retirement income. In this respect, it is analogous to Keogh and IRA programs which have been encouraged by favorable tax treatment.

Last month, Congressman PICKLE introduced H.R. 13581 in the House of Representatives, a bill identical in principle to this proposal. This measure differs from H.R. 13581 in that it sets a limitation on the amount of dividends that may be reinvested under its provisions.

I have introduced this proposal so that its merits may be considered and evaluated during the scheduled tax hearings before the Senate Finance Committee.

I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 3430

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 305 of the Internal Revenue Code of 1954 (relating to distributions of stock and stock rights) is amended by redesignating subsection (e) as subsection (f) and by inserting after subsection (d) the following new subsection:

"(e) QUALIFIED DIVIDEND REINVESTMENT PLANS.—

"(1) IN GENERAL.—Notwithstanding the provisions of subsection (b) and subject to the limitation under paragraph (2), subsection (a) shall apply to a distribution of stock of a corporation made by such corporation to a shareholder under a qualified dividend reinvestment plan if such shareholder elects under paragraph (4) to have this subsection apply to such distribution.

"(2) LIMITATION.—The amount of any distribution excluded from income by any taxpayer under subsection (a) by reason of paragraph (1) shall not exceed $1,500 ($3,000 in the case of a joint return under section 6013).

"(3) DEFINITION OF QUALIFIED DIVIDEND REINVESTMENT PLAN.—The term 'qualified dividend reinvestment plan, means a plan under which the common and preferred shareholders of a domestic corporation (other than a regulated investment company) who elect to participate in such plan receive a distribution otherwise payable in property only in shares (including fractional shares) of authorized but unissued common stock of the corporation which is—

"(A) designated by the board of directors of the corporation as issued for purposes of this subsection, and

"(B) priced at not less than 95 percent of fair market value of such common stock as of the date of distribution.

"(4) SHAREHOLDER ELECTION.—A shareholder may elect to have this subsection apply to any distribution of stock under a qualified dividend reinvestment plan by making an election, in such manner and form as the Secretary may by regulation prescribe, on the shareholder's Federal income tax return for the taxable year in which such distribution is received.

"(5) BASIS AND HOLDING PERIOD.—Notwithstanding any other provision of this title, the basis of stock received as a distribution pursuant to a qualified dividend reinvestment plan by a shareholder who makes an election under paragraph (4) shall be zero and the holding period of such stock shall commence on the date of such distribution.

"(6) DISPOSITIONS.—Under regulations prescribed by the Secretary, if a shareholder sells common stock of a corporation within 1 year following the receipt of stock described in paragraph (5) of the same corporation, the stock so sold shall be deemed to be the stock so described commencing with the first shares received during said 1-year period.

"(7) PRESUMPTION.—If a corporation, or a member of its 'affiliated group' within the meaning of section 1504(a), has purchased or purchases its common stock within 1 year of making a distribution pursuant to a dividend reinvestment plan, such distribution shall be presumed not to have been made pursuant to a qualified dividend reinvestment plan. Under regulations prescribed by the Secretary, the corporation may establish that it had a business purpose for purchasing such stock which is not inconsistent with the intent of this subsection, in which event the distribution will not be disqualified hereunder."

(b)(1) Subsection (c) of section 116 of such Code (relating to partial exclusion of dividends received by individuals) is amended by adding at the end thereof the following new paragraph:

"(4) Any amount excluded from gross income under section 305(a) by reason of section 305(e) shall not be treated as a dividend."

(2) Subsection (c) of section 243 of such Code (relating to dividends received by corporations) is amended by adding at the end thereof the following new paragraph:

"(5) Any amount excluded from gross income under section 305(a) by reason of section 305(e) shall not be treated as a dividend."

SEC. 2. The amendments made by this Act shall apply with respect to distributions made after December 31, 1978.

By Mr. KENNEDY:

S. 3431. A bill to amend certain provisions of title 23, United States Code, relating to commercial vehicle lengths and axle weight loads; to the Committee on Commerce, Science, and Transporation.

(The remarks of Mr. KENNEDY when he introduced the bill appear elsewhere in today's proceedings.)

By Mr. DOLE:

S. 3432. A bill for the relief of Roman Enriquez, Andrietta Enriquez, and their son Sol Allan Enriquez; to the Committee on the Judiciary.

ROMAN, ANDRIETTA, AND SOL ALLAN ENRIQUEZ

● Mr. DOLE. Mr. President, today I am introducing a bill on the behalf of Dr. and Mrs. Roman Enriquez, and their son Sol Allan, of Kansas.

The Enriquez family have been residing in the United States on nonimmigrant status so that both Dr. Enriquez and his wife could complete their medical training at the University of Kansas.

Dr. Enriquez has been licensed to practice medicine in both Missouri and Kansas, while Mrs. Enriquez is presently completing her residency in psychiatry. Working closely with the outreach program of the Kansas University Medical Center, the Enriquezs found an extreme need for physician care in the rural community of Howard, Kans.

As most of us know, the rural areas of this Nation are in critical need of adequate health care personnel and services. The creation of the Health Professions Education Assistance Act of 1976 was based on this critical need and the placement of these physicians in these areas, through such programs as outreach, will not only fulfill the intent of this act but exemplify the success in meeting this critical shortage of physicians in rural America.

Mr. President, the citizens of Howard first approached the Enriquezs to locate and establish a medical practice there some months ago, and after a meeting with the townspeople last month, interest of both parties has greatly intensified.

Mr. President, the intent of this bill will allow the Enriquezs to remain in the United States and allow them to begin practicing the medical services that this community has needed for so long. I ask unanimous consent that letters of support and the text of the bill be printed in the RECORD.

There being no objection, the bill and letters were ordered to be printed in the RECORD, as follows:

S. 3432

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of paragraphs (14) and (32) of section 212(a) and section 212 (e) of the Immigration and Nationality Act, for purposes of such Act, Roman Enriquez, Andrietta Enriquez, and their son Sol Allan Enriquez shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act upon payment of the required visa fees. Upon the granting of permanent residence to such aliens as provided for in this Act, the Secretary of State shall instruct the proper officer to reduce by the required numbers, during the current fiscal year or the fiscal year next following, the total number of immigrant visas and conditional entries which are made available to natives of the country of the aliens' birth under paragraphs (1) through (8) of section 203(a) of such Act.

ST. JOSEPH MEDICAL CENTER,
Wichita, Kans., July 25, 1978.

Hon. BOB DOLE,
U.S. Senate, Washington, D.C.

DEAR SENATOR DOLE: We understand that you are working with U.S. immigration authorities and the Republic of the Philippines in an effort to obtain permanent visas for Roman Enriquez, M.D., an internist, and Andrietta Enriquez, M.D., a psychiatrist, who wish to establish practices in Howard, Kansas.

As you know, Elk County (Pop., 41,175), of which Howard is the county seat, is one of the U.S. counties without a medical doctor. The latest figures available to us show that Elk County is one of 15 Kansas counties without an M.D.

Four years ago, St. Joseph Medical Center arranged to fly one of our resident physicians to Howard three afternoons a week in an effort to help meet the county's urgent medical needs. We had to discontinue the program when it become necessary for the resident physician to have an on-site supervision by a practicing physician if our residency training program was to remain accredited.

We still have some medical equipment stored in Howard that we will make available to an established practice.

We always have regretted that circumstances over which we had no control forced us to withdraw our small effort to help this rural Kansas community, and we sincerely hope you can help make it possible for these two physicians to practice in Howard. Please be assured that we will do anything we can to help the young physicians establish their practice in a community that needs their services.

Sincerely,

Mother MARY ANNE,
Executive Director.

PENN VALLEY MEDICAL GROUP, INC.,
Kansas City, Mo., July 25, 1978.

Re: Enriquez, Roman

Mr. JAMES W. EBY,
Howard National Bank,
Howard, Kans.

DEAR MR. EBY: I have known Dr. Roman Enriquez for approximately one year. I have observed him closely during his rotations at Trinity Lutheran Hospital. In this last year, he has spent approximately six months of the time at this hospital.

I can unquestionably say that Roman is an excellent physician. His clinical judgment is very good and he is well respected by his peers and patients alike. All of his preceptors at this hospital have been very impressed with Roman's diligence and attention to detail. He is a very fine physician. In addition, his integrity is above reproach. He is extremely honest, forthright person.

In summary, I would enthusiastically recommend Dr. Enriquez. I think he will make an outstanding addition to the Howard community. If there are any further questions regarding Dr. Enriquez, or I can be of any further help to you, please do not hesitate to contact me.

Sincerely,

DOUGLAS B. BOGART, M.D.●

By Mr. TALMADGE:

S. 3433. A bill to amend the Internal Revenue Code of 1954 to clarify the application of the investment tax credit to certain enclosures or structures used for single purpose food or plant production; to the Committee on Finance.

AMENDMENT TO ALLOW INVESTMENT TAX CREDIT ON STRUCTURES USED FOR FOOD AND PLANT PRODUCTION

● Mr. TALMADGE. Mr. President, I am today introducing a bill that would put an end to extensive tax litigation that has resulted from the position taken by the Internal Revenue Service that structures designed and used for the housing, raising and feeding of poultry and livestock and for the production of plants are not eligible for the investment tax credit. These structures are specifically designed for single purpose food and plant production and should have been eligible for the investment tax credit.

When the investment credit was restored by the Revenue Act of 1971, the Senate Finance Committee in its accompanying report tried to make it clear that the credit was intended to apply to special purpose agricultural structures. The report noted that although buildings are not eligible for the credit, the term "building" was not intended to include structures which house property used as an integral part of a manufacturing or production activity. To illustrate the type of structure which should be eligible for the credit, the committee gave the following example of a unitary hog-raising facility:

One example of a type of structure closely related to the product it houses which was called to the attention of Congress is a unitary system for raising hogs which includes automatic feed systems, special airflow units, slatted flooring, pens and partitions. The structure which can be added to, according to the number of hogs raised, is no more than a cover and way of tying together the specially designed pens, automatic feed systems, etc. There is no other practical use for the structure and it can, therefore, be expected to be used only so long as the equipment it houses is used. Such a structure would be eligible for an investment credit. (S. Rept. 92–437, 92d Cong., 1st Sess. (1971))

It was the intention of Congress to make clear that the investment credit as restored would apply to structures for raising livestock and poultry, despite references in certain revenue rulings to the contrary.

Despite the clear statement in the 1971 committee report, the Internal Revenue Service nevertheless in numerous cases has denied the credit to special purpose agricultural structures or enclosures for raising poultry, livestock, and horticultural products or for producing eggs. These structures have uses and physical attributes which are very similar to the unitary system for raising hogs described in the Finance Committee report, and the U.S. Tax Court has correctly sustained the taxpayers' position and allowed the credit in many of these cases.

Mr. President, the courts have ruled that structures for raising chickens and hogs, for aging liquor, and for greenhouses, qualify for this credit. For example, the Ninth Circuit Court of Appeals in 1974, and the District Court for the Western District of Missouri, August 10, 1978, ruled a greenhouse eligible for the credit. The ninth circut court held that the functional test rather than the appearance test is the proper test for determining whether a structure constitutes a building. The court concluded, and I quote:

Under the functional test, greenhouses do not function as "buildings" as the term is employed in section 48. The greenhouses supply the controlled environment that is essential to the commercial production of more and finer flowers.

With no exception, a greenhouse is a specially designed, single-purpose environment growth chamber integrally necessary in the production of floricultural plants. The greenhouse is a piece of product equipment that provides a climate control system that regulates temperature, light, and humidity so vital to the production of plants and flowers. Furthermore, it is impossible to expect a greenhouse to serve any alternate function other than that which it is designed to do unless significant capital expenditures are invested in major modifications.

Seven years after the restoration of the credit it is time to end the effort by the Service to deny the credit in these cases contrary to the clear intent of Congress as expressed in the 1971 com-

mittee report and affirmed by the Tax Court.

Continued litigation is expensive and wasteful to both parties involved. This needless expenditure of time and money prompts the provision in the bill to make it effective for all taxable years ending on or after August 15, 1971. Many of the taxpayers involved are relatively small farmers and are unable to bear the expense of such litigation.

Also, Mr. President, it should be the Government can do for these producers we are talking about here—those who raise poultry, livestock, and plants—have no Government subsidy program. They sometimes must bear severe losses for long periods of time. The least that the government can do for these producers of essential agricultural commodities is to give them the same access to the investment tax credit that is available to other industries.

This bill would amend the Internal Revenue Code of 1954 to make structures or enclosures used for single purpose food or plant production eligible for the investment tax credit. The Internal Revenue Code denies the investment tax credit to buildings. The IRS has taken the position that structures used in the production of food and plants are buildings and, thus, are not eligible for the credit.

To be eligible for the credit under the bill, the structure would have to be specifically designed and used solely for the production of poultry, eggs, beef, pork, or plants. General purpose structures, such as barns, would therefore not be eligible for the credit.

The effective date of the amendment is August 15, 1971, which is the date upon which the investment tax credit was restored by the Revenue Act of 1971.●

By Mr. HART:

S. 3434. A bill to amend chapter 5 of title 37, United States Code, to revise the special pay provisions for certain health professionals in the uniformed services; to the Committee on Armed Services.

UNIFORM SERVICES HEALTH PROFESSIONALS SPECIAL PAY ACT OF 1978

● Mr. HART. Mr. President, today the military health care system is faced with a critical shortage of qualified military health professions. Department of Defense figures indicate that the three military services are currently in need of approximately 1,130 physicians—the Army alone has fallen 13 percent below its 4,539 physician requirement. Furthermore, these figures do not reflect the severe shortages which exist in certain medical specialties such as radiology, anesthesiology and internal medicine.

This doctor shortage in the military services has been caused by a combination of factors including the termination of the doctor draft in 1973, the diminishing pool of Berry plan physicians and the increasing difficulties in retaining physicians once their initial obligation is completed.

This shortage, coupled with increasing medical costs, has forced military medical facilities to reduce services provided for active duty, dependents and retired beneficiaries. These reductions have in turn caused a corresponding increase in the use of the civilian health and medical program of the uniformed services (CHAMPUS). CHAMPUS not only places an additional financial burden on eligible beneficiaries, but results in additional costs to the taxpayer since such medical services are provided by civilian physicians on a fee-for-service basis. These contracted services do not come cheaply.

For example, nearly $8 million in contracted radiology services for the military were expended in the last fiscal year. As the physician shortage worsens, more money will have to be spent hiring civilian physicians to meet the needs of the military services. This is, at best, only a stop-gap solution because these civilian physicians cannot be deployed in the event of military mobilization.

The shortage in military medical services has had a profund effect on the attitudes of service members. According to Department of Defense officials, health care benefits have been consistently cited by service members as one of the most important influences in making military career decisions. The deterioration of the military health care services will make it increasingly difficult to recruit and retain qualified personnel throughout the armed services.

At present, the military is temporarily authorized to offer variable incentive special pay programs for health professionals. These special pay programs have six different methods of disbursement and confusing eligibility criteria which diminish their effectiveness. For example, variable incentive pay is not available to officers serving their initial active duty obligation. Similarly, medical officers trained under the military medical scholarship program are not eligible for incentive pay until the Federal assistance they have received is paid back through a specified period of military service. Inequitable requirements like these seriously undermine the armed services' effort to maintain a staff of qualified physicians.

The legislation I am proposing today would correct these inequities and replace the current temporary special pay program with a stable, long-term health professions special pay program. It will give the military the needed tools to enhance recruitment and retention of qualified health professionals.

Although this bill will not bring the pay of military medical officers up to civilian levels, it will make a career in the military health service substantially more attractive than it is now.

The major provisions of the bill include:

First, primary special pay for physicians, dental officers, veterinary officers and optometry officers called or ordered to active duty for a period of at least 1 year. This special pay is based on years of creditable service and varies from $1,200 per year to a maximum of $11,000 per year.

Second, incentive special pay would be offered physicians and dentists in selected specialty fields. To be eligible for this pay, the health professional must sign a written agreement to remain on active duty for at least 1 year.

Mr. President, I believe this bill will provide an effective incentive to persuade health professionals to enlist in our Nation's military services, and will give the military the tools necessary to improve its health services. We must insure that our military health care system meets its mission requirements effectively and economically, and provides the high quality medical care which its eligible beneficiaries deserve.

I ask unanimous consent that the text of this bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 3434

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Uniformed Services Health Professionals Special Pay Act of 1978".

SEC. 2. (a) Chapter 5 of title 37, United States Code, relating to special and incentive pays for members of the uniformed services, is amended by striking out sections 302, 302a, 302b, and 303 and inserting in lieu thereof the following:

"§ 302. Special pay: medical officers

"(a)(1) Except as provided in paragraph (2), a commissioned officer who is an officer of the Medical Corps of the Army or the Navy, an officer of the Air Force designated as a medical officer, or a medical officer of the Public Health Service and who is on active duty under a call or order to active duty for a period of not less than one year is entitled to primary special pay at the following applicable rate:

"(A) $2,000 per year, if the officer has less than five years of creditable service under subsection (c);

"(B) $7,000 per year, if the officer has at least five but less than eight years of creditable service under subsection (c);

"(C) $9,000 per year, if the officer has at least eight but less than fourteen years of creditable service under subsection (c); or

"(D) $11,000 per year, if the officer has fourteen or more years of creditable service under subsection (c).

"(2) A commissioned officer described in paragraph (1) who is serving in the pay grade of 07, 08, or 09 is entitled to primary special pay at the following applicable rate regardless of the number of years of creditable service such officer may have under subsection (c):

"(A) $6,000 per year if the officer is serving in a pay grade of 09;

(B) $7,000 per year if the officer is serving in a pay grade of 08; or

"(C) $10,000 per year if the officer is serving in a pay grade of 07.

"(3) The annual rate of primary special pay to which an officer is entitled under paragraph (1) or (2) shall be increased by—

"(A) $5,000 for any period during which the officer is not undergoing medical internship or residency training, as determined under regulations prescribed under section 302d(a); and

"(B) $2,000 if the officer is board certified, as determined under regulations prescribed under section 302d(a).

"(b)(1) Subject to paragraph (2) and under regulations to be prescribed under section 302d(a), an officer who is entitled to

primary special pay under subsection (a)(1) and who is not undergoing medical internship or residency training may be paid incentive special pay in an annual amount not to exceed the following applicable amount:

"(A) $8,000, if the officer has at least five but less than eight years of creditable service under subsection (c);

"(B) $6,000, if the officer has at least eight but less than fourteen years of creditable service under subsection (c); or

"(C) $4,000, if the officer has fourteen or more years of creditable service under subsection (c).

"(2) No officer shall be eligible for incentive special pay under this subsection unless the Secretary concerned has determined that the officer is qualified in the medical profession.

"(3) To be eligible for incentive special pay under this subsection for any year, an officer must first execute a written agreement under which the officer agrees to remain on active duty for a period of not less than one year beginning on the date the officer accepts the award of such special pay.

"(4) In developing the Budget for any fiscal year for transmittal to the Congress under section 201(a) of the Budget and Accounting Act, 1921, the President shall limit the amount to be paid during that year for incentive special pay under this subsection to an amount equal to not more than 5 percent of the amount to be paid in that year for primary special pay under subsection (a).

"(c) For purposes of this section, creditable service of an officer of the Medical Corps of the Army or the Navy, an officer of the Air Force designated as a medical officer, or a medical officer of the Public Health Service is computed by adding—

"(1) four years;

"(2) all periods which the officer spent in medical internship or residency training during which the officer was not on active duty; and

"(3) all periods of active service in the Medical Corps of the Army or Navy, as an officer of the Air Force designated as a medical officer, or as a medical officer of the Public Health Service.

"§ 302a. Special pay: dental officers

"(a)(1) Except as provided in paragraph (2), a commissioned officer who is an officer of the Dental Corps of the Army or the Navy, an officer of the Air Force designated as a dental officer, or a dental officer of the Public Health Service and who is on active duty under a call or order to active duty for a period of not less than one year is entitled to primary special pay at the following applicable rate:

"(A) $1,200 per year, if the officer has at least four years of creditable service under subsection (c) and is undergoing dental internship training, as determined under regulations prescribed under section 302d(a);

"(B) $2,000 per year, if the officer has at least four but less than seven years of creditable service under subsection (c) and is not undergoing dental internship training, as determined under regulations prescribed under section 302d(a);

"(C) $7,000 per year, if the officer has at least seven but less than fourteen years of creditable service under subsection (c); or

"(D) $9,000 per year, if the officer has fourteen or more years of creditable service under subsection (c).

"(2) A commissioned officer described in paragraph (1) who is serving in the pay grade of 07 or 08 is entitled to primary special pay at the rate of $7,000 per year regardless of the number of years of creditable service such officer may have under subsection (c).

"(3) The annual rate of primary special pay to which an officer is entitled under paragraph (1) or (2) shall be increased by—

"(A) $3,000 for any period during which the officer is not undergoing dental internship or residency training, as determined under regulations prescribed under section 302d(a); and

"(B) $2,000 if the officer is board qualified in a dental specialty, as determined under regulations prescribed under section 302d(a).

"(b)(1) Subject to paragraph (2) and under regulations prescribed under section 302d(a), an officer who is entitled to primary special pay under subsection (a)(1) and who is not undergoing dental internship or residency training may be paid incentive special pay in an annual amount not to exceed $2,000.

"(2) No officer shall be eligible for incentive special pay under this subsection unless the Secretary concerned has determined that the officer is qualified in the dental profession.

"(3) To be eligible for incentive special pay under this subsection for any year, an officer must first execute a written agreement under which the officer agrees to remain on active duty for a period of not less than one year beginning on the date the officer accepts the award of such special pay.

"(4) In developing the Budget for any fiscal year for transmittal to the Congress under section 201(a) of the Budget and Accounting Act, 1921, the President shall limit the amount to be paid during that year for incentive special pay under this subsection to an amount equal to not more than 2½ percent of the amount to be paid in that year for primary special pay under subsection (a).

"(c) For purposes of this section, creditable service of an officer of the Dental Corps of the Army or the Navy, an officer, of the Air Force designated as a dental officer, or a dental officer of the Public Health Service is computed by adding—

"(1) four years;

"(2) all periods which the officer spent in dental internship or residency training during which the officer was not on active duty; and

"(3) all periods of active service in the Dental Corps of the Army or Navy, as an officer of the Air Force designated as a dental officer, or as a dental officer of the Public Health Service.

"§ 302b. Special pay: veterinary officers

"(a) A commissioned officer who is an officer of the Veterinary Corps of the Army, an officer or the Air Force designated as a veterinary officer, or a veterinary officer of the Public Health Service and who is on active duty under a call or order to active duty for a period of not less than one year is entitled to special pay at the following applicable rate:

"(1) $1,800 per year, if the officer has less than three years of creditable service under subsection (b);

"(2) $2,400 per year, if the officer has at least three but less than six years of creditable service under subsection (b);

"(3) $3,000 per year, if the officer has at least six but less than ten years of creditable service under subsection (b); or

"(4) $4,200 per year, if the officer has ten or more years of creditable service under subsection (b).

"(b) For purposes of this section, creditable service of an officer of the Veterinary Corps of the Army, an officer of the Air Force designated as a veterinary officer, or a veterinary officer of the Public Health Service is computed by adding—

"(1) all periods which the officer spent in veterinary residency training during which the officer was not on active duty; and

"(2) all periods of active service in the Veterinary Corps of the Army, as an officer of the Air Force designated as a veterinary officer, or as a veterinary officer of the Public Health Service.

"§ 302c. Special pay: optometry officers

"(a) commissioned officer who is an officer of the Army, Navy, or Air Force designated as an optometry officer or who is an optometry officer of the Public Health Service and who is on active duty under a call or order to active duty for a period of not less than one year is entitled to special pay at the following applicable rate:

"(1) $1,800 per year, if the officer has less than three years of creditable service under subsection (b);

"(2) $2,400 per year, if the officer has at least three but less than six years of creditable service under subsection (b);

"(3) $3,000 per year, if the officer has at least six but less than ten years of creditable service under subsection (b); or

"(4) $4,200 per year, if the Officer has ten or more years of creditable service under subsection (b).

"(b) For purposes of this section, creditable service of an officer of the Army, Navy, or Air Force designated as an optometry officer or of an optometry officer of the Public Health Service is computed by adding—

"(1) all periods which the officer spent in optometry residency training during which the officer was not on active duty; and

"(2) all periods of active service as an optometry officer.

"§ 302d. Special pay: health professionals; general provisions

"(a)(1) The Secretary of Defense, with respect to the Army, Navy, and Air Force, and the Secretary of Health, Education, and Welfare, with respect to the Public Health Service, shall prescribe regulations for the administration of sections 302, 302a, 302b, and 302c.

"(2) For purposes of sections 302, 302a, 302b, and 302c, the terms "board eligible', 'board qualified', and 'initial residency training' shall have such meanings as shall be prescribed in regulations issued by the Secretary of Defense.

"(b) Special pay authorized under sections 302, 302a, 302b, and 302c is in addition to any other pay or allowances to which a member is entitled, and the amounts set forth in such sections shall not be included in computing the amount of any increase in pay under any other provision of this title or in computing retired pay, severance pay, or readjustment pay.

"(c) Special pay under sections 302(a), 302a(a), 302b, and 302c shall be paid monthly.

"(d) An officer who voluntarily terminates his service on active duty before the end of the period for which a payment was made to such officer under section 302(b) or 302a(b) shall refund to the United States an amount which bears the same ratio to the amount paid to such officer as the unserved part of such period bears to the total period for which the payment was made.

"(e) The special and incentive pays to which an officer of the health professions of the uniformed services is entitled under sections 302 through 302c are to be adjusted each year by the same percentage rate that the monthly basic pay and allowances of members of the uniformed services is adjusted pursuant to section 8 of the Act of December 16, 1967 (Public Law 90-207; 81 Stat. 654).".

(b) Sections 311 and 313 of title 37, United States Code, are repealed.

(c) Section 306(e) of such title, relating to exclusions from special pay for officers holding positions of unusual responsibility, is amended by striking out "302 or 303" and inserting in lieu there "302, 302a, 302b, or 302c".

(d) The table of sections at the beginning of chapter 5 of such title is amended—

(1) by striking out the items relating to sections 302, 302a, 302b, and 303 and inserting in lieu thereof the following:

"302. Special pay: medical officers.
"302a. Special pay: dental officers.
"302b. Special pay: veterinary officers.
"302c. Special pay: optometry officers.
"302d. Special pay: health professionals; general provisions.";

and

(2) by striking out the items relating to sections 311 and 313.

Sec. 3. Unearned amounts received by officers under the provisions of sections 311 and 313 of title 37, United States Code, on the day before the effective date of this Act shall be recouped by the United States from the officer concerned on a pro rata basis. An officer receiving pays under the provisions of any of the sections amended or repealed by this Act shall continue, under regulations prescribed by the Secretary of Defense, to be entitled under the amendments made by this Act to an annual amount of special pay equal to not less than the annual amount to which such officer would have been entitled had such sections not been amended or repealed by this Act.

SEC. 4. This Act shall become effective on October 1, 1979.●

By Mr. HASKELL (for himself and Mr. NELSON):

S. 3436. A bill to provide for the valuation of options to purchase stock in a small business; to the Committee on Finance.

● Mr. HASKELL. Mr. President, today I am introducing a bill for myself and the distinguished Senator from Wisconsin (Mr. NELSON) which provides an outline of a method which can be used in valuing nonqualified stock options in a small business.

The stock option is a very useful tool, especially to small business. It is used to attract competent management when startup funds are tied up in acquiring other necessary services and assets. The stock option gives employees a stake in the future of the company they are building.

The Internal Revenue Code provides that if the options have a readily ascertainable fair market value, the employee may elect to include in gross income the value of the option at the time of receipt. If the option cannot be valued, it must be included in income at the time of exercise.

I recognize that these options are difficult to value. However, if stock in a small business is included in an estate or if the options are included in an estate, the IRS has methods of valuation.

I was a conferee during the 1976 Tax Reform Act. We decided to put the following language in the conference report concerning the valuation of the options:

The conferees intend that in applying these rules for the future, the Service will make every reasonable effort to determine a fair market value for an option (i.e., in cases where similar property would be valued for estate tax purposes) where the employee irrevocably elects (by reporting the option as income on his tax return or in some other manner to be specified in regulations) to have the option valued at the time it is granted (particularly in the case of an option granted for a new business venture). The conferees intend that the Service will promulgate regulations and rulings setting forth as specifically as possible the criteria which will be weighed in valuing an option which the employee elects to value at the time it is granted.

The conferees intend that under these rules, the value of an option would be determined under all the facts and circumstances of a particular case. Among other factors that would be taken into account would be the value of the stock underlying the option (to the extent that this could be ascertained), the length of the option period (the longer the period, the greater the chance the underlying stock might increase in value), the earnings potential of the corporation, and the success (or lack of success) of similar ventures. Corporate assets, including patents, trade secrets and know how would also have to be taken into account. House Report No. 94–1515, 94th Congress, 2nd Session, 438–439 (1976).

The regulations which were proposed by the Treasury Department do not contain a description of the election to be afforded taxpayers nor do they detail the valuation criteria to be employed.

Because of my concern for the viability of the stock option for small business, I am introducing this bill which I think will provide the guidance needed in this area of valuation and which will carry out the intent of the conference committee in 1976.

I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 3436

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 83 of the Internal Revenue Code of 1954 (relating to property transferred in connection with performance of services) is amended by redesignating subsection (i) as subsection (j) and by adding after subsection (h) the following new subsection:

"(i) REGULATIONS TO VALUE CERTAIN SMALL BUSINESS STOCK OPTIONS.—

"(1) IN GENERAL.—The Secretary shall prescribe such regulations as may be necessary to provide for determining the fair market value of an option to purchase stock in a small business if the option does not have a readily ascertainable fair market value.

"(2) FACTORS.—The regulations prescribed under this subsection shall set forth factors which are to be taken into account in determining the fair market value of such options. Such factors may include, but shall not be limited to—

"(A) the type of small business,
"(B) an industry survey,
"(C) the earnings of the small business and the value of assets (including trademarks and copyrights) owned by the small business,
"(D) dividends,
"(E) intangibles,
"(F) arm's length sale of the stock with respect to which the option is granted,
"(G) the length of the option period, and
"(H) the value of the stock of small businesses which are similar to the small businesses issuing the option.

"(3) DEFINITION OF SMALL BUSINESS STOCK.—For purposes of this subsection, the term 'stock in a small business' means stock issued by a domestic corporation during the 5-year period after its incorporation and at a time when the equity capital (within the meaning of the last sentence of section 1244 (c)(2)) of such corporation was less than $1,000,000.".

(b) Section 83(e) of such Code (relating to applicability of section) is amended by adding at the end thereof the following:

"Paragraph (3) shall not apply to an option to purchase stock in a small business (within the meaning of subsection (i)(3)) if the taxpayer elects, at such time and in such manner as the Secretary may by regulation prescribe, to have the fair market value of such option determined under regulations prescribed under subsection (i). Paragraph (4) shall not apply to the transfer of property pursuant to an option with respect to which the taxpayer has made an election under the preceding sentence.".

(c) The amendments made by this subsection shall apply with respect to options granted after December 31, 1977.●

By Mr. CULVER (for himself, Mr. CHAFEE, Mr. HATHAWAY, Mr. BENTSEN, Mr. HATCH, Mr. NUNN, Mr. PERCY, Mr. RIBICOFF, and Mr. THURMOND):

S. 3437. A bill to amend the Comprehensive Drug Abuse Prevention and Control Act of 1970 and other laws to prevent the illicit importation of controlled substances into the United States, and for other purposes; to the Committee on the Judiciary.

DRUG TRAFFICKING CONTROL ACT OF 1978

● Mr. CULVER. Mr. President, today I am introducing a bill to increase the effectiveness of U.S. efforts to control international drug trafficking. Entitled the Drug Trafficking Control Act of 1978, it would close certain loopholes in U.S. laws that are currently being exploited by drug traffickers.

Specifically, the legislation would:

First, authorize U.S. authorities to prosecute the crews of so-called "mother-ships" which now distribute drugs along the coastlines of the United States with almost complete immunity from prosecution;

Second, intercept the profits of drug trafficking by strengthening the current requirement that anyone entering or leaving the United States with monetary instruments exceeding $5,000 must report them to the Customs Service; and

Third, require the master of any vessel carrying foreign merchandise to immediately report its arrival in the United States.

The Subcommittee on Juvenile Delinquency, which I chair, has had a long history of concern with international drug trafficking, the subcommittee has conducted a number of hearings and investigations on major smuggling routes and methods. Unfortunately we have found that as soon as U.S. authorities are able to place effective controls on one source of illegal drugs, the illicit traffickers begin to develop new methods to smuggle drugs into the country.

In the last few years, certain South American countries have become a major source of illegal drugs for the United States. Federal authorities estimate that nearly all of the cocaine and 50 percent of the marihuana smuggled into the United States each year now originates in South America. The great majority of these drugs are being brought in by air and by sea, using sophisticated new techniques which have presented new challenges to law enforcement officials.

In order to maintain effective controls over illegal drugs, we must respond to each new challenge as rapidly and as effectively as possible.

POSSESSION OF CONTROLLED SUBSTANCES ON THE HIGH SEAS

Among the present challenges is the need to halt "mother ship" smuggling operations. These mother ships, which carry huge amounts of illegal drugs, proceed to points that are off the U.S. coast but beyond the 2-mile territorial waters of the United States. From this position of safety the mother ship transfers its load of illegal drugs to smaller high-speed vessels such as fishing boats, cabin cruisers, and yachts. These smaller boats then mingle with the thousands of other small boats in U.S. waters along our coastline while transporting the illegal drugs to the mainland.

Recent enforcement efforts against this threat have documented the extent of such operations. In the first 7 months of this year, the Coast Guard seized 101 vessels, arrested 494 persons and confiscated over $700 million in drugs.

Unfortunately because of a loophole in existing U.S. laws, only about 40 percent of those arrested are ever prosecuted. The rest are either released or deported. Under U.S. law it is illegal to distribute drugs outside the United States only if the defendant intended or knew that such drugs would be unlawfully imported into the United States (21 U.S.C. 959). Thus, if a vessel with drugs is seized on the high seas, prosecutors cannot bring a charge for mere possession of illegal drugs on the high seas since this is not a crime under U.S. law. Similarly they cannot bring a charge of possession of drugs on the high seas with intent to distribute since this is not a crime under U.S. laws. Instead, they must prove that the crew of the vessel actually distributed drugs with the knowledge or intent that such substances were to be unlawfully imported into the United States. Since it is extremely difficult for U.S. authorities to actually observe such transactions on the high seas, it is often impossible to prove that they took place.

This legislation would remedy this problem by making it unlawful for anyone to possess dangerous drugs on board a vessel on the high seas if he intends or knows that such drugs will be unlawfully imported into the United States. U.S. authorities would no longer have to prove that such drugs were actually distributed. The United States would have authority to enforce this section against U.S. vessels, vessels without nationality, and vessels of a foreign nation when that nation authorizes the United States to assert jurisdiction over the vessel for the purposes of enforcing this act.

The bill also contains a related provision that makes it unlawful for any person to possess certain dangerous drugs on board a vessel or aircraft of the United States. This additional authority is possible because under international law, a U.S. vessel or a U.S. aircraft is considered U.S. territory when on or over the high seas.

ILLEGAL EXPORT OF CASH

We know that the sale of narcotics and dangerous drugs in the United States produces vast sums of money, much of which ultimately leaves the United States to be "laundered" or to be exchanged for additional drugs. By monitoring the flow of such funds, Federal authorities obtain valuable intelligence concerning the flow of drugs and frequently are able to disrupt drug trafficking networks by seizing large amounts of cash or negotiable instruments.

To assist in this effort, the Currency and Foreign Transactions Reporting Act of 1970 requires reports to be filed by persons transporting or causing to be transported monetary instruments in excess of $5,000 into or out of the United States. Recently, however, the U.S. district court dismissed a criminal proceeding against a defendant who was departing the United States with unreported currency on the grounds that no violation had occurred because the individual had not actually left the United States without filing the required report.

This legislation would remedy this situation by amending the Currency and Foreign Transactions Reporting Act to require a report to be filed prior to departure by any person who wishes to transport or have transported out of the United States any amount exceeding $5,000. A person departing by aircraft or vessel would have to file the report prior to boarding the carrier. Failure to file the report would then be a detactable violation.

Currently the Currency and Foreign Transactions Reporting Act requires the issuance of a search warrant in all cases in order to seize monetary instruments being taken from the United States in violation of these reporting requirements. In many instances it is impossible to obtain a search warrant in time to seize such funds before they leave the country. The Drug Trafficking Control Act would authorize customs agents to conduct warrantless searches under exigent circumstances if they have probable cause to believe that the Currency and Foreign Transactions Reporting Act is being violated. It should be noted that these searches could be conducted only if it is likely that a delay would result in the monetary instruments leaving the area and the customs officer has probable cause to believe the law is being violated. Under these restrictions, this new authority is similar to the existing authority of customs officers to examine other types of exports.

PROMPT REPORTING OF VESSELS

In recent years, the use of private yachts and pleasure vessels to smuggle narcotics and dangerous drugs has created a significant detection and interdiction problem for the Customs Service. The current law contributes to this problem by permitting, with the exception of vessels arriving from Canada or Mexico, 24 hours in which to report arrival of the vessel. A narcotics smuggler using a small boat can often land in the United States, unload his illegal cargo, and depart within 24 hours, thereby avoiding the current reporting requirement. This problem has become particularly acute in Florida where private vessels have easy access to nearby foreign islands.

The proposed bill would require the master of any vessel arriving from a foreign place, or of a foreign vessel arriving from a domestic port, or a vessel of the United States carrying foreign merchandise to immediately report arrival of the vessel at the nearest customhouse. U.S. authorities could therefore concentrate enforcement activities on those vessels failing to report immediately.

Mr. President, I believe this bill will provide law enforcement authorities with effective new weapons to stop the flow of illicit drugs into the United States. I am hopeful Congress can complete its consideration of the Drug Trafficking Control Act soon.

Accordingly, as chairman of the Senate Subcommittee on Juvenile Delinquency, I have scheduled a hearing to be held on August 22, 1978, on the scope of these drug enforcement problems and suggested improvements to combat them. The subcommittee will receive testimony from appropriate officials of the White House, the Drug Enforcement Administration, the U.S. Customs Service, the U.S. Coast Guard and the Department of State. We will also look at a recent White House plan to step up and coordinate the enforcement efforts of Federal, State and local authorities. Finally, we will examine the legislation that I am introducing today which is designed to close certain loopholes in existing law that are hampering these enforcement efforts.

Mr. President, I ask unanimous consent that the witness list for next Tuesday's hearing, the summary of the White House's recent plan to intensify drug enforcement in the Southeastern United States, and the text of the Drug Trafficking Control Act be printed in the RECORD at the conclusion of my remarks.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

S. 3437

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Drug Trafficking Control Act of 1978".

TITLE I—POSSESSION OF A CONTROLLED SUBSTANCE ON THE HIGH SEAS

SEC. 101. Section 1009 of the Comprehensive Drug Abuse Prevention and Control Act of 1970 (21 U.S.C. 959) is amended to read as follows:

"MANUFACTURE, DISTRIBUTION OR POSSESSION FOR PURPOSES OF UNLAWFUL IMPORTATION

"SEC. 1009. It shall be unlawful for any person to manufacture or distribute a controlled substance in Schedule I or II, or to manufacture, distribute or possess a controlled substance in Schedule I or II on board a vessel subject to the jurisdiction of the United States as defined in section 1001—

(1) intending that such substance will be unlawfully imported into the United States; or

(2) knowing that such substance will be unlawfully imported into the United States.

This section is intended to reach acts of manufacture or distribution outside the territorial jurisdiction of the United States, and acts of manufacture, distribution and possession on vessels on the high seas. Any person who violates this section shall be tried in the United States district court at the point of entry where such person enters the United States, or in the United

States District Court for the District of Columbia.".

SEC. 102. Section 1005 of the Comprehensive Drug Abuse Prevention and Control Act of 1970 (21 U.S.C. 955) is amended by—

(a) striking the heading for the section and inserting in lieu thereof: "POSSESSION ON BOARD VESSELS, AIRCRAFT AND OTHER VEHICLES";

(b) inserting "(a)" immedately after "SEC. 1005."; and

(c) adding at the end thereof the following new subsection:

"(b) It shall be unlawful for any person to bring or possess on board any vessel or aircraft of the United States, or on board any vehicle of a carrier of the United States, a controlled substance in schedule I or schedule II or a narcotic drug in schedule III or IV, unless such substance or drug is part of the cargo entered into in the manifest or part of the official supplies of the vessel, aircraft, or vehicle. This subsection is intended to reach acts of possession committed outside the United States or the customs territory of the United States. Any person who violates this section shall be tried in the United States district court at the point of entry where such person enters the United States, or in the United States District Court for the District of Columbia.".

SEC. 103. Subsection (a) (3) of section 1010 of the Comprehensive Drug Abuse Prevention and Control Act of 1970 (21 U.S.C. 960(a) (3)) is amended to read as follows:

"(3) contrary to section 1009, manufactures, distributes or possesses a controlled substance,".

SEC. 104. Subsection (a) of section 1001 of the Comprehensive Drug Abuse Prevention and Control Act of 1970 (21 U.S.C. 951) is amended by adding at the end thereof the following:

"(3) The term "high seas" means all waters beyond the territorial sea of the United States and beyond any foreign nation's territorial sea which is recognized by the United States and includes the Customs waters as defined in section 401 of the Tariff Act of 1930 (19 U.S.C. 1401).

"(4) The term "vessel of the United States" means any vessel documented under the laws of the United States, or numbered as provided by the Federal Boat Safety Act of 1971, as amended, or owned in whole or in part by the United States, or any citizen of the United States, or any corporation created under the laws of the United States, or any State, Territory, District, Commonwealth or possession thereof, unless such vessel has been granted nationality by a foreign nation in accordance with article 5 of the 1968 Convention on the High Seas.

"(5) the term 'vessel' includes every description of watercraft used or capable of being used as a means of transportation on the water.

"(6) The term 'vessel subject to the jurisdiction of the United States' includes (A) any vessel without nationality; (B) any vessel assimilated to a vessel without nationality in accordance with paragraph (2) of Article 6 of the 1958 Convention on the High Seas; (C) any hovering vessel or any vessel within the Customs waters as defined in section 401 of the Tariff Act of 1930 (19 U.S.C. 1401); (D) any vessel on the high seas registered in a foreign nation when that nation authorizes the United States to assert jurisdiction over such vessel for the purposes of enforcing this Act; and (E) any vessel of the United States.".

SEC. 106. The table of contents of the Compresensive Drug Abuse Prevention and Control Act of 1970 is amended by—

(a) striking out "SEC. 1005. Possession on board vessels, etc., arriving in or departing from United States." and inserting in lieu thereof

"SEC. 1005. Possession on board vessels, aircraft and other vehicles."; and

(b) striking out "SEC. 1009. Manufacture or distribution for purposes of unlawful importation." and inserting in lieu thereof "SEC. 1009. Manufacture, distribution, or possession for purposes of unlawful importation.".

TITLE II—ILLEGAL EXPORT OF CASH

SEC. 201. Section 231(a) of the Currency and Foreign Transactions Reporting Act (31 U.S.C. 1101) is amended to read as follows:

"(a) Except as provided in subsection (c) of this section, whoever, whether as principal, agent, or bailee, or by an agent or bailee—

"(1) intends to transport, or have transported, monetary instruments from any place within the United States to or through any place outside the United States in an amount exceeding $5,000 on any one occasion shall file a report or reports in accordance with subsection (b) prior to departing from the United States;

"(2) knowingly transports, or causes to be transported, monetary instruments from any place outside the United States to or through any place within the United States in an amount exceeding $5,000 on any one occasion shall file a report or reports prior to or at the time of arrival in accordance with subsection (b); or

"(3) receives monetary instruments at the termination of their transportation by common carrier to the United States from or through any place outside the United States in an amount exceeding $5,000 on any one occasion shall file a report or reports in accordance with subsection (b).".

SEC. 202. Section 235 of the Currency and Foreign Transactions Reporting Act (31 U.S.C. 1105) is amended by redesignating subsection (b) as subsection (c) and by adding a new subsection (b) as follows:

"(b) When because of exigent circumstances a warrant cannot be obtained, any officer of Customs may search without a warrant any of the individuals or objects included in subsection (a) of this section if he has probable cause to believe that monetary instruments are in the process of transportation and with respect to which a report required under section 231 of this Act (31 U.S.C. 1101) has not been filed or contains material omissions or misstatements.".

TITLE III—PROMPT REPORTING OF VESSELS

SEC. 301. Section 433, Tariff Act of 1930, as amended (19 U.S.C. 1433), is amended to read as follows:

"The master of any vessel from a foreign port or place, or of a foreign vessel from a domestic port, or of a vessel of the United States carrying bonded merchandise, or foreign merchandise for which entry has not been made, arriving at any port or place within the United States, shall immediately report the arrival of the vessel at the nearest customhouse or such other place as the Secretary of the Treasury may prescribe in regulations. The Secretary may by regulation prescribe the manner in which arrival shall be reported and may extend the time, not to exceed twenty-four hours after the arrival of the vessel, in which to report arrival.".

SEC. 302. Section 459, Tariff Act of 1930, as amended (19 U.S.C. 1459), is amended by substituting a comma for the word "or" wherever it appears between the words "entry" and "customhouse", and inserting after the word "customhouse" the phrase "or other places as the Secretary of the Treasury may prescribe in regulations.".

WITNESS LIST—HEARING ON DRUG TRAFFICKING CONTROL ACT OF 1978

U.S. Senate, Subcommittee To Investigate Juvenile Delinquency, August 22, 1978, 424 Russell Senate Office Building, 9:30 a.m.

Honorable John Chafee, U.S. Senator, State of Rhode Island.

Lee I. Dogoloff, Associate Director, Domestic Policy Staff, White House.

PANEL

Peter Bensinger, Administrator, Drug Enforcement Administration, Department of Justice.

G. R. Dickerson, Deputy Commissioner, U.S. Customs Service.

Capt. Robert H. Overton, III, Chief of Ocean Operations, U.S. Coast Guard.

PANEL

Morris Busby, Director, Office of Ocean Affairs, Department of State.

Mathea Falco, Senior Advisor to the Secretary and Director for International Narcotics Control Matters, Department of State.

THE WHITE HOUSE,
Washington, D.C., July 18, 1978.

DRUG TRAFFICKING IN THE SOUTHEASTERN UNITED STATES

There is growing concern over the illegal drug trafficking in marihuana and cocaine into and through Florida and other States along the Eastern seaboard and Gulf Coast. Originating in South American and Caribbean countries, huge quantities of marihuana are being smuggled by sea and air into the United States. Statistics indicate that over 2.5 million pounds have been seized through May of this fiscal year compared to less than 950,000 pounds during the same period last year. Seizure of multi-ton loads is commonplace. The amount of cocaine seized also has increased significantly. Federal, State and local law enforcement agencies and prosecutors in Florida report being overloaded with pending drug cases.

The U.S. economy is directly affected by the hundreds of millions of dollars paid to the sources of the drugs. The financial dealings connected with the illegal drug traffic several billion dollars a year. It is reported that corporations, sponsored by illegal drug profits, have been set up to purchase businesses to provide the mechanism for placing the illegal profits back into legitimate channels. The potential for major expansion of organized crime and for all forms of corruption is obvious.

The Executive Branch, the Congress, and State and local officials have indicated concern over this situation. To provide an effective and timely response, a White House review has been initiated under the direction of Dr. Peter Bourne, Special Assistant to the President. The principal Federal agencies involved (DEA, Customs, Coast Guard, and the State Department) are participating in the review.

The initial intent is to develop a more comprehensive response to this situation which capitalizes on the full capabilities of the Federal, State and local law enforcement authorities. Investigations are targeting on the illegitimate profit associated with the traffic and the effect of these large amounts of money on business and government. There will be a continuing emphasis on seeking longer term solutions through legislative, judicial and diplomatic initiatives.

The preliminary actions which have been initiated or are planned are based on attacking the entire chain. All Federal capabilities for air and sea surveillance are being reviewed for potential support of the anti-smuggling effort. The State Department will coordinate with foreign governments. Special joint law enforcement operations are being planned. The Federal agencies will open new offices in areas which are not currently covered. Support of State and local law enforcement will be expanded.

The following actions have been initiated or are planned in response to the need to stem the growing drug traffic in the Southeastern United States. Legislative needs are

included. The White House review team will continue to monitor the situation, coordinate the effort and provide follow-up recommendations.

I. SOURCE AND TRANSIT COUNTRIES

An intensive assessment of the drug sources and traffic routes has been initiated by the interagency narcotics intelligence committee. This report will address the South American and Central American countries, as well as the Caribbean and will be completed in mid-July.

Customs will conduct an intensified operation in the Virgin Islands in the near future. DEA has scheduled a seminar on conspiracy investigation in October 1978 for law enforcement officials in the Virgin Islands.

A Department of Justice team will travel to Colombia to discuss how Colombian nationals can be prosecuted under Colombian law either in the U.S. or Colombia if it can be shown directly or indirectly that they possess or have facilitated the possession of huge sums of money, largely using international banking facilities, where the assets can be directly linked with illicit drug trafficking.

The team will also discuss twelve cases where major Colombian traffickers are currently under indictment in the United States or scheduled for indictment in the near future. The Colombian Attorney General has indicated that he will prosecute these violators in Colombia if presented with sufficient evidence.

A proposal is under study which would turn over approximately twelve small ships (previously seized by U.S. authorities) to the Government of the Bahamas for maritime drug enforcement.

A Coast Guard and Customs team visited Colombia in May 1978 to evaluate and develop increased Colombian cooperation in coastal maritime interdiction. As a result of this visit, assistance is being furnished to the Colombians in developing an effective maritime drug interdiction force and for establishing a mutually beneficial exchange of intelligence information. An orientation visit to the United States by the Commandant of the Colombian Coast Guard is planned for this fall. A Colombian naval officer will accompany a U.S. Coast Guard interdictive patrol in the near future to observe our patrol strategy.

The U.S. delegation to the current General Assembly of the Organization of American States (OAS) is pressing for general recognition of drug trafficking as a hemisphere-wide problem requiring cooperative action by OAS members.

The Colombian Government will be encouraged to take aggressive steps to discourage the growth of marihuana.

II. FLORIDA

DEA, Customs and the Coast Guard will expand their cooperation, coordination, intelligence exchange, and training activities with State and local law enforcement officials in the Florida area. Specific coordination responsibilities will be assigned and an expanded drug training effort will begin in late summer of 1978.

DEA has detailed 15 additional special agents to Florida to assist in handling the heavy case load and to assist in developing conspiracy cases.

DEA will open new offices in Panama City and Ft. Meyers, Florida and increase the permanent staff in Miami.

Customs will open a patrol station in Ft. Meyers and increase staffing at Key West and Ft. Lauderdale. New patrol stations at Crystal River and Ft. Pierce are under consideration.

A Currency Investigation Task Force is being formed in Miami by Customs. This group of investigators will seek to expand upon violations of the Bank Secrecy Act, applying them in concert with other violations of Customs statutes, and laws enforced by Customs. The group will coordinate with the DEA in all violations of the currency laws that involve smuggling or trafficking in narcotics.

The trend toward low bail and low sentencing in South Florida is a significant factor in reducing the deterrent effect of arrest and conviction. An example given was that of 73 defendants released on bond, only eight reappeared to be tried and sentenced, and these eight are now fugitives. The Attorney General has been informed of this problem and asked to take action to encourage more aggressive bail and sentencing policies. Steps are being taken to ensure that adequate information is furnished to the judges so that appropriate bail is set and adequate sentences are meted out.

DEA and the FBI established a joint task force in Miami in October 1977 to investigate the financial aspects of drug trafficking and the use of U.S. banks to facilitate payments for drug shipments. This investigation includes the manner in which illegal drug profits are converted into apparently legitimate monetary transactions. More arrests are expected as this program continues.

DEA will continue to participate in the Federal/State and local task force in Orlando, Florida.

DEA is finalizing negotiations with the Florida Department of Criminal Law Enforcement regarding the possibility of that agency serving as a statewide clearinghouse for information and an interface with the El Paso Intelligence Center (EPIC) for other non-Federal agencies within the State. DEA is negotiating similar initiatives with Georgia and South Carolina.

III. MARITIME AND AIR

Discussions have begun with DoD to determine the feasibility of increased involvement of U.S. military resources, in conjunction with normal National Defense missions, to assist in surveillance and communications support of Federal law enforcement efforts against drug traffickers penetrating our sea and air borders.

Coast Guard maritime drug interdiction efforts will be increased in proximity to Florida coastal areas, through expanded WPB class vessel patrols, participation of small utility boasts in coastal anti-drug activity, and increased surveillance by major surface and air units.

On June 21, the Navy agreed to a Coast Guard request that Navy vessels would report sightings of known or suspected drug smuggling vessels to the Coast Guard.

This activity is part of the normal Navy maritime surveillance and is not to interfere with normal Navy operations.

DEA, Customs and Coast Guard will plan special operations for early fall 1978.

The Coast Guard will continue to support DEA and Customs with available drug interdiction resources, both surface and air.

Customs has been negotiating with DoD to furnish four T-39 jet aircraft for the Customs air interdiction program. While DoD has indicated agreement to the long term loan of these aircraft, it will require at least another 18 months to modify them with suitable radar and sensor equipment. Discussions will be undertaken with DoD to determine if suitably equipped aircraft could be loaned to Customs on a short term basis until the T-39's are modified and available for use.

IV. OTHER ACTIONS

The Attorney General has been asked to give special consideration to requests for LEAA grants which have the potential for significant impact on the drug trafficking originating in or transiting the Caribbean area. Particularly useful would be funding assistance to the Florida Statewide Grand Jury and to other prosecutorial areas. On June 30, the Attorney General announced award of a $360,000 grant in support of a Joint Organized Crime Investigation Program requested by the Dade County Department of Public Safety in Florida.

The Coast Guard is expanding, in coordination with Customs, their PADIE (Prevention and Detection of Illegal Entry) Program. This Program was created for National Security purposes to detect and deter smuggling and illegal entry into the United States from the sea. It should help solve one of the major problems—the lack of capability to monitor the vast coastline vulnerable to smuggling operations.

"PADIE" provides an organized way to make use of all agencies, organizations and individuals in reporting any unusual activity taking place along the waterfront or beach. It has significant potential for collection of information on smuggling when coordinated with similar on-going activities of Customs.

Coordination at the Federal level between the U.S. Attorneys and DEA is being increased. In addition, the staff of the U.S. Attorneys has been augmented by temporary assignment of three attorneys from the Narcotics and Dangerous Drugs Section of the Criminal Division of the Department of Justice, and additional assignments are under consideration. The Executive Office of the U.S. Attorneys is reviewing the possible assignment of additional Federal prosecutors to Miami and Puerto Rico.

White House representatives will discuss the proposed initiatives with the Governor of Florida and other officials to ensure that the efforts of the Federal Government and the State Government are working in concert to reduce drug traffic into and through their jurisdictions.

The White House review team will continue to monitor, coordinate and follow-up on these initiatives.

V. LEGISLATIVE INITIATIVES

On June 12, 1978, the Department of Justice sent to Congress the "Controlled Substances Seizure and Forfeiture Act of 1978". This proposal would: (1) provide for the forfeiture of proceeds and funds used or intended for use in connection with a violation of the Controlled Substances Act; (2) require the reporting of monetary instruments leaving the United States, or intended to do so; (3) require the prompt reporting of vessels carrying foreign cargo arriving in the United States; and (4) increase the administrative forfeiture amount from $2,500 to $10,000. Early passage of this proposed legislation will greatly facilitate the ability of Federal agencies to attack the economic base supporting the illegal drug traffic.

Current legislation does not allow the arrest of a person on board a United States vessel on the high seas or a United States citizen on board a foreign vessel on the high seas who is in possession of large amounts of illegal drugs. The Administration is currently preparing comments on H.R. 10371, which will amend the Controlled Substances Act. A pending amendment to the Criminal Code Reform (S. 1437) also addresses this issue. The Administration will support enactment of legislation to strengthen enforcement activities in this area.

Other proposals are under study.●

DRUG TRAFFICKING CONTROL ACT OF 1978

● Mr. HATHAWAY. Mr. President, I am pleased to join with the Senator from Iowa (Mr. CULVER) and a number of my distinguished colleagues in introducing the Drug Trafficking Control Act of 1978. I look forward to working for its prompt enactment.

The bill would close some loopholes in existing Federal law which have been exploited by drug smugglers, and have

frustrated their prosecution by the Government. Taken together, they should substantially upgrade our ability to combat the growing problem of drug smuggling.

These changes are urgently needed if we are going to deal effectively with drug smuggling, particularly smuggling involving so-called mother ships. These ships contain large quantities of illicit drugs. But they remain outside the 12-mile limit of U.S. territorial waters, and off-load their cargo onto much smaller and faster vessels—fishing boats and pleasure craft. These boats then carry their destructive cargo to isolated portions of the coast. Within the last year this has become a problem along the coast of New England, and Maine in particular.

The first of these would amend the Comprehensive Drug Abuse Prevention and Control Act to stipulate that it is a crime to possess on the high seas a controlled substance with the intention of illegally distributing or dispensing that substance. Under existing law, it is necessary to prove that the defendant actually dispensed or distributed the drug with the intention that the drug would be imported unlawfully into the United States. For successful prosecution under this statute it was often necessary to catch the smuggler in the act of unloading drugs off mother ships.

As a practical matter this often precluded prosecution of those on the mother ship.

Second, the bill would strengthen our ability to successfully prosecute smugglers on the basis of currency transactions. Under existing law, individuals coming into the country, or leaving it, must file a report whenever they transport monetary instruments in excess of $5,000. This is intended to allow the authorities to monitor such activity, with a view toward determining when it is connected to illicit smuggling or other illegal conduct. However, in a recent court case involving an individual who attempted to leave the country with $250,000 in unreported currency, the judge dismissed the case because the arrest took place prior to the time the individual actually left the United States. Under the terms of this decision, it will be virtually impossible to bring prosecutions in the future.

Therefore, this bill would amend the Currency and Foreign Transactions Reporting Act to require the reports to be filed prior to departure, and stipulate that persons must file such reports prior to boarding outbound common carrier vessels or aircraft.

The bill would also clarify existing law with respect to searches for such currency. It would permit warrantless searches by customs agents under exigent circumstances if they have probable cause to believe this law is being violated. This is consistent with prior Supreme Court interpretations of the fourth amendment.

Finally, the bill would tighten existing law with respect to the reporting of vessels entering domestic ports from foreign nations. Presently, these vessels must report their arrival within 24 hours. This allows more than enough time to unload illicit cargo. The bill would amend the law to require immediate reporting.

I am pleased to note that this legislation is supported by the Drug Enforcement Administration, the U.S. Customs Service, and the U.S. Coast Guard.●

THE PROPOSED DRUG TRAFFICKING ACT OF 1978

Mr. THURMOND. Mr. President, as a cosponsor of the proposed "Drug Trafficking Control Act of 1978," I rise in support of that measure. In doing so, I join with the distinguished junior Senator from Iowa (Mr. CULVER) in submitting this bill for consideration by the Senate Judiciary Subcommittee on Juvenile Delinquency which the distinguished Senator chairs.

It is my understanding that early hearings are scheduled on this measure, with the first day scheduled for August 25.

The thrust of the bill is straightforward. It would plug three "loopholes" that have developed in Federal attempts to enforce the Comprehensive Drug Abuse Prevention and Control Act of 1970. From my perspective, the most important provision of the bill is its title I. This title attempts to get at the so-called mother ships, those ships operating just outside the U.S. territorial 12-mile limit, which are large ships often bulging with huge quantities of illicit drugs. The mother ships serve as a source of supply for scores of smaller vessels, such as fishing trawlers, yachts, and other small boats. These boats ply off our coastal shores, smuggling illicit drugs into the mainland of the United States.

Just this past week, such a ship was discovered off the Florida coast and over 300 tons of marihuana were seized.

Until recently, this traffic on the east coast has been centered primarily off the Florida coast. However, concentrated enforcement activity by the Drug Enforcement Administration, the U.S. Coast Guard, and the U.S. Customs Service in that territory, has driven many of these operations farther up the east coast. Regrettably, one of the primary areas where this trafficking now occurs is off the coast of my own State of South Carolina.

I find this to be a truly shocking turn of events. If these reports are true, then immediate corrective action is essential to provide our enforcement agencies with the needed legal tools to stop these intrusions. Mr. Peter Bensinger, the Director of the Drug Enforcement Administration, has told me of this situation. I understand he will be the lead-off witness for this subcommittee hearing of the 25th. We will look forward to his testimony. If the facts are as I now understand them, I will join with my judiciary colleagues to secure expeditious handling of this legislation.

Mr. President, I ask unanimous consent that a letter from Mr. Bensinger be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DRUG ENFORCEMENT ADMINISTRATION,
Washington, D.C., Aug. 18, 1978.

HON. STROM THURMOND,
U.S. Senate,
Washington, D.C.

DEAR SENATOR THURMOND: This is in response to your request with respect to marihuana drug trafficking in South Carolina.

Last November, Beet Island, a remote island in Colleton County accessible only by water, was used by drug traffickers as a "stash and move" site for marihuana. An 80-foot sailing vessel flying under foreign registry unloaded multi-ton quantities of marihuana which had come directly from Colombia, South America. The seizure of the vessel by law enforcement authorities interrupted the plans to shuttle the marihuana by smaller boats to other locations.

Several months later, law enforcemnet authorities intercepted a 40-foot boat that was scheduled to enter international waters to meet an 85-foot vessel laden with marihuana. Due to severe weather conditions and mechanical difficulties, both vessels returned to Hutchinson Island in Colleton County. Eight subjects, seven of whom were not residents of South Carolina, were arrested and seven tons of marihuana were seized.

These cases are typical of the trends in maritime smuggling that DEA is monitoring. "Mother ships," commercial-sized vessels which transport illicit drug cargoes from South America, proceed to areas off the U.S. coasts and wait in international waters to transship their loads to smaller high-speed vessels. These smaller boats blend in with the legitimate vessel traffic, making law enforcement action difficult. There has been a rapid expansion in both the number and sophistication of these "'mother ships" operations, especially between Colombia, South America, and the East Coast of the United States. South Carolina, with its jagged coast and many islands, affords these smugglers just the shelter they need to stash the large loads of marihuana for subsequent distribution.

I will keep you advised of the situation in South Carolina. Please feel free to call me if I may be of further assistance.

Sincerely,

PETER B. BENSINGER,
Administrator.

ADDITIONAL COSPONSORS

S. 297

At the request of Mr. PACKWOOD, the Senator from Minnesota (Mr. ANDERSON) was added as a cosponsor of S. 297, a bill to require that imported meat and meat food products made in whole or in part of imported meat be subjected to certain tests and that such meat or products be identified as having been imported; to require the inspection of imported dairy products and that such products comply with certain minimum standards of sanitation, to require that the cost of conducting such tests, inspections, and identification procedures on imported meat and meat food products and on dairy products, as the case may be, be borne by the exporters of such articles, and for other purposes.

S. 2856

At the request of Mr. MORGAN, the Senator from North Dakota (Mr. YOUNG) was added as a cosponsor of S. 2856, the Uniformed Services Survivor Benefit Plan Amendments Act of 1978.

S. 2860

At the request of Mrs. ALLEN, the Senator from Alaska (Mr. STEVENS) was added as a cosponsor of S. 2860, the Solar Power Satellite Research, Development, and Demonstration Act of 1978.

S. 2867

At the request of Mr. GOLDWATER, the Senator from Mississippi (Mr. STENNIS) was added as a cosponsor of S. 2867, to remove residency requirements and acreage limitations applicable to land subject to reclamation law.

S. 3262

At the request of Mr. BENTSEN, the Senator from Louisiana (Mr. LONG), the Senator from Utah (Mr. GARN), the Senator from Montana (Mr. PAUL G. HATFIELD), the Senator from Wyoming (Mr. HANSEN), the Senator from California (Mr. HAYAKAWA), the Senator from Hawaii (Mr. INOUYE), the Senator from North Dakota (Mr. BURDICK), the Senator from Nebraska (Mr. CURTIS), and the Senator from Arkansas (Mr. HODGES) were added as cosponsors of S. 3262, the Regulatory Cost Reduction Act of 1978.

S. 3419

At the request of Mr. CULVER, the Senator from Mississippi (Mr. EASTLAND), the Senator from Arkansas (Mr. HODGES), and the Senator from Missouri (Mr. EAGLETON) were added as cosponsors of S. 3419, a bill to amend the Internal Revenue Code of 1954 to exclude from gross income a portion of payments made under certain Federal and State cost-sharing programs the primary purpose of which is conservation of soil and water resources, environmental protection or restoration, forest enhancement, or the provision of wildlife habitat.

SENATE JOINT RESOLUTION 111

At the request of Mr. GLENN, the Senator from Iowa (Mr. CLARK) was added as a cosponsor of Senate Joint Resolution 111, to authorize participation by the United States in parliamentary conference with Japan.

SENATE RESOLUTION 543—SUBMISSION OF A RESOLUTION RELATING TO HUMAN RIGHTS IN CAMBODIA

Mr. DOLE submitted the following resolution, which was referred to the Committee on Foreign Relations:

S. RES. 543

Whereas the moral intent of United States foreign policy is comprised, in part, of efforts to advance international human rights observance; and

Whereas, there have been numerous credible accounts by refugees from Cambodia telling of countless executions of Cambodian citizens and other barbaric violations of fundamental human rights by the Government of "Democratic Kampuchea"; and

Whereas, these repressive measures represent serious violations of the basic rights of the Cambodian people, and deserve the condemnation of all those who cherish the cause of freedom;

Whereas, the President of the United States has publically designated the Government of Democratic Kampuchea "the worst violator of human rights in the world today;"

Whereas, the Senate has concurred with this determination and has expressed its desire to take substantive action in protest, through its unanimous approval of unprinted Senate Amendments No. 1537 and No. 1585;

Whereas, the Government of Democratic Kampuchea thus far has shown itself unresponsive to expressions of international disapproval and condemnation; Now, therefore be it

Resolved, That the United States Senate—

(1) emphatically denounces the continuing disregard for basic human rights and human life by the Government of Democratic Kampuchea for its own people;

(2) calls upon the President to use his contacts and influence with those countries who do maintain diplomatic relations with the Government of Democratic Kampuchea to urge them to utilize their offices to end these inhuman violations of basic human rights;

(3) calls upon the President to cooperate with other nations, through appropriate international forums such as the United Nations, in an effort to bring more direct pressure to bear on the Government of Democratic Kampuchea to end these violations;

(4) reiterates its abiding concern for the welfare of those who seek refuge from the excessive human rights violations of the Kampuchean Government; and

(5) calls upon the President to direct the Assistant Secretary of State for Human Rights and Humanitarian Affairs to undertake a formal inquiry and documentation of Cambodian human rights violations, and to have this evidence formally presented to the United Nations.

SEC. 2. The Secretary of the Senate is directed to transmit a copy of this resolution to the President.

CAMBODIAN RESOLUTION

● Mr. DOLE. Mr. President, I am submitting a resolution in regard to the deplorable violations of human rights in Cambodia, violations which have persisted despite increasing international disapproval and condemnation.

Last November, I introduced a similar amendment, Senate Resolution 323, which expressed recognition of the barbaric situation that exists in so-called democratic Kampuchea, and called upon the President for a formal condemnation. The distinguished majority leader introduced a similar amendment this May, Senate Resolution 469.

These expressions of Senate concern and protest over the excessive policies of the Communist Government of Cambodia have been accompanied by other legislative actions. Last month, the Senator from Kansas proposed an amendment to the International Monetary Fund authorization bill, instructing the U.S. representative to oppose any financial assistance to Cambodia, which was approved by voice vote. Earlier this month, the Senate unanimously approved another amendment, offered by this Senator, to the State-Commerce-Justice Department appropriations bill, which urges the Attorney General to exercise his parole authority to allow 15,000 Cambodian refugees, located in camps in Thailand, to emigrate to the United States.

SENATE OPINION CLEAR

These resolutions and amendments reflect a clear expression of Senate concern. The situation in Cambodia is thoroughly condemned. The Senate has expressed a willingnes to help the victims of this tragedy. Our strong concern for the future of the Cambodian people is clear.

NEW RESOLUTION

In view of this increasing concern and disapproval of one of the worst crimes of this century, I am introducing a resolution further condemning this situation, and calling for further protest and pressure, in an attempt to bring this nightmare to an end. The Senator from Kansas is pleased to ncte that the Senate Foreign Relations Committee will be holding hearings on the previous resolution. I hope that this resolution shall be included as well on August 21.●

SENATE CONCURRENT RESOLUTION 104—ORIGINAL CONCURRENT RESOLUTION REPORTED—SECOND CONGRESSIONAL BUDGET RESOLUTION, 1979

Mr. MUSKIE, from the Committee on the Budget, reported the following concurrent resolution, which was placed on the calendar:

S. CON. RES. 104

Resolved by the Senate (the House of Representatives concurring), That the Congress hereby determines and declares, pursuant to section 310(a) of the Congressional Budget Act of 1974, that for the fiscal year beginning on October 1, 1978—

(1) the recommended level of Federal revenues is $447,200,000,000, and the amount by which the aggregate level of Federal revenues should be decreased is $23,400,000,000;

(2) the appropriate level of total new budget authority is $557,700,000,000;

(3) the appropriate level of total budget outlays is $489,500,000,000;

(4) the amount of the deficit in the budget which is appropriate in the light of economic conditions and all other relevant factors is $42,300,000,000; and

(5) the appropriate level of the public debt is $839,500,000,000, and the amount by which the temporary statutory limit on such debt should accordingly be increased is $41,500,000,000.

SEC. 2. Based on allocations of the appropriate level of total new budget authority and of total budget outlays as set forth in paragraphs (2) and (3) of the first section of this resolution, the Congress hereby determines and declares, pursuant to section 310(a) of the Congressional Budget Act of 1974 that, for the fiscal year beginning on October 1, 1978, the appropriate level of new budget authority and the estimated budget outlays for each major functional category are as follows:

(1) National Defense (050):

(A) New budget authority, $127,000,000,000;

(B) Outlays, $112,500,000,000.

(2) International Affairs (150):

(A) New budget authority, $12,600,000,000;

(B) Outlays $7,200,000,000.

(3) General Science, Space, and Technology (250):

(A) New budget authority, $5,200,000,000;

(B) Outlays, $5,000,000,000.

(4) Energy (270):

(A) New budget authority, $8,900,000,000;

(B) Outlays, $8,900,000,000.

(5) Natural Resources and Environment (300):

(A) New budget authority, $13,600,000,000;

(B) Outlays, $11,700,000,000.

(6) Agriculture (350):

(A) New budget authority, $12,200,000,000;

(B) Outlays, $7,200,000,000.

(7) Commerce and Housing Credit (370):
(A) New budget authority, $5,500,000,000;
(B) Outlays, $2,800,000,000.
(8) Transportation (400):
(A) New budget authority, $19,500,000,000;
(B) Outlays, $17,500,000,000.
(9) Community and Regional Development (450):
(A) New budget authority, $8,900,000,000;
(B) Outlays, $9,600,000,000.
(10) Education, Training, Employment, and Social Services (500):
(A) New budegt authority, $31,500,000,000;
(B) Outlays, $30,200,000,000.
(11) Health (550):
(A) New budget authority, $51,900,000,000;
(B) Outlays, $48,600,000,000.
(12) Income Security (600):
(A) New budget authority, $191,500,000,000;
(B) Outlays, $159,600,000,000.
(13) Veterans Benefits and Services (700):
(A) New budget authority, $20,900,000,000;
(B) Outlays, $20,400,000,000.
(14) Administration of Justice (750):
(A) New budget authority, $4,300,000,000;
(B) Outlays, $4,200,000,000.
(15) General Government (800):
(A) New budget authority, $4,100,000,000;
(B) Outlays, $4,000,000,000.
(16) General Purpose Fiscal Assistance (850):
(A) New budget authority, $8,800,000,000;
(B) Outlays, $8,800,000,000.
(17) Interest (900):
(A) New budget authority, $48,100,000,000;
(B) Outlays, $48,100,000,000.
(18) Allowances (920):
(A) New budget authority, $500,000,000;
(B) Outlays, $500,000,000.
(19) Undistributed Offsetting Receipts (950):
(A) New budget authority, —$17,300,000,000;
(B) Outlays, —$17,300,000,000.

AMENDMENTS SUBMITTED FOR PRINTING

DISTRICT OF COLUMBIA REPRESENTATION—HOUSE JOINT RESOLUTION 554

AMENDMENT NO. 3512

(Ordered to be printed and to lie on the table.)

Mr. CURTIS submitted an amendment intended to be proposed by him to House Joint Resolution 554, a joint resolution proposing an amendment to the Constitution to provide for representation of the District of Columbia in the Congress.

FEDERAL-AID HIGHWAY AUTHORIZATIONS—S. 3075

AMENDMENT NO. 3513

(Ordered to be printed.)

Mr. BARTLETT (for himself and Mr. BELLMON) proposed an amendment to S. 3075, a bill to amend title 23, United States Code, to authorize Federal-aid and highway programs through fiscal year 1980, and for other purposes.

NOTICES OF HEARINGS

COMMITTEE ON BANKING, HOUSING, AND URBAN AFFAIRS

Mr. PROXMIRE. Mr. President, on August 9, 1978, I announced that the Committee on Banking, Housing, and Urban Affairs will hold oversight hearings on August 21 and 22 on new types of mortgage instruments. I want to add that that will include Senate Concurrent Resolution 9, which expresses the sense of the Congress that the Federal Home Loan Bank Board should authorize the use of a wide variety of mortgage instruments.

SUBCOMMITTEE ON TAXATION AND DEBT MANAGEMENT

● Mr. HARRY F. BYRD, JR. Mr. President, the Subcommittee on Taxation and Debt Management of the Senate Finance Committee, will hold a hearing on August 28, 1978, on miscellaneous tax bills.

The hearing will be held on Monday, August 28, 1978, at 9:30 a.m. in room 2221 Dirksen Senate Office Building.

The following pieces of legislation of general application, unless otherwise noted, will be considered:

H.R. 810, sponsored by Congressman CONABLE, a bill amending section 4941 of the Code to permit private foundations to pay or reimburse Government officials for expenditures (up to certain limits) incurred for travel outside the United States. It is estimated that this bill will not have any direct revenue effect.

H.R. 4030, sponsored by Congressman GUYER, a bill to increase from 50 percent to 51 percent the maximum amount of voting stock that private foundations may hold in certain public utilities without being subject to the excise tax (imposed by section 4943 of the Code) on excess business holdings. It is estimated that the bill will not have any direct revenue effect.

H.R. 5099, sponsored by Congressman MOOREHEAD, a bill for the relief of Brian Hall and Vera W. Hall to make them eligible for nonrecognition of gain treatment under section 1034 of the Code on the reinvestment of the proceeds of sale of their personal residence. It is estimated that the bill will reduce revenues by less than $25,000 for fiscal year 1979.

S. 2771, sponsored by Senator HATHAWAY, a bill to exempt from the tax on unrelated business income the proceeds from the operation of certain games (such as beano). It is estimated that the bill will reduce budget receipts by about $15 million annually. This estimate does not take into account the retroactive effective date.

S. 1611, sponsored by Senator CULVER, a bill to provide a deduction for additions to a reserve for product liability losses.

S. 3049, sponsored by Senators CULVER and NELSON, a bill to provide a deduction for amounts placed in a reserve for product liability losses and expenses and for amounts paid to captive insurers.

S. 3176, sponsored by Senator LAXALT, a bill to allow public utilities to exclude from gross income, as contributions to capital, amounts received in aid or construction of electrical energy, steam, or gas facilities. If all the contributions in aid of construction were treated as income, the annual increase in tax liabilities is estimated to be in the range of $130–$200 million. If the electric and gas utilities rely on past treatment and file tax returns as if Revenue Ruling 75–557 applied only to water and sewage companies, and if court decisions are in favor of the utilities, then the proposal to broaden section 2120 of Public Law 94–455 would have no revenue effect because it could be viewed as codifying the historic tax treatment of contributions in aid of construction of regulated public utilities.

S. 3345, sponsored by Senator NELSON, a bill to amend the tax treatment of small business investment companies. It is estimated that the bill would reduce budget receipts by about $200,000 in fiscal year 1979 and less than $500,000 annually thereafter.

Revenue estimates for S. 1611 and S. 3049 are currently not available. The committee will make revenue estimates available prior to or on the day of the hearings.

Requests to testify. Persons who desire to testify at the hearing should submit a written request to Michael Stern, staff director, Committee on Finance; room 2227, Dirksen Senate Office Building, Washington, D.C. 20510, by no later than the close of business on Thursday, August 24, 1978.

Written testimony. The subcommittee would be pleased to receive written testimony from those persons or organizations who wish to submit statements for the record. Statements submitted for inclusion in the record should be typewritten, not more than 25 double-spaced pages in length and mailed with five copies by September 8, 1978, to Michael Stern, staff director, Committee on Finance, room 2227 Dirksen Senate Office Building, Washington, D.C. 20510.●

ADDITIONAL STATEMENTS

THE SLIPPING DOLLAR

● Mr. STEVENSON. Mr. President, I would like to bring to the attention of my colleagues a recent article by Robert J. Samuelson in the August 5 National Journal entitled "Is the Dollar Slipping on a Slope of Weak Exports?" I shall submit the text of the article to be printed in the RECORD at the conclusion of my remarks.

The point made by this article is that U.S. exports are becoming less competitive in world markets. This conclusion is reinforced in the extensive hearings which the Subcommittee on International Finance has recently held on U.S. export policy.

The reasons for this decline in competitiveness are largely self-inflicted. Business too often ignores export markets, or fails to compete aggressively for them. It has seen increasing numbers of foreign competitors, including the LDC's, beat it with superior technology and marketing. Labor concentrates on protecting jobs from import competition, instead of creating jobs through more exports. Thus, it warmly endorses import restrictions, which threaten the fabric of international trade, and reacts grudgingly to export incentives. And we in Congress, with the best of motives, encumber trade laws with a maze of restric-

tions, limitations, and conditions designed to promote everything from emigration to environmental protection, but not exports.

This article contains a rude awakening—we are not longer the indispensable supplier of the world's commodities, goods, and services. For every sale we forego—for lack of effort, for other objectives—there is someone else ready to make the sale, to create jobs in their own country. I hope my colleagues will keep this in mind when we begin debate on the Eximbank bill. Any more unnecessary restrictions on exports, no matter how well intentioned, well be but another case of shooting ourselves in the foot. Soon, we may have no feet to stand on in international markets.

We are at a watershed in our international economic history. Either we compete, to sell more abroad to reduce the trade deficit or face the prospect of becoming a second-rate economic power. That may sound a harsh statement, but it is a harsh reality.

The article by Mr. Samuelson follows:

IS THE DOLLAR SLIPPING ON A SLOPE OF WEAK EXPORTS?

Harry Jones, a vice president of the Westinghouse Electric Corp. and director of overseas affairs for the company's Washington office, likes to remind people that he's been a salesman for 32 years. He's traveled most of the world peddling Westinghouse's products—including power turbines and nuclear reactors—and, as an old salesman, he thinks he knows why American exports don't sell so well anymore.

Too much government interference.

Jones's villains sprawl across the bureaucracy: there's the State Department, which can block exports for foreign policy reasons; there's the Nuclear Regulatory Commission, which can impose time-consuming reviews of nuclear exports; and there's Congress, which has directed the Export-Import Bank of the United States to consider "human rights" before making export loans. A new candidate looms: the Council on Environmental Quality, which wants to require environmental impact statements for government actions affecting exports.

"All these uncertainties are scaring the customers away," according to Jones. "Most of the customers [for U.S. exports] are government officials. Their necks are out. If it [an export order] is held up for a year because of a license or an environmental review, they're going to get fired. They say, 'Hell, I can do this kind of business with the French and the Germans and not go through all this.'"

C. Michael Aho is not a salesman. He's an economist at the Labor Department, but when he processes mounds of trade statistics through his computer, he arrives at a conclusion strikingly similar to Jones's: something's wrong with American exports. He thinks the United States has suffered a "structural" loss of export competitiveness, though he's not sure why. Possible explanations are legion: inadequate aggressiveness by U.S. firms; lack of investment or research in new products; and the emergence of technologically advanced competitors abroad.

Aho's analysis and Jones's intuition should interest the White House. For despite an improvement in the most recent monthly trade report—the June deficit dropped to $1.6 billion, the first time since September it had been below $2 billion—America's continuing trade imbalance has rapidly emerged as one of President Carter's major headaches. It has caused a long slide in the dollar, unsettled relations with America's major allies and intensified pressures for stiff protectionism. Just last week. Rep. Charles A. Vanik, D-Ohio, chairman of the House Ways and Means Subcommittee on Trade, urged that the White House slap a heavy surcharge on Japanese imports.

Against that background. the message from Aho and Jones is a new and disturbing one. For their theory—that the United States is suffering a long-term decline in international competitiveness as a result of technological and political changes—raises a grim possibility: a continuing depreciation of the dollar that attempts to offset in cheaper prices what the country has lost in the quality of its products. In effect, they are prophesying the fate of Great Britain—before North Sea oil—for the United States.

CHILLING IMPLICATIONS

The theory, of course, is far from proven, but some statistics provide superficial support. After adjustment for inflation, U.S. exports of manufactured goods—the backbone of America's overseas trade—actually declined slightly between 1974 and 1977. During the same period, the exports of manufactured goods from other major developed countries rose 13 per cent. Since late last year, the United States has actually run a deficit in manufactured goods, accounting for much of 1977's record $31 billion over-all trade deficit.

Moreover, to increasing numbers of government officials and business executives, the lackluster export performance confirms the erosion of U.S. technological superiority. The United States still dominates the world market for commercial jets—accounting for about 85 per cent to 90 per cent of today's jet airlines—and remains the major seller of computers. But, in most other areas, businessmen say, U.S. firms compete with equal or better products.

"There has been a tremendous change in the last 15 years," said E. C. Chapman, vice president of Caterpillar Inc., a major manufacturer of construction and mining equipment and one of the largest U.S. exporters. "Today, there are manufacturers of our type of product that are [so] close to what we have . . . , [that] there are no significant differences."

The implications of such a fundamental change are chilling. Among the possibilities:

An international money panic. For better or worse, the dollar remains the world's chief form of international money. Countries keep about 80 per cent of their reserves in dollars; multinational firms and individuals also hold vast amounts of dollars. Any shift by these dollar holders—including the large oil producers—into other currencies could cause further depreciation and a stampede of dollar sales.

A decision by the Organization of Petroleum Exporting Countries (OPEC) to abandon the dollar as the sole currency for pricing oil. That change would mean that depreciation of the dollar immediately would translate into higher oil prices for Americans—and more domestic inflation. Ominously, a study group for OPEC recommended just such a change in mid-July.

A further loss of America's economic and political leadership among its western allies. For them, the dollar is both a symbol of American economic stability and a key determinant of their own economic performance. Because the currencies of many developing countries are linked to the dollar, a dollar depreciation also makes those countries' exports cheaper—and more competitive against European and Japanese products. The decline in U.S. economic leadership is already evident. The recent economic summit meeting in Bonn reconfirmed the unwillingness of other countries, particularly Germany and Japan, to follow American prescriptions for the world's economic problems.

Exports, of course, aren't the sole factor determining the strength of the dollar; foreigners' desire to invest in the United States and their willingness to hold surplus dollars also count heavily.

Moreover, comparisons of the United States to Britain are risky. In the late 1960s and early 1970s, Britain had social and economic problems—class conflicts, union militancy and a rate of inflation nearing 30 per cent—far more serious than anything the United States has experienced recently. The United States also remains the world's largest agricultural exporter, and, as Frank Vargo, the Commerce Department's top trade analyst, points out, "One of Britain's problems was that it was so heavily concentrated in a few industries—such as textiles—and the United States has never been concentrated like that."

Still, the slide in exports has proceeded beyond anything that can be explained simply by a rebuilding of the war-ravaged economies of Europe and Japan, which restored these areas as major competitors (*See chart above.*) Week export performance has now clearly intensified pressures on the United States to accept slower economic growth—to cut both imports and inflation—and has highlighted the growing conflict between U.S. commercial and diplomatic objectives abroad.

The conflicts have surfaced in a series of decisions to block—or stall—more than $600 million worth or exports, including the sale of trucks and commercial jets to Libya, power equipment and commercial jets to Argentina and a computer to the Soviet Union. Each decision reflected important U.S. political goals: the Libyan sales were rejected because of that country's support of terrorism and its hostility toward Egyptian President Anwar el-Sadat; the Argentinian sales were stalled because that country's "human rights" policies fall short of U.S. standards; and rejection of the Soviet computer sale was intended as a signal of U.S. dipleasure with the prosecution of Russian dissidents.

But business groups are increasingly upset by the restrictions, and some government officials regard them as futile gestures. "Treating our exports as a stick with which to beat people [is] completely ineffective," said Henry G. Wallich, a member of the Federal Reserve Board. "Every time we deny a country access [to sales], there's another country to take our place. . . . We get a reputation as an unreliable supplier."

Official anxiety about exports is relatively new. Until recently, large oil imports—up $10 last year to $44.7 billion—and fast U.S. economic growth, which also attracts imports, were considered the main problems. But their impact is now clearly diminishing. Alaskan oil is finally reducing oil imports, which are down 10 percent in the first six months of 1978, and U.S. economic growth is expected to slow to between 3.5 percent and 4.0 percent this year against 4.8 percent in 1977.

More important, the role of these pressures in the slide of the dollar may have been somewhat overstated. For example, the oil exporting countries have invested a large portion of their surplus dollar earnings in the United States. As long as that happens, the oil deficit does not directly cause a drop in the dollar, because the surplus dollars aren't being sold on foreign exchange markets. When more dollars are offered for sale on foreign exchange markets than people want to buy—to pay for U.S. exports, for example—the price declines.

Likewise, faster growth in the United States has clearly raised U.S. imports and slow growth in Europe, a major market for U.S. goods, has hurt U.S. exports. But even excluding other countries' exports to the United States, their overseas sales have been growing faster than U.S. export sales.

Consequently, the United States is losing its position in many markets. The following

table indicates U.S. exports as a proportion of the total exports of the 22 members of the Organization for Economic Cooperation and Development (OECD), the world's major industrialized countries, including the United States, Canada, Japan and the members of the European Community. Between 1974 and 1977, the U.S. share of total OECD exports dropped from 18.5 percent to 16.8 percent—a postwar low—and the share in most major markets dropped, too. These figures indicate that sluggish exports can't be attributed solely to slow growth in Europe.

U.S. EXPORTS TO MAJOR MARKETS

(U.S. share of OECD exports)

[In percent]

	1974	1977
Japan	52.4	48.2
European community	11.0	9.8
Developing countries	27.2	24.6
Communist countries	12.4	8.4

Although some of this drop may reflect a leveling off of U.S. farm exports—which have grown modestly since 1974, increasing from $22 billion to $23.7 billion in 1977—the same pattern emerges when manufactured exports alone are considered.

PERMANENT DAMAGE?

What remains unclear is whether the erosion is permanent. Some economists attribute much of the poor U.S. export performance to a sharp rise in the exchange rate of the dollar in late 1975 and 1976; from its 1975 low to its 1976 high, the dollar's value increased by about 18 percent, although the average change was much less. In retrospect, the jump reflected the temporary effect of the 1974–75 recession, which cut America's demand for imports and produced a record trade surplus of $9 billion in 1975. But, in the process, American exports became more expensive, and these higher costs could explain some, or all, of the loss of market shares.

The next year should show how much. Economists believe that changes in trade patterns lag behind changes in exchange rates because today's export shipments reflect contracts negotiated and signed a few months to a few years earlier. By this reasoning, the dollar's sharp depreciation in late 1977 and early 1978—followed by further depreciation this summer—should stimulate a rise in exports sometime in 1979.

For the depreciation has been substantial. Since early 1977, the dollar has dropped about 15 percent against the German mark, 35 percent against the Japanese yen and 10 percent against a basket of 10 major foreign countries. In practice, the actual price advantage conferred by the depreciation may be somewhat less, because inflation has been higher in the United States than in either Germany or Japan, offsetting some of the currency drop. Still, after price adjustment, the dollar dropped more than 5 percent between the end of 1976 and June 1978 against 16 foreign currencies, according to an index constructed by the Morgan Guaranty Trust Co. By the end of July, the drop had increased to 6.4 percent.

But economists like Aho wonder how pronounced the impact will be. At best, Aho believes that the dollar depreciation of the early 1970s permitted the United States to maintain its share of export markets but did not allow substantial improvement.

Aho's conclusion emerged from an elaborate analysis of OECD export data. His study attempted to show how much of a country's export growth could be attributed to its "competitiveness" and how much to other factors: the over-all growth in world trade; the trade growth of the commodities in which the country specialized; and the growth of a country's specific exporting partners. The reasoning was simple. If, for example, a country exports widgets, and, suddenly, the world experiences a widget boom, the country's exports would soar without any basic change in "competitiveness."

Aho consistently found that the U.S. export position had declined between 1970 and 1976, despite the impact of two devaluations. (The dollar was devalued against other currencies in the Smithsonian Agreement of December 1971 and again in early 1973; after that, currencies generally have been allowed to "float," meaning that their price is determined by supply and demand.) If the United States had been able to hold its 1970 export share, Aho found, its shipments to the European Community would have been $6 billion higher in 1976 than they actually were. The same conclusion resulted from an analysis of specific types of exports. If the United States had maintained its market share for heavy machinery (such as turbines and electric motors) and transportation equipment, these exports, to, would have been $6 billion higher in 1976.

Taking a closer look at the data, Aho discovered a slight improvement between 1973 and 1976, indicating some impact of the devaluations. But the magnitude of the changes didn't impress him. Instead, the dominant trends seemed to be a continual slide in the positions of the United States and the United Kingdom, contrasted with sharp gains by Japan and more modest gains by Germany.

Aho's study portrays the United States and Great Britain as well-established old stores that are slowly losing their customers. He speculates that the change reflects greater investment and research and development in Japan and Germany.

"If these trends continue, the increased research and development expenditures and larger investment overseas will in the long run improve the competitive position of those economies with respect to the United States," Aho concluded. "This will sustain the lagging performance of U.S. exports and not help to improve the value of the dollar in world markets. Other things equal, a lagging export performance by the United States will necessitate further dollar depreciation."

NEW REALITIES

Aho is not alone in believing that competitive realities have altered. Increasingly, U.S. companies are selling in new markets, facing new demands—both economic and political—and encountering competitors that seem to enjoy the backing of their governments. The added political dimension of export sales raises further doubts about the effectiveness of the dollar depreciation to generate more sales.

The shift in markets is clear. Between 1971 and 1977, for example, the percentage of U.S. exports going to developing and Communist countries rose from 31 per cent to 38 per cent.

Although most of that increase reflects a jump in exports to oil producers, part of the trade deficit can be attributed to U.S. inability to increase sales to many non-oil developing countries. In the 1970s, they have generally expanded their exports to the United States faster than the United States has increased its exports to them. Between 1971 and 1977, for example, the Asian "developing countries (mainly Korea, Taiwan, Hong Kong, Singapore and the Philippines) quadrupled their exports to the United States, from $3.9 billion to $17.8 billion, including a vast array of consumer products ranging from shoes and textiles to stereos and toys. But, over the same period, U.S. exports to those countries rose only two-and-a-half times, from $4 billion to $10.7 billion.

There is no agreement on why American firms have not been more successful. In some cases, rapidly expanding economies may simply be diversifying their sources of imports. Last year, the United States supplied about 30 per cent of the goods Korea imported from OECD countries, but that was down sharply from the 35 per cent the previous year and 41 per cent in 1968.

In other cases, unfamiliarity with new markets may hurt. Reginald H. Jones, chairman of the General Electric Co., recently noted that his company "spent four profitless years establishing a presence in Nigeria before we finally won an $11 million export order." Inexperience can cost sales. Pullman-Standard recently lost a $200 million to $300 million order for subway cars and rails for the Caracas subway in Venezuela. "I don't think we did our marketing homework right," a company official said later.

A top executive at another U.S. company put it this way: "In places like Lagos [Nigeria], Jidda [Saudi Arabia] or Teheran [Iran] . . . it's hard to make a phone call down the street, never mind to the United States."

But there's a less charitable view of U.S. corporate export performance. Last spring, a report by the Boston Consulting Group for the Treasury Department attributed much of the large U.S.-Japanese trade imbalance to lack of aggressiveness by U.S. companies. The report noted that the U.S. share of Japan's imports had slipped, and then added:

"The fact that the United States is losing its share of the Japanese market . . . puts the trade balance issue into a rather different perspective. Trade barriers cannot explain these data. Whatever the barriers, the United States is supplying a smaller part of what Japan does in fact take in. This is the case despite the U.S. advantages over other suppliers—a long history of close trade association; much the highest level of foreign investment in Japan; and close stategic association."

Frank A. Weil, assistant secretary of Commerce for industry and trade, also argues that U.S. companies—especially medium-sized and smaller firms—are too inward looking, too preoccupied with a large domestic market and too unwilling to take risks to create sales abroad. An Administration export task force, chaired by Weil, recently concluded that many firms are "biased" against exporting and deterred by fear of "language difficulties, the financial reliability of foreign customers, the mysteries of export documentation, exchange rate conversion [and] the regulatory restraints of foreign governments. . . ."

TOUGH COMPETITION

But if lack of interest were ever fatal, it is now. With large oil bills and high unemployment, most countries are desperate for export sales. Consequently, the bargaining advantage has shifted increasingly from seller to buyer—from exporter to importer—and the changed climate is making it more difficult for U.S. firms to compete.

The competition takes increasingly bizarre forms. To win orders, companies often have to agree to share a large amount of the production work with the importing country. In effect, the "exporter" provides management, technology and sophisticated parts. But much of the labor-intensive, less-skilled work is subcontracted to the "importer." In other cases, exports depend on barter (or "counter-trade") arrangements. A country will buy only if the exporter is willing to take some of its products in partial or complete payment.

The growth of this type of trade may work against the United States, both because American companies dislike such exchanges and because barter arrangements often require trade agreements between governments.

The skepticism of U.S. firms is not simply stuffiness. Bartering can be risky. In Europe,

many Communist countries paid for new chemical plants by shipping the plants' output back to the West; now, those shipments have aggravated a chemical glut on Western European markets.

But bartering seems likely to continue. Earlier this year, Japan and China signed an eight-year, $20 billion trade agreement under which China will sell oil and coal for Japan's exports of steel mills, construction materials and heavy equipment.

As the Japan-China agreement suggests, the desperate drive for exports also means more politics in export promotion. Just how much more is unclear, but U.S. firms insistently contend that any politics puts them at a further disadvantage.

"In 1976, our engineering company bid a $600 to $700 million major petrochemical complex in Latin America," Joseph F. Condon, vice president-international of Combustion Engineering, Inc., recently told a trade conference sponsored by *National Journal*. "We were head to head against European competition. We were told that our technology had an edge and our price was competitive. However, the European competitor offered extraordinarily aggressive export credit coupled with a government grant. This tipped the scale."

Whether the active intervention of other governments plays the decisive role described by U.S. companies is impossible to say. But the importance of "big ticket" exports seems to be growing, and their mere size gives them political overtones. Some projects assume staggering proportions. Western Electric Co., Inc., for example, is now bidding on a contract estimated at nearly $3 billion to expand and improve Egypt's telephone system; about 80 percent of that is reckoned to represent U.S. exports. (Western Electric recently lost a similar contract in Saudi Arabia to Sweden's L. M. Ericsson Telephone Co.)

Such huge stakes require some trust and goodwill between governments; otherwise, the importer may lack confidence that the contract will be fulfilled, including an ongoing supply of spare parts and continuing maintenance.

Nor is there much doubt that the United States has already done considerable damage to its reputation, mainly as a result of actions in the past that subordinated other countries' import needs to U.S. domestic and international political objectives. Typical is the experience of Japan, as the Boston Consulting Group reported to the Treasury Department last spring:

"Japan cannot be at the mercy of the world spot market for its basic requirements. . . . U.S. past practices here raise policy questions for Japan. The long series of restrictions on wood-product exports, the restrictions on North Slope crude [oil] and the abrogation of soybean contracts [in 1973, the United States placed an embargo on soybean exports]—these kinds of U.S. decisions are a real issue for Japan."

Under the best of circumstances, such suspicion might take years to dissipate but circumstances today are far from the best. The Administration has yet to find a clear way to boost exports—and help stabilize the dollar—while simultaneously serving all its other political goals.

It has attempted to reconcile some of the conflicts by limiting competition among major industrial nations on sensitive items. Thus the Administration is quietly pursuing negotiations to set common ground rules for military and nuclear exports and is continuing talks with other major exporting countries to limit the use of government subsidies of export credit to stimulate overseas sales.

But these efforts have met only modest success, and the Administration is being pushed increasingly toward aggressive export promotion policies. It has made a few halting steps in that direction. The Export-Import Bank, under its new chairman-president, John L. Moore Jr., has reversed the Ford Administration's policy of providing government export loans only as a last resort. Under Moore, new loans have risen rapidly; between last October and this June, new loans hit $2.1 billion against $394 million in the same period a year earlier. (*See box, p. 1238.*)

In mid-July, the Administration's Export Policy Task Force, chaired by Weil, urged the President to go even further. It recommended that exports not be halted on political grounds except in extraordinary circumstances. Such denials, the task force argued, not only give the United States a bad reputation abroad, but discourage U.S. exporters, who "become increasingly reluctant to undertake the expense and effort of seeking export markets . . ." a draft of the task force report said.

Even if the President were to adopt this and other recommendations, though, the immediate impact on exports isn't likely to be great. In fact, short of massive subsidies to exporters—which are great under the General Agreement on Tariffs and Trade (GATT) and probably would provoke retaliation from America's trading partners—there isn't much the White House can do to push exports. Unless the trade balance changes sharply and unexpectedly for the better, the huge deficit may resolve itself in one of three old-fashioned ways: through lower growth, more dollar depreciation or more protectionism.

To the White House, the choices cannot look very appealing.

The Eximbank: Growing More Bold

The Export-Import Bank of the United States is in the hot seat. On the one hand, exporters want it to become increasingly aggressive in financing their overseas shipments and, on the other, Congress wants it to become increasingly selective in the types of exports it will support.

In late July, for example, the House passed legislation restricting the bank's loans to South Africa and prohibiting loans to any country that "aids or abets any individual or group which has committed an act of international terrorism." In the Senate, the same legislation—which authorizes a continuation of the Eximbank through 1983—has run into another contentious issue: should the bank's export loans be subject to an environmental review?

Meanwhile, the bank's new president, John L. Moore, Jr., has attempted to reverse the cautious policy of his predecessor, Stephen M. DuBrul Jr. DuBrul believed the bank should provide funds only as a "lender of last resort"—when exporters couldn't obtain private financing—but Moore has attempted to stimulate loans by lowering interest rates, even though the general level of interest rates has been rising.

Generally, the bank makes direct loans on exports and guarantees private loans. Often, a financing package includes a combination of a direct loan and a guaranteed loan. Under DuBrul, the Bank generally limited itself to a 42.5 percent maximum in direct financing; Moore is willing to go as high as 85 percent. (Anything higher than that would violate an agreement among major industrial countries to require at least a 15 percent down payment on officially financed exports.) Exporters generally prefer direct loans not only because the rate is lower but also because the interest rate is fixed. Private lenders usually require a "floating" rate that could move up during periods of tight money.

Not surprisingly, therefore, there's been a dramatic shift towards more direct loans under Moore. In the nine months ending in June, direct loan authorizations hit $2.1 billion, up from $394 million in the same period a year earlier. Total Eximbank financial support (including guarantees) rose more moderately, from $4.1 billion in the 1977 period to $5.3 billion this year.

Congress is expected soon to approve the legislation authorizing the five-year extension of the bank and increasing its total lending authority from $25 billion to $40 billion. Guaranteed loans (counted at 25 percent of their face value in the $40 billion total) could rise from $20 billion to $25 billion.

The Agencies That Regulate Exports

The only form of government control on about 90 per cent of U.S. exports is a simple export declaration—a bookkeeping formality used to help the Census Bureau record the level of shipments. But the other 10 per cent is becoming increasingly controversial, and more and more exports are being stalled before they ever reach the docks.

Consider what happened to Allis-Chalmers Corp. Earlier this year, it asked the Export-Import Bank of the United States for a "letter of interest" to finance $270 million worth of power turbines and generating equipment for a new hydroelectric plant to be built on the border between Argentina and Paraguay. The Eximbank wanted to give the letter, but, under a recent congressional amendment, it must consider "human rights" conditions.

After consultations with the State Department, the Eximbank denied the company's request on the basis of Argentina's human rights policies. Consequently, Allis-Chalmers says it will probably be forced to supply the turbines to Argentina from a plant outside the United States.

Most export controls are administered by the Commerce Department, although the Eximbank and other agencies sometimes get involved. The Nuclear Regulatory Commission (NRC), for example, must approve all overseas shipments of nuclear fuels and reactors. If it prevents a shipment, the President can overrule the agency, and Congress can overrule the White House (both chambers must act within 60 legislative days). Thus President Carter recently approved a shipment of fuel to India's Tarapur reactor, nullifying a 2–2 vote of the NRC. Other agencies that have export authority include the Agriculture Department (over some foods) and the Justice Department (over some drugs).

Commerce's authority stems from the Export Administration Act of 1969. About 80 per cent of the exports that require "validated export licenses" are advanced goods, which are reviewed on strategic and military grounds. These include a large number of computers, advanced machine tools, lasers, avionics and sophisticated telecommunications systems. Many of the licenses are approved automatically, but important cases are reviewed by the Advisory Committee on Export Policy, an interagency group whose members include the State, Commerce, Defense, Energy and Treasury Departments.

Although Commerce administers the controls, the real power lies elsewhere. When one U.S. firm wanted to ship about $60 million worth of trucks to Libya, for example, Commerce told the firm that the shipment wouldn't require an export license. State learned of the deal and insisted that Commerce issue new rules requiring a license—which, it was indicated, would be denied. State thought the trucks would be used to haul Libyan tanks across the desert.

On foreign policy grounds, the country has virtually total export embargoes with four countries: Vietnam, Cambodia, North Korea and Cuba.●

SUPPORT CONTINUES STRONG FOR A LIMIT ON CONGRESSIONAL TENURE

● Mr. DANFORTH. Mr. President, early in this Congress Senators DeConcini,

SCHMITT, HAYAKAWA, WALLOP, GOLDWATER, and GARN joined me in introducing Senate Joint Resolution 28, a joint resolution calling for a constitutional amendment which would limit the tenure of Members of Congress.

In December 1977, Dr. George Gallup reported that 60 percent of the American people believe Congressmen should be limited to no more than 12 years of service as U.S. Representatives or Senators. Now, in its August issue, Nation's Business reports "overwelming" support among its readers for a 12-year limit on congressional tenure.

In June, Nation's Business "Sound Off to the Editor" column asked "Should congressional service be limited to 12 years?" To date, over 1,600 readers have responded, with more than 1,400—87 percent—supporting the concept of limited tenure for Members of Congress. With ballots continuing to come in, the actual figures now show 1,467 readers supporting limited tenure, 123 opposed, and 36 undecided.

Mr. President, I ask that the text of this report be printed in the RECORD.

The report follows:

12 YEARS IN WASHINGTON IS TIME ENOUGH

Overwhelmingly, NATION'S BUSINESS readers think congressmen should be limited to a dozen years in Washington.

While quite a few representatives and senators make it through only a single term, many are returned year after year by the voters.

By sheer endurance they move up the ladder to committee chairmanships and awesome power. And once elected, most congressmen find that the advantages of the incumbency are hard to beat.

Sen. John C. Danforth (R.-Mo.) has proposed a constitutional amendment that would limit each senator and representative to a total of 12 years' service—two six-year Senate terms and six two-year House terms.

Sen. Danforth says that our Founding Fathers intended members of Congress to be private citizens on leave to their government, not lifetime legislators. The sad results of many congressmen spending most of their adult lives in Washington are obvious, he says.

"First, Congress has grown more distant from the American people. Second, the growth and the cost of government have skyrocketed as congressmen say anything, do anything, and spend anything to get themselves reelected."

Sen. Danforth's proposed amendment requires approval of two thirds of the Senate and the House of Representatives and then three quarters of the states before it can become part of the Constitution.

Critics of the proposed amendment argue that the length of congressional service is a matter for the voters of each state and congressional district. Continuance of a legislator in office should be decided by his constituents, not by an arbitrarily restrictive constitutional amendment.

In June, the Sound Off to the Editor question was, "Should congressional service be limited to 12 years?" Judging by the response received from Nation's Business readers, Sen. Danforth seems to be on the right track. Overwhelmingly, the answer was yes.

John R. McAlpine, vice president and manager of administration at Young & Rubican-Detroit, says: "Sen. Danforth's observations are right on target; one of our problems is the serious lessening of competence of what we once regarded as the world's greatest deliberative body."

"Even better," suggests Roy W. Gronauer, president of TriTan Corp., Houston, "let's consider one term and no reelection unless it is separated by one term out of office."

"It is necessary to diminish the sustained influence of the legisaltive demigods," says Robert L. Riebow, director of government sales for Best Foods, Englewood Cliffs, N.J. "Authentic servants of the people can continue their contributions outside government. No state or congressional district is so short of talent that it cannot replace a legislator with another equally as effective."

Roger L. DeRaleau, vice president of Valley Bank and Trust Co., Springfield, Maine, says: "Definitely. New men bring in constructive and different outlooks, attitudes, and foresight on existing and proposed legislation."

"A thousand times yes," says attorney Wilbert E. McReynolds of McReynolds and Jantz, DeRidder, La.

"Nothing is as damaging to our form of government as the long personal reign in office of an elected official." He adds that "retirement from elective office should be unheard of in a democracy."

Walter H. Chapman, president of El Paso Corrosion Co., El Paso, Texas, speaks for the other side of the issue. "It's my decision as a voter," he says. "We believe we are sending the best to Washington. The important thing is it's the people's choice."

Another response opposing Sen. Danforth's plan is from William Weiss, president of The Rotary Co., Inc., Buffalo, N.Y. He says: "A time limit would result in the loss of experience a good legislator has accumulated." What should be scrapped, he says, is the present automatic rise to committee chairmanship based on seniority.

Keith T. Smith, director of corporate market development for Hercules, Inc., Wilmington, Del., sides with Sen. Danforth. "I believe," he says, "this move would make our elected officials more concerned about the next generation than about the next election."

"Congressmen should be professionals from every walk of life, but politics itself should not be a profession," says Joseph R. Farrell, Jr., president of Joseph R. Farrell, Inc., West Conshohocken, Pa. "Unfortunately power does corrupt, and while there are some good politicians, the upgrading of the whole Congress would far outweigh their loss."

Eldon Seelig, vice president of American Bank and Trust Co., Minot, N. Dak., agrees. He feels that many of our present economic and social problems are directly linked to our elective system. He says that congressmen are much too concerned about reelection.

L. P. Lathem, Jr., president of Lathem Time Recorder Co., Atlanta, is of a different opinion. He feels that "a good, honest career-type congressman could be lost to the nation. Experience takes time to replace," he says, "and we would have even more amateurs in office.

"If somehow voters learned to vote intelligently instead of selfishly, bad old congressmen would be voted out and good old congressmen kept in."

Charles L. Johnson, executive vice president of the Wayne Chamber of Commerce, Wayne, N.J., answers yes and would go even further than the proposed amendment. He suggests: "Perhaps consideration should also be given to requiring that the President, when elected, become disassociated from any political party. Hopefully, this would result in a more effective President because he would not have to give support to either party. Reelection would be as an independent incumbent running on his record."

"Fresh, energetic new people every 12 years would be a blessing to the U.S.," according to Roy E. Brooks, president of Louisville Mobile Homes, Inc., Louisville, Ky. "Congressional service should be just that," he says, "a service rather than a vocation for life."

Mark E. Large, branch manager of Cater-Vend, Inc., Centralia, Ill., votes no to Sen. Danforth's proposal but offers an alternative. The salary of congressmen should be lowered to the median national income, and the sessions of Congress should be limited to 60–90 days. Then only public-spirited people would be interested in serving."

E. A. Bishop, district manager of Armstrong Cork Co., Saddlebrook, N.J., favors limiting congressional terms. "Some will use the argument that it takes time to learn the ropes of government; therefore, the longer the time spent in office, the better the efficiency." But, he notes, that argument will be used "by those who have tangled the ropes."

John L. Colmar, attorney, Morton Grove, Ill., agrees that 12 years of congressional service is enough. "Let the legislators live and work some of their lives under the laws they pass."

Harold F. Knowles, executive vice president of the Greater Randolph Area Chamber of Commerce, Universal City, Texas, comments: The longer a congressman serves outside his constituency the more he loses touch with why he is in Washington. He can reach a point where being in Washington is more important than representing his constituents."

Kathleen A. Embry, bookkeeper for Sherlock's Glass Co., Elko, Nev., definitely favors Sen. Danforth's proposed amendment. You're damn tootin'," she says. "I've often wondered how congressmen have the temerity to restrict the President's term of office yet still leave their own wide open. Tenure, coupled with old age, often leads to arrogance or petulance, and opinions become as inflexible as old bones.

"Seniority can easily lead to corrupt power," she says. "I'm no cocky sprout letting off steam. I'm 61 years old."●

NATIONAL LUPUS WEEK

● Mrs. HUMPHREY. Mr. President, last Friday the Senate voted its approval of House Joint Resolution 682 which authorizes the President to proclaim the week of September 17–23, of this year, as "National Lupus Week." It is important that this time has been designated to bring attention to this disease. For we should all know more about this relatively new and little-known malady.

If you are not familiar with lupus, do not be embarrassed as many patients who have been diagnosed as having lupus erythematosus have never heard the term before either. Actually, the disease has been known to doctors since 1828 when it was first described by a French dermatologist, Biett. In those days the disease manifested itself by skin changes. Some years later it was determined that some patients who had LR skin lesions were also affected by the disease through their internal organs. Then it was observed that systemic LE could affect internal organs without skin changes.

In 1948, Dr. Malcolm Hargraves of the Mayo Clinic, discovered that there was a particular cell in the blood of patients with SLE, and was able to describe it. More recently it has been found that the individual has unusual antibodies that act against the patient's own tissues.

The cause of discoid LE, the skin form,

is unknown. Systemic LE has no known cause either, although it is thought that certain medicines, excessive sun exposure, and infections may contribute to its onset. Neither form is contagious.

The number of cases is hard to estimate because it is thought many people have mild cases and are unaware of it. Systemic LE cases, however, seem to be increasing. This may be attributed to either doctors recognizing the disease more readily or due to toxic changes in our environment triggering its cause.

For some undetermined reason, 7 out of 10 patients with discoid LE are women, usually in their late twenties. Nine out of 10 patients with systemic LE are women, half of them developing their first symptoms between ages 15 and 25. LE is rare in children under the age of 5.

The seriousness of the disease can range from being mild to life-threatening and depends on what parts of the body are affected. Some of the symptoms exhibited are muscle and joint pain, fever, skin rashes, chest pain, swelling of hands and feet, hair loss. There are periods of time when the symptoms clear and remission takes place. A large number of people with SLE have few symptoms and are able to live a nearly normal life.

Thus, lupus is a very real challenge to physicians and researchers in finding the cause of this disease. It is appropriate then that we have set aside these days to make the general public aware of a disease that is becoming increasingly prevalent.●

THE 10TH ANNIVERSARY OF THE SOVIET INVASION OF CZECHOSLOVAKIA

● Mr. DOLE. Mr. President, Monday marks the occasion of the 10th anniversary of the Soviet invasion of Czechoslovakia. To commemorate that sad event, I introduced Senate Resolution 526 which has been cosponsored by 10 of my distinguished colleagues. The 1968 invasion, however, should be observed with more than just a commemorative resolution. On August 21, we should pause and seriously examine the implications of the Soviet invasion of 1968 and resolve to apply the lessons to our policies in 1978.

PRAGUE SPRING

In 1968, under the leadership of Alexandr Dubczek, Czechoslovakia was experiencing what has come to be known as Prague Spring. People were free to express themselves in print, in conversations, in the various art media. Czechoslovakia became a prosperous nation with hard-working, happy and creative citizens. The tone and tempo of life in Czechoslovakia was admired and envied. On August 21, 1968, it all ended under the treads of Soviet tanks.

SOVIETS ARE PHILOSOPHICALLY OPPOSED TO FREEDOM

The question we should ask and seriously ponder, is why did the invasion happen? Why was Prague Spring terminated? The answer is simple, not particularly original, but enormously frightening. The Kremlin saw the people of Czechoslovakia enjoying freedom and prospering under its influence and they did not like it. It went against the basic philosophy of Soviet rule. The trials of Helsinki Monitors throughout this past summer are a dramatic reminder that the Soviets have not changed. Other repressive actions in the last 10 years since the Czechoslovakia invasion indicate consistent Soviet hostility to free and creative expression. Soviet foreign policy in Africa, the Middle East and Asia in the last decade has been designed to export and spread the same philosophy that gave us the Brezhnev doctrine. I realize that anyone who points out these facts risks being labeled "hard-line," but we still have the Czechoslovakia invasion to explain. That event is something we dare not forget or ignore.

INVASION MUST NOT BE FORGOTTEN

Certainly the Soviet Union has not forgotten—several divisions of Soviet troops still occupy Czechoslovakia to maintain the icy status quo that drove out Prague Spring. But that is only part of the story. The encouraging part of the story is the fact that the citizens of Czechoslovakia have not forgotten Prague Spring and are struggling to bring it back. In the wake of the Helsinki agreement—an agreement we must continue to remind the Soviets that they agreed to honor—hundreds of Czechoslovak citizens formed the Charter 77 Group, a grassroots movement committed to the implementation of the Helsinki agreement and dedicated to the return of basic human rights to Czechoslovakia. Last Wednesday, Reuters News Service reported that for the first time, representatives of the Charter 77 Group met with members of the Union for the Defense of Polish Workers, another group committed to the implementation of the Helsinki agreement.

The meeting of these two groups to discuss strategy indicates that despite repressions, the spirit of human rights is strong and growing in Eastern Europe. I believe the continued vitality of this historic movement is to a large degree attributable to the moral support the American people have offered the courageous men and women in Eastern Europe who struggle to achieve a happy, prosperous life through the fulfillment of basic rights and liberties.

WE MUST REMAIN FIRMLY COMMITTED TO HUMAN RIGHTS

As we commemorate 1968, we should also cast a glance backward to 1938, for it was then that the people of Czechoslovakia served as victims of the aggressive foreign policy designs of another powerful nation. In 1938, the free world chose to trade the freedom of Czechoslovakia for what was called "peace in our time."

We, of course, paid dearly in human lives, physical destruction, and human suffering for choosing to ignore the fate of this noble country. Now, in 1978, we owe it to the people of Czechoslovakia to remember their plight in the only truly meaningful way.

We must continue to give moral and diplomatic support for the just struggle of the Charter 77 Group to achieve the implementation of the Helsinki agreement within the borders of Czechoslovakia. We must also deal realistically with the Government of the Soviet Union—recognizing them for what they are, while taking what steps we can to encourage the citizens of the Soviet Union and other Eastern European governments to work peacefully for the realization of those rights they are now guaranteed on paper.

Above all, we must be strong in our own defense, firm and consistent in our foreign policy and cooperative but realistic in our dealings with the Soviet Union. Let the citizens of East and West meet and work together in cultural, commercial, athletic, and civic enterprises.

But let us not be naive and think that we can change a government that invades small nations, by indiscriminately offering them the technology and know-how their own system cannot produce. Unwavering support of human rights, couped with a resolve to remain strong and firm will be the most meaningful way we can commemorate the unhappy anniversary of Czechoslovakia's invasion and the most realistic approach to an eventual return of Prague Spring.●

SHORT LINE RAILROADS

● Mr. PELL. Mr. President, I was delighted to read in last Monday's Wall Street Journal an article entitled, "Rolling Along: Short-Line Railroads Are on Profits Track After Years of Neglect." The article featured the Providence and Worcester Railroad of Rhode Island, and portrayed "the little railroad that could" on its way to becoming the "big railroad that can." At a time when so many private railroads are fighting debt, decay and bankruptcy, it is reassuring to see the great success of the P&W over the past 5 years, as well as a great source of pride to Rhode Islanders. The Providence and Worcester Co., with its innovative management, is truly a model for others seeking to turn around privately owned railroads, and Mr. President, it is with pleasure that I ask that the article appearing in the Wall Street Journal on August 14, 1978 be printed in the RECORD.

The article follows:

ROLLING ALONG: SHORT-LINE RAILROADS ARE ON PROFITS TRACK AFTER YEARS OF NEGLECT

(By William Gilmer, Jr.)

WOONSOCKET, R.I.—In 1973 the Providence & Worcester Co. went into the railroad business with six leased locomotives, a handful of boxcars and 44 miles of track taken over from the Penn Central. Hardly an auspicious beginning for anyone in the railroad industry, you might think.

Think again. It now owns 140 miles of track in Massachusetts, Rhode Island and Connecticut, it operates 10 locomotives and a fleet of 600 boxcars, and its first-quarter earnings this year were $346,000.

On its way to becoming "the little railroad that could," the Providence & Worcester has been helped by innovative labor agreements, a knack for obtaining public financing and by leasing its rolling stock. But it also has provided old-fashioned good service to its freight customers. "The P&W does a hell of a lot better than the Penn Central ever did," says an official with Federal Paperboard Co., which ships its products on the tiny railroad.

A lot of other businessmen are equally pleased with many of the 300 other short-line railroads across the country. Many of them are going against the tide of an industry known for its financial troubles by making a profit or breaking even.

NO ROAD TO RICHES

"Nobody's getting rich," but the short lines are holding their own, says Howard Croft, president of the American Short Line Railroad Association. Washington transportation consultant W. G. Moore agrees that the industry is "generally sound" across the U.S.

A short-line railroad is generally less than 100 miles long and often connects a plant or a factory to a major railroad. Many of them have been created in the past few years as large railroads have merged and lopped off unwanted sections of track.

Many of these abandoned sections have been bought by the major industries they serve: U.S. Steel owns about a dozen short lines. Bethlehem Steel has about five, and others are owned by such concerns as textile mills and paper companies. Other sections have been bought by private investors and by state governments.

It's not known how many of these little lines are profitable. But according to the Interstate Commerce Commission, in 1975, the latest year available, 245 railroads that could be classified as short line had total profits of $27.4 million. By itself that isn't very much. In fact it's less than the Southern Railway's 1978 record first-quarter profit of $28.8 million. The Southern is only one of about a dozen major railroads, most of them in the South and the West, that are booming. The Union Pacific Corp., for example, had record first-quarter profit of $56.1 million.

DEBT, DECAY, AND BANKRUPTCY

But the short lines' small success is in sharp contrast to the bleak railroad picture in much of the U.S., particularly in the Northeast. In New England alone the large roads are fighting debt, decay and bankruptcy. The Boston & Maine is bankrupt and the Delaware & Hudson lost $12.6 million last year. The government-sponsored Consolidated Rail Corp., or Conrail, which took over six bankrupt northeastern railroads in 1976, including the bulk of the Penn Central's rail system, lost more than $1 million a day last year.

By comparison with the lumbering, money-losing Conrail there is the little Columbus & Greenville Railway. It operates just 180 miles of track in Mississippi, but last year it made a $171,000 profit, and it earned $68,000 in the first five months of this year. Craig Burroughs the railroad's president, says that before it became an independent line, the C&G had been deteriorating for years as an "unwanted section" of the Illinois Central Gulf Railroad.

Mr. Burroughs, who is a Chicago investor, also owns two railroads, the Erie-Western and the 77-mile Louisiana-Midland, which he bought for only $1,500. He predicts that both these roads will be in the black by the end of the year.

ESSENTIAL INGREDIENTS

The essential ingredients for success in running a short-line railroad, says Mr. Burroughs, are nonunion labor, making extensive track and equipment repairs and persuading Uncle Sam to help cover operating losses while the railroad is getting back on its feet.

The little P&W line has added its own refinements to this recipe. Indeed, a Massachusetts transportation official says the railroad has made "an aggressive use of public funds." In 1977, for instance, state highway-trust funds from Massachusetts and Rhode Island provided the railroad with $850,000 for grade-crossing improvements. In addition, it got $672,500 for rail rehabilitation from the New England Regional Commission.

The company says it also has plowed back 35 cents out of every dollar earned into track improvements, "an extremely high" around for any railroad, according to one industry source. The P&W blames this high cost of improvements, "an extremely high" amount $2.6 million last year. However, the line made a net profit of $835,000 after the addition of $3.6 million in income from real-estate and other sources. So far this year, though, its rail operations have been profitable.

The history of the P&W goes back to the 1840s when it was created to run the railway from Providence to Worcester, Mass. In 1888 it began leasing its line to larger railroads. By 1968 the lease had been taken over by the Penn Central, although it was still owned by the P&W, which had for many years been a real-estate-investment concern.

In 1973, Robert Eder, a lawyer who had been president of the P&W since 1966, obtained permission from the Interstate Commerce Commission to take back the lease from the ailing Penn Central. And the tiny company began to operate the line itself.

The railroad then consisted of the single line from Worcester to Providence. Since then, two other lines have been added from Worcester, one south to Plainfield, Conn., and one north to Gardner, Mass.

One of Mr. Eder's first successes was in persuading the United Transportation Union to accept an unusual contract allowing the P&W to pay employes an annual salary and an annual share of company profits, compared with the hourly wages and overtime normal at other railroads. The union also allowed the P&W to operate with three-man crews, instead of the usual four, and no caboose, something the major railroads have sought for many years.

The company's 99 union employes earn an average of $19,000 a year. "You might make more money on another railroad with hourly wages, but you'd have to jump all around the country to do it," says Mark McKeon, a P&W trainman. The employes also like the railroad's profit-sharing plan: Last year each employe received a bonus of $1,600.

The railroad is so small that working conditions tend to be informal. Supervisors regularly work as crew members and all employes are expected to make on-the-spot management decisions. "Just the other night we decided to set off (uncouple) a damaged car because we thought it was unsafe," says trainman Russell Brown. "Another railroad would have stopped the whole train until a supervisor came down from the main office to make the inspection."

All of this apparently is good for employe morale. The railroad says it has virtually no employe turnover and hasn't had a single strike or grievance hearing to date.

A major capital expense for railroads is new rolling stock. But not for the P&W. The company leased six new locomotives that the state of Rhode Island bought with industrial-revenue bonds. For its boxcars it went to Itel Corp. in San Francisco. Itel is one of a growing number of companies that have bought short-line railroads and are leasing their boxcars and flatcars to other railroads.

Joseph Costella, Itel's rail-division president, explains that many railroads, particularly the short lines, simply don't have the capital to invest in new cars and are forced to lease them. The company now has 14,000 cars leased to 43 railroads, including the 2,600 on order or being used by the P&W, Itel's largest customer.

Along with improved track and new equipment, the P&W also provides good service, according to its freight customers. "If any complaints about P&W's service should arise, which is rare, we can go straight to the president or the board of directors for an immediate answer," says Sidney Dressler, president of Colfax Inc. of Pawtucket, R.I. "With other railroads it's difficult to get to the person in charge," he says.

The Massachusetts Department of Transportation says it hasn't received a single complaint about the P&W, "which certainly isn't the case with all the other railroads running through our state," says a spokesman. Transportation consultant Mr. Moore notes that because short lines are so small, there is a "closeness among management, employes and shippers."

But not everyone likes the P&W, mainly because of the more than 10 heated court cases it has fought since 1973 with oil companies, government agencies and other railroads over a variety of issues. "The P&W just seems to look for areas of trouble to get into," says David Stein, director of transportation for the New England Regional Commission.

In one case, the P&W took the Penn Central to court on libel charges, but the case was settled out of court. Most of the court cases have involved so-called interline settlements, or the distribution of fees for freight carried over the lines of more than one railroad. P&W itself is being sued at present in U.S. court in Delaware by Conrail over such settlements.

But the P&W's persistence in challenging other railroads seems to be paying off. For some time it has been trying to take over a section of track in Connecticut between Plainfield and Groton, a line rich in big shippers. The line is now operated by Conrail, but the state of Connecticut has been urging its takeover by P&W which, it thinks, will operate the line more efficiently.

A few days ago the Department of Transportation in Washington agreed with the state and ordered the transfer of the line from Conrail to P&W. Details of the transfer and the price to be paid have to be worked out by other agencies and finally presented to a special court.

Now the P&W wants to buy track that would extend its service to the Hudson River. Ultimately, Mr. Eder says, the line wants to own 1,000 miles of track and to become "the big railroad that can."●

LEADERSHIP FOUNDATION POLL ON VOLUNTARY PRAYER IN SCHOOLS

● Mr. HELMS. Mr. President, an attempt is being made to create the impression that churches and church leaders are opposed to restoring voluntary prayer in the public schools. Time after time we see published statements which purport to represent the thinking of various denominations. But when one examines those statements, and looks at the persons who actually make those statements, then it becomes clear that we are usually listening to the views of some tiny bureaucracy that has enmeshed itself in the national headquarters of the denomination.

On the grassroots level, there is a tremendous support for voluntary prayer in the schools. The Leadership Foundation under the capable direction of Miss Martha Rountree, has recently taken a poll of various churches around the country. Hundreds of churches were contacted directly. In almost every case, the response was immediate and defi-

nite: The Nation ought to restore voluntary prayer in the schools.

Mr. President, I have been provided with a list of chuches from around the country that wish to go on public record as supporting voluntary prayer in the schools, and I submit it to be printed in the RECORD.

The material follows:

BACK TO GOD MOVEMENT—SURVEY OF CLERGY

(Re: Return of Voluntary Prayer To Our Schools)

SUMMARY SHEET

Denomination	*Number churches replied*

CIVIL SERVICE REFORM

● Mr. RIBICOFF. Mr. President, we are soon to consider the Civil Service Reform Act. This legislation is most important and is needed so that our Government can operate efficiently and effectively. The needs have beeen recognized over the years by members of the Cabinet of both parties. I submit for the RECORD a letter to me from former Secretary of Health, Education, and Welfare John W. Gardner, cosigned by the following distinguished former members of the cabinets of various Presidents: Alan Boyd, Clark M. Clifford, Wilbur Cohen, Arthur S. Flemming, Henry H. Fowler, Orville L. Freeman, Arthur J. Goldberg, Nicholas J. Katzenbach, Elliot L. Richardson, George Schultz, William E. Simon, Alexander B. Trowbridge, Stuart Udall, Robert C. Weaver, Willard Wirtz:

The letter follows:

WASHINGTON, D.C.,
June 1, 1978.

Hon. ABRAHAM RIBICOFF,
Chairman, Committee on Governmental Affairs, U.S. Senate, Washington, D.C.

DEAR CHAIRMAN RIBICOFF: As former Cabinet members we have maintained a deep interest in improving the civil service system. We join together in support of the President's proposed Civil Service Reform Act and Reorganization Plan.

The reform program provides for broader delegation of authority for personnel decisions to heads of departments and agencies in the Executive Branch. The consequence would be to decentralize personnel decision-making in the Federal government, making it more certain that decisons will be made on a timely basis and be based on program need.

The proposals seek to strike that balance necessary in a public personnel system, a balance which simultaneously provides managers with the tools to manage while providing for appropriate employee protections. The division of the Civil Service Commission into the Office of Personnel Management and the Merit Systems Protection Board gives the Federal government the necessary institutional framework for attaining this balance while the legislation incorporates those powers necessary to the operation of these institutions.

The President proposes to create a Senior Executive Service, which will make it much easier to effectively utilize and reward those top level career people who are the backbone of the public service.

The Civil Service Reform Bill also proposes an incentive pay system for supervisors and managers at the GS–13 through 15 levels. Tying financial rewards to standards of organizational and individual performance provides a critically needed tool to make government work well.

While we might differ as to detail on the President's proposals, we agree unanimously on the need for comprehensive civil service reform and on the sound objectives which shaped the proposed legislation.

Given the urgency of improving governmental efficiency and effectiveness, we urge your Committee to act promptly. Your actions can go a long way to restore public confidence in the Federal government.

Sincerely,

Alan Boyd, Clark M. Clifford, Wilbur Cohen, Arthur S. Flemming, Henry H. Fowler, Orville L. Freeman, John W. Gardner, Arthur J. Goldberg, Nicholas J. Katzenbach, Elliot L. Richardson, George Shultz, William E. Simon, Alexander B. Trowbridge, Stuart Udall, Robert C. Weaver, Willard Wirtz.

It was physically impossible to arrange for the actual signing of this letter by each of the above, but they fully endorse it.

JOHN GARDNER.●

IMPACT OF LONGSHOREMEN ACT ON SMALL BUSINESS

● Mr. CRANSTON. Mr. President, I submit for the record a recent statement by my colleague from California, Congressman GEORGE MILLER of Contra Costa County. Congressman MILLER and I have sponsored legislation in this Congress to amend the Longshoremen and Harbor Workers' Act in order to remove from coverage small recreational boat works and marinas whose workers were never intended to be covered. Congressman MILLER has prepared a fine summary of the issues and the need for this legislation, which I would like to share with my colleagues.

The statement by Congressman MILLER follows:

MILLER INVESTIGATION OF IMPACT OF LONGSHORE ACT ON SMALL BUSINESS

(By Congressman George Miller)

A great crisis has been brewing over the last several years in the recreational boat and marina industry which threatens not only the future of these small businesses, but also the millions of boat owners who utilize them. In my own district, the cities of Richmond, Martinez and Pittsburg have all constructed new marinas for use by the citizens of Contra Costa County, and throughout the country, other cities and private interests have similarly invested large amounts of money into such projects.

Now, the future of these marinas, and the future of the small, recreational boat business in general, is in serious jeopardy. This crisis has been precipitated by the decision of a Department of Labor bureaucrat who, without any justification in law, decided to apply the Longshoremen and Harbor Workers' Act to the small boat industry. Overnight, insurance rates skyrocketed without any corresponding increase in injuries among employees. In some areas, rates rose by as much as 400 percent, forcing businesses either to pay the higher rates (and correspondingly increase their prices to boatowners), or close down.

Working conditions in the small boat business, and at marinas, make wholly inappropriate the application of insurance rates which were designed for large scale, injury-prone shipbuilding and repair yards. Assistant Secretary of Labor Donald Elisberg, who as a Senate staff person participated in the

drafting of the 1972 amendments to the Longshoremen's Act, recently acknowledged this disparity before the Subcommittee on Compensation, Health and Safety, of which I am a member. Mr. Elisberg told the subcommittee: "There have been relatively few injuries reported by this industry. During the three months July-September, 1977, when we conducted a survey, only 158 such injuries were reported nationwide, of which only 62 involved lost time from work. In February, there were 24 lost time injuries reported; in March, 44; and in April, 28."

For the sake of comparison, I would like to point out that there were 171,300 injuries in all occupations covered by the Longshoremen's Act throughout the Nation in 1976. Given the infinitesimal injury rate in the recreational and marina businesses, it strikes me as nothing short of preposterious to impose the high rates of the LHWA, which were designed for hazardous occupations, to these small scale firms.

The United States District Court for the Northern District of California reached a similar conclusion earlier this year. In the case, Boating Industry Associations, et al., v. Ray Marshall, the Court found no legal justification for applying the 1972 amendments to recreational boat builders and marinas. The Court ordered the Department of Labor to rescind Notice 21 and instructed the federal government to declare "that it is no longer the official position of the Labor Department that the LHWA applies to recreational boat builders and marinas."

Together with 31 House and Senate colleagues, I wrote to the Secretary of Labor and requested that he accept the ruling of the District Court and not file an appeal. Unfortunately, the Labor Department has decided to pursue the appeal.

It was because of the obvious failure of either the courts or the bureaucracy to address the concerns of small businessmen and their millions of affected customers that I introduced H.R. 8878 last year. This bill would remove small boat builders and marinas from coverage under LHWA if the workers do not work over the navigable waters of the United States, and if the workers are covered by state workman's compensation laws. Despite a great deal of testimony before the Subcommittee on Compensation, Health and Safety, it now appears unlikely that H.R. 8878 will be enacted this year. For boatmen in California, the problem will take on even more serious overtimes because the State Legislature has not renewed the coverage of these yards under the State Fund. For many builders and marinas, the future appears extremely bleak.

I am very disappointed that enactment of H.R. 8878 will have to be delayed. For many months, I discussed this legislation with business and labor organizations, Members of Congress, representatives of the Department of Labor, and others. I do not believe that the specific provisions of this bill would cause any of these interests any significant problems. Yet promises of cooperation and good faith have apparently gone by the board, and the penalty will unjustifiably be paid by small boatmen.

In order to establish a sound empirical base for next year's action on this legislation, I intend to request the General Accounting Office to begin immediately an investigation of the legislative history and fiscal impacts of Notice 21 on small recreational boat builders and marinas. I also am requesting the GAO to investigate the ripple effect of Notice 21 with respect to the closure of yards, increases in mooring, launching and storage fees for boatowners, and other related cost increases which are passed along to those who patronize marinas and recreational boat yards. GAO will, in addition, be asked to compare the injury rates in small businesses with the rates in larger shipbuilding establishments in order to determine whether there is any rational basis for imposing the high LHWA rates on small employers.

In addition, I will ask the GAO to investigate whether evidence exists to determine if insurance companies are exploiting Notice 21 in order to impose unjustifiably high rates for recreational boat makers and marinas.

This investigation will lay important groundwork for legislative action in the next session. I intend to pursue the policy of H.R. 8878 because it is evident to me that the Longshoremen and Harbor Workers' Act has been seriously misinterpreted and misapplied by the Department of Labor. The effects of Notice 21 are being felt by employers, workers, and customers alike. This unreasonable, and legislatively unjustified policy, represents a very serious sword over the heads of the entire recreational boating industry which must be corrected. I am hopeful that, armed with additional evidence of the illwisdom of this interpretation, the Congress will move more expeditiously next year.●

UTILIZATION CONTROL UNDER MEDICAID—CLARIFICATION OF CONGRESSIONAL INTENT

CORRECTION

● Mr. HASKELL. Mr. President, in the RECORD of yesterday, August 17, 1978, at page 26710, in some correspondence between myself and Senator TALMADGE, with respect to section 1903(g) of the Social Security Act, reference was made in column 1, paragraph 3, line 2 paragraph 4, line 2, and paragraph 4, line 15, to Public Law 95–245. This should have been Public Law 95–142. I ask that the permanent RECORD be corrected.●

INDIAN HEALTH CARE: A NEED TO UPGRADE PREVENTIVE HEALTH CARE SERVICES

● Mr. DOMENICI. Mr. President, among the growing problems confronting the United States today, there continues to be an increased need for accessible and available preventive health care services for our American Indian and Alaska Native populations. The Department of Health, Education, and Welfare established the Indian Health Service (IHS) in 1955 with the goal "to raise the health status of the American Indian to the highest possible level." Notwithstanding this effort, the health care problems of this population subgroup continue to grow. In spite of the significant gains which have been made, much more remains to be done.

Current statistics of the health status of the American Indian and Alaska Native population demonstrate the continuing inadequacy of available preventive health care services. The statistics I am about to discuss demonstrate that health problems among this segment of our population continue to be greater than those of the rest of our citizens.

The tuberculosis rate for the American Indian-Alaska Native population is 4.4 times the U.S. rate.

The infant mortality rate is 1.3 times the U.S. rate.

The influenza and pneumonia rate is 2.3 times the U.S. rate; and

Otitis media (inflammation of the inner ear) affects 40 percent of the American Indian-Alaska Native population aged 1–4. If this problem is not corrected at an early period of life, it can cause permanent ear damage.

The health problems of the American Indian-Alaska Native population extend far beyond the parameters of the areas listed above. Alcoholism and alcohol abuse continues to be a serious health problem facing this population. The alcoholism death rate for American Indian-Alaskan Natives during the past 10 years has ranged from 4.3 to 5.6 times the overall U.S. rate. In fact, in my own State of New Mexico, five of the ten leading causes of death among Indians are alcohol-related. According to a recent report prepared by the Association of American Indian Physicians, Inc., some of this can be attributed to "understaffing and underfunding of Indian health and alcohol-treatment centers . . ." But that does not explain why the American Indian-Alaska Native population should receive inadequate preventive health care services. It is time for us to reevaluate what this country's true commitment is to the American Indian-Alaska Native population and begin to seriously correct these inadequacies. By providing adequate and accessible preventive health care services now, we can develop a national approach to minimize premature institutionalization of elderly Indians, and prevent unnecessary hospitalization.●

VETERANS' AFFAIRS COMMITTEE

● Mr. SASSER. Mr. President, as we move closer to the end of this legislative session, I would like to take this opportunity to commend my colleague Senator ALAN CRANSTON, chairman of the Senate Veterans' Affairs Committee, and the distinguished members of that committee for the work they have done to aid the veterans of our Nation's Armed Forces.

In particular, I would like to commend Senator CRANSTON and his colleagues for their untiring efforts in the areas of veterans' and survivors' pensions, disability compensation, and housing benefits. These three areas, embodied in bills H.R. 10173 (S. 2384), S. 2828 and H.R. 12028, respectively, comprise three major areas regarding veterans' benefits.

Mr. President, a brief look at H.R. 10173 (S. 2384) indicates that this bill makes substantial strides toward providing a restructuring of the pension program for wartime veterans disabled by reason of non-service-connected disability. Further. S. 2828 will provide for an increase in the rates of disability compensation for disabled veterans, and increase the rates of dependency and indemnity compensation for their surviving spouses and children. And, finally, H.R. 12028 will provide additional assistance to veterans by increasing the basic rate for home loans from $17,500 to $25,000, as provided under chapter 37 of title 38, United States Code, as well as expand the entitlements relating to certain wartime service to include Vietnam-era veterans.

Mr. President, passage of this legislation is, I feel. recognition by Congress of America's debt to those veterans who

defended her shores and her democratic ideals in times of crisis. The Senate Veterans' Affairs Committee, led by its very able chairman, has distinguished itself this year by presenting legislation that so positively expresses the Nation's gratitude to the veterans of our Armed Forces. I commend that committee, and support it for its outstanding efforts.●

REGENERATION: GROWING NEW LIMBS

● Mr. GLENN. Mr. President, an article, "Growing New Limbs", appeared in the August 6, 1978 Washington Post which I found fascinating and exciting. The author, Ms. Susan Schiefelbein, an associate editor of Saturday Review magazine, from which the article was reprinted, tells of the advances that have been made in the regeneration of severed parts of amphibians and mammals by electrical stimulation, and of the potential far-reaching benefits for humans. Regeneration has already been used to heal broken human bones, and physicians may possibly one day use electrical stimulation to regrow reformed, damaged limbs and crippled joints, and even to regenerate severed spinal cords that cause paraplegia. Many questions have been raised and need to be answered about the possible uses of regeneration in preventing and treating cancer.

By tracing the progress that has been made since Italian physiologist Luigi Spallanzani first wrote about regeneration in 1768 to the work being done today by Dr. Robert Becker, chief of orthopedic surgery at the Veterans' Administration Hospital in Syracuse, N.Y., Dr. Marcus Singer of Case Western Reserve University in Cleveland, and other scientists, Ms. Schiefelbein gives a good example of the value of basic research. She shows how different areas of science that seem unrelated, and how the work of many individual scientists over a long period of time, come together to bring about significant advances.

We sometimes hear criticism of individual experiments which sound ridiculous or unworthy of the time and money being spent on them, and occasionally there are obvious excesses. But often, as is shown in this article, previously unrelated bits and pieces of new knowledge eventually come together to bring about exciting, new scientific advances of great and unforeseen benefit.

Efforts to explore the unknown, to exercise a curiosity which adds to the known, is not readily amenable to the normal rigors of today's cost accounting. In fact, that uniquely human characteristic of wondering "why," and also of "why not," are at the heart of every step in human progress since time immemorial.

I am glad to have the opportunity to bring this article to the attention of my colleagues and ask that it be printed in the RECORD.

The article follows:

[From the Washington Post, Aug. 6, 1978]

GROWING NEW LIMBS

(By Susan Schiefelbein)

Physicians may one day treat patients who have shattered limbs, crippled joints and injured spines in a way that man never before dared to dream of: regrowing the damaged part—whole, perfect and undiseased.

For centuries man has watched in wonder as the salamander regenerated its severed limbs, never imagining that complicated human parts could grow back in such a way. The halt and the lame could be made whole, it seemed, only by the healing waters of Bethesda or the touch of a god incarnate. But in recent years, scientists have grown back a frog's leg from elbow to toes and a rat's leg from shoulder to the top half of the elbow, with cartilage and bone, muscle, nerves and veins, all in awesome anatomical precision.

One of the pioneers in the field, Dr. Robert Becker, chief of orthopedic surgery at the Veterans Administration Hospital in Syracuse, N.Y., has already applied the newly found healing mechanism to broken human bones, successfully knitting fractures that previously had failed to heal even after extensive surgical procedures. He and his colleagues have now reached the point where they can confidently predict that regeneration of human parts can and will be achieved, possibly in the next few decades.

A brave new world? Not a bit. The magic of regeneration has been with us all along, hidden in the wondrous complexity of every organism's bodyworks. These scientists are not performing miracles; they are witnessing them.

Their challenge, then, has been not so much to recreate a limb as to discover how some animals do so naturally. The chronicle of their quest reads like a detective story; for clue by clue, Becker and his colleagues have been unraveling a medical mystery that began with creation.

The tale begins with a few known biological principles about regeneration that were to serve as the departure point for their search. The way regenerative healing works has been observed, if not explained, for hundreds of years; the process still seems so magical that even the most clinical of researchers must shake his head in amazement as he watches the microscopic metamorphosis unfold.

The body of every animal, from the flatworm on up the evolutionary scale, possesses primitive, undifferentiated cells that could best be described as being like raw clay. When a creature which can regenerate loses a limb, these cells migrate to the injury, forming a mass called a blastema. Some of the mature, specialized cells at the site of the injury dedifferentiate, reverting to primitive form, and add further to the blastema. The blastema then respecializes, transforming itself into whatever types of cells are needed to replace the missing part—bone cells, cartilage cells and so forth. Somehow, the blastema absorbs information about what to produce along the way, so that at the appropriate moment, it creates an elbow joint or a tibia or a fibula, a left leg or a right one.

TWO IMPORTANT CLUES

The first formal paper on regeneration was written by the great Italian physiologist Luigi Spallanzani and appeared in 1768. Spallanzani's experiments uncovered the first two important clues: The younger the animal, the greater its capacity for regeneration; and the lower an animal is on the evolutionary scale, the greater its capacity for regeneration.

This latter finding was especially interesting, for it provided a clue in itself. The lower orders that regenerate are biologically just as complicated as man; their parts are just as difficult to replace. The main difference is—and this was later to become a significant clue—that animals in the lower orders have comparatively more nerves in their extremities.

A third clue was buried in the writings of the late 1700s. Every time a creature is injured, an electrical charge is generated at the site of the injury. This phenomenon is called the current of injury, and it is proportionate to the severity of the wound.

It was not until some 180 years later that scientists again began to delve into the mystery of regeneration. In 1945, the biologist Meryl Rose (a retired professor of anatomy at Tulane University College of Medicine who is currently affiliated with Woods Hole Marine Biological Laboratories) amputated the forelegs of some frogs below the elbows. Thinking he could perhaps promote growth by preventing the injuries from scarring over, he bathed the stumps of the frogs' limbs in a strong salt solution.

The result was startling. About half of each amputated limb regenerated, developing new bone and muscle and in some cases even showing the beginnings of digital growth. Thus Rose became the first to prove that an animal which cannot regenerate naturally can be made to do so artificially.

The next year, a Russian named Vladimirovic Polezhaev amputated frogs' legs in a similar fashion and then irritated the stumps by repeatedly jabbing them with needles. The result? Astonishingly, he regenerated about the same amount of growth that Rose had with the salt solution. It was possible that the salt not only had prevented scarring but, like the needle punctures, had actually execerbated the injuries and thereby stimulated growth. Now there was another clue: Regeneration may somehow be connected to the severity of injury.

In the early 1950s, Marcus Singer, now a professor of anatomy at Case Western Reserve University in Cleveland, became the next to uncover important evidence. He transferred nerves from a frog's healthy hind legs to the stump of its foreleg; his frog also regenerated about the same amount of growth that Rose's had. Singer's contribution to the collection of clues is an almost mathematical formulation: The nerve tissue required for regeneration must constitute at least 30 percent of the total tissue at the site of the injury.

Then, in 1958, a Russian named A. V. Zhirmunskii discovered that the current of injury is proportionate not just to the severity of the injury but also to the amount of nerve tissue in the area.

Becker's turn at medical detection also came in 1958. He assembled his evidence as a good detective would assemble his suspects: Injury is related to regeneration; nerve tissue is related to regeneration, and both injury and nerve tissue are related to the current of injury. Could the current of injury, Becker reasoned, thus be related to regeneration?

He measured the current of injury in a salamander's regenerating leg and in a frog's scarring stump. Sure enough, his findings seemed to support his hunch. On the day the legs were amputated, both creatures generated the same current of injury—a positive voltage. But there the similarity ended: As the frog's stump scarred over, the current of injury in its leg declined to zero; but the current of injury in the salamander's leg switched from a positive to a negative polarity and only then began to decline, reaching zero when regeneration was complete.

Becker had definitely discovered a connection between the current of injury and regeneration. In a sense, however, his discovery complicated rather than clarified the mystery. The way the current of injury worked in those limbs was simply not concurrent with the way nerves are supposed to produce electricity.

Nerve fibers have traditionally been thought to respond to stimulation in only one way: Sodium penetrates into the nerve cell and potassium leaks out, creating a chemical reaction that generates a charge called an action potential. Whatever the stimulus—a gentle touch or an injury—the action potential is exactly the same. Moreover, each nerve fiber can create only one of these poten-

tials at a time. Becker compares the system to that of a digital computer, which transmits single impulses in rapid succession.

Herein lay Becker's problem: How could the action potential—a constant—account for the switch from positive to negative polarity that he had seen in the salamander's current of injury? How could the action potential account for the fact that the current of injury lasted many days after the stimulated nerve cells should have either died or repaired themselves and ceased their impulses? How could the action potential, which responds in the same way to every stimulus, account for the fact that creatures feel intensities of pain?

Becker guessed that in addition to its digital-computer impulses, the central nervous system can carry steady currents and potentials—in the way an analog computer can. He further theorized that the body's analog computer system has an input signal—could it be pain?—that triggers an output signal which switches on the heating function.

To verify his theory, Becker measured the electrical potentials of different points on the skin of humans and other animals. He found an electrical field that roughly parallels the nervous system. A disturbance in that field, such as an injury, might stimulate cells to begin repairs.

Becker's theory ran counter even to basic textbook explanations of the nervous system, and medical men let him know it. "That cells are capable of sensing and responding to levels of electrical current is hardly universally accepted," he wrote in one medical journal. But he stuck to his convictions; and today, more than a decade later, doctors are coming to accept his hypothesis. "They no longer march out of my lectures," he says. "The response has changed from complete rejection through amused disbelief to—at present—almost enthusiastic acceptance."

BONE REGENERATION

And no wonder. The experiments that Becker based on his unorthodox vision of the nervous system produced remarkable results. First, in 1964, Becker began to examine the spontaneous regeneration of human bone. Given the fact that bone is not well innervated, the theories about electrical stimulation would not apply—unless bone could generate its own electricity. Becker knew that bone accommodates automatically to mechanical stress. When he measured the currents around a stressed bone, he discovered that it generated a positive charge on the stretched side (which dissolved some bone) and a negative charge on the other side (which built up bone and provided the necessary added support). Then Becker administered a negative charge to a mouse's broken leg bone to see if he could artificially stimulate bone growth. He did.

In 1964, Steven Smith, then a student of Meryl Rose and now an associate professor in the department of anatomy at the University of Kentucky, studied Becker's findings and got the idea of implanting a simple electrode right into the muscle tissue of the stump of a frog's leg. He soldered together a piece of platinum wire, which has a positive charge, and a piece of silver wire, which has a negative charge, and embedded the metal into the animal tissue—with the negative end at the stump—thus improvising a crude battery. It worked. He regenerated about as much growth as the Rose, Polezhaev and Singer experiments had the decade before.

Breakthrough followed breakthrough. Becker examined his healing frog bones under a microscope and saw that the blastema around the regenerating bone was coming from a blood clot that had formed there. (A frog's red blood cells are prime candidates for blastema, for, unlike the red blood cells of mammals, they have nuclei and thus can easily divide and dedifferentiate.)

His next step? He had a student expose frog blood to various levels of electrical current in order to find out exactly how much of a charge is needed to turn blood cells into blastema. Days passed, then months. The student administered smaller and smaller currents to the blood (high ones either did nothing or began to cook the cells), but he saw no evidence of change. Finally, the week before the student was supposed to quit and return to his classes, he found that blood cells revert to blastema at a few billionths of an ampere.

In 1973, armed with the knowledge of how much current produces a blastema, Becker decided to brave the step from regenerating amphibians to regenerating mammals. He amputated a rat's foreleg below the shoulder and implanted the platinum-silver electrode device at the stump. Again, success—this time, the most exciting ever. The animal regenerated nerves and tissue and even formed the humerus, the upper-arm bone, complete with the rounded end that fits into the elbow joint. Other parts of the elbow joint began to take shape, including cartilage and two bony structures that Becker surmised were the forerunners of the radius and ulna bones of the lower leg. Everything about the new growth was precisely as it had been in the original limb. And all this growth took place in just three days.

But then the growth ended; for the electrode remained implanted in the shoulder tissue, while the end of the stump, where regeneration was taking place, had grown beyond the reach of its vital current.

The rat's growth, though incomplete, was nevertheless significant, particularly in one respect: The fact that the rat, whose red blood cells have no nuclei, could form a blastema—probably from bone marrow—indicated that in all probability humans could do so as well.

About this time in London, two newborn infants lost their fingers, and the fingers regenerated naturally. The explanation, in Becker's view, probably lies with Spallanzani's early finding that the younger the creature, the better its ability to regenerate. But what was most significant about the babies' growth was that it indicated that the human body contains within it the capacity for regeneration.

Later in 1973, Smith devised an electrode that would travel with the regenerating stump. Again he amputated a frog's leg below the elbow: With the new device, the frog's entire leg grew back.

The year 1973 marked a third triumph as well: Becker began using his findings about the body's electricity in experiments on human bone. A patient of his who had fractured his ankle two years earlier suffered from a mild diabetic condition that was interfering with the bone's ability to regenerate. The ankle had failed to mend despite two corrective operations; and the bone on both sides of the break had deteriorated.

Under normal circumstances, Becker would have had to amputate the leg. Instead, he implanted an electrode into the fracture and administered the same current that he found had divided the frog's red blood cells. He waited three months, the time an ankle fracture would normally take to heal, and the fracture regenerated. A sample of the new bone showed it to be normal in every respect.

CLUE IN THE NERVES

The next year, during the course of routine experiments, Becker stumbled on another clue that finally shed considerable light on his nervous system theory. With the intention of impeding growth, he and his staff broke the tibia in a rat's leg and then cut the nerve that led to the broken limb, assuming that without a nerve supply the rat's bone would heal poorly, if at all. But the fracture healed well; the only drawback was that it took twice the normal time. Perhaps the severed end of the nerve needed time to degenerate, they thought. So they cut the nerve six days before breaking the bone. To their astonishment, the bone healed in the normal amount of time, as if the nerve had never been cut at all.

What was going on? They opened up the leg, only to discover that the nerve fiber had not healed. What *had* healed was the nerve's sheath of Schwann cells—one of a dozen types of cells that make up the "perineural group"—traditionally thought to serve no purpose other than the insulation of the nerve fiber. The perineural cells in the brain were known to carry a steady current—for what reason, no one knew. It now seemed apparent that Schwann cells also carry a steady current. This was proof enough for Becker that the analog computer system he had theorized was indeed contained in the perineural cells—cells that sheathe the entire central nervous system.

The perineural discovery is by no means the end of the tale. Experiments must still be conducted to determine if electrical regeneration is entirely safe. Could applications of electricity to the peripheral nervous system, for example, induce some sort of behavorial disorder? Or damage our cognitive powers? Every human body contains dormant cancer cells. Could an implanted electrode shock them into fatal multiplication?

Nevertheless, much of the mystery has been solved. Only the last chapter—the most exciting one—has yet to be written. It may well describe the modern world as a Shangri-La where damaged human parts are simply cut off and grown back properly. Our future may lie not with the bionic man but with the natural man.

The replacement of arthritic hip joints with Teflon parts, for example, is now a costly and not altogether satisfactory operation. The Teflon wears out. If the device is implanted in a young person, it may have to be replaced some four or five times in the course of his life. And with each hip operation, there is the risk of infection, which can be a deadly prospect. The alternative—growing a natural hip—would be safer and cheaper.

We may also someday regenerate a damaged heart. Becker has discovered that salamanders replace some 50 percent of their cardiac muscles by regeneration. And Polezhaev has cut away the scar tissue on the hearts of dogs which had suffered severe heart attacks; all of the hearts regenerated and less than 5 percent of the dogs died. We may even replace parts defective at birth, given that damaged genes do not garble the instructions given to the blastema.

Becker himself is hesitant to herald regeneration as an immediate cure for amputees. The replacement of severed parts, he says, is still pretty far off. Why not aim for more immediate uses that would be beneficial to greater numbers of people? Severing the spinal cord in man produces paraplegia because man's spinal cord does not regenerate. Becker, however, thinks that since salamanders regenerate their spinal cords, man's spinal cord could perhaps be electrically stimulated to do the same thing. It would take only a year to see whether electrical stimulation works without complications in a paraplegic dog or monkey. And if such stimulation works safely in them, it could be safely applied to humans.

UNANSWERED QUESTIONS

The outstanding disappointment of the entire regeneration tale is that no one is conducting that experiment with paraplegic animals. Why? Money. Becker's own $100,000 grant from the Veterans Administration just covers staff salaries. Experiments are costly; keeping paraplegic animals in particular is frightfully expensive.

Still, it must not be forgotten that the financial problem—serious though it is—is

the only laggard in regeneration's exhilarating face toward the future. It is the promise of regeneration—not the problems—on which we must focus attention. Hundreds of questions wait to be answered.

Animals that regenerate don't get cancer. If a tumor is implanted in a lizard's body, which does not regenerate, it grows to fatal proportions. But if it is implanted in the tail, which does regenerate, the tumor disappears. If we learn how to turn on regeneration (controlled growth), can we learn to turn off cancer (uncontrolled growth)?

Hormones play an important role in regeneration. A chopped-up adrenal gland when implanted in a frog will generate some growth. Moreover, if the adrenal gland is removed from a lizard, the creature will lose its ability to regenerate its tail. If the hormone prolactin is then injected, the lizard will regain its regenerative potential. It has also been hypothesized that hormones secreted during stress can cause cancer. Prolactin is secreted during stress. Is there a connection? Do carcinogens impose a stress on the body, which then triggers a hormonal release that oversensitizes the body to its own electrical forces, thus sparking wild division of cells?

If a negative charge builds up bone and a positive charge dissolves bone, could positive charges have an effect of malignancies?

If pain is the input signal needed by the brain to trigger healing, does anethesia—the muffling of the pain signal—impede healing?

When power lines are stretched across the sea, amplifiers are put in at regular points to boost the current along. The body's electrical system may run the same way, equipped with special spots along the analog nervous system that boost the signals as they are carried to or from the brain. Becker has found that half of the traditional acupuncture points correspond to the spots in the nervous system that seem to be amplifiers of electricity. Could acupuncture simply involve the insertion of a metal needle into one of the amplifiers, short-circuiting the pain signal so that it never reaches the brain?

Does the body's sensitivity to electricity explain why reversals in the earth's magnetic field are related to the extinction of certain animals?

When one electrical field is imposed on another, the currents are altered. When one human being approaches another, do their biological electric systems overlap? Is this a scientific explanation for the "psychic" mystery of ESP?

The characteristics of the analog nervous system are such that it should be influenced by external electrical fields. Becker has already found experimental evidence that would indicate that electrical fields such as those produced by power transmission lines produce stress in animals—with consequent physical effects that are shocking indeed to the layman. What is the relation between this unseen electrical pollution and human stress?

The possibilities seem infinite. Each is like a silver key. Which one will open the door to a new world?●

COMMUNIST DEBT AND TECHNOLOGY TRANSFER

Mr. THURMOND. Mr. President, it appears to me that the Western nations of the world are in the process of financing their own destruction.

Western governments and international monetary organizations are loaning money or grantnig credit to Communist nations and even to Russia in the hundred millions of dollars.

As a perfect example of this, the World Bank just voted to loan Communist Vietnam $60 million interest free for an irrigation project. Granted the United States did vote against loan approval, but still U.S. money will be used to assist a Communist country.

The United States itself has water projects which cannot get Government financing but a Communist country against which we have a trade embargo can get money interest free. Mr. President, I just cannot understand why this country feels it necessary to help its sworn enemies.

An informative chart, which appeared in the July 1977 edition of "Foreign Affairs" shows the East European debt to the West. Since 1970 this debt has increased from $8.3 billiion to $45.3 billion at the end of 1976. The Russian debt alone has increased from $2.5 billion to $14.4 billion during the same period. Mr. President, I ask unanimous consent that this table be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. THURMOND. These loans to Communist countries are financing such things as chemical industries, capital equipment, copper industry, steel mill equipment, steel, heavy duty trucks, et cetera. Such equipment can and very possibly will be used in an attempt to overtake the Western world.

A study prepared by the Congressional Research Service of the Library of Congress in July 1977 entitled "U.S. Trade and Payments With Communist Countries: An Overview," indicates that there is rising concern in the West about the political and strategic implications of the growing Eastern debt. The study goes on to say:

> There are fears among some Western observers that the large exposure of Western banks in the East gives leverage to Eastern debtors. These observers believe that the most exposed banks will have to continue lending in order to protect the loans that they have already made, and that private banks will pressure their governments to increase and protect their loans.

A perfect example of this latter situation was the recently enacted Panama Canal treaties. Panama is heavily indebted to U.S. banks and these banks were very much opposed to our country taking any action that would jeopardize repayment of this money. It is quite possible that if Western banks continue to loan money to Eastern European and other Communist nations, the United States could be placed in a position of being reluctant to take necessary action because of jeopardizing repayment of this money.

Mike Tharp of the Wall Street Journal wrote in the June 16 edition an article entitled "North Korea Failing To Pay Foreign Debts." He writes:

> The Japanese are trying to get the North Koreans to repay overdue trade debts of an estimated $370 million owed to banks and companies. Agreement was reached in 1976 for North Korea to pay interest on these import debts in 1977 and to repay the principal this year. But, say the Japanese, the last payment by Pyongyang was in February, when it sent $3.6 million in interest that was due last September.
>
> The Japanese experience with North Korea is being repeated in several other countries as Pyongyang struggles to find ways to pay its foreign debts, estimated by Japanese bankers to be over $2 billion, of which $1.3 billion is owed to Western banks and companies. These debts are from North Korea's imports of industrial plant and equipment from Europe and Japan that have helped fuel the nation's rapid growth over the past few years.

Mr. President, the article went on to point out that not only are the Japanese unable to get the North Koreans to repay the debt, they cannot even get the North Koreans to discuss the matter because of the North Koreans' passion for secrecy.

Mr. President, I recently read an article entitled "National Suicide: Military Aid to the Soviet Union" which appeared in the February 6, 1978 edition of Research Report, published by American Institute for Economic Research. The article says:

> Lenin reportedly wrote that capitalists would sell the communists the rope with which the communists would hang them.

The article went on to say,

> All modern technology including modern military technology depends on the use of computers. To make any progress in weapons systems the Soviets have to utilize modern high-speed computers. These computers and the necessary computer technology have come from the West and still come from the West, almost exclusively from the United States.

Mr. President, I ask unanimous consent that this article be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

Mr. THURMOND. The distinguished Senator from Washington (Mr. JACKSON) recently disclosed further alarming proof that we continue to transfer our high technology to the Soviets. Senator JACKSON revealed that Dresser Industries is proposing to build a multimillion dollar plant in the Soviet Union that would turn out tungsten carbide oil drilling bits essential to Soviet energy resource development. In spite of significant congressional and public opposition, the sale was approved.

Further, the administration was considering a sale to the TASS News Agency of a Sperry Univac computer system vastly larger than any comparable system previously sold to the Soviets. Fortunately, because of congressional pressure, the Sperry Univac was canceled.

In the August 3, 1978 edition of Defense/Space Daily, it was reported that last year the United States sold $1 billion worth of food and $586 million worth of industrial and commercial goods to the Soviets, while buying $234 million goods from the Russians.

In the July 31, 1978 edition of Barron's, Robert M. Bleiberg wrote an article entitled, "Dirty Business—the U.S. Should Ban Technology Transfers to the Soviets." This article points out the fine work done by Antony C. Sutton, former

research fellow of the Hoover Institution and author of several volumes on Western technology and Soviet economic development, Mr. Sutton said:

In general, I find that almost all Soviet technology has originated in the West.

Mr. President, I ask unanimous consent that this article be placed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 3.)

Mr. THURMOND. Mr. President, I have urged President Carter to end even consideration of technology transfer to the Soviets. Our biggest advantage over the Soviets is our advanced technology. Congressional pressure on the White House has prevented several transfers recommended by the State and Commerce Departments.

Further, I would urge the President to take a leadership role in ending the flow of U.S. money to the Soviet through private or international banks. I am confident the American taxpayer is not sympathetic with the practice of his or her tax dollar supporting international monetary groups which in turn loan money to the Soviets, Vietnam or any other Communist state. If we continue to follow such a policy we are financing our own destruction. Our country is still the greatest country on Earth and I want to see it remain that way. I urge my colleagues to join with me in urging President Carter to halt involvement of the U.S. taxpayer's money in loans to Communist countries.

NATIONAL SUICIDE: MILITARY AID TO THE SOVIET UNION

In our research activities connected with a forthcoming bulletin on national defense, we have read one of the most important books about U.S.–U.S.S.R. trade ever to be published. In that book, National Suicide: Military Aid to the Soviet Union, Mr. Antony Sutton assesses some effects of trade between the Western countries, particularly the United States, and the Soviet Union. He prefaces his book by stating that the evidence therein "will come as a surprise—and perhaps an unwelcome shock—to almost all readers."

Mr. Sutton asserts: (1) that Western countries, particularly the United States, have provided military aid to the Soviet Union; (2) that this aid has involved both the direct transfer of arms and, more importantly, through the guise of "peaceful trade," the transfer of modern technology to an otherwise technologically primitive Russia; (3) that this "peaceful trade" has been conducted since the Bolshevik Revolution in 1917 through the present; (4) that this trade has been an integral part of the creation of the Soviet military-industrial complex; (5) that the development of the Soviet military-industrial complex would not have been possible without this Western help; and (6) that the connection between Western trade and Russian military power is known by the highest ranking Washington officials, who have extended great efforts to keep this information hidden from the American public.

Assertions unsubstantiated by evidence merit little attention, even when they might be consistent with one's preconceptions. Actions based on unsupported assertions probably will be harmful as often as helpful. This would apply to claims made by Mr. Sutton if all that he did was to make assertions. If, however, Mr. Sutton can provide sufficient evidence that the above assertions are correct, it would be, as he says, "one of the most tragic stories in the 200-year history of the American republic."

The reason that National Suicide was written is, itself, some evidence that the facts have been hidden from the public. Mr. Sutton had completed the manuscript for the third volume, covering the period 1945–65, of his scholarly Western Technology and Soviet Economic Development. However, the Hoover Institute, which had funded his research and had published the first two volumes of this work, withheld publication of the third volume for more than 3 years. Mr. Sutton then wrote National Suicide to put before the American public the salient findings and primary implications of his unpublished work. Once the Hoover Institute learned of the impending publication of National Suicide, officers there rushed into publication the third volume of Mr. Sutton's Western Technology.

MILITARY AID

A sure way to demonstrate that a nation provided another nation with military aid is to provide evidence of direct shipments of armaments between the two. Mr. Sutton documents his evidence of this in these words: "Purchases of war materials were made directly from American manufacturers. Thus, in 1938 the William Sellers Company of Philadelphia received a contract for heavy machinery for the manufacture of 12-inch steel-plate for armor-plate manufacture. In March 1939 the State Department approved a proposal (already approved by the Navy Department) under which the Electric Boat Company of Groton, Connecticut, would furnish plans, specifications, and construction services to the Soviet Union for a submarine. This weapons-acquisition process of the 1930's culminated in the 1941 Lend-Lease program, under which large quantities of war materials were transferred to the Soviet Union."

The U.S. Lend-Lease program involved direct shipments of aircraft, tanks, guns, trucks, explosives, and naval and marine equipment to the Soviet Union during World War II. In aircraft alone, Mr. Sutton says, "A total of 14.018 aircraft were shipped, including pursuit planes, light bombers, medium bombers, one heavy bomber, transport planes, flying boats, observation planes, and advanced trainers. In addition, link-trainers, and a considerable quantity of aircraft landing mats and communications equipment were shipped."

Some might defend those armament shipments with the argument that they were made before or during World War II and for the benefit of the allied effort against Nazi Germany. However, the sale of strategic materials by Western nations continued after the conclusion of the war. Through the guise of "peaceful trade," Western nations have provided the Soviet Union with materials and technology that could be and have been converted to military use. To believe that only direct military shipments have military applications is sheer folly. Almost anything with an industrial application has a military application. About U.S. shipments of industrial products to Russia, Mr. Sutton writes:

". . . No Army has a machine that churns out tanks. Tanks are made from alloy steel, plastics, rubber and so forth. The alloy steel, plastics and rubber are made in Soviet factories to military specifications. Just like in the United States.

"Missiles are not produced on missile-making machines. Missiles are fabricated from aluminum alloys, stainless steel, electrical wiring, pumps and so forth. The aluminum, steel, copper wire and pumps are also made in Soviet factories.

"In other words the Soviet military gets its parts and materials from Soviet industry. There is a Soviet military-industrial complex just as there is an American military-industrial complex."

Any automobile or truck manufacturing plant can be converted easily to the production of military vehicles, including tanks, weapons carriers, and personnel carriers. In connection with this, Mr. Sutton says, "Although the military output of Gorki and ZIL is well known to U.S. Intelligence and therefore to successive administrations, American aid for construction of even larger military truck plants was approved in the 1960's and 1970's.

"The Volgograd automobile plant, built between 1968 and 1971, has a capacity of 600,000 vehicles per year, three times more than the Ford-built Gorki plant, which up to 1968 was the largest auto plant in the USSR.

"Although Volgograd is described in Western literature as the 'Togliatti plant' and the 'Fiat-Soviet auto plant,' and does indeed produce a version of the Fiat-124 sedan, the core to the technology is American. Three-quarters of the equipment, including the key transfer lines and automatics, came from the United States.

"Up to 1968, American construction of Soviet truck plants was presented as 'peaceful trade.' In the late 1960's Soviet planners decided to build what is going to be the largest truck factory in the world. This plant, situated on the Kama River, will have an annual output of 100,000 multi-axle 10-ton trucks, trailers, and off-the-road vehicles.[1] It was evident from the outset, given the absence of adequate Soviet technology in the automotive industry, that the design, engineering work, and key equipment for such a facility would have to come from the United States.

"In 1972, under President Nixon, the pretense of 'peaceful trade' was abandoned and the Department of Commerce admitted (*Human Events*, Dec. 1971) that the Kama plant will have military potential. Not only that, but according to a department spokesman, military capability was taken into account when the export licenses were issued."

Most, if not all, ship designs and marine engines of course can be used for military purposes. One would have to be a fool to be-

[1] Ed.—This plant covers 36 square miles. Its maximum output of large trucks is more than that of all U.S. manufacturers combined.

lieve otherwise. Yet, Mr. Sutton reveals two telling facts about the Soviet merchant marine:

"First: over two-thirds (68 percent to be exact) of its ship tonnage has been built in Soviet yards and to a great extent with shipbuilding equipment from the West, particularly Finland and the NATO allies, Great Britain and Germany.

"Second: four-fifths (79.3 percent to be exact) of the main marine diesel engines used to propel the vessels of the Soviet merchant marine were built in the West. In other words, only one-fifth of the main diesel engines were built in the USSR. Moreover, even this startling statistic does not reflect the full nature of Soviet dependence on foreign marine diesel technology because all of the main engines manufactured in the USSR are built to foreign designs."

Although some of these vessels were built before or during World War II, many others were produced later. Mr. Sutton cities evidence indicating "that thirty-seven out of the ninety-six Soviet ships on the Haiphong [North Vietnam] run had Western-built engines, manufactured after 1951, which could have been restricted by the State Department."

COMPUTERS

What about computers? Obviously, they too can be used for military purposes. Information processed so fast and efficiently by computers can be military information as easily as nonmilitary. There is no such thing as a computer guaranteed to have no military application.

According to Mr. Sutton, "All modern technology, including modern military technology, depends on the use of computers. To make any progress in weapons systems the Soviets have to utilize modern high-speed computers. These computers and the necessary computer technology have come from the West and still come from the West, almost exclusively from the United States.

"American computer sales may be traced from 1959 with sale of a Model-802 National-Elliott sold by Elliott Automation, Ltd., of the United Kingdom. (Elliott Automation is a subsidiary of General Electric in the United States.) Toward the end of the sixties Soviet purchases of computers were stepped up, and by late 1969 it was estimated that Western computer sales to all of Communist Europe, including the USSR, were running at $40 million annually, in great part from European subsidiaries of American companies.

"In sum, Soviet military computers are either imported American 'civilian' computers or copies of imported American computers redesigned for specific military purposes."

The evidence presented in National Suicide and referred to therein makes a convincing case that Western nations have provided substantial military aid to the Soviets. Although the Soviet Union fought with the Western allies against Hitler's Germany during World War II, since that time the military technology and materials provided by the West to Russia have been used to kill hundreds of thousands of American and other Western soldiers and to support military adventures by Communist puppet leaders throughout the world.

Mr. Sutton describes how the North Koreans and North Vietnamese used Soviet-built trucks, tanks, planes, and vessels to kill hundreds of thousands of American and allied soldiers during the Korean and Vietnamese wars. Much of this military equipment either came directly from Western countries or was produced in Russian factories that were built by Western companies. The Soviet Union almost surely could not have produced these military supplies without Western help. Mr. Sutton has accumulated clear evidence that few Soviet military goods are of Soviet design and that advances in Soviet technology mostly have been copied from Western technological advances.

According to Mr. Sutton's evidence, the Soviets have been so inept at technological development that they could not have become a world military power without Western help. He quotes Leonid Vladimirov, a Russian engineer, in support of this conclusion: "The Russians were never ahead in space . . . the Soviet Union's backwardness in space research is perfectly natural and inevitable, because the Soviet Union is a backward country and in particular is a technologically backward country."

But what about Russian space technology? There is no denying that Russia launched the first space satellite, but the only way that they were able to do so was by capturing intact during World War II German production facilities for rockets and 6,000 German technicians. Entire German rocket facilities were dismantled in Germany and reassembled in Russia. Sputnik I was launched by modified German V-2 rockets strapped together.

UNDOING OURSELVES

Lenin reportedly wrote that capitalists would sell the Communists the rope with which the Communists would hang them. *National Suicide* describes the vast amount of rope thus far provided by the U.S. and our allies. Moreover, the evidence suggests that we even give them detailed instructions on how to use it.

Most Americans are totally ignorant of the facts exposed in this book. In spite of the need for the American public to know this type of information so that wise political choices might be made, effective measures have been taken by U.S. officials to hide these facts from them. Why? How could U.S. officials, in view of this evidence, defend before the American public their practices of promoting and permitting such trade with Russia while at the same time spending hundreds of billions of dollars for defense against the Russian military strength arising from the trade? The inconsistency of U.S. trade policy with the Soviet Union and massive Government expenditures to defend our nation against Russian military power would be obvious.

Mr. Sutton offers this explanation for the inconsistent policies: "If a policy is based on erroneous information or on lack of facts, or if it is developed from accurate data by nonlogical, i.e., mystical, methods, the policy is not likely to achieve its objectives.

"There is adequate reason to believe that Western policy toward the USSR in the field of economic relations is based, first on an inadequate observation of fact, and second, on invalid assumptions. In no other way can one explain the extraordinary statements made, for example, by State Department officials to Congress, by academic writers, and by 50 years of policies which prescribe first the establishment and then the continuing subsidy of a system that simultaneously calls forth massive armaments expenditures. Those countries which have been the prime technical subsidizers of the USSR are also the countries with the largest expenditures on armaments against a presumably real threat from the Soviet Union.

"To subsidize and support a system that is the object of massive military expenditures is both illogical and irrational. In other words, it calls into question not only the ability and the wisdom but indeed the basic common sense of the policymakers.

"The choice therefore is clear: either the West should abandon massive armaments expenditures because the Soviet Union is not an enemy of the West, or it should abandon the technical transfers that make it possible for the Soviet Union to pose the threat to the Free World which is the *raison d'etre* for such a large share of Western expenditures." [2]

If the U.S. were to discontinue trade with Russia, would that deter other Western powers from such trading? The mechanism for assuring that further shipments of strategic materials or technology to the Soviet Union will be stopped already is in place. In 1951 Congress passed the Battle Act, which provides for U.S. participation in CoCom (Coordinating Committee). CoCom is an informal group of representatives of Western nations. Mr. Sutton writes, "Under CoCom arrangements in the Battle Act, the State Department can enter an objection to CoCom concerning any technological exports to the Soviet Union. No CoCom member can make such exports over the objection of any other member of CoCom." Thus, the U.S. could have, and still can, prevent Western trade with the Soviet Union.

U.S. trade with the Soviet Union must be ended. As a defense matter, the ultimate folly is to provide the avowed enemy with any help whatsoever. In times of active war, such provision is treason. Who is ready to claim that the U.S. system is not in a struggle for survival with the Soviet system? As an economic matter, the net effect on the U.S. economy from trading with Russia and having to commit huge quantities of our resources to defense activities clearly is enormously negative and costly. Only when the American public forces their elected representatives to end these inconsistent policies will that change be made. Mr. Sutton urges, "Congress must publish the names and corporate affiliations of all lobbyists and other persons who have previously influenced it to relax the export control laws, together with the inducements and arguments offered.

"Congress should further require the Department of Commerce to publish each month a full, detailed list of all exports to Communist countries, together with the names of the firms involved, brief technical descriptions, and a departmental statement that the exports cannot be used for military purposes against the United States."

If this were required, the Government might be forced to halt trade with Russia. Oppositely, as long as the American public remains ignorant of the national suicidal trade policies now in effect, they probably will continue.

Although the original edition of *National Suicide* no longer is in print, a new edition is expected to be available in a few months. When it becomes available, we shall inform readers how to obtain a copy. We urge all our readers to read this book, and, when possible, to send a copy to their Congressman, and to anyone else who is concerned with or about American's future.

EXHIBIT 3

[From Barron's, July 31, 1978]

DIRTY BUSINESS—THE U.S. SHOULD BAN TECHNOLOGY TRANSFERS TO THE SOVIETS

Real Life, somebody once quipped, follows art; in what passes for real life these days in the nation's capital, that's no joke. Early on in the Carter Administration, we watched with amazement as the Chief Executive sought to foist on the country a conscientious objector as head of the Central Intelligence Agency and a hawk-turned-dove as Secretary of Defense. The incongruous, if not downright bizarre, nominations moved us to make one or two of our own: as head of the Social Security Administration, the ex-boss of Equity Funding; to run the Federal Bureau

---

[2] These words are from Mr. Sutton's *Western Technology and Soviet Economic Development*, 1945 to 1965, published by Hoover Institution Press, 1973.

of Investigation, Willie Sutton. Little did we know at the time that the Presidential crony in charge of the Office of Management and Budget happened to be one of the last of the big-time spenders, or that the chief counsel to the White House on Drug Abuse was a user. Thus encouraged by events, we are moved to put forward another modest proposal. To make the really hard decisions on whether to do business with totalitarian states—to decide, for example, whether or not to sell super computers to the Soviets, or to buy cigars from Castro—we urge the appointment of either Kirby Jones, whose Alamar Associates packages trips to Havana for American businessmen, or William C. Norris, chairman of the Control Data Corp.

To judge by the headlines, what this country needs is a take-charge guy. Consider, for example, the confusion that has erupted over the recent decision by the White House to prohibit the sale by Sperry Rand of data processing equipment to Tass, the Soviet propaganda organ. In announcing the move (at least according to J. Paul Lyet, who runs Sperry and presumably should know), the Chief Executive credited the computer with far more capacity than it actually commands, a miscalculation that doubtless falls afoul of some FTC or SEC stricture. By the same token, a number of arms of the Executive branch for nearly a year have been carrying on a "study of the national security and military implications of international technology transfer." Scheduled for release this Friday, the study, say some who have worked on it, concerns itself largely with procedural rather than substantive issues.

Or take the fascinating bureaucratic flap which our Washington editor, Shirley Scheibla, uncovered the other day. Seems that under existing regulations, oil drilling and exploration machinery, which is supposed to be strictly non-military in nature, may be freely shipped abroad. However, last Monday, the Department of Commerce drew up—and nearly made official by publishing in the *Federal Register*—changes which in future would have imposed export controls on drilling rigs and their components, a policy shift that triggered a fresh dispute among the Executive movers and shakers.

No such shilly-shallying for Norris or Jones. The latter, of course, is the former aide to Sen. George McGovern (D. S.D.) who has gone on to fame and fortune by building bridges between the U.S. and Cuba. Heedless of the billions of dollars which the Cubans owe a clutch of American companies, not to mention the tens of thousands of Cuban mercenaries deployed on the African continent, Kirby Jones, at $30,000–$40,000 per plane load, is briskly running package tours for U.S. businessmen from the mainland to Havana. Says an admiring colleague: "He's got a lot of chits he can pick up if things go through."

Control Data's Norris strikes us as equally hardheaded. Last year, until Washington put the kibosh on the deal, his company was all set to sell the Soviets the Cyber 76, an advanced computer with perhaps 40 times the capability of anything now available east of the Iron Curtain. At a press conference held in mid-April to observe the signing of a 10-year pact with the Communist government of Romania, Mr. Norris, so to speak, laid it on the line. Hailing his new partner, he went on to complain to his receptive audience, which included Nicolas Ceausescu, Romanian chief of state, that the major obstacle to expansion of trade between the two countries is the Department of Defense.

Barron's by and large doesn't suffer bureaucrats gladly; on the whole, we are all in favor of cutting red tape. In this strategic realm, however, we would opt for making haste slowly. If U.S. industry doesn't sell to the Soviet Union, runs the standard sales pitch, the competition will. Undoubtedly—someone can always be found to peddle pornography to minors or bribe his customer's buyer, but that doesn't necessarily make it right. There is, after all, such a thing as dirty business. Moral issues aside, the national security happens to be one of the few legitimate provinces of the federal government, one which, by the way, it has handled very badly. Computers, after all, boast military as well as civilian applications. However, for years, in pursuit of the will o' the wisp of detente, Washington has drastically relaxed constraints on their shipment abroad. Long before the latest series of outrages involving Russian dissidents and American nationals, it should have been clear to anyone not blind to the color red that the Soviet Union is an implacable foe. Yet until just the other day, official policy, in effect, has encouraged trading with the enemy. Apologists will find handy rationales for such a course: pragmatism, expediency or live-and-let-live. But along with Alexandr Solzhenitsyn, we call it a betrayal of the Western world and all its values.

And its history dates back about as far as the Gulag Archipelago. On this score, weigh the evidence given to a House Subcommittee by Antony C. Sutton, former Research Fellow of the Hoover Institution, distinguished scholar and author of several volumes on *Western Technology and Soviet Economic Development* (*Barron's*, Feb. 9, 1970). After painstaking research into Soviet progress in the manufacture of ball bearings, merchant ships, military trucks and computers, Dr. Sutton voiced these jolting views: "In general, I find that almost all Soviet technology has originated in the West: This conclusion holds good from 1917 to 1974. There has been some Soviet innovation in recent years, but it is concentrated in a very few fields . . . The reason for Soviet technical dependence appears to be that a centrally planned system cannot generate indigenous innovation . . . that will compete with Western innovation. The Russians are intelligent and capable people. It is the planned economic system that is their problem."

Professor Sutton's research stopped at 1974, but, with occasional reversals, the trend that he underscored (and deplored) persists. U.S. exports to the Soviet Union in 1976 hit a peak of $2.3 billion, from which it dropped last year to $1.6 billion. Most of the business done between the two trading partners represents U.S. sales of wheat and corn—under the Czars, the Ukraine was the granary of Europe, but since November, 1918, the weather has been bad. Nonetheless, tranfers of technology, notably in the field of computers, loom large. At the behest of then Secretary of State Henry Kissinger, fourth generation IBM machines and sophisticated computers from Control Data were sold to the Soviets.

Back in 1973, Control Data broke fresh ground by setting up with the Government of Romania a joint venture "for the purpose of manufacturing computer peripheral equipment . . . and to exchange and develop technology related to those products." Amidst considerable fanfare last spring (at which time he launched his attack on Defense), chairman Norris signed a "unique" 10-year agreement, under which Control Data plans a series of joint ventures with Romania.

Such transactions, as noted, have rarely raised the hackles of the powers-that-be, but there have been exceptions. Last summer, until the Commerce Department demurred, Control Data was all set to ship Moscow the Cyber 76, described as a scientific marvel, capable of processing up to 40 million operations per second and estimated to be at least 40 times faster than the best Soviet counterpart. Over the company's protests, Commerce, citing the likelihood of "diversion to military or strategic uses," blocked the sale. Similarly, after an outcry from Rep. Paul S. Trible (R., Va.), the General Electric Co. withdrew its application to sell a dozen CF6 jet engines to the Soviets. Developed with $315 million of taxpayer's money, and installed in the world's largest passenger and cargo planes, the engine is roughly twice as powerful as anything Moscow can boast. It would have given the Soviets overnight parity with U.S. airlift capability. Win some, lose some.

Until the sudden—albeit perhaps temporary—stiffening of U.S. policy, this country was letting far too much go by default. Now at least some in Washington are having sober second thoughts. Barring the Sperry Rand transaction is a welcome, if belated, step in the right direction, as would be cancellation of a huge sale of sophisticated oil field equipment by Dresser Industries. Still better news has come from the office of Rep. Robert K. Dornan (R., Calif.), who is looking into the possibility of either cutting off—or subjecting to Congressional oversight—all transfers of technology to the Soviets. Capitalists, so Lenin once boasted, would sell rope to their hangman, a chilling figure of speech which Alexander Solzhenitsyn, in his first address in this country, brought up to date. "Don't," pleaded the greatest dissident of them all, "sell earthmoving equipment to our gravediggers."

THE HART BUILDING

Mr. MELCHER. Mr. President, we have been experiencing an onslaught of criticism, often incomplete or misguided, although satirically hilarious in opposition to the addition of the Hart Building for Senators' offices connected to the present Dirksen Building.

I have no idea of why the Architect of the Capitol would plan, if he has, 16-foot ceilings. This is my 10th year in Congress and I have had offices in the Longworth Building on the House side and now in the Russell Building here on the Senate side. My current Senate office has ceilings 15 feet high which, in my view, is impractical and an unnecessary waste of space while, typically, we jam our staffs, their desks, chairs, files, typewriters, and books into an average of 10 feet by 6 feet of floor space per person.

Contrary to the average space for Federal workers in Washington or throughout the country, which is double or more, we ignore the questions of inefficiency and health by allowing such little space that we have to group staffs according to their personal size, their tolerance of noise and their susceptibility to tobacco smoke, in what still amounts to an almost unbearable concentration of tight quarters for human beings.

A few senior Members of both the House and Senate have suggested that the solution is to reduce staff. That mostly comes from those who have additional space for staff in committees, or in additional offices assigned to them in the Capitol enclave on the basis of their seniority and feel no pressure. That solution is often echoed by a few junior Members whose home States are only an hour or two away from the Capitol and, of course, by news media editorialists or funny cartoonists who realize that congressional staff is a popular target for criticism and a newer target than por-

nography, nuclear war, or hard drugs. Yet they ignore the problem of adequate, healthful space for essential workers doing essential work.

I do not believe that Montanans are any different from other people in that they have a lot of problems with, and a lot of criticism of, the Federal Government. Montanans are not very close to Washington and it takes both time and money to come here, so they expect their representatives to dig into their written and verbal complaints and do something about them. That requires staff. We are never caught up, and we are never completely fulfilling our constitutional mandate to control Federal actions through sufficient oversight.

To effectively control or curb a $500 billion Federal budget with only a handful of staff would require daily miraculous feat more stunning than David's slingshot slaying of Goliath. The entire staff of the 535 Members of Congress is only 0.002 percent of the federally paid Government work force who expend that $500 billion and crank out each year thousands of new Federal regulations to regulate citizens' lives and their opportunity to make a living.

Unless the object of the game is to make the Federal Government even more inefficient than it is today, believe me, congressional staff is needed.

The fact is that these office buildings are woefully inefficient. The fact is that at least 3 out of the 5 House and Senate office buildings are unsafe and would not be permitted in any other jurisdiction of the country to continue with the public and employee hazards that now exist in them. Fire marshals in any other jurisdiction would condemn them as public hazards. In 3 out of the 5 principal congressional office buildings there are open stairwells, an absence of fire control and no plans or procedures for the thousands of employees and the public in case of fire. It is the responsibility of the Architect of the Capitol to install those safeguards and Congress should fund the necessary fire precautions that that official has already cited.

It is the responsibility of the Congress itself to protect their employees' health. Since OSHA by law is explicitly excluded from enforcing safe and tolerable working conditions in these buildings on its own initiative, I have requested the Architect to have OSHA survey these buildings—promptly—this month. I shall expect their report to be publicized.

Meanwhile, the public should at least be warned by posted notice at every entrance and on every floor of these three congressional office buildings of the lack of both adequate fire protection and adequate means of escape from fire. I have requested the Architect to promptly post such information for the public. And also, the public is entitled to know that office buildings that are safe and healthful for the employees who work in them must be provided if representative government is expected to control and curb the Federal encroachment into the daily lives of America's citizens.

New Senate offices are essential. If the plans for the proposed Hart Building are not economical—and I do not think we should erect a bunch of bunkhouse buildings around the U.S. Capitol—let us get them altered and get on with the provision of decent office space.

OLDER AMERICANS RURAL AND SPECIAL TRANSIT INSURANCE

Mr. DOMENICI. Mr. President, transportation services continue to be a major problem for our older Americans. Although commendable efforts have been made in recent years, thousands of older Americans remain isolated because they lack mobility within their own communities. The elderly still face physical and economic barriers to public and private transportation that deny them adequate, inexpensive transportation services. In 1974, I testified before the Senate Special Committee on Aging that—

Inadequate transportation systems intensify other severe problems confronting the elderly. Low income people suffer most, but individuals with low and median fixed retirement incomes also suffer when suitable transportation is not available . . . Transportation, especially in my rural State of New Mexico, is a constant problem to senior citizens . . . The 1971 White House Conference on Aging pointed out that rural transportation problems must be solved before there can be effective solutions to the rural health, income, employment, and housing difficulties faced by the elderly.

Mr. President, in rural America transportation for the elderly is extremely limited and in most instances nonexistent.

In many ways, rural areas need more effective transportation systems than do urban areas, and yet rural residents are rapidly losing access to even inadequate modes of transportation. Rural transportation studies have indicated that transportation systems must be planned in accord with population growth. Most of the elderly prefer to stay in their own communities. They are reluctant to move to urban areas or be institutionalized. Needed social and medical services are located in urban areas. In Bernalillo County, N. Mex., which includes our largest city—Albuquerque—for example, better than 25,000 of the county's 41,000 elderly—61 percent—lack personal transportation or reasonable access to public transportation. Existing public transit, limited to the metropolitan Albuqeurque area, is wholly inadequate in the rest of the county.

The Administration on Aging, through the aging network, the Federal Department of Transportation, nonprofit organizations, civic groups and social service agencies, has made some progress in alleviating the transportation difficulties faced by the elderly. However, these efforts have come face to face with a number of acute problems, including spiraling inflation, rising fuel and maintenance costs, and the unavailability of—or exorbitant cost of insurance.

The Senate Special Committee on Aging, on which I serve as the ranking minority member, held hearings in July of 1977 on 'Transportation and the Elderly: Problems and Progress—The Insurance Issue." At the hearing I noted:

I am appalled at the information which has recently come to our attention as to the increase in insurance costs for vehicles which serve the elderly. I am also dismayed at the apparent evidence of age discrimination in the practices of certain insurance companies.

We know that older Americans are severely hampered in getting to and from places to which they need to travel. In many rural areas there is no public transportation at all. This has led to the development of alternative services provided by titles III and VII of the Older Americans Act. Furthermore, much-needed help is given by RSVP volunteers. Many volunteers will be forced to drop out of the program if these insurance problems are not promptly resolved.

We also know that transportation is given by social workers in public and private agencies, sometimes by public health nurses. It would be interesting to know how many agencies in large and in rural areas provide some kind of transportation for the elderly. What are the regulations required by each agency for use of the van or bus? Is there a means test? An age test? A handicapped test? A family with many problems would have to travel in separate buses to the proper place for care.

It seems to me that coordination for our various specialized transportation systems would make it possible for insurance coverage on a group basis. We seem to have the same problems in transportation, of fragmentation and restrictive regulations, as we do with delivery of home care services. I sincerely hope that today's witnesses can give us some ideas as to how we can solve this problem of insurance.

In September 1977 at a meeting of the National Association of Independent Insurers in Des Plaines, Ill., industry representatives raised the following concerns to the Senate Special Committee on Aging staff.

In the event of a suit brought by an injured passenger, will they be able to have the court apply the standard of care owed by a common carrier? This is part of the larger question—what legal degree of care is owed by these social service carriers to their aged passengers?

If they accept this type of risk as a social responsibility, will they be forced by State regulators to accept other high-risk business they do not want to take on?

Will the insurers be classified as Federal contractors if they accept this business?

If a volunteer driver is reimbursed for mileage, will his service be classified as a public livery?

Can total liability be limited to help lower rates? If this is done, will the courts permit it?

It is clear that the Federal Government and the insurance industry have not come to terms in seeking solutions to this most serious problem. This problem is not one which lends itself to a Federal solution inasmuch as individual States have the responsibility for regulating the insurance industry.

It has recently come to my attention that the White House is now working to address this problem as part of an effort to deal with the problems of rural America. I am pleased to see that the White House is taking an active interest in resolving the insurance crisis facing many rural social service and transportation providers. It is my understanding that a number of task forces will be appointed to formulate recommendations

which can be the focus for discussion at a later White House seminar.

I believe we must continue to seek every avenue available to promptly resolve this situation. We must use every resource at our disposal to assure a speedy solution to this serious problem. I am pleased that the President has begun to take action on this issue, and I hope he will do everything possible to expedite this study. I believe this task force will find a need for vigorous Federal, State, and local action to overcome this pressing problem. I hope the President will act promptly and forcefully when the task force study reaches his desk.

TECHNICAL AND CLERICAL CORRECTIONS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized to make technical and clerical corrections in the engrossment of Senate Resolution 540.

The PRESIDING OFFICER. Without objection, it is so ordered.

CONSIDERATION OF CERTAIN MEASURES ON THE CALENDAR

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order Nos. 1002, 1003, 1005, and 1007.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will report the first bill.

RETENTION OF INSURANCE BENEFITS BY CERTAIN RETIRED EMPLOYEES

The Senate proceeded to consider the bill (H.R. 4319) to amend subchapter III of chapter 83 of title 5, United States Code, to provide that employees who retire after 5 years of service, in certain instances, may be eligible to retain their life and health insurance benefits, and for other purposes, which had been reported from the Committee on Governmental Affairs with an amendment to strike all after the enacting clause and insert the following:

That (a) section 8706 of title 5, United States Code, is amended—

(1) by striking out subsections (b) and (c) and inserting in lieu thereof the following new subsection:

"(b) If on the date the insurance would otherwise stop—

"(1) the employee—

"(A) retires on immediate annuity, or

"(B) is receiving compensation under subchapter I of chapter 81 of this title because of disease or injury to the employee, and is certified by the Secretary of Labor or his delegate as being unable to return to duty; and

"(2) the employee has been insured under this chapter during—

"(A) the 5-year period immediately preceding such date, or

"(B) if the employee was entitled to be insured during only a part of such 5-year period, the entire period for which he was so entitled,

life insurance only may be continued under conditions determined by the Commission. The amount of life insurance continued under this subsection shall be reduced by 2 percent at the end of each full calendar month after the date the employee becomes 65 years of age and is retired or is receiving such compensation for work injury. The Commission shall prescribe minimum amounts, not less than 25 percent of the amount of life insurance in force before the first reduction, to which the insurance may be reduced.";

(2) by redesignating subsection (d) through (f) as subsections (c) through (e), respectively;

(3) by striking out "The" in the first sentence of subsection (c), as redesignated by paragraph (2), and inserting in lieu thereof "Notwithstanding subsections (a) and (b) of this section, the"; and

(4) by striking out "(a)–(c)" in subsection (d), as redesignated by paragraph (2), and inserting in lieu thereof "(a) and (b)".

(b) Section 8705(a) of title 5, United States Code, is amended by striking out "or (c)".

(c) Paragraph (2) of section 8714(a) of title 5, United States Code, is amended to read as follows:

"(2) So much of the standard optional life insurance (without accidental death and dismemberment insurance) in force on an employee on the date he retires on an immediate annuity or becomes entitled to receive compensation for work injuries under subchapter I of chapter 81 of this title which has been in force under this chapter during—

"(A) the 5-year period immediately preceding such date, or

"(B) any period of service during such 5-year period which the standard optional insurance was available to him if not available the entire 5-year period,

may be continued, under conditions determined by the Commission, after retirement or during the period the employee is receiving compensation for work injuries and is certified by the Secretary of Labor or his delegate as being unable to return to duty, subject to the same monthly reductions required for regular life insurance under section 8706(b) of this title.".

SEC. 2. Section 8901(3)(A) of title 5, United States Code, is amended by striking out "12" and inserting in lieu thereof "5".

The committee amendment was agreed to.

UP AMENDMENT NO. 1689

(Purpose: Providing an effective date)

Mr. ROBERT C. BYRD. Mr. President, I send to the desk an amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from West Virginia (Mr. ROBERT C. BYRD), for Mr. SASSER, proposes an unprinted amendment numbered 1689.

Mr. ROBERT C. BYRD. I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 5, after line 3, insert the following new section:

SEC. 3. The amendments made by this Act shall take effect on the later of—

(1) the date of the enactment of this Act, or

(2) October 1, 1978.

Mr. ROBERT C. BYRD. The purpose of this amendment is to assure that this legislation is in conformity with the Congressional Budget and Impoundment Control Act of 1974, specifically section 401(b).

The amendment was agreed to,

Mr. BAKER. Mr. President, I ask unanimous consent that a statement by the Senator from Alaska (Mr. STEVENS) be printed in the RECORD at this point.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT OF SENATOR STEVENS

I wish to join the distinguished Chairman of the Subcommittee on Civil Service and General Services (Mr. SASSER) in support of H.R. 4319, which will amend the existing law to reduce from 12 to 5 years the length of service required by a retiring Federal employee to retain his group life insurance and health benefits coverage during retirement. This action will equate the years of creditable service necessary to retain the insurance benefits with retirement benefits. Under present legislation, disability retirees are the only group of employees who may continue their life and health insurance coverages after retirement with 5 years of service.

Under this bill, there will be no increase in the unfunded liability of the Retirement Fund during the first 5 years following enactment. During the ensuing years, the increase in the unfunded liability would be minimal. H.R. 4319 would make retirement possible for many eligible employees over age 62, who now stays on the job solely to complete the required 12 years of service for life insurance and health benefits retention. Finally, it would standardize at 5 years the service requirement for vesting of employee life insurance and health benefits coverage, the same as the present 5-year service requirement for a vested right to retirement benefits.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time, and passed, as amended.

Mr. ROBERT C. BYRD. I move to reconsider the vote by which the bill was passed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–1080), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

EXCERPT

PURPOSE

The purpose of H.R. 4319, as amended, is to reduce from 12 to 5 years the length of service required by a retiring employee to retain his group life insurance and health benefits coverages during retirement.

Thereafter, the subcommittee on July 12, 1978, recommended favorable action on the bill, as amended.

The provisions of H.R. 4319, as amended by the committee, reflect two basic changes in the legislation as it was passed by the House of Representatives. First, it will become effective immediately upon enactment. Second, the committee amended the legislation relating to life insurance to make it conform with the Commission's proposal to revise the Federal Employees' Group Life Insurance law, chapter 87 of title 5, United

States Code. Both changes were recommended to the committee by the Civil Service Commission.

Regarding the effective date, as pointed out by the Commission, the effective date of the legislation was originally set 5 years in the future (1982) primarily because of the provision for mandatory separation at age 70 after 5 years of service. However, since elimination of age 70 mandatory retirement was being considered and has since been enacted as Public Law 95-256, the House deleted that provision from the bill but they did not change the effective date off the health benefits and life insurance provisions. The Commission also stated that "because the additional cost would be minimal, the Commission recommends that it become effective upon enactment."

On April 20, 1978, the Civil Service Commission submitted a proposal to the Congress to amend the Federal Employees' Group Life Insurance (FEGLI) Law. The proposed in part provides for the continuation into retirement of both regular and optimal life insurance after 5 years of participation. The Civil Service Commission in order to avoid conflict recommended to the committee that H.R. 4319 be amended to conform with the Commission's proposal. As a result, the legislation as amended will permit all insured employees who retire on immediate annuity, or become entitled to receive workmen's compensation under 5 U.S.C., chapter 81 and are determined by the Department of Labor to be unable to return to duty, to continue optimal and/or regular FEGLI life insurance if they have been insured for such coverage for a minimum of 5 years or from the first opportunity to elect coverage, if less than 5 years.

BACKGROUND

The Federal Employees' Group Life Insurance law (section 8706(b) of title 5, United States Code) and the Federal Employees' Health Benefits law (section 8901 (3)(A) of title 5, United States Code) provide for the retention of life and health insurance coverage after an employee's retirement on an immediate annuity, either on disability or after having completed at least 12 years of creditable service. The committee believes that, in light of the fact that an employee has vested rights under the civil service retirement system after 5 years of creditable civilian service, the 12-year service requirement for retention of health and life insurance benefits during retirement no longer can be justified and that it unduly discriminates against many employees.

EXTENSION OF CERTAIN BENEFITS TO FORMER EMPLOYEES

The Senate proceeded to consider the bill (S. 408) to amend title 5, United States Code, to extend certain benefits to former employees of county committees established pursuant to section 8 (b) of the Soil Conservation and Domestic Allotment Act, and for other purposes, which had been reported from the Committee on Governmental Affairs with an amendment on page 1, beginning with line 3, strike through and including line 5, and insert in lieu thereof the following:

That (a) section 5334(f) of title 5, United States Code, is amended—

(1) by inserting a comma after "may"; and

(2) by striking out "under the Department of Agriculture,".

So as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 5334(f) of title 5, United States Code, is amended—

(1) by inserting a comma after "may"; and

(2) by striking out "under the Department of Agriculture,".

(b) The first sentence of section 6312 of title 5, United States Code, is amended by striking out "in the case of any officer or employee in or under the Department of Agriculture".

(c) Section 3502(a)(C) of title 5, United States Code, is amended by striking out "who is an employee in or under the Department of Agriculture".

SEC. 2. The amendments made by the first section of this Act shall take effect on the date of the enactment of this Act.

The amendment was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that a statement by the Senator from Tennessee (Mr. SASSER) be printed in the RECORD at this point.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR SASSER

S. 408, which was introduced by Senators Huddleston and Dole, amends current law in order to grant former employees of the Agricultural Stabilization and Conservation Service, who become employed by a Federal agency, certain benefits such as: transferring accumulated sick and annual leave, receiving full credit for prior service in determining the annual rate of annual leave accrual and reduction-in-force preference, and transfer of previous rate of pay.

I am personally very much aware of the contributions made by employees of the Agricultural Stabilization and Conservation Service (ASCS). The work which they do in administering specified commodity and related land use programs is absolutely vital to the country. The programs which they implement are developed by the President, the Congress and the Secretary of the Department of Agriculture. The ASCS employees operate on the county level, working directly with local farmers to implement Federal programs designed for voluntary production adjustment, resource protection, and price, market, and farm income stabilization. Although the Federal government develops, finances, and provides for the implementation of these programs, the ASCS employees are not considered to be federal civil service employees. However, they are eligible to participate in the civil service retirement system and other employee programs. In addition, should an ASCS employee become competitively employed by the Department of Agriculture he or she is eligible to transfer annual and sick leave, creditable service for leave earning and reduction-in-force purposes, and the highest previous rate of pay for salary determination purposes. Furthermore, should such an employee then become employed in another federal agency, he or she will retain all previous benefit coverage.

The Subcommittee on Civil Service and General Services, which I chair, held hearings on this subject on March 17, 1978 and the Governmental Affairs Committee, on August 10, 1978 issued a favorable report on the legislation.

S. 408 addresses an important issue for a relatively small number of people who are thoroughly dedicated public servants. The legislation simply attempts to establish some uniformity and consistency in the treatment of county committee employees who transfer into federal agencies. I urge my colleagues to give S. 409 their wholehearted support.

Mr. BAKER. Mr. President, I ask unanimous consent that a statement by Senator STEVENS be printed in the RECORD at this point.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR STEVENS

After P.L. 90-367 was enacted in 1968, county committee employees of ASCS (the Agricultural Stabilization and Conservation Service) could enter into Federal employment with the Department of Agriculture with three benefits. These included (1) the entry into any Federal agency at their highest previous salary level, (2) the transferral of annual and sick leave to the new position, and (3) the crediting of service for the purpose of leave and reduction of force. These former county committee employees desiring Federal jobs still must meet competitive selection procedures for positions in the Department.

Under present law, the committee members are entitled to the benefits listed above solely with regard to employment in the Department of Agriculture. The Subcommittee on Civil Service and General Services held extensive hearings on this bill. Thus I join Senators Dole and Helms in supporting S. 408 which extends the three provisions to include all departments and agencies in the Executive Branch. By expanding the language of the current legislation to include all Federal agencies, S. 408 will provide more benefits for former ASCS employees and encourage their entry into Federal service.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. ROBERT C. BYRD. I move to reconsider the vote by which the bill was passed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95-1081), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

EXCERPT

PURPOSE

The purpose of S. 408, as amended, is to broaden the applicability of Public Law 90-367 by granting to former employees of the Agricultural Stabilization and Conservation Service, who become employed by a Federal agency, certain benefits, such as transferring accumulated sick and annual leave, receiving full credit for prior service in determining the annual rate of annual leave accrual and reduction-in-force preference, and transfer of rate of pay.

BACKGROUND

The Agricultural Stabilization and Conservation Service (ASCS) was established by the Secretary of Agriculture in 1961 pursuant to section 8(b) of the Soil Conservation and Domestic Allotment Act. ASCS administers specified commodity and related land use programs designed for voluntary production adjustment, resource protection, and price, market, and farm income stabilization. In each State, ASCS operations are supervised by a State committee of three to five members appointed by the Secretary of Agriculture. A State executive director, appointed by the Secretary, and staff carry on day-to-day operations of the State office. In each of approximately 2,800 agricultural counties, local ASCS programs are administered by a county committee of three members who are elected to the committee by farmer-elected delegates

to a county convention. The county committees employ necessary staff to carry on day-to-day operations of the county office.

Currently, there are approximately 7,200 ASCS county committee employees in the United States. Although, these county committee employees are treated as if they are Federal employees for purposes of granting most benefits which Federal employees receive, such as retirement, and life and health insurance, the Civil Service Commission feels that they do not meet the established criterion to be considered as Federal employees. In addition to such retirement, life and health insurance benefits, Public Law 90–367, enacted in June 29, 1968, extended to ASCS county committee employees who enter into Federal employment with the Department of Agriculture certain additional benefits. These benefits include transferring annual and sick leave to the new position, creditable service for leave earning and reduction-in-force purposes, and the highest previous rate of pay for salary determination purposes. County committee employees, however, still have to meet competitive selection procedures for positions in the Department of Agriculture.

S. 408, as amended, extends the benefits accorded by Public Law 90–367 to county committee employees who transfer to any department or agencies in the executive branch, thereby providing for the transfer of annual and sick leave, creditable service for leave earning and reduction-in-force purposes, and highest previous rate salary determination. County committee employees must, however, be competitively selected for positions in such Federal department or agencies.

The committee believes that county committee employees perform vital functions to their localities under direction and supervision of the Federal Government. They are paid with Federal funds and they are already eligible for retirement, health and life insurance benefits which Federal employees are eligible for. Those county committee employees who become employed at the Department of Agriculture can, as a result of Public Law 90–367, carry over their leave and pay benefits. In fact, should such an employee leave the Department of Agriculture and transfer to another Federal agency he continues to count his county committee service for leave, pay, and reduction-in-force purposes.

S. 408 establishes uniformity and consistency in the treatment of county committee employees who transfer into Federal agencies. For these reasons, the committee urges the enactment of S. 408, as amended.

FEDERAL EMPLOYEE WITHHOLDING OF LOCAL TAXES

The Senate proceeded to consider the bill (H.R. 8342) to amend title 5 United States Code, to provide for the application of local withholding taxes to Federal employees who are residents of such locality.

Mr. BAKER. Mr. President, I ask unanimous consent that a statement by the Senator from Alaska (Mr. STEVENS) be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT OF SENATOR STEVENS

H.R. 8342 requires withholding of local taxes from Federal employees who are residents of a given locality but are employed elsewhere within the same state. If enacted, this bill will simply correct an oversight in the law which requires the withholding of taxes when an employee works and lives within the locality but is only voluntary when an employee only lives in the locality.

Currently, localities are unable to ensure that taxes are withheld for Federal employees. Often, Federal employees are saddled with large local tax bills which were not anticipated by the employee. This bill would eliminate this problem. It has the support of the Treasury Department, the Civil Service Commission and local governments.

Some officials have expressed increasing concern over the difficulty in collecting local tax when the Federal employee lives in a city but is employed elsewhere within the state. H.R. 8342 would allow a city or county qualifying for mandatory local tax withholding and having an agreement for this withholding currently in effect, to include employees who live in that city but are employed elsewhere within the state in that negotiated agreement.

I would like to thank Senator SASSER for his work on this bill. Due to his efforts action was taken on this legislation. I urge my friends to join me in support of this bill.

The bill was ordered to a third reading, read the third time, and passed.

Mr. ROBERT C. BYRD. I move to reconsider the vote by which the bill was passed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–1083), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of H.R. 8342 is to extend application of section 5520 of title 5, United States Code, relating to the withholding of city or county income or employment taxes from the pay of Federal employees, to employees who are residents of (but are employed outside of) cities or counties with which the Secretary of the Treasury has entered into a tax withholding agreement under the provisions of section 5520 of title 5.

BACKGROUND

Public Law 83–340, enacted July 10, 1974 (5 U.S.C. 5520), provided for the withholding of city income or employment taxes from the pay of Federal employees where a city ordinance provided for the collecting of such taxes and imposes a duty on employers within the taxing jurisdiction to withhold taxes. Subsequently, the law was amended by section 408 of the Tax Reduction and Simplification Act of 1977 (Public Law 95–30) to extend the application of the tax withholding provisions to county governments.

Currently, the law provides that the Secretary of the Treasury, under certain conditions, shall enter into an agreement with a city or county to provide for such withholding from the pay of Federal employees who are subject to the tax and who are regularly employed within the city or county. Such agreements do not apply to employees who are residents of the city or county with which the agreement is made but who are employed outside of the city or county. Also, the agreements do not apply to employees who are not residents of the State in which the taxing city or county is located unless the employees specifically consent to have the tax withheld from their pay.

RETIREMENT CREDIT FOR JAPANESE-AMERICANS FOR TIME IN WORLD WAR II INTERNMENT CAMPS

The Senate proceeded to consider the bill (H.R. 9471) to amend title 5, United States Code, to provide that Japanese-Americans shall be allowed civil service retirement credit for time spent in World War II internment camps.

UP AMENDMENT NO. 1690

(Purpose: Amending the effective date)

Mr. ROBERT C. BYRD. Mr. President, I send to the desk an amendment and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Virginia (Mr. ROBERT C. BYRD), on behalf of Mr. SASSER, proposes an unprinted amendment numbered 1690.

Mr. ROBERT C. BYRD. I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 3, strike out lines 14 through 16, and insert in lieu thereof the following:

Sec. 2.(a) The amendments made by this Act shall take effect on the later of—

(1) the date of the enactment of this act, or

(2) October 1, 1978.

Mr. ROBERT C. BYRD. Mr. President, the purpose of this amendment is to assure that this legislation is in conformity with the Congressional Budget and Impoundment Control Act of 1974, specifically section 401(b).

The amendment was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that statements by Senators CHURCH and INOUYE be printed in the RECORD at this point.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR CHURCH

I am very pleased to join in urging the Senate to pass H.R. 9471, which would allow Japanese-Americans civil service retirement credit for time spent in World War II internment camps in the United States. As a cosponsor of S. 224, the Senate version of this bill introduced by Senator Inouye, I have long felt that this step is necessary compensation for what all Americans now recognize was a dark chapter in our Nation's history.

In 1952, Congress enacted legislation to provide some compensation for certain Japanese-American internees. Years later, Congress finally repealed the statutory authority which permitted this tragedy to occur. Later, legislation which I sponsored repealed and clarified national emergency powers in order to see to it that this terrible episode will not be repeated.

In 1972, Congress belatedly returned its attention to the wrongs our Japanese-American citizens had suffered by passing legislation to provide social security credit for those years of internment. And now, in 1978, Congress is taking another action toward redressing these grievances by enactment of H.R. 9471. Again, I urge its adoption by the Senate.

Actually, relatively few Japanese-Americans will benefit from the bill before the

Senate today. There is another group of Americans, also few in number, who also have legitimate grievances that should be redressed. These Americans were civilian employees working in the Pacific at the outbreak of World War II, who were captured and held as prisoners-of-war for all of the years of that conflict.

I have introduced a bill, S. 407, which, not unlike H.R. 9471 and its predecessors, would provide credit for government retirement programs and social security for these prisoners-of-war. I am very pleased to have Senator Inouye as a cosponsor of my bill, and, although the Senate will not consider it this year, I intend to press for its passage in the upcoming 96th Congress.

I recognize that the Executive Branch has opposed H.R. 9471, and S. 407, based largely on the argument that benefits should not be provided unless traditional work or service has been performed. Nevertheless, Alan Campbell, Chairman of the Civil Service Commission, has commented on H.R. 9471:

Therefore, while still opposing the principle of granting credit for non-Federal service, the Commission, because of the unique circumstances of this group of Japanese-Americans and because non-Federal employees receive credit for similar service under Social Security, does not oppose enactment of H.R. 9471.

I would hope that the Executive Branch will also come to appreciate the unique circumstances of all Americans who were interned during World War II. In fact, prisoners-of-war do perform unique "work and services" for our Government and our Nation, and I feel strongly that it is only just that we compensate them appropriately.

STATEMENT BY SENATOR INOUYE

For a number of years, I have been interested in securing credit for retirement purposes to those working adult Japanese-Americans interned during WW II for the period of their internment. By the enactment of Public Law 92–603 such coverage was granted to those who are covered under the Social Security Act. Federal retirement credit had also been granted to some who were Federal employees at the time of their internment under the provisions of Public Law 82–545 and 86–782. No coverage existed, however, for those who entered Federal employment subsequent to their internment for the time spent in internment camps in involuntary service to the government. H.R. 9471, which is before us today, will provide such credit for such coverage.

H.R. 9471, similar to my own bill, S. 224, will give Federal Civil Service retirement credit to those who were interned under Executive Order 9066 or related legislation and authority. As you may know, H.R. 9471 passed the House on January 23, 1978, by an overwhelming vote of 366 to 12.

We are here today to consider H.R. 9471 which I hope will be interpreted as having the widest possible applicability when it is implemented. The number affected is small but their coverage is essential if we are to achieve equity.

The atmosphere after the bombing of Pearl Harbor by the Japanese on December 7, 1941, was oppressive. Fear, hate, and suspicion of Japanese-Americans was stifling in Hawaii, where Americans of Japanese ancestry composed 40 percent of the population. The tension was multiplied tenfold in the West Coast states of California, Oregon, and Washington, where Japanese-Americans were a much smaller minority and anti-Asian sentiment was already widespread. Grossly discriminatory law long prevented citizenship for first-generation Asian-Americans and state law limited ownership of property by non-citizens.

It was bad enough for those living in Hawaii, a State more isolated and less prejudiced than most, but the people who experienced the mistrust of their country in the mainland United States went through a particularly degrading and humiliating experience.

When we heard in Hawaii that 110,000 Americans of Japanese ancestry in West Coast states were rounded up and whisked to internment camps—virtual prisons—the news was frightening and nightmarish. Could such a thing be happening in the land of freedom? Could a mass imprisonment of persons whose only crime was their ancestry actually take place here?

I was soon to witness these camp-prisons firsthand. On leave from my military training with the 422nd Regimental Combat Team, I accompanied a few of my mainland Army buddies to visit their families at one of these camps. After witnessing the desolate surroundings, crowded tar-paper barracks and degrading prisonlike atmosphere, I gained new respect for my comrades, who had the courage to volunteer to defend the country which put their families through this demeaning ordeal.

Despite the 1948 Evacuation Claims Act, which attempted to compensate Japanese-Americans for their losses, it is estimated that the evacuees recovered only 10 percent of their losses. It is further estimated that the total loss came to approximately $400 million, of which only $35–$40 million was recovered.

Our Government has attempted, through the Evacuation Claims Act, to compensate for the heavy monetary losses suffered by Americans of Japanese ancestry. But no government can ever fully pay for the trampling of pride, breaking of the spirit, and loss of human dignity experienced by the internees.

Legislation has been enacted at various times to attempt to correct this injustice. Public Law 82–545 of 1952, and Public Law 86–782 gave credit for pay and retirement purposes to Civil Service employees who were in or about to enter the Civil Service before interment. A weakness of the legislation is that the law provided credit only to those who were still in the Civil Service in 1952, when the legislation was enacted. Thus, those who had retired, were on maternity or other prolonged leave without pay, or were no longer working for the Civil Service at the time of enactment did not receive credit.

Public Law 92–603 has a provision giving social security credit for time spent in interment camps to those who were 18 years or older at the time of interment. In practical terms, however, the social security credit formula is such that the years of interment do not prove beneficial to many in determining the level of social security benefits.

While credit has already been given to internees, through the Federal retirement credit of Public Law 82–545 and Public Law 86–782, those Japanese-Americans who did not have the opportunity to enter the Civil Service prior to internment have not received any credit. My bill would provide credit to those who entered the Civil Service at any time after internment.

Mr. President, Congress has since guaranteed that the injustice perpetrated against Japanese-Americans cannot happen to any other racial group in this country. In 1971, legislation introduced by myself and Representative Spark Matsunaga was enacted into public law which repealed Title II of the Internal Security Act of 1950, also known as the Emergency Detention Act, which allowed the President to detain, without due process of law, anyone for suspected acts of espionage or sabotage in times of "internal security emergency." Those who experienced internment bear a permanent scar. Thousands of families were summarily uprooted, taken from their homes, often on 12 hours' notice, and moved to "relocation" camps on the incredible grounds that this whole class of Americans—rich and poor, alien and citizen, men, women, and children—was a security risk.

Congress has before it the opportunity to further rectify the wrong that was committed against this group of loyal Americans. The bill before you affects an estimated 500 to 1,000 persons at a modest cost of $400,000 to $800,000 annually. It is my sincere hope that my colleagues will act expeditiously and affirmatively on this measure, while Congressional action is still meaningful to these former internees. Many are now among the older members of their communities and further delay will but perpetuate a great injustice.

Mr. BAKER. Mr. President, I ask unanimous consent that a statement by Senator STEVENS in respect to the passage of this measure may be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR STEVENS

This bill H.R. 9471 is an attempt to remedy an inequity in current law affecting a small group of Japanese-Americans and to bring about over-due justice. H.R. 9471 would provide that Japanese-Americans be allowed Civil Service retirement credit for time spent in World War II internment camps.

Several laws have been enacted granting special pay and retirement benefits to certain groups of Japanese-Americans. Providing Civil Service retirement credit to those who were in internment camps is a logical and overlooked step that has not been included in any other legislation although efforts have been made in the past.

It is hoped through this legislation the Federal government can rectify any unintentional inequities which may have been suffered by these Japanese-Americans. This measure passed the House on January 23, 1978.

Extensive hearings were held in which the need for this legislation was expressed. I urge support of the final passage of this bill.

Mr. MATSUNAGA. Mr. President, I rise in support of H.R. 9471, a bill which would provide civil service retirement credit for Japanese American Federal employees who were interned during World War II.

Although its estimated cost is minimal and the number of beneficiaries relatively small, H.R. 9471 would set right a grave injustice stemming from the early days of World War II. The recent television production of "Holocaust" brought home to millions of Americans the unspeakable horror of Germany's wartime treatment of Jews. Too few recall, however, the feelings of fear, suspicion, and hysteria which the December 7, 1941 attack on Pearl Harbor aroused in the hearts and minds of Americans and which were directed at their fellow Americans of Japanese ancestry.

Those feelings were particularly strong on the west coast, where there was a significant minority population of Japanese Americans. In 1942, more than 110,000 Japanese Americans who lived on the west coast were rounded up by military authorities and imprisoned

in so-called detention centers, which had the semblance of concentration camps, complete with barbed wire fences and armed guards. Not one of them had ever been convicted of a crime and none were subsequently found to be disloyal to the United States.

In retrospect, the internment of the Japanese Americans is regarded as a tragic example of wartime hysteria, a blot on the pages of American history. Nevertheless, the Federal Government has been slow to make restitution to those who fell victim to such hysteria.

In addition to the physical, emotional, and mental hardships which the internees suffered, their detention imposed on them severe economic hardships. Many lost their homes and businesses. Some were interrupted in the course of promising careers and lost seniority and retirement credit. Youngsters who normally would have entered college or the labor market during those years were deprived of these opportunities. Moreover, none of the internees were fairly compensated for work performed within the detention camps, where they served as doctors, teachers, clerks, and laborers.

Long after the war ended, those whose properties were seized were finally compensated, but only to the extent of 10 cents for every dollar lost. The 82d Congress provided certain benefits for those who were Federal employees prior to internment and were fired or denied reinstatement. Still later, under the provisions of the Social Security Act Amendments of 1971, Public Law 92-603, former internees who were subsequently employed in the private sector were permitted to include the time spent in detention camps in the computation of social security retirement benefits.

The pending bill, H.R. 9471, is similar to this last measure in that it would permit former internees to include in the computation of their Federal retirement benefits the time spent in detention camps. It would extend to former internees employed by the Federal Government after World War II the same type of benefits already enjoyed by those in the private sector. Only a few hundred Federal employees now nearing retirement age would be affected.

H.R. 9471 is an exceptionally fair and reasonable measure. In addition to unanimous support in the Asian American community, it enjoys very broad support among Federal employees in general, whether or not they are of Japanese ancestry. Under the circumstances, I urge the passage of H.R. 9471, so that a longstanding injustice will at last be in part set right.

The amendment was ordered to be engrossed and the bill to be read the third time.

The bill (H.R. 9471), as amended, was read the third time, and passed.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. MATSUNAGA. I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

HAWAII CELEBRATES 19 YEARS OF STATEHOOD

Mr. MATSUNAGA. Mr. President, today, August 18, is being celebrated by the people of Hawaii as the 19th anniversary of statehood, for this is admission day for the Aloha State.

The inspiring story of Hawaii's fight for statehood has been told and retold. The deep belief of the people of Hawaii in the democratic ideals which form the basis of our Government is illustrated by the fact that the first petition calling for statehood was presented to Congress as early as 1903—only 3 years after Hawaii became a territory of the United States. Prince Jonah Kuhio Kalanianaole, Hawaii's second territorial delegate to Congress, authored the first statehood resolution and similar resolutions were introduced in subsequent Congresses by all of the delegates who followed him.

Not only were the people of Hawaii eager to share the benefits of statehood, they were more than willing to bear the responsibilities of statehood. Over the years, they have given to their fellow Americans just as much as they have received in return, adding to and enhancing the democratic traditions of our Nation. Among other things, Hawaii has contributed the following:

First. Leadership in the field of civil rights.—It was no accident that President John F. Kennedy selected the recently admitted Island State as the site of his first major civil rights address in 1963. "Hawaii," he said, "is what the United States is striving to be." With its multiethnic, multicultural population, Hawaii still is the embodiment of the revolutionary American dream of our forefathers.

Second. Leadership in foreign affairs.—Hawaii's strategic location in the mid-Pacific has made it a natural bridge between the nations of Asia and the nations of the Western world. Through the Center for Cultural and Technical Interchange Between East and West (the East-West Center), Hawaii has helped the United States to become a "Pacific Power" through peaceful cultural, technical, and educational exchange, and is helping to banish forever the spectre of "the ugly American" in Asia and the Pacific Basin.

Third. Leadership in scientific research and development.—Hawaii is rapidly becoming the Pacific center of scientific research and development, and its leadership in this area will benefit the entire Nation, both domestically and abroad. An island State with no indigenous sources of fossil fuel, Hawaii has embarked on an ambitious but realistic effort to make itself energy self-sufficient early in the next century. Indeed, Hawaii will serve as the national laboratory for energy self-sufficiency. Its abundant sunshine and agreeable trade winds will be used to produce power, as will steam from its volcanoes and ocean thermal energy from the Pacific Ocean.

Hawaii is also a leader in the field of tropical agriculture and is exploring new crops and agricultural methods appropriate for use in the developing nations of the Third World. We will probably pave the way to solving the problems of world hunger. Moreover, because of research in the field of tropical medicine underway in Hawaii, we are well on the way to eliminating some of the major diseases of the tropical zone. Finally, research in Hawaii will help to unlock the remaining secrets of the universe. The clear atmosphere atop Hawaii's tallest mountain, Mauna Kea, led scientists from the United States, France, and Canada to select that spot as the site of the world's second largest telescope.

LEADERSHIP IN TRADE AND COMMERCE

Fourth. Perhaps because the United States No. 1 trading partner, Japan, is a Pacific nation, Hawaii has in recent years become the Pacific center of business, trade, and commerce. Its role will become even more important as we continue to normalize our relations with China.

Finally, it goes without saying that the Aloha State is No. 1 in hospitality. In the last 19 years, millions of Americans have had a chance to share with the people of Hawaii the island State's beautiful scenery, clean air, and fine beaches. Long ago, Hawaii recognized the value of its unique natural resources and moved to protect them. It was the first State to adopt a land use law and first to designate its beaches a public resource. These and other innovative policies designed to enhance the quality of life for residents and visitors alike are also gifts which Hawaii's sister States are just beginning to appreciate.

Mr. President, as one who was born and raised in Hawaii, and one who fought hard for statehood, I may be a little biased. I know, however, that my colleagues share my pride in Hawaii's achievements since statehood and that they would wish to join me and the people of Hawaii in celebrating the 19th anniversary of Hawaii's admission to the Union. As a grateful citizen of the United States, I thank the people of the other 49 states for having granted the great privilege of full American citizenship to the people of Hawaii, myself included, 19 years ago.

Mr. President, I suggest the absence of a quorum.

Mr. ROBERT C. BYRD. Mr. President, will the Senator withhold that, please?

Mr. MATSUNAGA. Yes.

ORDER FOR INDEFINITE POSTPONEMENT OF SENATE RESOLUTION 39, RELATING TO THE DISAPPROVAL OF THE PAY RECOMMENDATIONS OF THE PRESIDENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Calendar Order No. 1041 be indefinitely postponed.

The PRESIDING OFFICER. Without objection, it is so ordered.

KEUM SUN LEE

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 1013. This is a bill which I believe I introduced for Mr. ANDERSON.

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (S. 2366) for the relief of Keum Sun Lee.

The PRESIDING OFFICER. Without objection, the Senate will proceed to its consideration.

There being no objection, the bill was considered, ordered to be engrossed for third reading, read the third time, and passed as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Keum Sun Lee may be classified as a child within the meaning of section 101(b)(1)(F) of the Act, upon approval of a petition filed in his behalf by Mr. and Mrs. Ed Roach, citizens of the United States, pursuant to section 204 of the Act: *Provided,* That the natural parents or brothers or sisters of the beneficiary shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act.

SEC. 2. Section 204(c) of the Immigration and Nationality Act, relating to the number of petitions which may be approved, shall be inapplicable in this case.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BAKER. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nominations on the executive calendar on page 12, beginning with the Department of State.

Mr. BAKER. Mr. President, reserving the right to object, and I will not object, I wish only to advise the majority leader that these items he has just identified are cleared on our calendar and we have no objection to proceeding to their consideration and confirmation at this time.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished minority leader.

The PRESIDING OFFICER (Mr. SPARKMAN). Without objection, it is so ordered.

DEPARTMENT OF STATE

The legislative clerk read the nomination of Nicholas A. Veliotes, of California, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Hashemite Kingdom of Jordan.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

INTERNATIONAL COMMUNICATION AGENCY

The legislative clerk read the nomination of James David Isbister, of Maryland, to be an Associate Director of the International Communication Agency.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

The legislative clerk read the nomination of Harold F. Schneidman, of Pennsylvania, to be an Associate Director of the International Communications Agency.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

COUNCIL ON ENVIRONMENTAL QUALITY

The legislative clerk read the nomination of Jane Hurt Yarn, of Georgia, to be a member of the Council on Environmental Quality.

The PRESIDING OFFICER. Without objection, the nomination is considered and confirmed.

FEDERAL HIGHWAY ADMINISTRATION

The legislative clerk read the nomination of Karl Smith Bowers, of South Carolina, to be Administrator of the Federal Highway Administration.

The PRESIDING OFFICER. Without objection. the nomination is considered and confirmed.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that it be in order to reconsider the votes by which the nominations were confirmed en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I so move.

Mr. BAKER. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of the nominees.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate return to legislative session.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF PROCEDURE NEXT WEEK

ORDER FOR RECESS UNTIL 9:30 A.M. MONDAY, AUGUST 21, 1978

Mr. ROBERT C. BYRD. Mr. President, the Senate will come in at 9:30 a.m. on Monday, by unanimous consent.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, are there any orders for the recognition of Senators on Monday?

The PRESIDING OFFICER. There is an order for Senator PROXMIRE for 15 minutes.

Mr. ROBERT C. BYRD. Very well.

RESUMPTION OF CONSIDERATION OF HOUSE JOINT RESOLUTION 554 AND S. 3073 MONDAY

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at the conclusion of Mr. PROXMIRE's order on Monday the Senate resume its consideration of the D.C. representation amendment and that at no later than 3 p.m. in the afternoon the Senate resume its consideration of the Federal aid highway bill.

The PRESIDING OFFICER. Is there objection?

Mr. SCOTT. Mr. President, reserving the right to object, and I do not plan to object, will the distinguished majority leader allow a few minutes for routine morning business after the 15 minutes? That would delay for 15 to 20 minutes possibly the resumption of this D.C. measure.

Mr. ROBERT C. BYRD. Mr. President, I would not want to delay it because the original intention was to come in at 9 a.m., and then we moved it to 9:30 a.m. We have both these measures to confront us on Monday.

Mr. SCOTT. I was wondering if the distinguished majority leader will let us resume consideration at 10 a.m.

Mr. ROBERT C. BYRD. Yes; 10 a.m.

Mr. SCOTT. I thank the Senator.

Mr. ROBERT C. BYRD. Yes.

Mr. President, I ask unanimous consent that at 10 a.m. on Monday morning the Senate resume its consideration of the D.C. representation amendment and at no later than 3 p.m. on Monday the Senate resume its consideration of the Federal aid highway bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECESS AT CONCLUSION OF BUSINESS MONDAY TO 9 A.M. TUESDAY, AUGUST 22, 1978

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business on Monday it stand in recess until the hour of 9 a.m. on Tuesday.

The PRESIDING OFFICER. Without objection, it is so ordered.

RESUMPTION OF CONSIDERATION OF HOUSE JOINT RESOLUTION 554 ON TUESDAY, AUGUST 22, 1978

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that after the two leaders or their designees have been recognized on Tuesday and after the completion of any orders that may be en-

tered prior thereto, the Senate resume its consideration of the D.C. representation amendment at that time.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, there will be no more rollcall votes today. The Senate has done a good day's work.

I compliment the distinguished Senator from Texas (Mr. BENTSEN), the distinguished Senator from Rhode Island (Mr. CHAFEE) and the distinguished Senator, the chairman of the committee (Mr. RANDOLPH) and all Senators for the work that has been done. It is my understanding that 19 amendments have been disposed of today.

I would hope the Senate could complete its action on the Federal highway bill on Monday. The order has already been entered, of course, for final action on the D.C. representation amendment on Tuesday at 6 p.m.

The D.C. representation amendment is under a time agreement, and there will be rollcall votes on Monday very likely in connection with amendments to that measure. Mr. McCLURE has seven amendments he intends to call up either Monday or Tuesday or on both days, and there is a time limitation on each of his amendments of 30 minutes.

The Federal aid to highways bill is, of course, under a time agreement. There will be rollcall votes on it on Monday. There is no hour set for the beginning of rollcall votes on Monday. There is a rollcall vote on Monday at 5 p.m. on an amendment by Mr. BARTLETT, but I would hope that Senators would clearly understand that this does not mean there will not be rollcall votes prior to 5 p.m. The vote at that hour is on the Bartlett amendment.

During the morning and early afternoon votes may occur on the D.C. representation amendment. During the early and midafternoon and late afternoon and evening votes may occur, and probably will occur, on the highway bill, so there will be rollcall votes on Monday.

I will yield to my distinguished friend, the minority leader.

THE HIGHWAY BILL

Mr. BAKER. I thank the majority leader. I, too, wish to commend the distinguished ranking minority member of the subcommittee and the chairman of the subcommittee for their handling of this matter, as well as the chairman of the full committee and the ranking minority member (Mr. STAFFORD) for their work in bringing up a complex and difficult package and handling it so well.

Mr. President, judging from the description of the majority leader which he gave us with respect to the job to be done, there is some possibility that we may be late in on Monday.

Mr. ROBERT C. BYRD. Yes, I am glad the Senator raised that point.

I see no alternative, unless we finish the highway bill but that we will have to stay in late.

Mr. BAKER. In any event, it is the intention of the majority leader to finish the highway bill before we turn to District of Columbia representation?

Mr. ROBERT C. BYRD. It is my intention to finish the highway bill on Monday. The District of Columbia representation bill will be first. It will come up at 10 o'clock on Monday and go possibly as late as 3 o'clock, but not necessarily. We might turn to the highway bill by 1:30 or 2 p.m. Mr. CHAFEE or Mr. STAFFORD will be able to begin consideration of the highway bill by 1:30 p.m. or 2 p.m., if it is convenient to all sides, and the Senate might resume consideration of the highway bill at that point.

THE WORKLOAD NEXT WEEK

But it will be the intention to finish that bill that day because I would hope, Mr. President, that the Senate could complete action on a good many measures next week, and if a good dent can be made in the workload next week, the Senate will not be in on Monday and Tuesday of the following week as had been earlier announced and contemplated. The holiday, according to the announcement, was to begin on Wednesday of the following week or at the conclusion of business on Tuesday of the following week. But this would allow Senators to have additional days away from the floor to do work in their offices or in their home States or whatever.

But I think we ought to try to accomplish as much as possible next week, with the understanding, may I say to my friend the minority leader—Mr. President, I am having just too much competition here.

The PRESIDING OFFICER. The Senate will be in order.

Mr. BAKER. I think the majority leader has answered my question.

Mr. ROBERT C. BYRD. I am trying to pick up where I left off.

As earlier had been stated, the Senate would be in on Monday and Tuesday of the week after, but if we can work long days next week and accomplish a good bit, I would hope we could add those days to the holidays so that Senators can be in their home States or their offices or whatever away from the floor and not be troubled with the Senate floor work.

I thank the distinguished minority leader.

Mr. BAKER. Mr. President, I thank the majority leader.

Mr. DOMENICI. Mr. President, may I ask the leader a question about scheduling?

Mr. ROBERT C. BYRD. Yes.

Mr. DOMENICI. It is not the leader's intention that the natural gas conference be brought before the Senate until after the Labor Day recess?

Mr. ROBERT C. BYRD. I will say this: It will not be brought up before next Wednesday, I can say that with certitude. I would like to not go beyond that point today.

Mr. DOMENICI. I thank the majority leader.

Mr. ROBERT C. BYRD. I thank the Senator. I think he may be reasonably assured that it will not be brought up before the recess, but I would like at least to withhold that option at the moment.

RECESS UNTIL 9:30 A.M., MONDAY, AUGUST 21, 1978

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the order previously entered, that the Senate stand in recess until the hour of 9:30 a.m., Monday.

The motion was agreed to; and at 6:02 p.m. the Senate recessed until Monday, August 21, 1978, at 9:30 a.m.

NOMINATIONS

Executive nominations received by the Senate August 18, 1978:

DEPARTMENT OF STATE

Marilyn Priscilla Johnson, of New Hampshire, a Foreign Service information officer of class 2, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Togo.

Edith Huntington Jones Dobelle, of Massachusetts, for the rank of Ambassador during her tenure of service as Chief of Protocol for the White House.

TENNESSEE VALLEY AUTHORITY

Richard Merrell Freeman, of Illinois, to be a Member of the Board of Directors of the Tennesse Valley Authority for the term expiring May 18, 1987, vice Aubrey J. Wagner, term expired.

U.S. INTERNATIONAL TRADE COMMISSION

Paula Stern, of the District of Columbia, to be a member of the United States International Trade Commission for the term expiring June 16, 1987, vice Daniel Minchew, term expired.

NATIONAL COMMISSION ON LIBRARIES AND INFORMATION ON SCIENCE

Charles William Benton, of Illinois, to be a member of the National Commission on Libraries and Information Science for the remainder of the term expiring July 19, 1980, vice Frederick H. Burkhardt, resigned.

CONFIRMATIONS

Executive nominations confirmed by the Senate August 18, 1978:

DEPARTMENT OF STATE

Nicholas A. Veliotes, of California, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Hashemite Kingdom of Jordan.

INTERNATIONAL COMMUNICATION AGENCY

James David Isbister, of Maryland, to be an Associate Director of the International Communication Agency.

Harold F. Schneidman, of Pennsylvania, to be an Associate Director of the International Communication Agency.

COUNCIL ON ENVIRONMENTAL QUALITY

Jane Hurt Yarn, of Georgia, to be a member of the Council on Environmental Quality.

FEDERAL HIGHWAY ADMINISTRATION

Karl Smith Bowers, of South Carolina, to be Administrator of the Federal Highway Administration.

The above nominations were approved subject to the nominees' commitments to respond to requests to appear and testify before any duly constituted committee of the Senate.

EXTENSIONS OF REMARKS

A TRIBUTE TO THE VOLUNTEER FIRE DEPARTMENT OF CHEEKTOWAGA, N.Y.

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1978

● Mr. KEMP. Mr. Speaker, on September 9, 1978, the Rescue Volunteer Hose Company No. 1 of Cheektowaga will be observing its 75th anniversary—three quarters of a century of dedicated volunteer fire service to the residents of the Walden Fire District No. 2 and the township of Cheektowaga.

There is no finer example of selfless service than the risks and hazards endured by volunteer firefighters. As early as the late 1600's and early 1700's such groups were formed in our country and volunteer firefighting organizations have been an important part of our history throughout the development of our great Nation.

Because of the nature of this job and the dedication of the people, I feel strongly that volunteer firefighting organizations deserve the help of the Congress in enacting key legislation such as classification of arson as a major crime, a spark arrester bill, exemption from excise taxes on gasoline and others they have assigned a priority classification. I urge my colleagues to give strong support to such proposals which will benefit the volunteer firefighter organizations in their districts. Certainly there is no more positive way to acknowledge and exhibit appreciation than passage of bills which will make the volunteer's job a little easier.

Mr. Speaker, included as part of my remarks is a history of Rescue Hose Company No. 1, written by my constituents, Robert Jurek and Thomas Adamczak, a history which details the volunteer firefighters' outstanding service to the people of the Cheektowaga community. And, since this spirit of unselfish responsibility to the community is shared by volunteer firefighting organizations throughout our country, I would like to express my admiration for all volunteer firefighters who have so ably protected the people of this Nation:

A HISTORY—SEPTEMBER 1903 TO SEPTEMBER 1978

The Town of Cheektowaga at the turn of the century consisted of thousands of acres of farmland. Shopping malls, residential subdivisions, and sprawling factories were nonexistant. At this time, most of the Town's five thousand inhabitants were situated along the city line, the area's population was growing fast and building was progressing at a tremendous rate. It was in 1903 that the residents of the Walden area realized they needed some form of fire protection.

The date was September 3rd, in the year 1903, and the first meeting was held to establish a firefighting organization. The people were gathered at the home of Joseph Forestor and he was selected to chair the meeting. On a motion by Bernard Fossett, the group was incorporated under the name of Rescue Hose Company No. 1 Volunteer Fire Department of Cheektowaga. Their first order of business was to acquire a hose cart and hose.

At a meeting on September 8, 1903, Jacob Hasselback was elected the first president of the company and Bernard Fossett the first chief. Money was needed to purchase the equipment so the company held its first fund raiser, a clambake.

The company now needed a fire house. Joseph Forestor, already involved as an organizer, made available to the company for $1,000 a month a building he owned. The building was known as the Arlington Club House. The house was located on Walden Ave. across from Pine Ridge Road. The first major expense was 1,000 feet of hose purchased for $700. This was followed by a hose cart purchased in November for $62.50. Such expenses were covered by dues, donations, and fund raising events.

No time was wasted in raising money for more equipment purchases. A social and dance was held November 14, 1903 followed January 21, 1904 by another. The tickets at that time went for 25¢. During the first twenty years or so, the company held smokers and dances as frequent as once a month. All firefighting apparatus and other equipment in the early years was purchased by the company with monies they gathered. Today the purchases are made with property tax monies under the control of the elected Board of Fire Commissioners.

On November 21, 1903, at a regular meeting of Rescue Hose Co. No. 1, the members were informed that the company had been duly incorporated in the State of New York. This made Rescue Hose the first officially incorporated and recognized fire company in the Town of Cheektowaga.

Rescue Hose was not immune from the very enemy it was to fight. In 1905, a hotel next to the firehouse erupted in flames. The fire was so intense, the Arlington Club House became engulfed in flames and the area's first firehouse was reduced to nothing more than smoldering ashes. All was not lost in this most embarrassing fire. The hose cart was salvaged and the company was able to carry on from temporary quarters further down Walden Ave. The need was seen for some sort of financial support which could be depended upon for replacing the lost equipment and provide for future expenditures. In 1905 the Walden Fire District No. 2 was formed. The taxes helped to build a fire house located on the site of the present fire house. The hose cart was sold to the fire district for $75.00 in May of 1905 and was soon after replaced with a 4-wheel wagon. The wagon, having been custom built, with it's buggy sorings, carriage lamps, green varnished wood, and gilded lettering was as beautiful as it was functional. It carried hose, axes, ladders, lanterns and all the equipment necessary for firefighting procedures of that day.

The fire district in the early days did not have benefit of radios and sirens. The men were summoned to the fire house or the scene of the fire by telephone or the neighbors. At the January 6, 1909 meeting, the chief reported that a house burned to the ground because of the lack of hydrants in the area and that most of the men were unaware that there was a fire. The blame for this was put on the inadequate alarm system. It wasn't until the middle of 1910 that a bell and then a whistle was installed to sound an alarm.

In 1911 the company formed a Ladies Auxiliary which met for several years until it was disbanded. A drum corps was started at the same time. This group performed in parades and for special events for many years and was considered quite good. The company acquired the drums and sticks while the members of the corps took care of all other expenses.

The hose cart which served the company and fire district for so many years was finally sold in March of 1914 to the Rochester Exempts Association for $75.00. The first rumors of a new truck and fire siren were circulated at the end of 1914 and by the end of 1915 the fire district had its first gas-powered apparatus. Even the fire company was not immune from crime, the magneto was stolen from the truck not long after being put in service.

The company was continually making purchases of recreational items for use by the members. The first item was a Victrola and a dozen records. Later a piano and pool table were added. Almost all acquisitions as such were made by the company with their funds since the district and town were not as sound financially back in 1928 as they are today. As a matter of fact, the company made two loans to the district and town totaling $2,200.

The year 1929 is of special importance to the company. It was in the early part of this year that Rescue Hose bought the old school house at 72 Randolph. This building was the nucleus around which the present Randolph Hall was built. Along with the building, the entire corner property was bought. At the corner of Doat and Randolph was a two-story building which was used as a meeting house for a Boy Scout troop sponsored by the company. This building was demolished some years ago due to the age and the need for more parking spaces for hall patrons.

January of 1931 was a time when the company was re-organized. On a motion by Edw. Janiak and seconded by B. Zablotny, the company voted to have eight directors elected every September. These directors would have full charge of building finance bonds and the company treasury.

1932 was also the first year that any formal training was given the active members of the company. Seven men were instructed to drill with the Buffalo Fire Department for a period of time. First aid courses were also attended by twelve men, giving them their first training in that field.

At this point in time, the firefighting apparatus and the fire District office was located at temporary quarters at 1236 Walden Ave. The present firehouse was officially dedicated to the public and put into service on October 25, 1936. The original structure was a two-story brick and concrete building having two truck bays. In 195 , an addition was erected to the north. From housing two trucks, the firehouse now has five trucks under its roof.

On June 26, 1938, the Board of Fire Commissioners presented the first 25 Year awards to eight members of the company. This practice is still followed as a way of honoring the unselfish dedication of the men.

The trophy case in the firehouse contains a wooden axe. This axe was presented to the company on December 6, 1939 by the Captain of the Welland Hose Company No. 1 of Ontario, Canada. This was the first of many times that the Canadian firefighters were represented at an inspection or event.

Statements or insertions which are not spoken by the Member on the floor will be identified by the use of a "bullet" symbol, i.e., ●

Through the efforts of all the members, the fundraising activities, and the donations of friends, the first mortgage for the Randolph Hall was burned on September 3, 1941—the 38th anniversary of the company.

The war years made it rough for all volunteer organizations, especially the fire companies. Manpower was at its lowest. Some companies allowed high school boys to answer alarms just to assure the people that someone would respond. Rescue Hose, just as other companies, even had a "guard" on duty 24 hours a day to sound the alarm for any reason.

The original uniform consisted of dark pants, a red shirt with a large emblem in front, and a "pillbox" hat. In 1952 the fire commissioners voted to adopt the double-breasted blue serge uniform of the Buffalo Fire Department. The uniform is the same as today's, except that newer materials are used.

The Fiftieth Anniversary of Rescue Hose Company No. 1 was celebrated on September 3rd, 1953. The banquet was held at the Buffalo Trap and Field Club located at the Buffalo Airport. This year, for the Seventy-Fifth Anniversary, the celebration will be held at the Executive Inn on Genesee St.

From 1953 until 1978, the company experienced many of the common problems and growing pains all fire companies have at one time or another.

In the following twenty five years, 1953 to 1978, the company continued to grow. The Randolph Hall was remodeled and in the early 1960's the company started the annual coin card drive to raise funds for the many functions run for the membership. The district also was growing. It had acquired five trucks by 1978. This consisted of a snorkel, two pumpers, a quad (ladder truck), and an emergency truck. The chief and assistant chief also had district cars.

The people of Walden Fire District No. 2 should be proud of the men that serve them. Rescue Hose has always been No. 1 in the town and the members of the company intend to continue this tradition.●

ONE CAMBODIAN'S STORY

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1978

● Mr. ANDERSON of Illinois. Mr. Speaker, I would like to place in the RECORD extracts of a report by an American Foreign Service officer who interviewed Pin Yathay, after Mr. Yathay successfully escaped from Cambodia in June 1977:

[Extracts from an airgram report by an officer of the American Embassy at Bangkok, Oct. 26, 1977]

THE STORY OF PIN YATHAY*: ONE MAN'S TREK THROUGH CAMBODIA

EVACUATION FOR "THREE DAYS"

Pin Yathay, 34, Director for Supply-Procurement, one of four directorships in the former Ministry of Public Works of the Government of the Khmer Republic, was distressed over corruption in the Government of the Khmer Republic (GKR) and felt some sympathy for the Khmer Rouge in the spring of 1975. On April 17, he joined most Phnom Penhois, he said, in welcoming the peace which was expected to follow the Khmer Rouge takeover. He planned to remain in Cambodia to serve in rebuilding the country. He was an engineer, trained for five years at the University of Montreal, Canada, and thought that his talents could serve the nation.

At 11:00 A.M., April 17, 1975, white flags began to appear throughout Phnom Penh. The Khmer Rouge were soon thereafter reported to be urging the citizens to leave the city temporarily. Several non-Khmer Rouge messengers arrived in south Phnom Penh where Pin Yathy resided and urged the families to leave the city. At that point no force backed the exhortation. Huddled with his family of eighteen—his wife, 3 children aged 9, 6, and 3, his parents, a brother and his family, a sister and her family, and an 18-year-old male cousin—they decided to try to remain, both in Phnom Penh and in Cambodia. Later in the evening they joined hundreds of others taking refuge in a major Pagoda of south Phnom Penh. The next day, April 18, Khmer Rouge soldiers appeared at the Pagoda and demanded that everyone quit Phnom Penh. Weapons were used to emphasize the point. Pin Yathay and his family left the Pagoda. After temporarily taking refuge in a school on the outskirts of Phnom Penh, Pin Yathay was forced to leave the city. Khmer Rouge soldiers told the citizens of Phnom Penh that they must leave the city for three days so that the city could be "purified." Moreover, the Americans were going to bombard Phnom Penh. They were told not to bother to take much with them since they would return quickly to the city. Pin Yathay, in retrospect, thinks the Khmer Rouge cadre probably thought the evacuation would last only three days, but he is convinced that Angka intended the evacuation to be permanent and to lead to the death of most of the population. . . .

Deaths occurred in the first few days of the evacuation. Being the hottest month, the April heat was unbearable. Those forced to leave hospital beds, pregnant women and the aged were the first to succumb. There were only scattered reports of executions. During the first days, Pin Yathay was aware of the execution of one youth, who attempted to return to Phnom Penh to get his papers. After one failure, he tried again and was summarily shot. Other, similar stories were heard. . . .

Although in general he had wanted to stay in Cambodia, conditions enroute to Chakmau led Pin Yathay to decide that they should attempt to escape through Viet-Nam. He changed his mind, however, when he heard on the Voice of America that the United States would evacuate its mission in Vietnam during the next week. How ruefully, he said, he later regretted that decision.

EARLY DAYS

When he arrived in Chakmau, a village previously controlled by the Khmer Rouge, his family was assigned a house along with others. They were put to work immediately. Being strong, he was assigned to cutting forests and bamboo, the most difficult work. At that time they worked only during daylight hours. All were required to register and write biographic resumes. Pin Yathay abbreviated his name and wrote merely that he was an engineer.

Food was adequate, although a shock for those accustomed to a good life in Phnom Penh. Death from disease among the weak became common. Extreme nervous conditions were frequent and deaths resulted. Suicides were also not rare. When a former GKR Lt. Colonel heard that his identity had been discovered, he took his own life. Pin Yathay was not aware of widespread executions, but said that, during that period, individuals or small groups were called away and disappeared. He presumed they were executed.

RETURN TO ANCESTRAL HOMES?

After remaining for about three months in Chakmau, the "new Cambodians" (those who were not under Khmer Rouge control before April 17, 1975) were told that they should return to their ancestral homes. With that news Pin Yathay determined to move across Cambodia to try to escape into Thailand. He claimed that Cudong was his ancestral home. The "new Cambodians" were then loaded on trucks, presumably to return to their old homes. However, when the trucks reached Takeo, the new Cambodians were told to unload. They were asked rhetorically how they could expect to return to their homes when crops needed to be cultivated. Pin Yathay and his family remained in Takeo for three months.

During this period in Takeo, undernourishment began seriously to affect the health of most "new Cambodians." Pin Yathay himself remained in comparatively good health and was assigned the difficult labor of digging new canals. Khmer Rouge cadres were ignorant and forced them to dig canals in such ways that frequently the water would flow in the opposite direction from that desired or would not flow at all. He kept quiet, even though he was an engineer and could have helped. Criticism was not welcome. In Takeo, executions became more common. With identities known or suspected, former Phnom Penhois began disappearing in increasing numbers. Pin Yathay mentioned specifically the execution of former Undersecretary of the Ministry of Culture, the writer, Lien Hap An; former colonels; and other government functionaries. He ceased calling himself an engineer, claiming that he had been a low level technician in the Public Works Ministry.

TO PHUM LEACH

In December, 1975, the "new Cambodians" in Takeo were again told that they should return to their ancestral homes. Attempting to get as close as possible to Thailand, Pin Yathy claimed Battambang as his home province. In fact he only had relatives of his wife in Battambang. Again the several thousand "new Cambodians" were loaded on trucks, supposedly to return to their old homes. People were pressed like sardines on the trucks, forced to leave behind most of the few belongings they had managed to retain thus far. Pin Yathay's family lost their last bicycle at that point. An invalid woman confined to a wheelchair was left to care for herself in the road, since there was no room for her wheelchair on a truck. Her death was certain, Pin Yathay said, but characteristic of the Khmer Rouge policy of deliberately reducing the population.

The trucks headed toward Battambang, but at Pursat (Pouthisat Province) the caravan turned left through Phum Leach to the forested mountain area about ten miles south of Phum Leach. Pin Yathay estimated that half the Cambodians, undernourished, weakened by disease and exposure to heat and weather, died enroute to Pursat.

The survivors were little better off. They were dumped in the forest in torrential rains and told to build their own huts. Still relatively fit, Pin Yathay was assigned work as a tree cutter. During this period many "old Cambodians" who had been living in the Cardamom Mountain range moved into the area of Pin Yathay's camp. He assumed that Khmer Rouge were emptying the mountainous area of its population to prevent their escape into Thailand. Pin Yathay noted rising resentment against Angka, even among the "old Cambodians."

Toward the end of 1975 many in the group were moved again to a location about ten miles west of Phum Leach. Pin Yathay volunteered to go with them, even knowing that conditions would be worse than in the present site. The move would take them closer to Thailand. Moreover, the more often one moved the less likely that one's former identity would be discovered.

Pin Yathay stayed in the Phum Leach area from December, 1975, to October, 1976. Food was adequate until early 1976, primarily be-

*Pin Yathay agreed to the use of his name in a public document.

cause the communal kitchens which were established seemed to get greater supplies. However, after January, 1976, supplies dwindled. By April, 1976, Pin Yathay estimated that eight persons were sharing one tin of rice per day (¼ kilo per day). Work was extremely hard. Mosquitoes and disease plagued the population. Large numbers of the "new Cambodians" died. Pin Yathay used the money and treasures the family had brought from Phnom Penh to supplement their ration, usually through bribery of all too receptive Khmer Rouge cadre. Fourteen of the eighteen members of Pin Yathay's family who left Phnom Penh together died during this period in Phum Leach. His parents, a sister and brother, their children and his three-year-old child died. Pan Yathay, his wife, and their other two children were constantly sick.

During this period Pin Yathay made his first attempt to escape to Thailand. He failed, however, since other members of the escape party changed their minds. He recounted the difficulties he had with the Khmer Rouge when he returned, since he had been reported as having fled the camp. He finally managed to convince the Khmer Rouge cadres that he had been gathering wild potatoes and had left his children with a friend. His fabrication was accepted.

In March, 1976, Pin Yathay was sent without his family to the Tonle Sap, to assist in a drive to catch fish for food. The area had many "old Cambodians", but they rarely spoke to the "new". One evening, however, Pin Yathay was bathing alone when an "old Cambodian" approached him and whispered to Pin Yathay that he should not distrust all "old Cambodians". "Many of us are with you", he said. Pin Yathay did not dare respond, since it was possible that he was being provoked. Nevertheless, he believed the man.

At the Tonle Sap Pin Yathay also learned of a highly secret police organization, which he referred to as the "Chhlop" (phonetic). According to what he learned, the "Chhlop" have authority above even Angka, but few people are even aware of the organization's existence.

In May or June, 1976, Pin Yathay contracted beriberi. He was near death and begged to be permitted to return to Phum Leach to see his family. The Khmer Rouge finally relented but refused to allow a friend to accompany him to Phum Leach. With pills he purchased and took with him, he miraculously made it back to his family. He exchanged a gold necklace with a Khmer Rouge cadre for twenty-four tins of sweet palm syrup. Despite the fact that the palm oil can be dangerous, even lethal, it was soothing and Pin Yathay wanted to ease what he thought would be his last days. However, he recovered after a month . . .

ESCAPE

Until this time, Pin Yathay had managed to keep his nine year old son at home even though children of his age should have been assigned to live with the youth league.

He was repeatedly harangued for this. Khmer Rouge cadre accused him of being a reactionary, of having the "thought of imperialism's dandruff". "How could he selfishly keep his son at home, when the commune needed him?" The son, whom Pin Yathay clearly adored, finally told his father that he should go. Pin Yathay acquiesced. Three days later he learned that his son was dead. He cried as he recounted this story.

Pin Yathay then began plans for his escape. A group of several men and women, not all directly known by anyone but Pin Yathay, developed together an escape plan. Pin Yathay told his wife that he was planning to escape, but that she should stay behind. Women seemed to be standing the ordeal better than men. In their weakened condition he felt he would never be able to get them through the jungles and mountains to Thailand. His wife cried and pleaded with him to take her. Finally, he agreed that she could go.

So that he could make preparations, Pin Yathay managed to be transferred temporarily from his work in the forest and to be hospitalized. In fact, he managed each day to spend most of his time free. This arrangement provided time for planning and enjoying what Pin Yathay thought might be the last days of his life.

Plans were delayed by indecision among the eleven other escapees, some of whom wished to wait. Discovery by a Khmer Rouge cadre that Pin Yathay was neither in the hospital nor at work precipitated a decision. Pin Yathay was ordered to return the following day to the forest work, accompanied by the Khmer Rouge cadre. Final arrangements for flight required an additional day and Pin Yathay hoped to have a full night's flight to put distance between himself and the camp. He contrived the following scheme. His wife would feign sickness and he would plead for a day's delay.

When Pin Yathay failed to appear at the cadre's house to return to work, the cadre came to Pin Yathay's hut looking for him. He was greeted with the moans and cries of Pin Yathay's wife who said that Pin Yathay had gone to find medicine. Pin Yathay then appeared and explained that he could not leave until the next day. If his wife was still sick, he would take her to the hospital; then he could return to work. The cadre finally insisted that Pin Yathay accompany him to work where his superior could decide. Pin Yathay deliberately left his hammock in his hut.

CORRUPTION AMONG THE CADRES

Noting that the cadre had a Japanese watch, not a preferred Omega or Rolex, Pin Yathay asked the cadre the time and when the cadre informed him of the time, Pin Yathay commented that he thought the watch was slow. He should have an Omega. Pin Yathay added that he knew where he could get one, but it would cost the cadre, who worked in the commune kitchen, fifty tins of rice (25 kilos). When the cadre complained that this was too much, Pin Yathay said that he might be able to get it for 30 tins, but he would have to act quickly, the next day, since the owner of the Omega was being reassigned almost immediately to another camp. The cadre smiled, and Pin Yathay knew he had gained an ally to help him with his superior at the forestry worksite.

At first the superior was adamant that Pin Yathay must stay. Too bad that he had been so improvident as to leave his hammock in his hut. He would have to sleep on the wet ground. Finally Pin Yathay told the superior that the other cadre should be asked for confirmation if his wife's illness, since he had seen his sick wife and heard her cries. Eager for the Omega watch, the cadre vouched for the truth of Pin Yathay's story. He was permitted to return to his wife. Pin Yathay commented to me with disgust that corruption is common in Democratic Cambodia.

All twelve of Pin Yathay's cohorts gathered later that evening for the escape. It was May 24, 1977. At least two of the group were Khmer Rouge. Only three survived the trip. Pin Yathay's wife became extremely ill, forcing him to remain behind, briefly, until she died. Afterward, he could not find the others and trooped on alone. He ran into Khmer Rouge patrols three times, but was captured only once. He outwitted the Khmer Rouge and managed subsequently to escape. Without rations, he ate berries, roots, and occasionally trapped wild animals and insects in the rough, jungled mountain terrain. His sandals fell apart. His body was extremely weak, he said, but his spirit remained strong.

On June 20, 1977 he arrived at the Thai border, to be greeted by the pointed rifles of the Thai Border Patrol Police, who suspected that he was a Khmer Rouge soldier. He finally convinced them otherwise. He was stripped of his ragged remnants of clothes to make sure that no valuables were sewed in the linings, he said, and given the shirt and trousers he wore.

POLICIES OF DEATH

Commenting generally, Pin Yathay said that the new leaders of Democratic Cambodia seem to be committed deliberately to eradication of a large part of the population—the "dandruff of imperialism". He estimated that perhaps only three to four million Cambodians are still alive. One million of the pre-war population of seven million died during the war, and nearly half of the five million "new Cambodians" have survived the policy of the Khmer Rouge to reduce their ranks. This would leave, in Pin Yathay's view, a population of three to four million. Death is the primary policy instrument of the Khmer Rouge, Pin Yathay concludes.●

CLOCK RUNNING ON WILSONVILLE

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1978

● Mr. FINDLEY. Mr. Speaker, on August 1, 1977, more than a year ago, I introduced H.R. 8657 the Resource Conservation and Recovery Act Amendments of 1977, and desiring to have the views of the administration, requested Chairman HARLEY O. STAGGERS of the House Committee on Interstate and Foreign Commerce to ask for such a report. Chairman STAGGERS did so promptly.

After long delay I finally received a letter from the Department of the Interior, dated March 31, stating that its report on the bill had been forwarded to the President's Office of Management and Budget for final action.

I then addressed a request to James T. McIntyre, Director of OMB, urgently requesting the administration position. It is now August 17 and I have yet to hear from Mr. McIntyre or anyone else at OMB. I still do not know the administration's attitude.

I cannot understand why it should take OMB more than 4½ months to clear a report.

Passage of this type legislation is critically important for the entire nation, and especially because of the existence of a hazardous waste dump located within the town of Wilsonville, Ill.

No doubt many of my colleagues have read of dangerous problems that the people of Niagara Falls, N.Y., face. Beginning 35 years ago toxic chemicals were buried in a hazardous waste dump similar to the one at Wilsonville. Later a school and housing subdivision was built on the dumpsite. Now ooze believed to be highly poisonous and carcinogenic is bubbling out of the ground in this populated area. Women living there have suffered 50 percent more miscarriages than would be expected. And there is an abnormally high incidence of birth defects among children. Their future is permanently clouded. The lives of people may be harmed just because they have for years lived on top of a chemical dump.

There is nothing currently in law to keep the people of Wilsonville from suffering the same fate. At Wilsonville hundreds of steel drums of benzine, pesticide residue, PCB leftovers, and other substances are buried on the edge of a residential area.

My bill would correct weaknesses in the Solid Waste Disposal Act of 1976. It was my hope that this legislation would receive prompt consideration so as to eliminate or minimize the potential hazards that chemical wastes possess to human and animal life.

Under my bill hazardous wastes could not be buried near residential areas, and any so located would have to be moved. Property on which hazardous wastes were buried would have to be dedicated to public ownership.

Regulations of such sites is today totally inadequate.

The situation is critical as the tragedy at Niagara Falls obviously shows. Too much time has already elapsed and the clock continues to run on Wilsonville.●

NUCLEAR NONPROLIFERATION ACT OF 1978

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 17, 1978

● Mr. BINGHAM. Mr. Speaker, the Nuclear Nonproliferation Act of 1978, which it was my privilege to sponsor, gave impetus to many important and necessary processes. One of these was the U.S. sponsored international nuclear fuel cycle evaluation (INFCE). Hopefully, this international evaluation—the first of its kind—will result in a consensus as to which new technologies and institutions can best help to provide security against the spread of nuclear weapons in the years ahead.

In forging such a consensus, sober but imaginative thought will be required, not only by the United States but by all participating governments. An example of such thought was recently provided by Dr. Joseph Nye, Deputy to the Under Secretary for Security Assistance, Science and Technology, in a July 12 speech before the Uranium Institute in London. In his speech, Dr. Nye discusses not only a possible framework for a more proliferation-resistant world, but also details the technological possibilities now being pursued by the United States in increasing the efficiency of the existing light water power reactor. Among Dr. Nye's other points, two of the most important are: First, that plutonium does not provide a solution to the short- and mid-term energy security problems which we and the world at large now face, and second, that if we fail now to fashion responsible and credible solutions to the proliferation risks posed by advanced nuclear systems, we may be deprived of their use altogether in the future as a result of public fears and hostility.

I am sure that those who have worried in the past that the U.S. nonproliferation policy was insufficiently attentive to the energy needs of other countries will find Dr. Nye's speech balanced, conciliatory, and free from dogmatism and exhortation. His remarks encourage us, however, to think more critically about the prospects for the future and about the complex trade-offs that necessarily must be made.

I insert herewith the final section of Dr. Nye's address:

URANIUM AND THE ROLE OF PLUTONIUM

U.S. policy is based [among other considerations] on . . . the need to keep perspective in balancing energy and military security problems. Plutonium does not provide a solution to the short and mid-term energy security problems, while its dispersal and utilization before the international system has learned how to cope with it threatens to add to the world's security burden. Other technologies on the other hand do not *now* commit us to political problems we don't know how to deal with. For these reasons, the United States Government has opposed plutonium recycle in thermal reactors, which offers only marginal (if any) economic or energy security benefit. Diminished dependence on uranium imports can be accomplished more economically and safely through modest national stockpile programs.

At the same time, we have not opposed breeder reactor R&D programs because of the greater range of uncertainty surrounding estimates of their energy costs and benefits. A key element in this evaluation is the question of probable uranium resources. And since no one knows the answer to that question with certainty, we must be sure that we weigh the risks of being wrong from both the energy and the military security point of view.

Essentially, nations are making energy and economic security bets about the availability of uranium and its likely price on the one hand versus the capital costs of the breeder reactor on the other. There are large uncertainties in the breeder capital costs and fuel cycle costs. If we consider the range of these estimates, we see that the lower priced breeder would compete with present LWR's using uranium oxide priced at about $60/pound; while the more expensive breeder would compete with uranium oxide priced at about $200/pound. The improved LWR would compete at even higher uranium prices. We do not know *now* what the competitive costs will be, but it does raise the following questions. Will the capital costs of the breeder escalate as has occurred with many high technology projects during the commercialization process? Will uranium reserves be exhausted and prices increase rapidly? Or will more resources be found as higher prices stimulate further drilling?

No one can answer these questions with certainty. Yet given long lead times in high technology R&D projects, decisions must be made before all the facts are known. In order to maximize our area of common interest, we should strive for a situation in which nations can place different long term energy bets without jeopardizing each other's security interests. We ask those who bet on breeders to include security costs which they impose on others, particularly safe fuel cycles, in their economic calculations. At the same time, they can rightly ask us for greater assurance on fuel supplies, and we are presently exploring bilateral and multilateral fuel assurance options. Then each nation can bet as it wishes on the economics of the breeder without imposing the political costs of its actions on others.

We ask those who choose to go ahead now with the breeder to include the following factors in their decisionmaking process: First, avoidance of the temptation to reduce per unit capital costs by premature exports. The commercialization of the breeder (and reprocessing) should be limited to situations where it has compelling advantages. Economies of scale arguments dictate that only the largest nuclear programs could satisfy such a condition for commercialization. Second, fuel cycle facilities should be designed to make their misuse difficult and time-consuming, even though such design, as in the case of hot fuel fabrication, may involve additional cost. Third, efforts should be made to minimize flows of cold plutonium or fuels with high concentrations of fissionable materials even if this adds to transport costs. Fourth, multinational institutional arrangements should be utilized where there are compelling reasons to proceed with new technology. While such arrangements could produce benefits in economic efficiency, such steps would be desirable even if they led to a net cost.

Measures that would make these sorts of compromises possible are currently under discussion in INFCE. Certainly the way the U.S. will respond to requests for transfers for reprocessing of U.S. origin spent fuel will depend on the extent to which other countries have made serious efforts to recognize and take proliferation concerns into account. At the same time, we are ready to take their energy security concerns into account.

PROSPECTS FOR STABILITY AFTER INFCE
